Doctor of Philosophy in Medical Nutrition Science

The doctoral program in medical nutrition science is designed for students with a bachelor's or master's degree in nutrition (or with a degree in biological sciences that included course work in nutrition) to have the opportunity to pursue research at a world-class academic health center renowned for its research facilities. This program emphasizes course work in the core science of nutrition (integration of nutrition with biochemistry and physiology), biostatistics and research using advanced research methodology. The program is offered by the KU Department of Dietetics and Nutrition (http://www.kumc.edu/school-of-health-professions/dietetics-and-nutrition.html).

Graduates are prepared for research and leadership roles in academia, industry, government, clinical departments of academic medical centers and centers of advanced clinical practice. Program faculty conduct human nutrition research and registered dietitians are encouraged to apply; however, students enrolled in this program are not eligible to become RDs unless they have met all prerequisites of the Academy of Nutrition and Dietetics (http://www.eatrightpro.org/resources/about-us) and have completed a dietetic internship. More information. (http://catalog.ku.edu/health-professions/dietetics-nutrition/certificate)

The program is offered on the KU Medical Center (http://www.kumc.edu) campus of the University of Kansas which along with The University of Kansas Hospital (http://www.kumc.edu) forms the region's top academic health center. The mission of this alliance among health care professions is to create a modern environment for instruction, research, and service, and to provide these services across multiple constituencies at local, regional and national levels.

The University of Kansas is a major comprehensive research and teaching institution serving as a center for learning, scholarship and creative endeavor. A major strength of KU's medical nutrition science program is the opportunity for clinical and translational research.

Academic Objectives of Program

- To graduate students capable of conducting research using appropriate research methods, ethical procedures and statistical analysis.
- To graduate students with advanced knowledge in the nutritional sciences who will contribute to the growing body of knowledge in the medical nutrition science arena.
- To graduate students who demonstrate professional attributes such as advocacy, critical thinking, flexibility, time management, and work ethic within various organization cultures.
- To enrich the scholarly and collegial culture of the Department of Dietetics and Nutrition at KU Medical Center.

This program emphasizes course work in the core science of nutrition (integration of nutrition with biochemistry and physiology), biostatistics and human nutrition research using advanced research methodology. The course work required depends upon whether the student is accepted to the program from a bachelor's or master's degree program, as well as on the area of study of these degrees (nutrition, biological sciences or other areas of study). Detailed instructions on how to apply are posted on the Department of Dietetics and Nutrition (http://www.kumc.edu/school-of-health-professions/dietetics-and-nutrition/phd-in-medical-nutrition-science/how-to-apply.html) website. Application deadlines are February 1 for fall semester entry and September 1 for spring semester entry.

Admission requirements:

- A bachelor's degree or master's degree from a regionally accredited institution is required and must be documented by submission of official transcript indicating the degree has been conferred before entering the program. Official transcripts must be submitted for all courses taken at every institution. The bachelor's and/or master's degree should be in nutrition or other biological sciences. Students with degrees from outside the U.S. may be subject to transcript evaluation indicating the degree is equivalent to a U.S. degree and meets the minimum cumulative grade-point average requirement.
- A cumulative grade-point average of at least a 3.0 on a 4.0 scale for the bachelor's degree is required.
- Applicants who are not native speakers of English, whether domestic or international, must demonstrate they meet the minimum English proficiency requirement.
- Before entering the program, students must have completed prerequisite courses in biochemistry (one semester), physiology (one semester), and nutrition (more than one semester preferred).
- An official copy of the Graduate Record Examination score must be sent from Educational Testing Service to KU Medical Center using ETS institutional code 6895 and department code 0214. The following minimum scores are required: Verbal Reasoning, 150; Quantitative Reasoning, 150; Analytical Writing, 4.0.
- A resume or curriculum vitae is required and must include prior employment and participation in professional and/or voluntary organizations (e.g., hospital, alumni or nonprofit.)
- A goal statement will be submitted detailing the applicant's educational and professional goals.
- Three references are required. A reference provides a professional recommendation on the applicant's behalf. It is preferred that college instructors, academic advisors or supervisors provide these recommendations. The recommendations may not be obtained from family members.
- The Joint Commission requires all incoming students to pay for a background check (http://www.kumc.edu/school-of-health-professions/background-checks-and-drug-screening-for-students.html). This one-time fee must be paid directly to the company performing the background investigation. For more information, please see the School of Health Professions background check instructions. (http://www.kumc.edu/school-of-health-professions/background-checks-and-drug-screening-for-students.html)

Applicants will be assessed based on these requirements. Students not meeting the above requirements may be eligible for provisional admission. After an applicant has been admitted, a program may defer an applicant's admission for one year after which time the applicant must submit a new application.

Admission requirements are subject to change. In most cases, use the catalog of the year student entered the program. Other years' catalogs--.

The Ph.D. in Medical Nutrition Science degree program consists of coursework, research experience, and the successful completion of a doctoral dissertation. Relevant prior graduate work and the student's
research interests are taken into consideration in setting up individual programs of study leading to the Ph.D.

The program offers a great deal of flexibility. RDs embedded in clinical departments may continue to be employed and may choose to do their dissertation research on clinical problems relevant to the clinical population with whom they work. Students may also do their dissertation research on a nutrition problem with a mentor from a clinical department (and funded by that individual), however, the dissertation committee must be chaired by a member of the Department of Dietetics and Nutrition holding one or more degrees in nutrition. The total course work required depends upon whether the student is accepted to the program from a bachelor's or a master's degree, and it depends upon the area of study of that degree (nutrition, biological sciences or other areas of study). The hours for completion and suggested coursework is determined by the student's research advisor and research committee.

**Degree requirements:**

- Degree requirements are normally completed within 4 years of admission to the program although a maximum of 8 years is allowed.
- Cumulative grade-point average (GPA) of at least a 3.0 for all KU graduate coursework.
- Successful completion of the University’s Research Skills and Responsible Scholarship (http://catalog.ku.edu/graduate-studies/kumc/#programtext) requirement prior to the semester the Oral Comprehensive Examination is scheduled.
  - Successful completion of DN 900 Techniques in Nutrition Research and Human Subject certification meets the Research Skills requirement.
  - Successful completion of GSMC 856 Introduction to Research Ethics meets the Responsible Scholarship requirement.
- Successful completion of the Residence Requirement (http://catalog.ku.edu/graduate-studies/kumc/#programtext) prior to the semester the Oral Comprehensive Examination is scheduled. The requirement is met by enrollment in full-time status a minimum of two semesters.
- Successful completion of the Qualifying (written) Examination. This examination takes place after completion of DN 895 and DN 896. The goal of this examination is to assess that a doctoral aspirant has the necessary nutrition knowledge and analytical, communication and writing skills to successfully complete a PhD degree.
- Successful completion of the Oral Comprehensive Examination (http://catalog.ku.edu/graduate-studies/kumc/#programtext). Students are recognized as formal doctoral candidates after they have passed the comprehensive examination. The Ph.D. candidate must submit a written dissertation proposal describing an original research project in some aspect of nutrition research, and defend the proposal in a comprehensive oral exam before beginning the dissertation research. For this examination, students must: exhibit the potential for original scientific thought; be familiar with the relevant literature and be able to identify significant research questions in their field; have a good understanding of the underlying principles of the experimental methodologies proposed; show an ability to critically analyze data and to anticipate experimental outcomes; and, have a good fundamental knowledge of nutrition science.
- Successful completion of the Post-Comprehensive Enrollment (http://catalog.ku.edu/graduate-studies/kumc/#programtext) requirement.
- Enrollment in a minimum of one (1) credit hour of DN 999 Dissertation the semester the student will defend dissertation and graduate.
- Successful completion of the Final Oral Examination (http://catalog.ku.edu/graduate-studies/kumc/#programtext) dissertation defense. The dissertation should be comparable in scope to justify first authorship on a rigorously peer-reviewed manuscript. Students qualifying for a PhD degree in Medical Nutrition Science must have at least one first-author peer-reviewed research publication in review and at least one additional first-author publication prepared for submission at the time of the defense. Students are encouraged to submit their work for publication well before the defense if possible, especially if they wish to be competitive for a postdoctoral research position.
- Successful Dissertation Submission and Publication (http://catalog.ku.edu/graduate-studies/kumc/#programtext) (according to Office of Graduate Studies policy.)
- Successful completion of the following courses:

Final Oral Exam (dissertation defense) may be scheduled as early as this semester if approved by committee to defend and graduate.

Total Hours 44-61

Reasonable accommodation will be considered and may be made to qualified students who disclose a disability, so long as such
accommodation does not significantly alter the essential requirements of
the curriculum and the training program, or significantly affect the safety
of patient care. Students who disclose that they have a disability are
considered for the program if they are otherwise qualified. Qualified
students with a disability who wish to request accommodations should
provide appropriate documentation of disability and submit a request for
accommodation to:

The Office for Academic Accommodations

Cyn Ukoko, Senior Coordinator of Academic Accommodations

913-945-7035 or 711 TTY

cukoko@kumc.edu

G020 Dykes Library

The Department of Dietetics & Nutrition and the University of Kansas
Medical Center have a commitment to nondiscrimination, access and
reasonable accommodation of students with disabilities. Therefore, all
students admitted to the MS Degree in Dietetics & Nutrition must be able
to meet the following requirements and expectations with or without an
accommodation. The MS degree prepares students to practice dietetics
and nutrition and to interpret and participate in research in nutrition within
academic and healthcare organizations. Graduates need knowledge and
skills to function in diverse practice and research settings. All students
who are admitted into the MS degree program in Dietetics & Nutrition are
able to do the following:

**Observe**: Students must be able to observe lectures, demonstrations,
research, and practice situations in the practice and research of health
sciences.

**Communicate**: Students must have the ability to use multiple
communication techniques (oral, written, nonverbal, group process
information technology, and esthetic endeavors) that enable them
to communicate with clients, teachers, health providers, and faculty.
Students must be able to report to members of the team, express
accurate information to clients, and teach, explain, direct and counsel
people.

**Psychomotor**: Students must have sufficient motor capacities and
motilities to execute various tasks and physical maneuvers such as:
collecting specimens and perform basic tests and physical assessments
on individuals, e.g., finger sticks for blood glucose testing, using
glucometers, skin fold thickness, blood pressure, and placing feeding
tubes; working in institutional and food demonstration kitchens to
prepare foods and direct employees involved in food services; and
conducting patient visits individually and with health care team members
to provide nutrition care. **Graduate students who are not involved with
clinical experiences are expected to demonstrate during their research
assistantship sufficient motor capabilities and motilities to execute various
tasks similar to those in the clinical rotations.**

**Intellectual and Cognitive Abilities**: Students must be able to measure,
calculate reason, analyze, synthesize, integrate, and remember to apply
information. Creative problem solving and clinical reasoning requires all of
these intellectual abilities.

**Professional and Social Attributes**: Students must exercise good
judgment and promptly complete all responsibilities required of the
program. They must develop mature, sensitive, and effective professional
relationships with others. They must be able to tolerate taxing workloads
and function effectively under stress. They must be able to adapt to
changing environments, display flexibility, and function in the face
of uncertainties and ambiguities. Concern for others, interpersonal
competence, and motivation are requisites for the program.
