This course focuses on the development of foundational skills for planning, implementing, and assessing math, science, and social studies knowledge and skills for students with IEPs. The course will emphasize many of the "behind-the-scenes" strategies and activities that must be completed regularly and frequently with teaching colleagues to make progress in these three content areas possible for all elementary students. Prerequisite: SPED 326, SPED 327, SPED 328.

**SPED 443. Evidence-based Strategies and Practices for Creating Positive, Productive Classrooms. 3 Credits.**
This course focuses on effective, efficient strategies for setting up and monitoring classroom management practices for ALL students. In this course, students will learn about tiered systems of supports designed to meet students’ academic, behavioral, and social-emotional needs. They will learn about the importance of designing positive behavioral interventions and supports based on the values and cultures of the community, with strong involvement from diverse families and community members. Prerequisite: SPED 326, SPED 327, SPED 328.

**SPED 444. Classroom Assessment and Beyond. Practices for Students with IEPs. 3 Credits.**
This course focuses on the development of foundational skills for classroom assessment. It includes planning for student learning, assessing student progress, communicating with students and families to track learning over time, and planning with colleagues to address learning needs and challenges that may emerge from progress monitoring.

**SPED 446. Professional Learning Seminar UEC. 1 Credits.**
The primary purpose of the professional learning seminars is to collaboratively engage KU students, KU faculty, and early childhood professionals in a continuous seminar that focuses on important issues that our KU students face in the ECE (birth - grade 3) programs. We will critically examine instructional practices that support all young learners belonging and success, learning in real-world contexts, and analyze teaching and learning from multiple perspectives including the philosophical and psychological. The professional learning seminars are designed around key features of effective professional learning communities and sustained professional development for early childhood educators. Features include supportive, collaborative learning, shared personal and professional practice, and collective inquiry of teaching and learning. Graded on a satisfactory/unsatisfactory basis. Prerequisite: Admission to the Teacher Education Program is required.

**SPED 450. Dis/ability in an American Context. 3 Credits.**
This course is designed to introduce undergraduate students of any major to important theoretical and practical concepts regarding special education, disability, and diversity. Successful completion of this course fulfills one requirement for the School of Education minor in Education.

**SPED 494. Intrnshp-Specialized Instr in Gen Ed Elem Classrooms&Support Settings for Students w/Disabilities. 6 Credits.**
A supervised field experience leading to initial teaching licensure in Elementary Education Unified (K-6). The teacher candidate assumes the total professional role as a teacher serving students with high incidence disabilities and low incidence disabilities in inclusive elementary classrooms and in support settings. Prerequisite: Admission to EEU program, completion of EEU program courses with B or better/enrollment in final semester of program, approved application of intent to complete internship.

**SPED 495. Developing the ECU Teaching Portfolio. 1 Credits.**
This course meets in conjunction with student teaching and includes assigned readings, participation, and writing. The seminar provides
opportunities for candidates to discuss their transition from their role as an aspiring early educator to a career in early childhood education within birth to grade 3 community and public-school settings serving young children and their families. Candidates will engage instructional planning, implementation, and outcome assessment including reflection on their own successes and challenges as they move to becoming a qualified reflective early childhood educator. Graded on a satisfactory/unsatisfactory basis. Prerequisite: Admission to the Teacher Education Program is required.

**SPED 497. Independent Study.** 1-2 Credits.
Only one enrollment permitted each semester, a maximum of four hours will apply toward a bachelor's degree. Prerequisite: Recommendation of advisor and consent of instructor.

**SPED 501. American Sign Language I (ASL I). 3 Credits.**
This course will cover the development of American Sign Language and its application within the Deaf Community. It is based on the functional-notational approach to learning sign language. This approach organizes language around communicative purposes of everyday interaction.

**SPED 502. American Sign Language II (ASL II). 3 Credits.**
This is the second level course in American Sign Language and its application within the Deaf Community. It is based on the functional-notational approach to learning sign language. This approach organizes language around communicative purposes of everyday interaction. Prerequisite: SPED 501.

**SPED 503. American Sign Language III (ASL III). 3 Credits.**
This is the third level course in American Sign Language. The primary objective of the American Sign Language III "Signing Naturally" Level 2 curriculum is for students to continue using the two basic language skills: visual listening and signing. Prerequisite: SPED 502.

**SPED 504. American Sign Language IV (ASL IV). 3 Credits.**
This is the fourth level course in American Sign Language. The primary objective of the American Sign Language IV "Signing Naturally" Level 3 curriculum is for students to continue using the two basic language skills -- visual listening and signing. Prerequisite: SPED 503.

**SPED 506. Advanced Practices for Children with Disabilities in the Elementary General Education Classroom. 3 Credits.**
This course is designed to enable novice teachers to master and apply the instructional and communicative skills that will facilitate appropriate and productive inclusion of children and youth with exceptionalities within general education classrooms and other school settings. Specific research-based strategies in curriculum content acquisition (content enhancements, learning strategies, classwide-peer tutoring), and specific research-based strategies in behavior management will be learned and applied to real teaching experiences. Novice teachers will learn about collaborative structures found in schools to support student learning in general education settings (co-teaching, collaborative consultation, teacher/student support teams) and roles and responsibilities of teachers within these structures. Prerequisite: Admission to the Teacher Education Program.

**SPED 507. Advanced Practices for Children with Disabilities Middle/Secondary General Education Classroom. 3 Credits.**
This course is designed to enable novice teachers to master and apply the instructional and communicative skills that will facilitate appropriate and productive inclusion of middle and secondary age students with disabilities within general education classrooms and other school settings. Specific research-based strategies in curriculum content acquisition (content enhancements, learning strategies, classwide-peer tutoring), and specific research-based strategies in behavior management will be learned and applied to real teaching experiences. Novice teachers will learn about collaborative structures found in schools to support student learning in general education settings (co-teaching, collaborative consultation, teacher/student support teams) and roles and responsibilities of teachers within these structures. Prerequisite: Admission to the Teacher Education Program.

**SPED 635. Introduction to Teaching Learners with Low-Incidence Disabilities in Inclusive Settings. 3 Credits.**
This course examines current principles and inclusive practices for learners with significant disabilities. The course will focus on the extent research base concerning inclusive practices, characteristics of learners with low-incidence disabilities, and instructional strategies. Prerequisite: SPED 326 or equivalent.

**SPED 641. Methods & Assessment: Literacy Interventions Struggling Learners&Students High-Incidence Disabilities. 3 Credits.**
This course will provide in depth learning experiences targeting literacy; both reading and writing. Students will learn about assessment tools and assessment systems used in tiered support frameworks to determine the required intensity of literacy support and instruction needed by children/adolescents with adaptive special education needs, and will learn about evidence-based instructional approaches and curriculum developed for students with disabilities and struggling students in general. The course is intended for persons working toward the Kansas teaching license in teaching students needing an adapted curriculum. Prerequisite: SPED 730, admittance into the Adaptive program in the Department of Special Education, or permission of the instructor.

**SPED 642. Assessment and Methods of Teaching Students with Low-Incidence Disabilities in Inclusive Settings. 3 Credits.**
This course prepares teacher candidates to assess students with disabilities using formal and informal measures, to use assessment information to develop a strengths-based inclusive Individual Education Program (IEP), to design instruction related to IEP goals and state standards, and to evaluate the effectiveness of that instruction using progress-monitoring techniques. Prerequisite: SPED 326.

**SPED 650. Constructing Early Childhood Curriculum. 3 Credits.**
Students in this course will learn to design, implement and evaluate developmentally appropriate curricula and programs for children from birth through kindergarten. Issues of curriculum design and assessment are introduced as interrelated processes that include structuring learning environments and experiences that are responsive to children's interests and abilities. Students analyze and evaluate curriculum that focuses on the five developmental domains a) social emotional development; b) cognitive development; c) language and communication development; d) adaptive behavior development; and e) gross and fine motor development and in addition the content domains of literacy, science, math, and fine art. Strategies for developing learning opportunities that are appropriate for young children, including children with special needs and children from diverse cultural, ethnic and linguistic backgrounds, will be explored. Prerequisite: Admission to School of Education UEC program.

**SPED 661. Supporting Children with Significant Learning and Behavioral Challenges. 3 Credits.**
Students in this course will gain knowledge of the causes, and intervention and support approaches for young children with multiple and significant disabilities including neurological impairments, physical disabilities, sensory impairments, significant developmental disabilities and challenging behavior. Emphasis is placed on environmental adaptations and direct instructional techniques to maximize independence as determined through systematic ecological inventories tailored to the individual child's strengths and needs. Information is also provided on assistive technology designed to provide appropriate supports. Functional behavioral assessment procedures, proactive intervention strategies,
and developing collaborative support plans will be studied. Prerequisite: Admission to the Teacher Education Program.

**SPED 663. Assessment Strategies in Early Education. 3 Credits.**
Examines the practice of gathering information for the purpose of making individual referral and instructional decisions for infants, toddlers, and young children with and without special needs. Discusses effective informal assessment techniques and emphasizes an ecological approach to gathering information. Introduces standardized assessment and screening instruments and provides an overview of the purposes and limitations of such tests. Prerequisite: Admission to the Teacher Education Program.

**SPED 664. Inclusive Strategies and Intervention for Infants and Toddlers. 3 Credits.**
Emphasizes curriculum development and early intervention provision for infants and toddlers through the planning of appropriate learning experiences, the design of learning environments, developing Individual Family Service Plans (IFSP), promoting collaboration among families and the use of various methods of enhancing the child's development across the five (social-emotional, adaptive, cognitive, physical/movement, communication) development domains. The role of the educator/early interventionist in relation to the family and the child is examined. Curriculum resources and intervention strategies for infants and toddlers with special needs are reviewed with emphasis on interdisciplinary planning and implementation. Prerequisite: Admission to the Teacher Education Program.

**SPED 665. Inclusive Strategies and Intervention for Preschoolers. 3 Credits.**
Provides the opportunity for students to develop and evaluate inclusive environments for young children. This course emphasizes meeting the needs of all young children through an integrated approach to planning, implementing and assessing instruction in all areas; linking assessment information to individualized instruction; developing Individual Educational Plans (IEPs) and promoting collaboration among families, schools and communities. Service delivery systems and transitions between early childhood programs are reviewed in relation to curriculum. Curriculum development for early childhood content areas (literacy and language, numeracy, science, social studies, physical education and the arts) and domains (language, social/emotional, physical, and cognitive) will be explored. Prerequisite: Admission to the Teacher Education Program.

**SPED 667. Field Experience in Preschool. 1 Credits.**
This supervised field experience is intended to allow the pre-service teacher to apply the knowledge gained in SPED 665 Inclusive Strategies and Intervention for Preschoolers, by working with infants and toddlers in early intervention settings/programs. To be taken concurrently SPED 665. Prerequisite: Admission to the Teacher Education Program.

**SPED 672. Field Experiences with Exceptional Children and Youth: _____ 1-3 Credits.**
A course designed to provide experiences for students to participate with exceptional children in public schools and/or residential facilities and with professional personnel associated with the lives of exceptional students including special education teachers, child care workers, therapists, etc. Students will have opportunities to participate as aides, tutors, and instructors with individual and small groups of exceptional youth in one or more placements. Through weekly meetings with the instructor students are guided to relate their experiences to the needs and services for exceptional children and youth. Prerequisite: SPED 635.

**SPED 675. Practicum with Children and Youth with Disabilities: _____ 1-10 Credits.**
Intensive diverse and direct teaching experiences with children and youth with disabilities in educational settings. The course is differentiated from SPED 775 through the amount of scaffolding undergraduate students will receive when demonstrating skill application (e.g., undergraduates report and receive feedback on practicum experiences on a more frequent basis, reduced data collection requirements, more emphasis on cooperating teacher providing guidance, etc.). This practicum is a requirement for provisional endorsement according to KSDE. Students who have completed SPED 675 cannot enroll in SPED 775 within same curricular area. Prerequisite: SPED 326.

**SPED 701. American Sign Language I (ASL I). 3 Credits.**
This course will cover the development of American Sign Language and its application within the Deaf Community. It is based on the functional-notational approach to learning sign language. This approach organizes language around communicative purposes of everyday interaction.

**SPED 702. American Sign Language II (ASL II). 3 Credits.**
This is the second level course American Sign Language and its application within the Deaf Community. It is based on the functional-notational approach to learning sign language. This approach organizes language around communicative purposes of everyday interaction. Prerequisite: SPED 701.

**SPED 703. American Sign Language III (ASL III). 3 Credits.**
This is the third level course in American Sign Language. The primary objective of the American Sign Language III “Signing Naturally” Level 2 curriculum is for students to continue using the two basic language skills: visual listening and signing. Prerequisite: SPED 702.

**SPED 704. American Sign Language IV (ASL IV). 3 Credits.**
This is the fourth level course in American Sign Language. The primary objective of the American Sign Language IV “Signing Naturally” Level 3 curriculum is for students to continue using the two basic language skills -- visual listening and signing. Prerequisite: SPED 703.

**SPED 723. Positive Behavior Interventions and Supports for Students with Low-Incidence Disabilities. 3 Credits.**
This course is designed to teach students how to apply behavioral principles in educational settings to support students with low incidence disabilities and complex communication needs in inclusive environments. Specifically, the course emphasizes (a) definition of behavior from a behavioral perspective, (b) measurement strategies including observation, time sampling, and frequency counts, (c) preventative and responsive strategies to address challenging behaviors, including reinforcement, (d) function-based assessment and intervention planning, (e) incorporating behavioral strategies into ongoing instruction, and (f) collaborating with families and other professionals to support prosocial behaviors and address challenging behaviors.

**SPED 725. Introduction to the Psychology and Education of Children and Youth with Disabilities. 3 Credits.**
This course provides an overview of current practices in the identification, placement, and education of students with disabilities. This course emphasizes on patterns of social, cognitive, language, and physical development. Social, political, and economic advocacy issues are also addressed. Prerequisite: One course in Child Development.

**SPED 730. Characteristics, Methods & Assessment: Intro Struggling Learners & Students High-Incidence Disabilities. 3 Credits.**
The course is designed as an introduction to the characteristics, assessment and identification process, and initial instructional and behavioral interventions needed in meeting the needs of students with high-incidence disabilities under the Kansas Adaptive Teacher Education Standards. The needs for specialized services to meet specific learning and/or behavioral needs will be presented. Frameworks for instruction and conceptualizing best practice will be introduced including the principles of Universal Design for Learning and the Multi-Tier System of Support.
The role of the educator in identifying, understanding and implementing evidence-based practices is also examined. Curriculum resources and intervention strategies for students with high-incidence disabilities will be introduced with emphasis on tiered planning and implementation. The course is intended for persons working toward the Kansas teaching endorsement in the Special Education Adaptive Area. Prerequisite: Admittance into the Adaptive endorsement teacher education program in the Department of Special Education or permission of the instructor.

**SPED 731. Supporting Children with Significant Learning and Behavioral Concerns. 3 Credits.**

Students in this course will gain knowledge of the causes, and intervention and support approaches for young children birth through 5 years with significant support needs. These include young learners with multiple and significant disabilities including neurological impairments, physical disabilities, sensory impairments including dual sensory impairments, complex health care needs, significant developmental disabilities and challenging behavior. Emphasis is placed on environmental adaptations and direct instructional techniques to maximize independence as determined through systematic ecological inventories tailored to the individual child's strengths and needs. Information is also provided on assistive technology designed to provide appropriate supports. Functional behavioral assessment procedures, proactive intervention strategies, and developing collaborative support plans will be studied. Prerequisite: Admittance into the ECU - Birth through Kindergarten graduate initial licensure teacher education program in the Department of Special Education or permission of the instructor.  

**SPED 732. Foundations of Early Intervention. 3 Credits.**

This course explores evidence-based principles and practices of providing early intervention services, including requirements of IDEA Part C, mission and key principles of early intervention and recommended practices and standards. Students will engage in guided field observations of assessment, intervention and collaborative practices, reflective practice and teaching/coaching activities. (Same as SPLH 736.)

**SPED 737. Infants and Toddler with Significant Needs. 3 Credits.**

This course explores the challenges infants and toddlers with significant developmental needs face and how to best support their participation in daily activities. Challenges faced by medical, physical, communication, social-emotional, hearing, vision, and mental health issues will be discussed along with how to support these needs across disciplines and in the home and community activities. This course will provide in-depth review of the unique challenges these children and families face and how providers from various backgrounds can work together to best support children and families. Environmental adaptations and direct instructional techniques to maximize independence tailored to the infant and toddler's strengths and needs will be explored. Information is also provided on assistive technology designed to provide supports. Functional behavioral assessment procedures, proactive intervention strategies and psycho-educational approaches as well as the development of collaborative support plans will be studied. (Same as SPLH 737.)

**SPED 739. Special Education Early Childhood Unified Practicum. 1-3 Credits.**

A supervised field experience leading to initial teaching licensure in Kansas early childhood unified (birth through kindergarten). The student assumes the total professional role as a teacher in an approved inclusive early childhood program to include infant/toddler and preschool or kindergarten. Prerequisite: Admission to ECU licensure program.

**SPED 741. Methods & Assessment:Literacy Interventions Struggling Learners&Students High-Incidence Disabilities. 3 Credits.**

This course will provide in depth learning experiences targeting literacy; both reading and writing. Students will learn about assessment tools and assessment systems used in tiered support frameworks to determine the required intensity of literacy support and instruction needed by children/adolescents with adaptive special education needs, and will learn about evidence-based instructional approaches and curriculum developed for students with disabilities and struggling students in general. The course is intended for persons working toward the Kansas teaching license in teaching students needing an adapted curriculum. Prerequisite: SPED 730, admittance into the Adaptive program in the Department of Special Education, or permission of the instructor.

**SPED 742. Assessment and Methods of Teaching Students with Low-Incidence Disabilities in Inclusive Settings. 3 Credits.**

This course prepares teacher candidates to assess students with disabilities using formal and informal measures, to use assessment information to develop a strengths-based inclusive Individual Education Program (IEP), to design instruction related to IEP goals and state standards, and to evaluate the effectiveness of that instruction using progress-monitoring techniques. Prerequisite: SPED 635 or 735.

**SPED 743. Methods: Functional Behavioral Assessment, Positive Behavior Support and Classroom Management. 3 Credits.**

This course provides a problem-solving approach and the framework for teaching and assessment strategies to develop pro-social behavior in students with disabilities and their typical peers in classrooms and whole school contexts. Students assess problem behavior, discover the functions of problem behavior, and learn pro-social alternatives in home, school, and community settings. Prerequisite: SPED 730 or permission of instructor.

**SPED 746. Assessment and Supports for Students with Complex Communication Needs. 3 Credits.**

This course provides a problem-solving approach and the framework for teaching and assessment strategies to develop communication supports, to implement communication supports in natural settings, and to progress monitor communication development. Prerequisite: SPED 642 or SPED 742.

**SPED 750. Curriculum and Methods in Early Childhood. 3 Credits.**
This is a curriculum and methods course that addresses how to design, implement and evaluate developmentally appropriate curricula and programs for children from birth to six years of age. Issues of curriculum design and assessment are introduced as interrelated processes that include structuring learning environments and experiences that are responsive to children's interests and abilities. Strategies for developing learning opportunities that are appropriate for young children, including children with special needs and children from diverse cultural, ethnic and linguistic backgrounds, will be explored. Students analyze and evaluate curriculum that focuses on facilitating progress in the domains of a) social emotional development; b) cognitive development; c) language and communication development; d) adaptive behavior development and e) gross and fine motor development. Students also analyze and evaluate curriculum standards and frameworks for the young child's acquisition of concepts, skills and dispositions that support the development of early competencies and interest in literacy, mathematics, the sciences, social studies, the arts and individual and group sports. Prerequisite: Admittance into the ECU - Birth through Kindergarten graduate initial licensure teacher education program in the Department of Special Education or permission of the instructor. SPED 752 or its equivalent (may be taken concurrently).

**SPED 752. Overview of Early Childhood and Early Childhood Special Education. 3 Credits.**
The course serves as an introduction to the profession including historical, philosophical, social and psychological foundations, awareness of value, ethical and legal issues, staff relations and the importance of becoming an advocate for children and families. Students will analyze/interpret trends in early education, including diversity, early childhood special education, family centered practices, legislation, public policy, and developmentally appropriate practice. The two key professional organizations, National Association for the Education of Young Children (NAEYC) and Division of Early Childhood for the Council for Exceptional Children (DEC), recommended practices serve as the foundation for understanding the roles, knowledge and competencies of the early educator. Prerequisite: Admittance into the ECU - Birth through Kindergarten graduate initial licensure teacher education program in the Department of Special Education or permission of the instructor.

**SPED 753. Assessment in Early Education. 3 Credits.**
This course examines the practice of gathering information for the purpose of making individual referral and instructional decisions for infants, toddlers, and young children with and without special needs. Discusses effective informal assessment techniques and emphasizes an ecological approach to gathering information. Introduces standardized assessment and screening instruments and provides an overview of the purposes and limitations of such tests. Prerequisite: Admittance into the ECU - Birth through Kindergarten graduate initial licensure teacher education program in the Department of Special Education or permission of the instructor.

**SPED 755. Inclusive Strategies and Interventions for Preschoolers: 3 Credits.**
This is a methods course that covers instructional approaches and procedures that offer developmentally appropriate, effective and inclusive early intervention for preschool and kindergarten age children who experience developmental delays, disabling conditions or who are at risk for developmental problems and disabilities. It is directed toward: (a) "how to" teach, or the technical components of developing and delivering effective instruction that provide access to the general early childhood curriculum within recognized approaches to early childhood education for young children, and (b) the "what to teach, or the selection of developmentally and individually appropriate child objectives as well as specific materials and specialized instructional approaches. The relationship of instructional planning to state and federal mandates will also be considered. The course is primarily intended for persons who are currently working toward certification in the ECSE program area. Prerequisite: Admittance into the ECU - Birth through Kindergarten graduate initial licensure teacher education program in the Department of Special Education or permission of the instructor. SPED 752 (may be taken concurrently).

**SPED 756. Special Education Leadership. 3 Credits.**
This is an introductory course in special education law and policy implementation. It is designed to provide school and district administrators, and other special education stakeholders, with a basic understanding of key points in the history of special education law and policy. It focuses primarily on the Individuals with Disabilities Education Act (IDEA) and its core concepts, with particular attention to Least Restrictive Environment (LRE). This course is designed to provide a working knowledge of IDEA's procedural requirements, the preferred practices associated with implementing the procedures in schools, criticism of these practices and their implementation, and ideas for addressing these criticisms in ways that promote more equitable and inclusive special education practices. Prerequisite: Degree in Special Education, School Psychology, or related fields.

**SPED 757. History, Context, and Critique of Special Education. 3 Credits.**
This course is designed to provide school and district administrators, and other special education stakeholders, with a general understanding of the history of the treatment of individuals with disabilities and the development of special education law and policy over time. It foregrounds current issues in the post-IDEA organization of the field, highlighting the goals and challenges of democratic leadership and civic professionalism in relation to special education. The course concludes with a final paper and online presentation examining how history, disability, difference and justice inform special education leadership, both in theory and in practice. Prerequisite: Degree in Special Education, School Psychology, or related fields.

**SPED 758. Appropriate Education and Least Restrictive Environment. 3 Credits.**
This course is designed to provide school and district administrators, and other special education stakeholders interested in special education leadership, a deep understanding of two core principles of the Individuals with Disabilities Education Act (IDEA). These are: (1) appropriate education; and (2) least restrictive environment. The course continues the same pattern established in the previous courses for this four-course program. It introduces these core IDEA concepts, features a week of criticisms of those concepts, and follows with a week on remedies to address key issues identified. The last two modules of the course focus on the Individualized Educational Plan and inclusive practices. The course concludes with a final project. Prerequisite: Degree in Special Education, School Psychology, or related fields.

**SPED 759. Non-Discriminatory Evaluation, Parent Participation, and Procedural Due Process. 3 Credits.**
This course is designed to give school and district administrators, and other special education stakeholders interested in special education leadership, a deep understanding of three of the core principles of the Individuals with Disabilities Education Act (IDEA). These are: (1) non-discriminatory evaluation; (2) parent participation; and (3) procedural due process. The course continues the same pattern established in the previous courses for this four-course program. It introduces these three core IDEA concepts, features a week of criticisms of those concepts, and follows with a week on remedies to address key issues identified. The last two modules of the course focus on the Individualized Educational Plan and Inclusive Practices.
Plan and inclusive practices. The course concludes with a final project. Prerequisite: Degree in Special Education, School Psychology, or related fields.

SPED 760. Introduction to Autism Spectrum Disorders. 3 Credits. An introductory graduate-level course on autism spectrum disorder. Addresses characteristics of children and youth with autism spectrum disorder. Also surveys trends, issues, and evidence-based practices promoting academic, social, behavioral, and communicative development of learners with autism spectrum disorder.

SPED 772. Participation with Children and Youth with Disabilities: _____. 1-3 Credits.
A course designed to provide field experiences with children and youth with disabilities in settings where educational services are provided. Students work directly with professionals such as special education teachers, general education teachers, therapists and other support personnel. Students participate as aides, tutors, and instructors with individual and small groups of children and youth. Ongoing meetings with supervisors are designed to facilitate both reflection and strategic learning.

SPED 775. Practicum with Children and Youth with Disabilities: _____. 1-10 Credits.
Intensive diverse and direct teaching experiences with children and youth with disabilities in educational settings. This practicum is a requirement for provisional endorsement according to KSDE. Students who have completed SPED 775 cannot enroll in SPED 675 within the same curricular area. Prerequisite: Varies by topic.

SPED 785. Application of Assessment Information for Exceptional Children and Youth: Autism Spectrum Disorder. 3 Credits.
An analysis of information derived from assessment instruments and procedures appropriate to measuring the social and cognitive development of exceptional children and youth. Provides experiences in determining assessment data required in the development of individualized educational programs (IEP). Attention is also given to the design of informal assessment procedures, specific to the needs of exceptional children and youth. Experience is provided in the preparation and presentation of assessment data for use in instructional planning conferences. Prerequisite: SPED 760; SPED 860; SPED 785.

SPED 790. Methods for Learners with Higher-Functioning Autism Spectrum Disorder. 3 Credits.
This is a methods course, with special emphasis on learners with high-functioning autism spectrum disorder. Particular attention is given to evidence-based practices and strategies for teaching, managing and promoting social skill and social communication development and proactive social interactions. Prerequisite: SPED 760; SPED 860; SPED 785.

SPED 798. Special Course: _____. 1-5 Credits.
A special course designed to address topical issues. Graded on a satisfactory/unsatisfactory basis.

SPED 800. Teaching Language and Communication Skills to Students with Autism and Developmental Disabilities. 3 Credits.
Course covers aspects of communicative behavior of learners with autism and other development disabilities. Emphasis is on a verbal behavior approach and evidence-based practices for teaching communication skills including symbol exchange systems, augmentative and alternative communication strategies, and speech generating devices. Methods for evaluating intervention fidelity and effects on communicative behavior are covered along with strategies to support collaboration between speech and language pathologists and other individualized education team members. Prerequisite: Completion of SPED 760 and SPED 860 or instructor approval.

SPED 803. Mathematics Development and Intervention for Students with Learning Disabilities (K-5). 3 Credits.
Designed for teachers, specialists who manage intervention programs, and graduate students pursuing intervention research in mathematics, this course explores mathematics development, methods for designing and testing mathematics interventions, and procedures for developing mathematics programs for students. The focus of this course is on the mathematical development and intervention for students with learning disabilities at the elementary level (K-5), considerations for students learning English alongside learning mathematics, and tiered interventions in general and special education.

SPED 841. Advanced Methods & Assessment: Strategies for Students Struggling Learners & Students High-Incidence Disabilities. 3 Credits.
This course is designed for graduate students enrolled in the Masters of Science Program with an emphasis in school-age populations primarily with high mild disabilities or seeking to obtain a license to teach students needing an adapted curriculum in Kansas. Course experiences focus on how to identify and implement evidenced-based practices designed to increase the success of students with mild disabilities in mathematics, social studies, science, and language arts through their participation in general and special education classrooms primarily in grades 4-12. This course emphasizes practices associated with understanding and evaluating curricular demands, monitoring student progress in content-area courses, providing tiered supports and accommodations in teaching, using assessment and grading alternatives, and incorporating the principles of explicit and strategic instruction to design instruction that will promote and enhance content-area learning. The course is intended for persons working toward the Kansas teaching license in teaching students needing an adapted curriculum. Prerequisite: SPED 730, SPED 741, admittance into the High Incidence Disabilities program in the Department of Special Education, or permission of the instructor.

SPED 842. Methods in Access and Inclusion in the Core Curriculum. 3 Credits.
This course focuses on foundational skills for setting up an inclusive program that meets the needs of students with low-incidence disabilities in general education settings. The course will emphasize many of the “behind-the-scenes” strategies and activities that must be completed on a regular basis to make inclusive education effective and efficient. Prerequisite: SPED 635 or SPED 735 and SPED 642 or SPED 742.

SPED 844. Advanced Methods & Assessment: Strategies for Students with Significant Behavior, Social, & Emotional Need. 3 Credits.
This course is designed to introduce educators and related service professionals to prevention and intervention related to a broad range of antisocial, aggressive, and behavioral problems. Approaches focus on understanding and addressing the precipitating factors related to inappropriate behavior, short-term approaches for immediate crises, and problem-solving strategies for longer-term change. Course content will include antisocial, aggressive, and violent behavior; options for classroom interventions; school and system-oriented interventions, and ethical and legal issues involved in various prevention and intervention approaches. Class work will focus on literature, research-based intervention approaches, and case work illustrating specific approaches and programs. Prerequisite: SPED 630 or SPED 763 or SPED 741, and SPED 743.
The purpose of this course is to provide graduate students with models and strategies to develop and coordinate meaningful work experiences and supports for youth with disabilities. Emphasis is placed on practical strategies for engaging with community businesses, developing and customizing jobs and supports for youth in the workplace. Prerequisite: SPED 865.

SPED 866. Student Engagement in School and Community. 3 Credits.
The purpose of this course is to provide graduate students in special education and related areas who are specializing in secondary school/transition programs with an overview of models and issues pertaining to school and community engagement for secondary age youth. Prerequisite: SPED 865.

SPED 871. Advanced Practicum with Exceptional Children Needing an Autism Spectrum Curriculum. 3 Credits.
This is an advanced practicum experience for the graduate student teaching children and youth with autism spectrum disorder (ASD). The practicum is designed to provide intense, diverse and direct teaching experiences with children and youth who have learning and behavioral needs in the mild through moderate range and who have been identified with ASD. Prerequisite: SPED 760; SPED 860; SPED 785; SPED 790; SPED 800; SPED 743.

SPED 875. Practicum with Children and Youth with Disabilities: 1-10 Credits.
This course is designed to provide intensive field work and direct teaching experiences with children and youth with disabilities in educational, residential, and clinical settings. Prerequisite: SPED 775.

**SPED 897. Independent Study. 1-4 Credits.**
Prerequisite: Consent of advisor and instructor.

**SPED 898. Master’s Project. 1-4 Credits.**
Graded on a satisfactory progress/limited progress/no progress basis.

**SPED 899. Master’s Thesis. 1-6 Credits.**
Graded on a satisfactory progress/limited progress/no progress basis.

**SPED 900. Praxis Seminar: Scholarship and Writing. 3 Credits.**
Course assists first-year doctoral students in (a) developing a scholarly identity and technical skills in the areas of teaching, scholarship, and service, (b) developing a critical understanding of the scholarship informing special education practices and policies through course readings and seminar discussions, and (c) developing the skills to complete a comprehensive, critical review of a topic in the field of special education and disability. Prerequisite: Doctoral student status in Special Education.

**SPED 932. Praxis Seminar: Scholarship of Teaching. 3 Credits.**
Course assists doctoral students in learning (a) what is known about effective teacher education, (b) how that knowledge is translated into practice, and (c) what methodologies can be enlisted to conduct cutting-edge teacher education research. Prerequisite: Doctoral student status in Special Education.

**SPED 936. Cross-Spec I: Conceptual Issues in Special Education. 3 Credits.**
The focus of the seminar is current and historically-significant disability-related special education issues and problems (e.g., inclusive education, effective instruction, race and social class bias) that both intersect and implicate the various special education doctoral specializations. Because such problems tend to be intractable, the seminar is designed to build student capacity for conceptualizing and addressing them by exploring forms of disciplinary, interdisciplinary, and specialization scholarship and inquiry applicable to (re)framing and potentially resolving them. Prerequisite: Doctoral student status in Special Education.

**SPED 937. Cross-Specialization Seminar: Methodological and Conceptual Issues in Special Education. 3 Credits.**
The purpose of this seminar is to enable doctoral students to develop an interdisciplinary stance in their research and teaching by building meaningful connections across three types of knowledge-mathematical foundations of the social science and humanities disciplines; methodological and theoretical knowledge of the social sciences/humanities and theoretically-oriented social professions; and specialized knowledge of education, special education, and related professions. The primary focus of the seminar is the methodological traditions of the social sciences/humanities and education and their application to historically-significant, intractable special education problems such as exclusion/segregation, instructional ineffectiveness, and race and class bias, all of which intersect and implicate our various doctoral specialization areas. The secondary focus is application of the theoretical knowledge of the social science/humanities disciplines and theoretically-oriented social professions to these and related contemporary special education problems.

**SPED 949. Specialist Research. 1-4 Credits.**

**SPED 950. Civic Professionalism. 3 Credits.**
This course is concerned with the relationship between professions and society in a democracy, and specifically, with the ethics and practices associated with the professions of education, special education, and other disability-related fields. Models of professionalism are compared and advantages of civic professionalism for individuals with disabilities and their families, the professions, and society as a whole are explored. Lessons drawn from disagreements over questions such as the nature and social consequences of the professions are used to broaden understanding of what professionalism could and should be in a democracy. Prerequisite: Admission to doctoral program.

**SPED 951. Suppınıng Early Childhood/Early Childhood Special Education Practitioners in Evidence Based Practice. 3 Credits.**
This course will add to the formation of doctoral students as scholars who support practitioners as they strive to be effective consumers of research and implement evidence based practice. The course will address history and current trends, issues/problems and associated methodologies, key leaders, and schools of thought for the fields of Early Education/Early Childhood Special Education with a focus on educator preparation. This course includes active involvement in teaching Early Childhood Unified masters degree students participating in SPED 752, Overview of Early Childhood/Early Childhood Special Education. Doctoral students will help plan and teach SPED 752 course sessions as well as mentor SPED 752 students, who are developing understandings of and writing about evidence based practice. Prerequisite: Admission to the Special Education Doctoral program or instructor permission.

**SPED 954. Disability, Justice and Democracy. 3 Credits.**
This course is concerned with what justice requires for people with disabilities, and in this regard, with the institutional, political, and cultural barriers to these requirements today and historically. As such, it is an interdisciplinary treatment of the place of disability in theories of justice from Rawls’s contractarian theory of justice through Nussbaum’s capabilities approach, as well as a critical-theoretic analysis of injustice toward people with disabilities from the Enlightenment to contemporary society. Prerequisite: SPED 950 or permission of the instructor.

**SPED 955. Intersectional Oppression in Special Education Policy and Practice. 3 Credits.**
This course is designed to explore the ways in which difference is traditionally perceived and responded to in special education policy and practices in the United States. We will examine how larger systems and individual perceptions about multiple forms of difference and larger social processes, intersectionality, conspire to create particular forms of injustice. Students in the course will analyze the processes of intersectionality to understand how students at the intersections of multiple oppressions experience education within communities of practice that enact, reproduce, and resist policies through their daily activities. We will build an understanding of intersectionality as a "method and a disposition, a heuristic and an analytic tool." Furthermore, we will explore how these students need access to opportunities to dismantle systemic inequities, which will support their engagement with formal learning communities such as schools. Prerequisite: Admittance to the Special Education doctoral program or instructor permission.

**SPED 956. Families, Diversity, and Special Education. 3 Credits.**
This course will engage students in analyzing, evaluating, and planning for conducting research into an array of equity issues for families of students with or considered “at risk” for disabilities associated with the programs and professionals that serve them. Students will critically engage the origins and reproduction of dominant discourses regarding families from diverse backgrounds, drawing on interdisciplinary frames and research approaches for identifying systemic inequities within educational institutions for families and their children from diverse racial, ethnic, social class, and linguistic backgrounds. Prerequisite: Admission to a doctoral program.
SPED 957. Instructional Technology and Design for Individuals with Diverse Learning Needs. 3 Credits.
This course is designed to provide students with a foundational understanding and analysis of emerging critical topics and research in instructional design, technology innovation, implementation of innovation across higher education and K-12 environments as it relates to struggling learners, especially individuals with disabilities. The focus of the course is to contextualize issues in design, planning, development, implementation, and evaluation of technology as it aligns to the needs of struggling learners and their peers with identified disabilities. Topics will include Assistive Technology (AT), Instructional Technology (IT), Universal Design (UD), Universal Design for Learning (UDL), models of instructional design, usability, human-factors/performance measurement, blended and online learning (higher education /K-12), adoption/abandonment, outcome measures, Technological Pedagogical Content Knowledge (TPACK) and current trending topics related to research, teacher education, and implementation of IDT in higher education and K-12 education, again, as it applies to the relevant needs of struggling learners and their peers with disabilities. Students will be required to coordinate requirements with research & teaching competencies and outcomes of the special education doctoral program specific to the IDT specialization. Prerequisite: Admission to a doctoral program.

SPED 958. Advanced Research in Universal Design for Learning. 3 Credits.
As we understand more about the learning process, the more we recognize the importance of design. Simple modifications to the learning environment and the instructional process can shape whether learners access, process, and develop understandings within the experience. As future leaders, it is important for you to understand and continually reflect on how the design elements within your research, teaching, and service will impact learners. Universal Design for Learning (UDL) provides a basis for thinking about the use of design within the learning process. As a scientifically-based instructional framework, UDL is focused on supporting the variability that exists in all learners. UDL integrates proactive as well as iterative instructional design across goals, methods, materials, and assessments to support the development of expert learners. This course is designed to expand on the foundational knowledge of UDL to support an interdisciplinary understanding across various fields of study that engage in the framework's advancement. Learners will develop understanding surrounding the contemporary issues and topics facing UDL in research, development, and implementation. Prerequisite: Admission to a doctoral program.

SPED 959. Advanced Research and Analysis of Instructional Design and Technology for Diverse Learners. 3 Credits.
Covers four themes relative to instructional design and technology innovation research for students with disabilities and diverse learning needs: (1) understanding initial usability testing in design and development of innovations, (2) basic comprehension of research methodologies applicable to design and technology analysis, (3) expansion of usability testing and similar formats to the increasingly K-12 environments within and outside the traditional brick-and-mortar setting, and (4) applying knowledge to initial design and implementation of research. Prerequisite: Admission to a doctoral program.

SPED 960. Special Education Policy and Politics. 3 Credits.
This course is concerned with political struggles associated with the formation of special education law and policy and its implementation in schools and associated institutions. Using an interdisciplinary theoretical framework that views policy development historically and institutionally, it analyzes the formation and implementation of the Individuals with Disabilities Education Act from its origins in disability-focused social movements to its implementation in largely resistive school organizations. Prerequisite: SPED 950 or permission of instructor.

SPED 963. Self-Determination, Support Needs, and the Application of Positive Psychology to Disability. 3 Credits.
Practices pertaining to the third wave of the disability movement and the third generation of inclusive education emphasize strengths-based models that conceptualization disability not as a deficit within the person, but in the context of the gap between personal capacity and the demands of the environment. This course will provide students with in-depth instruction and reading pertaining to 21st century understandings of disability, how strengths-based positive psychology can contribute to the education of students with extensive and pervasive support needs, and how supports-paradigms and assessments (Supports Intensity Scale for Children) can be used to identify and provide needed supports to students with more extensive support needs. Because the aforementioned changing understandings of disability and a movement to a supports paradigm emphasizes the importance of promoting the self-determination of all students, including students with extensive and pervasive support needs, the second half of the course will provide a life span survey of the self-determination construct, examining evidence-based theories of the construct and their application to the education of students with disabilities; the importance of promoting self-determination to academic and transition-related outcomes, and roles of families and others in the development of self-determination. Prerequisite: Admission to a doctoral program.

SPED 964. Inclusion & Access to General Education Curriculum for Secondary Students w/Extensive Support Needs. 3 Credits.
IDEA requires that all students be involved with and progress in the general education curriculum. This course will build on the previous two courses in the specialization to overview supplementary aids and services, special education services, and related services necessary to ensure that students with extensive and pervasive support needs are provided instruction and are successful in the general education curriculum. The course will focus on the importance of inclusive education, and the role of universal design for learning in the education of students with significant cognitive disabilities. Prerequisite: Admission to a doctoral program.

SPED 965. College and Career Readiness for Students with Extensive and Pervasive Support Needs. 3 Credits.
School reform has emphasized college and career readiness for all students. This course will examine the application of College and Career Readiness (CCR) to students with extensive and pervasive support needs. Theory and research will be examined during this class focusing on methods, materials, and strategies to ensure a successful transition from secondary education to college or a career for students with significant cognitive disabilities. Three themes, reflecting improvement science, research and translation to practice, serve as foundations this course: (1) What is known about CCR from interdisciplinary theory and practice, (2) How do critical elements translate into successful translation for systems supporting students with significant disabilities, and (3) Is there consensus related to application of CCR theory and research for students with significant disabilities. Prerequisite: Admission to a doctoral program.

SPED 966. Issues Related to Serving Students with Intensive Support Needs. 3 Credits.
Course focuses broadly on current issues and trends in scientifically supported methods for identifying, assessing, and serving students with intensive support needs. Prerequisite: Admission to the Special Education doctoral program or instructor permission.
SPED 968. Evidence-Based Practices for Students with Intensive Academic, Behavior, and Social Support Needs. 3 Credits.
This course will focus on preventing the development of academic, behavior, and social challenges and responding effectively when challenges do occur. Course content will include the use of behavior and academic screening tools to detect and support students with and at risk for academic, behavior, and social challenges within comprehensive, integrated, three-tiered (CIST) models of prevention. In addition, students will learn about evidence-based strategies, practices, and programs for supporting students with and without identified disabilities for whom Tier 1 efforts are insufficient. Students will develop their abilities to analyze, synthesize, and apply research methods related to design, implementation, and evaluation of Tiers 1, 2, and 3. Students will be required to coordinate requirements with research and teaching competencies and outcomes of the special educational doctoral program. Prerequisite: Admission to a doctoral program or permission from the instructor.

SPED 971. Organization and Administration of Services for Children and Youth with Disabilities. 3 Credits.
This course is designed to prepare administrators and prospective administrators for organizing and administering educational programs for students with disabilities. Major topics include a review of current trends in special education, state and federal guidelines and regulations, legal and financing aspects of special education, program planning, and administration of special services. (Same as ELPS 959.) Prerequisite: Nine hours of education including educational psychology and SPED 725.

SPED 972. Issues and Trends in Special Education I. 2 Credits.
This course is designed to assist first-year special education doctoral students organize and synthesize a conceptual and substantive map of the field of special education and introduce them to corresponding faculty research interests and resources. Emphasis is placed on the academic writing expectations and resources of the field, university, and department, and on building a cohort of students to address common issues and to provide a foundation for peer support throughout the doctoral program. Prerequisite: Admission to special education doctoral program or permission of instructor.

SPED 975. Advanced Practicum with Children and Youth with Disabilities: ______. 1-10 Credits.
Advanced development of conceptual and practical field-based skills. Prerequisite: SPED 775.

SPED 980. Advanced Topics: ______. 1-3 Credits.
A special course of study to meet current needs of education professionals -- primarily for post-master’s level students.

SPED 981. Changing Complex Systems. 3 Credits.
This course is designed to provide students with an overview of seminal leadership and systems change literature. Prerequisite: Admission to doctoral program.

SPED 983. Research Funding and Proposal Development. 3 Credits.
This course is designed to teach a broad array of strategies associated with the development of successful proposals that will generate funds to support programmatic work. Among the topics covered in this course are sources of funding, strategies for conceptualizing and writing proposals, collaboration strategies, proposal peer-review process, and integrating proposal development activities into other professional responsibilities. Prerequisite: Admission to doctoral program and EPSY 710.

SPED 985. Naturalistic Research. 3 Credits.
This course is designed to develop skills in naturalistic or constructivist research, while situating it theoretically within the broader framework of modern and postmodern social inquiry, and exploring its social, political and ethical implications. The course develops students’ skills in using this form of interpretive qualitative research, provides a theoretical framework for selecting inquiry paradigms, compares and contrasts positivist and constructivist inquiry, and reviews social and political implications of constructivist inquiry. Prerequisite: Six hours of statistics, measurement, and/or large or small group research design.

SPED 990. Small Sample Empirical Research Methods. 3 Credits.
This course provides a detailed examination of research methods for advancing knowledge and validating hypothetically useful treatments in situations in which sufficient sample sizes to conduct formal experiments are lacking, the question of interest is better addressed by multiple observations of treatment effects over time, and/or the question is best addressed by taking a variety of observations of a single unit of interest. Specifically, two small sample research methods will be examined in depth with examples and practical application experience: interrupted time series design for small samples (“single case” design), and Yin’s empirical case study method. Prerequisite: Doctoral program admission or permission of instructor.

SPED 992. Seminar in Early Childhood/Intervention. 3 Credits.
This seminar examines research to support evidence-based practices that currently exist in the areas of early intervention and early childhood special education. The primary objective is to learn how to read and critically analyze studies that form the evidence base for several early intervention and early childhood special education practices. Primary goals of the class include the development of skills for evaluating research studies in early intervention and early childhood special education, and increasing knowledge of evidence-based practices in the early intervention literature. Prerequisite: Three courses in special education or permission of instructor.

SPED 993. Advanced Concepts, Issues, and Trends Single Case Research for Special Education. 3 Credits.
This course covers advanced concepts, issues, and trends in single case research. Topics include theoretical frameworks for single case, combining single case designs, observational measurement, rigor and outcomes analysis, and synthesis. Emerging statistical methods of analyzing single case experimental research are also covered. Prerequisite: SPED 990 or equivalent course.

SPED 995. Field Experience in: ______. 1-5 Credits.
Supervised and directed experiences in selected educational settings. Instructors conduct regular observations and conference with students. Written summaries and evaluations of field experiences are prepared independently by the student, a representative of the cooperating agency, and the instructor. Open only to advanced students and field experience credit in any one semester may not exceed five hours, and total credit may not exceed eight hours.

SPED 996. College Teaching Experience. 2 Credits.
This course is designed to prepare students for college teaching. Enrolled students shall engage in semester-long, planned, instruction that includes college classroom teaching under supervision. Planning shall be done with a member of the faculty who will supervise the experience.

SPED 997. Individual Study. 1-4 Credits.
Prerequisite: Prior graduate coursework in the area of study and consent of instructor.

SPED 998. Seminar in: ______. 1-4 Credits.

SPED 999. Doctoral Dissertation. 1-15 Credits.
Graded on a satisfactory progress/limited progress/no progress basis.
Undergraduate Certificate in KU Transition to Postsecondary Education

The mission of KU-Transition to Postsecondary Education (KU TPE) is to ensure that students with intellectual and developmental disability (ID/D) have the opportunity to participate in postsecondary education at the University of Kansas through fully inclusive academics, career development, and student life activities with fellow Jayhawks.

During the 2-year non-degree seeking program leading to the KU Transition to Postsecondary Education certificate students:

- take credit-bearing KU courses with needed accommodations and adaptations,
- participate in KU student clubs, organizations, and activities,
- have the option to live in KU Housing, and
- develop a career path including internships each semester.

To be considered for admission students must meet the following eligibility criteria:

- A documented intellectual disability - this can be determined by:
  - IEP
  - Physician's documentation
  - Social Security Administration documentation
  - Psychological evaluation summary
  - Vocational Rehabilitation documentation
  - Physician's documentation
- Student with significant support needs in both intellectual functioning and adaptive behavior
- Aged 18-25 years old
- Demonstrate skills in navigating community and school environments with a willingness to learn new modes of transportation
- Demonstrated level of unsupervised independence (2-4 hours) using appropriate supports with potential to increase independence over time
- Desire to gain skills and experiences in:
  - Academic and adult learning
  - Career development and employment
  - Self-determination
  - Adult roles and responsibilities
- Established competence and responsibility for medications and self-care
- Past experience with work-based learning (e.g., in-school, volunteering, and/or paid employment)
- Desire for obtaining integrated employment upon completion of the KU-TPE program

Please visit the KU-Transition to Postsecondary Education Program admissions page [http://tpe.ku.edu/application-process-and-deadlines/] for additional information.

- Students who pursue this certificate will be classified as non-degree undergraduates.
- The certificate is a 2-year program over 4 semesters. Students will be enrolled in a minimum of 6 credit hours each semester, and will take 4 required courses, with a minimum of 4 elective courses.
- Required courses: UNIV 101, EPSY 310, a Health & Wellness course and a Communications course as well as a career internship course each semester that align with student interest and identified career pathway.
- Elective courses: Specific KU coursework will be identified for enrollment that aligns with student interest and identified career interests.
- Students will participate in career development (C&T 175) for one semester and work-based learning internships (C&T 220) for three semesters. Internships are supervised by KU TPE staff and are on the KU Lawrence campus or within the Lawrence community.

Master of Science in Education in Special Education

The Department of Special Education offers graduate online and campus based education for students interested in teaching, research, and professional service related to infants, toddlers, children, adolescents, and adults with low and high incidence disabilities and their families. Since the 1970s, the department has received national and international recognition. The faculty is known for its leadership to the field, commitment to high-quality inclusive learning and development opportunities for children and youth with low and high incidence disabilities, innovative field-based research, and preparation of highly effective educators. The annual U.S. News and World Report graduate program survey consistently ranks KU’s Department of Special Education at the top when compared to more than 200 graduate programs in this field. As one of the most comprehensive special educator preparation programs in the country, the department attracts students from many states and countries.

Programs Offered:

Students may pursue a master's degree in one of 5 areas:

- Autism Spectrum Disorder (online)
- Early Childhood Unified (ECU, birth through kindergarten) (campus-Lawrence and Edwards)
- High-incidence Disabilities (online)
- Low-incidence Disabilities (campus-Lawrence)
- Secondary Transition Education and Services (online)

</tr>
</tbody>
</table>
**Application checklist:**

- Current resume or Curriculum Vitae (CV)
- Proof of English proficiency (https://graduate.ku.edu/english-proficiency-requirements/) (for non-native English-speaking applicants)

In Kansas to become a special educator in high or low incidence, one must first obtain an initial teaching license in: Early Childhood Unified, Elementary Education, Elementary Education Unified, or Secondary Education.

Students seeking initial licensure or an endorsement in a state other than Kansas may find different eligibility requirements in their state. Therefore, students are encouraged to review their individual state licensure requirements with the appropriate licensing or regulatory authorities prior to enrolling in our various licensure/endorsement programs to ensure whether our coursework complies with individual state requirements.

**Graduate Admission to the School of Education and Human Sciences**

Graduate programs in education are open to students with acceptable baccalaureate and graduate degrees whose academic records indicate that they can do successful work at the graduate level. Applicants must provide evidence of ability to work successfully at the graduate level, including experience in and commitment to the profession.

Each department in the School of Education and Human Sciences sets its own application deadlines and admission criteria. Prospective graduate students should contact the appropriate department for more information.

See Admission in the Graduate Studies (p. 2449) section of the online catalog for more information.

**Master of Science in Education - Special Education Admission Information:**

Applicants must have a bachelor’s degree (or equivalent) with at least a 2.5 grade point average on a 4.0 scale from a regionally accredited institution or a foreign university with substantially equivalent bachelor’s degree requirements.

Meeting minimum admission standards does not guarantee admission to the program. Other factors considered by the committee include: strength of the letter of application; strength of the letters of recommendation; quality of previous experience and background in special education or a closely related discipline; availability of an appropriate advisor in the applicant’s identified area of emphasis; and the fit between the applicant’s professional and graduate program goals and the purpose and mission of the KU.

**Application checklist:**

- Online Application
- Official transcript of completed bachelor’s degree from accredited university
- Letter of introduction stating your area of interest and licensure status as applicable
- Name, email and position for three professional references

Please read the full policy and acceptable proof of proficiency options on our policy page (https://policy.ku.edu/graduate-studies/english-proficiency-international-students/). Additional information can be found here (https://gradapply.ku.edu/english-requirements/).
High-Incidence Disabilities (campus)

The Department of Special Education (http://specialedu.soe.ku.edu/) is currently accepting applications for graduate admission to the on-campus Master's in High Incidence Disabilities. Individuals interested in the fully online Master's in High Incidence Disabilities offered at KU can learn more below in our online MSE programs.

Low-Incidence Disabilities Curriculum (campus)

Low-Incidence Master's Requirements including Low Incidence Endorsement

**Master's Project or Thesis to be completed in your last semester of the program.**

**Master's Thesis or Project Option:**

To complete a Master's degree in Special Education (M.S.E.), students must have a total of 30 credit hours. Within these 30 credit hours a majority of the hours must be taken in Special Education. In addition, students must also enroll in 3 credit hours of either Master's Project and 3 credit hours of EPSY 715.

One of the following courses to complete the Master's Thesis or Project Option:

**Written Exam Option:**

Students complete 36 credit hours of graduate coursework, a majority of the hours in Special Education and a written comprehensive exam. Students must be enrolled in graduate credit hours the semester they complete the exam, typically during the final semester. This option is only available with approval from your advisor.

**Master of Science in Education (M.S.E) - On-line**

The Special Education online graduate programs, with Master's and endorsement-only options, equips students to meet the challenges of being a special educator by building skills to assist both at-risk students and those with identified disabilities.

Graduates are employed as general educators, special educators, or consultants in a wide range of settings. Many complete course work required for the Kansas educational license or endorsements. Some students from related fields (e.g., speech therapists, occupational therapist, social workers) pursue this degree to expand their professional
knowledge and skills for working in educational settings with children and youth with disabilities. These students may choose to complete a master's and not complete Kansas endorsement/licensure requirements.

The degree requires courses in the area of study (plus any endorsement-related courses); a research class; and completion of a project.

For degree seeking students, maintaining a minimum cumulative grade point average (GPA) of 3.0 or higher is required. A minimum cumulative grade point average (GPA) of 3.0 or higher is required to remain in good academic standing and in order to graduate.

Further information can be found in the Graduate Regulations (https://catalog.ku.edu/education/#graduateregulationstext) section of the catalog.

The Department of Special Education (SPED) online (Autism, Transition and High Incidence) MSE programs are comprised of rigorous eight week courses. A majority of the work is completed asynchronously, meaning that it does not happen "live." Courses are generally eight weeks long (2 courses per a typical semester) and typically contain multiple milestones throughout the course. Students are expected to follow the course modules in order, submit assignments on time, and participate in online discussions with classmates. Potential students must ensure that they are prepared to be successful. Online coursework will require approximately 15-20 hours of undivided attention per week (including readings, online discussions, individual projects, etc.). Consistent access to high speed internet services (basic broadband - 1Mbps) and a personal computer that features Office 2016 or equivalent will be necessary. A tablet or mobile device (i.e., smartphone) will not be sufficient as a primary computer or primary means of accessing the Internet for the online coursework.

**Program Tracks:**

Students will complete three (3) elective courses from a single elective track for their program of study. There are three tracks to choose from: the Behavior track, the Leadership track and the Secondary/Transition track. Courses for each track will be determined in consultation with your advisor.

This program is not designed to lead to licensure in Kansas, but coursework may be used toward licensure in another state. Please check with the state licensing board for further information.

Doctor of Philosophy in Special Education

Special Education Doctoral Program

The mission of the doctoral program in special education is to prepare civicly-committed scholars who, through rigorous and relevant research and transformational interventions, address significant educational and social problems in ways that advance education, social policy, research, care giving, and public service to enhance the quality of life of persons of all ages with (dis)abilities and their families. Program students and graduates rely on interdisciplinary theoretical knowledge and the full range of methodological approaches to engage, influence, and transform educational and social institutions and their practices to promote learning, equal opportunity, full participation, independent living, and economic self-sufficiency.

Program graduates are highly-competent, socially-committed educational researchers, leaders, and teacher educators engaged in the design, development, and/or use of educational and social interventions that result in transformational outcomes. Graduates are scholars who steward the profession, working across disciplinary boundaries to address the educational and social challenges of the 21st century. Moreover, as civic professionals, they also engage in stewardship with their communities.

Our graduates are scholars who recognize that resolving the great social and education challenges we face requires a sense of collective social purpose among the professions, and that the professions’ greatest responsibility is to the people most affected.

The specific principles that define how students will be engaged in learning build upon the idea that doctoral education is a complex process of formation emphasizing development of scholars’ professional identity in all its dimensions, including their recognition of the role the discipline and its scholars are to play in academe and in society. Because such a professional identity requires students to play an active role in its development, the doctoral program is premised on four instructional principles: (a) problem-centered learning focusing on the formulation of significant research questions and specification of corresponding methods of inquiry; (b) apprenticeship with multiple mentors involving intentionality, collective responsibility, recognition, respect, trust, and reciprocity; (c) creating and sustaining a safe and engaging intellectual community/culture in which students feel support among themselves and in collegial relations with faculty; and (d) scholarly integration in which the teaching and research mission of the department and faculty is closely linked.

Every year the doctoral program accepts a cohort of students from throughout the world. Each cohort consists of students with diverse interests and career goals. Underlying this cohort design are weekly seminars, various research and teaching experiences, and an interrelated specialization structure. Each doctoral student chooses an area of specialization and potentially a related area of interest outside the specialization and the department as a cognate. Currently, our program has the following areas of specialization:

- Disability and Diversity in School and Society
- Early Childhood Unified (Blending of Early Childhood and Early Childhood Special Education)
- Evidence-based Practices: Supporting Students with Intensive Interventions Needs in Tiered Systems
- Instructional Design, Technology, and Innovation
- Special Education Policy and Systems Studies

Doctor of Education in Special Education

Doctor of Education in Special Education

The Department of Special Education is not accepting students for the Ed.D. at this time.

The Department of Special Education is not accepting students for the Ed.D. at this time.

The Department of Special Education is not accepting students for the Ed.D. at this time.

Ed.D. Degree Program

The doctoral degree program encourages and supports students working with faculty in cutting-edge research and development related to effective education in the field of disabilities. The Ph.D. and Ed.D. programs are similar, but serve different needs for special educators seeking advanced knowledge and leadership skills. Both degrees require intensive and rigorous study in special education foundations, disability issues, curriculum, teaching, program development, and research. The Graduate Record Examination is required for admission.

Doctor of Education

This degree is designed for master special educators who seek leadership positions in public school and other agencies related to program leadership, administration, development, and evaluation. Students complete a sequence of courses emphasizing applied research knowledge and skills. Specific core and research courses for the Ed.D. are required. In addition to the special education and research skills cores, students complete a structured, supervised field internship and designated hours in one of the doctoral program’s areas of specialization, and a dissertation.

Note: Contact your department or program for more information about research skills and responsible scholarship, and the current requirements for doctoral students. Current Lawrence and Edwards Campus policies on Doctoral Research Skills and Responsible Scholarship (http://policy.ku.edu/graduate-studies/doctoral-research-skills-requirement/) are listed in the KU Policy Library.

Doctor of Philosophy in Special Education

- Strengths Based, Inclusive Education: Adolescents with Extensive and Pervasive Support Needs

Graduate Admission to the School of Education and Human Sciences

Graduate programs in education are open to students with acceptable baccalaureate and graduate degrees whose academic records indicate that they can do successful work at the graduate level. Applicants must provide evidence of ability to work successfully at the graduate level, including experience in and commitment to the profession.

Each department in the School of Education and Human Sciences sets its own application deadlines and admission criteria. Prospective graduate students should contact the appropriate department for more information.

See Admission in the Graduate Studies (p. 2449) section of the online catalog for more information.

Admission to Ph.D. in Special Education at KU

Individuals applying to the Ph.D. in Special Education at the University of Kansas must have relevant professional training, usually represented by undergraduate and graduate degrees in special and/or general education or a related field. Applicants are usually expected to have at least three years of professional experience teaching in public schools or related work in agencies that serve individuals with disabilities. Both formal education and experience in the field help to demonstrate the foundational knowledge necessary to develop expertise in special education.

Applicants are strongly advised to establish a dialogue with one (or more) faculty members in the preferred specialization area prior to applying for the doctoral program. The purpose of the dialogue is to understand how scholarship interests align and/or intersect with departmental faculty, and to ensure the specialization focus aligns with the student’s interests and skills. Meeting with faculty will help identify a good match between a student and the specialization advisor with whom they may wish to study. This dialogue is critical to inform students about various social, academic, and teaching aspects of the doctoral experience that will complement their development as a scholar. Communicating with specialization faculty prior to submitting the application is strongly recommended and is considered vital to the department admissions process.

Admission Process Components

Doctoral program applications are only reviewed for fall admission. Application materials will continue to be accepted based on available space and funding. After the Admission Committee has reviewed applications, applicants who are identified as a finalist will be invited to interview sometime in late January or early February.

On-line Application Process: (https://specialedu.ku.edu/admission/)

- On-line Application
- Letter of Introduction
- Professional Resume/Curriculum Vitae (CV)
- Transcripts (Bachelor's and Master's degree conferral)
- Documentation of English Proficiency for non-native English speakers

Applicants who are non-native speakers of English must demonstrate English proficiency (https://gradapply.ku.edu/english-requirements/) in the skill areas of reading, writing, and listening. Please read the full policy and acceptable proof of proficiency options on our policy page (https://policy.ku.edu/graduate-studies/english-proficiency-international-students/?num=1.5). To forward exam scores electronically, the University code is 6871 and the Department code is 85

- Letters of Recommendation
- Academic Professional Work Samples (3)

The application requires three professional work samples, with two of these samples being scholarly writing (e.g., academic papers, published journal articles). The third professional work sample is of the applicant’s choosing; either another written sample or a multimedia-based submission of professional experience (e.g., video link of applicant teaching, video of applicant conducting professional development, the applicant’s professional website, etc.).

Students are encouraged to submit application packages in advance of deadlines. Until all components of the application package (on-line application submitted and fee paid, letter of introduction, resume or CV, official GRE report (if requested), all transcripts, letters of recommendation, professional work samples) are received, the application will not be reviewed by the Special Education Department Admissions Committee. Only completed application packages received by the deadline will be considered.

Official GRE Exam Results

The GRE exam is NOT required but can be requested to be considered for admission to the Department of Special Education as a doctoral student. Request GRE scores to be submitted by Educational Testing Service as stated: for electronic submission (ETS), the Institution Code for KU is 6871 and the Department Code is 3705. Students that have an official copy of their GRE exam results, should upload a copy when applying online under “Misc documents”. The Admission Committee can use unofficial copies of the exam results for reviewing applications if GRE scores were requested. Official scores must be submitted if the applicant is recommended for admission and scores were submitted with the application.

Ph.D. Degree Program

The doctoral degree program encourages and supports students to work with faculty on cutting-edge research and development related to address significant educational and social problems that advance education, social policy, and research in the field of disabilities. The degree requires intensive and rigorous study in educational foundations, disability issues, special education, organizational and individual change, curriculum, teaching, program development, and research.

The KU Department of Special Education doctoral program is designed to provide students with learning opportunities and practical experiences in research, teaching, and service. These experiences occur in consultation with your advisor and are reflective of your funding expectations (if applicable).

Doctor of Philosophy

This is a full-time research degree. Graduates are prepared for roles as university faculty members, researchers, or policy analysts. Specific core and research skills for the Ph.D. are required. In the first 3 years of the program, students typically take 3 courses per fall and spring semester. In the summer enrollment in 1 course is optional and contingent on
funding and determined with your advisor. This is followed by work on the dissertation. In addition to the special education cores, students complete course work in a specialization area, 15 hours of Research Skills (or 18 hours if pursuing the Minor in Research and with the discretion of the specialization area or advisor), and a dissertation based on original research.

Students are reviewed annually starting with a Probationary Review, then a Second Year Review, Comprehensive Exam, Dissertation Proposal, and the final Dissertation Defense. Examples of annual review requirements are outlined in the department Ph.D. handbook. Doctoral students must maintain a 3.0 cumulative GPA.

Minimum hours for the program are 72.

• Research skills require 15 credit hours of research methods courses.
• Students may select to fulfill a research minor by completing an additional 3 credit hours of research.
• Responsible Conduct of Research is satisfied with EDUC 800.
• College Teaching Experience: We require one teaching experience where students teach a college course at KU and an experience such as a teaching activity in a different modality than the college course taught, or a mentorship activity of other students. Students may enroll in SPED 996 College Teaching Experience (optional), or SPED 995 Field Experience as determined with your advisor.
• Research Internship Experience: We require at least one research internship where activity is up to the equivalent of 3 credit hours. This is planned with your advisor. This experience typically results in products such as a poster for presentation at a national convention, a paper for use in the comprehensive examination portfolio or for submission to a professional journal. It is at the discretion of the student and advisor to determine if student enrolls in credit hours for this internship. The research internship may be used to complete the research proposal and the research project for the Second Year review.
• Service Experience. Students will complete at least one service experience determined by the student and their advisor, in each level: National/International, State/Local, and University
• Students will enroll in department pool courses for a minimum of 6 credit hours. Courses are selected in consultation with your advisor.
• Students are required to enroll in 9 credit hours of Specialization Seminars
• Comprehensive Exam: The comprehensive examination is your gateway to doctoral candidacy and usually occurs in the spring of your third year. The exam includes written and oral components, both designed to permit you to demonstrate mastery of curricular content, scholarly and leadership aptitude, and higher order analytical thinking. The student passes the comprehensive examination if a majority of the official examining committee members (including the chair, your advisor) finds the portfolio meets or exceeds expectations and the student’s oral defense was adequate or excellent. If a student’s oral components are inadequate as determined by the majority of the committee, another oral defense may be permitted if a majority of members agree; the oral defense may not be attempted more than three times. The student may not repeat the oral examination until at least 90 days have elapsed since the last unsuccessful attempt.
• Dissertation proposals will vary depending on the format chosen for the dissertation. Details on what needs to be in the proposal are outlined in the in the department PhD handbook. You are eligible to hold your dissertation proposal at least one week after successfully completing the Comprehensive Exam. The dissertation proposal meeting is not a formal milestone meeting and the purpose is to come to consensus on a student’s dissertation research. Following approval of the proposal, you may begin the formal dissertation work.
• Dissertation enrollment: After passing the comprehensive examination, the candidate must be continuously enrolled until the degree is completed. A student must be continuously enrolled in accordance with the following schedule: Until the degree is completed or until 18 post-comprehensive hours have been completed (whichever comes first), the student must enroll for at least 6 hours a semester (fall and spring). Students who have not completed the degree after completing 18 hours of post-comprehensive enrollment must continue to enroll for the amount of credit that best reflects their demands on faculty time and university resources each semester until they pass the final oral examination. Typically PhD students who have completed their 18 hours of dissertation, enroll in 1 hour per term (fall and spring) until they are done.
• Dissertations are either a traditional five-chapter format or a three-study dissertation structured with an introductory and culminating chapter, with the literature review and/or dissertation study findings presented in at least two additional chapters that, individually, are formatted in journal article format. The dissertation defense (“doctorate final exam”) includes the full written dissertation and the oral defense. Additional details are outlined in the in the department PhD handbook. Completion of the dissertation is the final academic phase of a doctoral program, culminating in the final oral examination and defense of the dissertation. Seven days prior to the defense date, all committee members complete a rubric to score the written defense product. At least 3 of 5 members must rate all 6 dissertation components as acceptable or above for the defense to move forward.

Dissertation honors may be conveyed if the mean of the committee scores for both the written rubric (24 points) and the oral rubric (8 points) is 30 points or higher. Total points achieved across all rubrics scored by the voting members will be added up and divided by the same number of voting members.

For every scheduled final oral examination, the department reports to the Graduate Division a grade of Honors, Satisfactory, or Unsatisfactory for the candidate’s performance. If an Unsatisfactory grade is reported, the candidate may be allowed to repeat the examination on the recommendation of the department.

In all but the rarest cases, tentative approval of the written dissertation is followed promptly by the final oral examination. When the completed dissertation has been accepted by the committee in final draft form and all other degree requirements have been satisfied doctoral candidates may submit their dissertation to the graduate school.

Summer enrollment in dissertation hours is required only when students intend to complete major milestones (i.e. comprehensive examination, proposal meeting, dissertation defense) or require significant faculty time in the summer.

Specific examples of Teaching, Research and Service experience requirements are outlined in the in the department PhD handbook.

Graduate Certificate in Autism Spectrum Disorder

Autism Spectrum Disorder Graduate Certificate

The online Graduate Certificate in Autism Spectrum Disorder has a focused curriculum designed to prepare graduates to address the needs of children and youth with autism spectrum disorder.

This certificate program provides critical knowledge and practical skills to help address social, behavioral, academic, and communication skills development. Students complete a four-course sequence in addition to a field observation course.

In order to be admitted to the online graduate certificate, a Bachelor’s degree is required.

This program WILL NOT lead to any initial teacher licensure/certification or endorsement for the state of KS. State-by-state requirements vary. Completion of a graduate certificate is not a guarantee of licensure or endorsement of any kind. It is each student’s responsibility to determine the licensure and endorsement requirements in his or her state and to apply for the licenses or endorsements necessary for his or her career goals.

The Department of Special Education online programs are comprised of rigorous eight week courses. A majority of the work is completed asynchronously, meaning that it does not happen “live.” Courses are eight weeks long (2 courses per a typical semester) and typically contain multiple milestones throughout the course. Students are expected to follow the course modules in order, submit assignments on time, and participate in online discussions with classmates. Potential students must ensure that they are prepared to be successful. Online coursework will require approximately 15-20 hours of undivided attention per week (including readings, online discussions, individual projects, etc.). Consistent access to high speed internet services (basic broadband-1Mbps) and a personal computer that features Office 2016 or equivalent will be necessary. A tablet or mobile device (i.e., smartphone) will not be sufficient as a primary computer or primary means of accessing the Internet for the online coursework.

Graduate Admission to the School of Education and Human Sciences

Graduate programs in education are open to students with acceptable baccalaureate and graduate degrees whose academic records indicate that they can do successful work at the graduate level. Applicants must provide evidence of ability to work successfully at the graduate level, including experience in and commitment to the profession.

Each department in the School of Education and Human Sciences sets its own application deadlines and admission criteria. Prospective graduate students should contact the appropriate department for more information.

See Admission in the Graduate Studies (p. 2449) section of the online catalog for more information.

Applicants must have a bachelor’s degree (or equivalent) with at least a 2.5 grade point average on a 4.0 scale from a regionally accredited institution or a foreign university with substantially equivalent bachelor’s degree requirements.

Meeting minimum admission standards does not guarantee admission to the program. Other factors considered by the committee include: strength of the letter of application; strength of the letters of recommendation; quality of previous experience and background in special education or a closely related discipline; availability of an appropriate advisor in the applicant’s identified area of emphasis; and the fit between the applicant’s professional and graduate program goals and the purpose and mission of the KU.

Application checklist:

- Online Application*
- Official transcript of completed bachelor’s degree from accredited university
- Letter of introduction stating your area of interest and licensure status as applicable
- Name, email and position for three professional references
- Current resume or Curriculum Vitae (CV)
- Proof of English proficiency (https://graduate.ku.edu/english-proficiency-requirements) (for non-native English-speaking applicants)

Applicants who are non-native speakers of English must demonstrate English proficiency in the skill areas of reading, writing, and listening. Please read the full policy and acceptable proof of proficiency options on our policy page (https://policy.ku.edu/graduate-studies/english-proficiency-international-students/). Additional information can be found here (https://gradapply.ku.edu/english-requirements/).

*Students that are admitted and currently active (not graduated) in a special education master’s program may add a certificate program to their student record without completing the online application, subject to current faculty advisor and graduate certificate program coordinator approval. Please contact your advisor for more information.

The 13-credit hours required for the online Autism Certificate program include:
Applicants must have a bachelor's degree (or equivalent) with at least a 2.5 grade point average on a 4.0 scale from a regionally accredited institution or a foreign university with substantially equivalent bachelor's degree requirements.

**Graduate Certificate in Interdisciplinary Early Intervention**

The Interdisciplinary Early Intervention Certificate (IEI) program will focus on preparing practitioners (e.g., speech-language pathologists, early childhood special education) to meet the developmental and early education needs of young children (birth-3 years old) with developmental delays or disabilities and those children considered at risk for developmental delays or disabilities and their families. This is a four course, face-to-face, graduate certificate program with 2 required courses and electives selected from other related areas. As an interdisciplinary program, the focus is on interdisciplinary early intervention in natural and inclusive settings. Special attention is paid to the provision of culturally and linguistically appropriate, family-centered supports. 11-12 credit hours are required to complete the certificate. This program is open to individuals from a variety of backgrounds and experiences who are interested in the field of early intervention.

This program WILL NOT lead to any initial teacher licensure/certification or endorsement for the state of Kansas. State-by-state requirements vary. Completion of a graduate certificate is not a guarantee of licensure or endorsement of any kind. It is each student’s responsibility to determine the licensure and endorsement requirements in his or her state and to apply for the licenses or endorsements necessary for his or her career goals.

**Graduate Admission to the School of Education and Human Sciences**

Graduate programs in education are open to students with acceptable baccalaureate and graduate degrees whose academic records indicate that they can do successful work at the graduate level. Applicants must provide evidence of ability to work successfully at the graduate level, including experience in and commitment to the profession.

Each department in the School of Education and Human Sciences sets its own application deadlines and admission criteria. Prospective graduate students should contact the appropriate department for more information.

See Admission in the Graduate Studies (p. 2449) section of the online catalog for more information.

Applicants must have a bachelor’s degree (or equivalent) with at least a 2.5 grade point average on a 4.0 scale from a regionally accredited institution or a foreign university with substantially equivalent bachelor’s degree requirements.

Meeting minimum admission standards does not guarantee admission to the program. Additional information can be found in the graduate regulations (https://catalog.ku.edu/education/#graduateregulationstext) section of the catalog.

**Graduate Certificate in Leadership in Special and Inclusive Education**

The Leadership in Special & Inclusive Education Graduate Certificate program helps position educators, leaders, and advocates to lead change and innovation in special education. The certificate grounds leaders in special education policy and law, while exploring advancements in systems change, research, and policy implementation. Graduates will gain a deep understanding of inclusive leadership and methods for reform. Further, they will be prepared to lead and influence systems change in a variety of state, district, and/or school settings.

This certificate program prepares graduates to advance the rights of all students and confront biases about individuals and groups, including how those translate into identification and categorization of students. Program students will learn to identify and overcome the challenges of translating special education policies into socially just practice. The certificate requires completion of 4 specific courses.

In order to be admitted to the online graduate certificate, a Bachelor’s degree is required.

This program WILL NOT lead to any initial teacher licensure/certification or endorsement for the state of Kansas. State-by-state requirements vary. Completion of a graduate certificate is not a guarantee of licensure or endorsement of any kind. It is each student’s responsibility to determine the licensure and endorsement requirements in his or her state and to apply for the licenses or endorsements necessary for his or her career goals.

Courses are to be taken in order.
A minimum cumulative grade point average (GPA) of 3.0 or higher is required to remain in good academic standing and in order to graduate.

Additional information can be found in the graduate regulations (https://catalog.ku.edu/education/#graduateregulationstext) section of the catalog.

### Graduate Certificate in Licensure Endorsement in Early Childhood Unified (birth-k) (KS)

**Graduate Certificate in Licensure Endorsement in Early Childhood Unified (birth-k) (KS)**

The graduate certificate in Early Childhood Unified (ECU) - (birth through kindergarten) at the University of Kansas blends knowledge and skills in early childhood education and early childhood special education thus preparing the early childhood educator to appropriately address the learning and development of each and every child, birth through kindergarten, including those at-risk for and with developmental delays and disabilities. Graduates/completers of the full set of courses, practicum experiences, and the appropriate state PRAXIS and performance exams are eligible to apply for Kansas Early Childhood Unified (birth through kindergarten) teaching license.

In order to be admitted to the graduate certificate, a Bachelor’s degree is required. The degree should be in a related area, or application materials must demonstrate experience working with young children.

### Graduate Admission to the School of Education and Human Sciences

Graduate programs in education are open to students with acceptable baccalaureate and graduate degrees whose academic records indicate that they can do successful work at the graduate level. Applicants must provide evidence of ability to work successfully at the graduate level, including experience in and commitment to the profession.

Each department in the School of Education and Human Sciences sets its own application deadlines and admission criteria. Prospective graduate students should contact the appropriate department for more information.

See Admission in the Graduate Studies (p. 2449) section of the online catalog for more information.

Applicants must have a bachelor’s degree (or equivalent) with at least a 2.5 grade point average on a 4.0 scale from a regionally accredited institution or a foreign university with substantially equivalent bachelor’s degree requirements.

Meeting minimum admission standards does not guarantee admission to the program. Other factors considered by the committee include: strength of the letter of application; strength of the letters of recommendation; quality of previous experience and background in special education or a closely related discipline; availability of an appropriate advisor in the applicant’s identified area of emphasis; and the fit between the applicant’s professional and graduate program goals and the purpose and mission of the KU.

Application checklist:

- Online Application*
- Official transcript of completed bachelor's degree from accredited university
- Letter of introduction (https://educationonline.ku.edu/documents/SPED-IntroLetter.pdf) stating your area of interest and licensure status as applicable
- Name, email and position for two professional references
- Current resume or Curriculum Vitae (CV)
- Proof of English proficiency (https://graduate.ku.edu/english-proficiency-requirements/) (for non-native English-speaking applicants)

Applicants who are non-native speakers of English must demonstrate English proficiency in the skill areas of reading, writing, and listening. Please read the full policy and acceptable proof of proficiency options on our policy page (https://policy.ku.edu/graduate-studies/english-proficiency-international-students/). (http://graduate.ku.edu/english-proficiency-requirements/) Additional information can be found here (https://gradapply.ku.edu/english-requirements/).

*Students that are admitted and currently active (not graduated) in a special education master’s program may add a certificate program to their student record without completing the online application, subject to current faculty advisor and graduate certificate program coordinator approval. Please contact your advisor for more information.

Graduate Certificate in Low Incidence Disabilities Endorsement (KS)

Graduate Certificate in Low Incidence Disabilities Endorsement (KS)

The Graduate Certificate in Low Incidence Disabilities Endorsement (KS) program prepares educators to meet the educational needs of the students with a significant intellectual disability or with multiple disabilities, including cognitive, sensory & physical impairments.

The graduate certificate in low incidence disabilities at the University of Kansas provides graduate preparation focused on meeting the educational needs of students with significant intellectual disability and students with multiple disabilities, including students on the autism spectrum with concurrent cognitive, sensory, and/or physical impairments.

The program prepares students to add a low-incidence disabilities endorsement to your existing Kansas license. State-by-state requirements vary and it is the students’ responsibility to verify with their employer and/or home state department of education as to whether this program will meet their needs/requirements.

Graduate Admission to the School of Education and Human Sciences

**SPED 730 or equivalent is required to be admitted to the certificate program. If equivalency is not demonstrated, SPED 730 will be added to applicants program plan. A minimum cumulative grade point average (GPA) of 3.0 or higher is required to remain in good academic standing and in order to graduate. Additional information can be found in the graduate regulations (p. 158) section of this catalog.
Graduate Certificate in Transition

Transition Graduate Certificate

Designed to be completed in as little as one year, the online Graduate Certificate in Secondary Special Education and Transition Services provides graduates with knowledge in evidence-based practices to improve the post-secondary outcomes of youth with disabilities.

In order to be admitted to the online graduate certificate, a Bachelor's degree is required.

This program WILL NOT lead to any initial teacher licensure/certification or endorsement for the state of KS. State-by-state requirements vary. Completion of a graduate certificate is not a guarantee of licensure or endorsement of any kind. It is each student's responsibility to determine the licensure and endorsement requirements in his or her state and to apply for the licenses or endorsements necessary for his or her career goals.

The Department of Special Education online programs are comprised of rigorous eight week courses. A majority of the work is completed asynchronously, meaning that it does not happen “live.” Courses are eight weeks long (2 courses per a typical semester) and typically contain multiple milestones throughout the course. Students are expected to follow the course modules in order, submit assignments on time, and participate in online discussions with classmates. Potential students must ensure that they are prepared to be successful. Online coursework will require approximately 15 - 20 hours of undivided attention per week (including readings, online discussions, individual projects, etc.). Students need to have consistent access to high speed internet services (basic broadband 1Mbps) and a personal computer that features Office 2016 or equivalent will be necessary. A tablet or mobile device (i.e., smartphone) will not be sufficient as a primary computer or primary means of accessing the Internet for the online coursework.

Graduate Admission to the School of Education and Human Sciences

Graduate programs in education are open to students with acceptable baccalaureate and graduate degrees whose academic records indicate that they can do successful work at the graduate level. Applicants must provide evidence of ability to work successfully at the graduate level, including experience in and commitment to the profession.

Each department in the School of Education and Human Sciences sets its own application deadlines and admission criteria. Prospective graduate students should contact the appropriate department for more information.

See Admission in the Graduate Studies (p. 2449) section of the online catalog for more information.

Applicants must have a bachelor's degree (or equivalent) with at least a 2.5 grade point average on a 4.0 scale from a regionally accredited institution or a foreign university with substantially equivalent bachelor’s degree requirements.

Meeting minimum admission standards does not guarantee admission to the program. Other factors considered by the committee include: strength of the letter of application; strength of the letters of recommendation; quality of previous experience and background in special education or a closely related discipline; availability of an appropriate advisor in the applicant's identified area of emphasis; and the fit between the applicant's professional and graduate program goals and the purpose and mission of the KU.

Application checklist:

- Online Application*
- Official transcript of completed bachelor's degree from accredited university
- Letter of introduction stating your area of interest and licensure status
- Name, email and position for three professional references
- Current resume or Curriculum Vitae (CV)
- Proof of English proficiency (https://graduate.ku.edu/english-proficiency-requirements/) (for non-native English-speaking applicants)

Applicants who are non-native speakers of English must demonstrate English proficiency in the skill areas of reading, writing, and listening. Please read the full policy and acceptable proof of proficiency options on our policy page (https://policy.ku.edu/graduate-studies/english-proficiency-international-students/). Additional information can be found (https://policy.ku.edu/graduate-studies/english-proficiency-international-students/) here (https://gradapply.ku.edu/english-requirements/)

*Students that are admitted and currently active (not graduated) in a special education master’s program may add a certificate program to their student record without completing the online application, subject to current faculty advisor and graduate certificate program coordinator approval. Please contact your advisor for more information.

Facilities
Engineering faculty members and graduate students are major users of the facilities and services of many research laboratories and centers across campus and among our research partners at other universities:
- Biotechnology Innovation and Optimization Center (https://biocenter.ku.edu/)
- Center for Environmentally Beneficial Catalysis (http://cebc.ku.edu/)
- Center for Remote Sensing of Ice Sheets (https://crises.ku.edu/)
- Energy Council (http://www.kgs.ku.edu/ERC/)
- Higuchi Biosciences Center (http://www.hbc.ku.edu/)
- Information and Telecommunication Technology Center (http://www.ittc.ku.edu/)
  - Bioinformatics and Computational Life Sciences Laboratory
  - Communications and Networking Systems Laboratory
  - Computer Systems Design Laboratory
  - e-Learning Design Laboratory
  - Intelligent Systems Laboratory
  - Radar Systems and Remote Sensing Laboratory
- Institute for Bioengineering Research (https://berc.ku.edu/)
- Institute for Policy and Social Research (http://www.ipsr.ku.edu/)
- Tertiary Oil Recovery Project (https://torp.ku.edu/)
- Kansas Biological Survey (https://biosurvey.ku.edu/)
- Kansas Geological Survey (http://www.kgs.ku.edu/)

Undergraduate Programs
The school offers 11 undergraduate degree programs:
- Aerospace engineering (p. 389)
- Architectural engineering (p. 438)
- Chemical engineering (p. 418)
- Civil engineering (p. 438)
- Computer engineering (p. 470)
- Computer science (p. 470)
- Electrical engineering (p. 470)
- Engineering physics (p. 513)
- Interdisciplinary computing (p. 470)
- Mechanical engineering (p. 519)
- Petroleum engineering (p. 418)

Our Bachelor of Science degree programs in aerospace engineering, architectural engineering, chemical engineering, civil engineering, computer engineering, electrical engineering, engineering physics, mechanical engineering and petroleum engineering are accredited by the Engineering Accreditation Commission of ABET, http://www.abet.org (http://www.abet.org/). The Bachelor of Science degree programs in computer science and information technology undergraduate programs are accredited by the Computing Accreditation Commission of ABET, http://www.abet.org (http://www.abet.org/).

High School Preparation
Preparation for an engineering career begins in high school with basic mathematics and science courses. Prospective engineering students should take mathematics through at least trigonometry and at least one year of both chemistry and physics. A well-rounded background in English, history, economics, and social studies, preferably with some computer operations and programming and advanced mathematics,

Introduction
From communication systems to bridges, from satellites to manufacturing - society depend on engineers. A KU engineering education helps students understand technical principles and the background behind them and prepares them for the changes ahead. Most graduates assume responsible positions in business, industry, education, or government, and our engineering programs also provide an excellent background for other careers. Many graduates are CEOs of major companies or enter fields like medicine or law.

Mission
The mission of the school is to provide students a high-quality educational experience, to generate and apply knowledge through research, development, and scholarly activity, and to serve society, the state of Kansas, and the engineering profession. In accordance with this mission and with KU’s mission, all undergraduate engineering programs and the computer science program must meet these objectives. Additional objectives are specified in program descriptions.
affords flexibility in choosing a concentration. A strong college preparatory program provides a good background for the student who plans to major in engineering.

Honors Programs
The school encourages all qualified students to participate in the University Honors Program (http://www.honors.ku.edu/). Students in engineering must meet with an engineering advisor every semester and should also meet with an honors program advisor.

Some engineering departments offer an option to graduate with departmental honors. Departments set these requirements.

Bachelor of Science in Engineering Degree Requirements
The B.S. degree is offered with majors in aerospace engineering, architectural engineering, chemical engineering, civil engineering, computer engineering, electrical engineering, engineering physics, mechanical engineering, and petroleum engineering. The school also offers the B.S. degree in computer science and interdisciplinary computing.

First- and Second-Year Preparation
Undergraduates usually enroll in engineering in their first year. The first few semesters of all the curricula contain a large proportion of common courses. Through proper planning with advisors, students may delay choosing specific fields for one or two semesters. Selecting the major by the beginning of the third semester is strongly encouraged so that the recommended schedule of classes can be followed.

Each engineering degree program includes courses in 5 general areas of study:
1. KU Core (communications, humanities, social sciences, diversity, ethics, etc.),
2. Basic sciences,
3. Basic engineering sciences,
4. Specialized engineering sciences, and
5. Engineering design.

The computer science degree program has a similar structure, but computer science courses replace some engineering courses. Courses taken during the first 2 years are largely from the first 2 areas, with a few courses in the basic engineering sciences or computer science. The basic sciences include mathematics, chemistry, and physics and further course work in the earth and life sciences in some of the curricula. Appropriate laboratory experience that combines elements of theory and practice is included in each student’s program, together with extensive computer-based experience. Completion of the KU Core is required in all majors. Each department recommends certain courses be used to fulfill the KU Core within each major to allow students the greatest flexibility in degree completion.

Requirements for Graduation
In addition to completing each of the required and elective courses listed in the curriculum,
1. A student must attain a cumulative grade-point average of at least 2.0 in the courses applied toward the degree. A student must also have a KU cumulative grade-point average of 2.0 whether or not all courses are being applied to the degree.
2. A student must attain a cumulative grade-point average of at least 2.0 in all courses taken in the school, including courses not applied toward a degree.
3. A student entering with advanced standing must attain a cumulative grade-point average of at least 2.0 in the resident courses applied toward the degree and at least a 2.0 in all courses taken in the school.
4. A student must take the last 30 hours of credit toward the degree at KU and be officially enrolled in the School of Engineering during this time.

General Education Component
Students in all engineering curricula must take courses that complement the technical content. These must include courses applicable to the KU Core and course work that
- Fosters an understanding of professional and ethical responsibility.
- Promotes the ability to communicate effectively.
- Develops an understanding of the impact of engineering solutions.
- Advances the student’s knowledge of contemporary issues.

Each engineering department specifies courses that fulfill these requirements.

Credit for ROTC Courses
A few credit hours from courses in aerospace studies, military science, or naval science may be applied toward graduation in lieu of certain required or elective courses. A student normally must complete the ROTC curriculum, whether or not it leads to a commission, to receive ROTC hours toward a bachelor’s degree in engineering. The student should submit a petition for substitution of courses to the department. The ROTC policy for each engineering degree program is listed with the information on each program.

Credit for Foreign Language Courses
Some foreign language courses may be applied toward graduation in engineering programs. A foreign language that is similar to the native language is not acceptable. Information on use of foreign language courses is available in each engineering program listing.

Petitions for Exceptions
A student seeking an exception to the rules and practices of the school should first consult an advisor and then petition the school to consider the exception. All petitions are approved by the Engineering Dean’s Office with the guidance of the student’s advisor and department.

Minors
The School of Engineering has a minor in Biomedical Engineering (p. 387), which requires five courses and a minimum of 18 credit hours.

Additionally, engineering students may minor in many liberal arts (p. 747) areas or in the schools of Business (https://business.ku.edu/), Journalism and Mass Communications (http://www.journalism.ku.edu/), or Music (http://www.music.ku.edu). To earn a minor, a student must take at least 18 credit hours, 12 of which must be 300-level courses or above. If the department or program has additional requirements for the minor, students must meet those requirements also. Interested students should
see an advisor in the department offering the minor and complete a minor declaration form as early as possible.

**Dual Enrollment**

KU permits dual enrollment in 2 academic divisions. The student must plan carefully with special advisors in each area. Students should expect the minimum time required for 2 degrees to be at least 1 year longer than the minimum for 1 degree. The academically well-qualified student who is seriously considering dual enrollment might consider studying for the second degree at the graduate level. If the program is properly planned, it may be possible to earn 1 B.S. and 1 M.S. degree in about the same time required for 2 undergraduate degrees.

**Limitation on Enrollment in Engineering Courses**

After the fifth day of classes, enrollment in a course offered by the school is permissible only with approval of the instructor and permission of the dean. The school reserves the right to deny admission to courses offered by the school to any student who is officially enrolled in another division of the university and does not meet the school’s standards for admission or readmission and/or who does not have the proper prerequisite course work completed.

**Preparation for Graduate Study**

Undergraduates in the School of Engineering receive excellent preparation for pursuing graduate degrees. The school offers M.S. degrees as well as professional degrees. Students may apply for admission to graduate studies during the senior year and may be enrolled during the final undergraduate semester. Admission to graduate studies requires a minimum 3.0 grade-point average and completion of an ABET-accredited undergraduate degree.

**Graduate Programs**

The Master of Science (M.S.) degree is offered in 11 areas:

- Aerospace Engineering (p. 389)
- Architectural Engineering (p. 438)
- Bioengineering (p. 409)
- Chemical Engineering (p. 418)
- Civil Engineering (p. 438)
- Computer Science (p. 470)
- Electrical and Computer Engineering (p. 470)
- Environmental Engineering or Science (p. 438)
- Information Technology (p. 470)
- Mechanical Engineering (p. 519)
- Petroleum Engineering (p. 418)
- Chemical and Petroleum Engineering (p. 418)
- Civil Engineering (p. 438)
- Computer Science (p. 470)
- Electrical Engineering (p. 470)
- Environmental Engineering or Science (p. 438)
- Mechanical Engineering (p. 519)

Doctoral students interested in careers in research or teaching or both should consider the Ph.D. degree. Exceptionally qualified undergraduates may be admitted directly to a Fast-Track Ph.D. program.

For aerospace students interested in careers in engineering design or engineering project management, the school offers programs leading to the Doctor of Engineering (D.E.) degree in Aerospace Engineering. (p. 389)

**Graduate Certificate Programs**

The School of Engineering is excited to offer certificate programs in the following focus areas:

- Construction Management (p. 467)
- Computational Fluid Dynamics (p. 408)
- Data Science (p. 512)
- Petroleum Management (p. 438)
- RF Systems Engineering (p. 513)
- Structural Analysis (p. 468)
- Structural Design (p. 468)
- Structural Forensics (p. 469)
- Water Resources (p. 469)

For information on graduate studies in petroleum management, contact the Department of Chemical and Petroleum Engineering (http://www.cpe.engr.ku.edu/) or the School of Business (https://business.ku.edu/).

**Graduate Grade-Point Average (GPA) Requirement**

In addition to completing a Plan of Study (https://gradplan.engr.ku.edu/accounts/login/?next=/) that is formally approved by the advisory committee and other requirements appropriate to the graduate degree, a student must:

1. Attain and maintain at least a 3.0 grade-point average in all graduate courses and
2. Attain and maintain at least a 3.0 grade-point average in all course work, including undergraduate courses taken to make up background deficiencies, except for courses taken at the Applied English Center.

Please note, once you begin enrolling in your graduate career all courses 500 level and above will count towards your graduate GPA, even if you are not counting those courses towards your degree or are taking them as pre-requisite courses. Students who obtain a GPA below 3.0 will be placed on academic probation or dismissed from the School of Engineering.

**Plan of Study**

All graduate students must have an approved Plan of Study on file by the end of their second semester of graduate study. Click here (https://
of four years of undergraduate study. All first-time freshmen who are
admitted to the School of Engineering are considered for scholarships if
they apply to the School of Engineering by the university’s scholarship
deadline (typically November 1).

Students with financial need should fill out the FAFSA (Free Application
for Federal Student Aid) by March 1.

Graduate Funding and Assistantships
A variety of scholarships, fellowships, and assistantships are available to
graduate students through the School of Engineering, KU, and outside
sources. Many opportunities require that students be admitted to a
graduate program before students are eligible to apply. Be sure to apply
early, in order to meet eligibility requirements for funding (both internal
and external) by posted deadlines. Graduate students are nominated by
their department or program for School of Engineering funding each fall
and spring.

The KU Office of Financial Aid & Scholarships offers a helpful calculator to
estimate costs and search for scholarships. Financial Aid & Scholarships
(https://financialaid.ku.edu/apply-for-aid/) also administers grants,
loans, and need-based financial aid. Students should contact the
Graduate Director within their department or program or their advisor
to inquire about research or teaching assistantships. Students must be
admitted regularly or enrolling on regular status to be eligible for
assistantships. Students admitted provisionally or placed on academic
probation are ineligible for research or teaching assistantships. More
information on graduate student funding is available here (https://
graduate.ku.edu/funding/).

Undergraduate University Regulations
For information about university regulations, see Regulations (http://
catalog.ku.edu/regulations/) or visit the University of Kansas Policy Library
(http://www.policy.ku.edu/).

Absences
A student with excessive absences may be withdrawn from the course by
the dean.

Academic Standing (Probation)

Good Academic Standing
Undergraduates must maintain both semester and cumulative grade-point
averages of 2.0 or higher, and make progress towards an Engineering
degree, to remain in good standing. Students’ academic standings are
reviewed after each semester.

Probation
If a student’s semester or cumulative grade-point average falls below
2.0, the student is placed on probation. The student will return to good
standing if

1. The following semester’s cumulative and engineering grade-point
   average is 2.0 or higher,
2. The cumulative grade-point average is 2.0 or higher, and
3. All other requirements described in the probation letter are met.

Students also may be placed on probation for failing to make progress
toward an engineering degree or failing to be continuously enrolled in
Applied English Center (https://aec.ku.edu/) or English courses until all AEC and the KU Core Written Communications requirements are met.

**Dismissal**

A student on probation may be dismissed if any of the following occur:

1. Any semester grade-point average is below 2.0 while the student is on probation.
2. The cumulative grade-point average is below 2.0 after two semesters on probation.
3. The student has failed to meet the other requirements stated in the probation letter.
4. The student on probation has failed to make progress toward an engineering degree or toward fulfilling all AEC and the KU Core Written Communications requirements.

**Readmission**

A student who has been dismissed from the School of Engineering for poor scholarship may apply for readmission by submitting a Change of School form to the Engineering Student Success office in LEEP2, room 1415. A student who has been dismissed from the University of Kansas may apply for admission or readmission to the School of Engineering by contacting the Office of Admissions and Scholarships (http://www.ku.edu/admission/). A student does not automatically become eligible to re-enroll after a certain period of time. A student who is readmitted on probation must meet stringent academic requirements to be returned to good standing.

**Change of School**

To change from one school to another, KU students must submit a Change of School form online (https://registrar.ku.edu/change-school/).

Admission is competitive and students are considered on a case-by-case basis. Students must have an overall college grade-point average of 2.5 or better, with grades of “C” or better in Calculus I and any courses in mathematics, science, and engineering taken. Applications are accepted on an ongoing basis.

**Credit/No Credit**

A Credit/No Credit option is available to degree-seeking undergraduates depending on their academic program. Where permitted, students may enroll in one course a semester under the option; specifically required courses (such as calculus or physics) may not be taken credit/no-credit. For more information, visit the KU Policy Library (http://policy.ku.edu/).

*Always check with your advisor before electing C/NC, as policies vary from department to department.*

In EECS majors, engineering physics, and mechanical and petroleum engineering majors, Credit/No Credit is allowed for courses used to fulfill KU Core GE 2.1 Written Communication, GE 2.2 Oral Communication, GE 3H Arts & Humanities, GE 3S Social Sciences, AE 4.1 Human Diversity, AE 4.2 Cultural & Global Awareness, and AE 5 Social Responsibility and Ethics requirements only. If an Engineering department recommends that certain course work be used to fulfill any of these requirements, those courses shall not be eligible for Credit/No Credit.

Credit/No Credit is **not an option** for any credits counting towards aerospace, chemical, civil, or architectural engineering degrees.

**Warning:** Certain undesirable consequences may result from exercising the option. Some schools, scholarship committees, and honorary societies do not accept this grading system and convert grades of No Credit to F when computing grade-point averages.

**Dean's Honor Roll**

Students with grade-point averages of 3.75 who have completed at least 14 graded hours are recognized on the honor roll or dean’s list in fall and spring. An Honor Roll notation appears on the transcript.

**Enrollment Holds**

An Engineering Advising Hold (EH) is placed on all Engineering students' accounts prior to enrollment each term. Students must meet with their assigned Engineering advisor to have the hold released.

A No Drop Hold (DRP) is placed on all Engineering students' accounts early in the term preventing students from dropping classes without the permission of their advisor and the Engineering Dean's Office. The No Drop Hold prevents students from withdrawing from essential classes without speaking with an advisor about the possible negative ramifications of a withdrawal.

Students voluntarily leaving the School of Engineering may have their Engineering Advising Hold or No Drop Hold released by submitting an official Change of School form to leave the School of Engineering.

**Graduation with Departmental Honors**

For students who complete their department's honors program, designation of honors appears on the transcript.

**Graduation with Distinction and Highest Distinction**

Students who fulfill the following requirements are eligible for graduation with distinction.

1. Students must rank in the upper 10 percent of the graduating class by KU grade-point average.
2. Students must have taken at least 64 hours in residence at KU.
3. Students with transfer credit must also have overall grade-point averages, including transfer credit, that fall into the upper 10 percent of the class.

The upper third of those awarded distinction graduate with highest distinction. The list is compiled each spring and includes July, December, and May graduates.

**Maximum and Minimum Semester Enrollment**

The normal course load is 15-17 hours a semester. A student may not enroll in more than 19 credit hours during any semester or more than 10 credit hours during the summer session except with approval of the major advisor and the dean.

**Prerequisites and Corequisites**

Students may be administratively dropped from courses for which they do not meet prerequisite or corequisite requirements.
Required Work in Residence

Students must be enrolled in the school for the last 30 hours of credit.

Transfer of Credit

CredTran (https://credittransfer.ku.edu/) is a transfer course equivalency system that lists more than 2,200 colleges and universities from which KU has accepted transfer courses in the past. If your school or course is not listed, your evaluation will be completed when you are admitted to KU.

The School of Engineering does not routinely accept credits from foreign institutions or from vocational-technical programs in the United States. Before such courses may be added to a student’s official KU record as transfer credits, they must be validated

1. By examination by the department or school offering the course on the KU campus,
2. By earning a grade of C or higher in a later course in the sequence of courses, or
3. By earning a grade of C or higher in a course.

Credits for English composition at a foreign institution of higher education are not accepted for the required English courses in any engineering curriculum.

Credits from courses completed at the secondary level (high school), whether from U.S. or from foreign schools, are not added to a student’s official record unless the student obtains college credits through one of three examination programs:

1. The College Entrance Examination Board’s Advanced Placement test,
2. KU’s own credit by examination program, or
3. The College Level Examination Program.

A course from another college or university may apply toward the Bachelor of Science in Engineering degree as transfer or nonresident credit only if the grade received is at least C.

Transfer credit in engineering science and engineering design from institutions accredited by the Accreditation Board for Engineering and Technology (http://www.abet.org/) and from institutions with which KU has approved articulation agreements may be applied toward the degree as appropriate in the particular engineering curriculum. Transfer credit in engineering from other institutions must be evaluated and validated on a case-by-case basis.

Graduate University Regulations

For information about university regulations, see the Graduate (http://catalog.ku.edu/regulations/) Regulations (http://catalog.ku.edu/regulations/) or visit the University of Kansas Policy Library (http://www.policy.ku.edu/).

Graduate Enrollment

The Graduate Studies policy for graduate enrollment is that all graduate students must be continuously enrolled in the fall and spring semesters. Note that this does not include the summer semester, unless you are a Ph.D. candidate (post-comprehensive enrollment) or have a GTA/GRA appointment. This includes part-time programs, but does not include non-degree seeking students. Review the general information in the Graduate Studies (p. 2449) section of the online catalog for more information.

If you do not plan to enroll for a given semester, you will need to do one of the following:

Request a Leave of Absence – Use this option when you plan to return to your graduate study after one or more semesters. A leave of absence may be granted upon request to the graduate program in advance of leave. Leaves may be granted in cases of illness, emergency, to pursue family responsibilities, or to pursue full-time activities related to long-range professional goals. The time taken for a leave of absence does not count against the time limit for earning the degree. However, if the total time for the leave extends more than three semesters, you may lose your place in the program and have to re-apply for admission. To request a leave of absence, you must contact your department graduate coordinator, who will submit a Progress-to-Degree (PtD) form. You need to provide the graduate coordinator with the following information: non-ku email address, mailing address, first term of leave and the semester you plan to return, as well as a statement on the reason for the leave of absence.

Request to Voluntarily Discontinue – Use this option if you do not plan to return to your graduate program in the School of Engineering. This means that you voluntarily resign from a program by requesting a discontinuance. If you choose to return at a later date, you must re-apply for admission. Discontinuance is requested through your department or program via email to the department graduate director or assistant.

Please note, students who do not request a leave of absence are discontinued in the system and will be required to apply for re-admission (application fee required). To prevent having to re-apply and pay additional fees, students are strongly encouraged to request a leave of absence and contact their departmental staff when they are ready to return.

Academic Status

Good Academic Standing

Graduate students must be admitted regularly and maintain cumulative grade-point averages (GPA) of 3.0 or higher to be considered in good standing. Students admitted provisionally must complete departmental / program requirements before they are considered in good standing. Students on academic probation can regain their good standing once they have a cumulative GPA of 3.0 or higher. Students’ academic standings are reviewed after each semester. All courses 500-level and above will count towards the graduate GPA, if enrolled in a graduate program.

Provisional Admittance / Academic Probation

Students who are admitted provisionally are given a set of requirements that must be completed, generally within the first year, before they will be moved to regular status. Students placed on academic probation due to their graduate GPA must obtain a cumulative GPA of 3.0 or higher within a given time frame, generally one semester, before they are moved to regular status. If you receive a cumulative grade point average below a 3.0 during your graduate career, you are considered ineligible for teaching and research assistantship positions or will need to petition the school and Graduate Studies office for approval.

Dismissal

Graduate students who are unable to meet their provisional or probationary requirements within the given time frame may be dismissed from the School of Engineering. When the particular circumstances are deemed to justify continuation, and upon the recommendation of the department or program, such a student may be continued on probation by the Graduate Division for one additional semester equivalent of full-time
study. If a student decides to pursue another graduate degree within the School of Engineering, they are required to re-apply.

**Change of Degree**

A student who wants to change from one engineering degree program to another within the same department should see their department graduate coordinator to complete a progress-to-degree (PdD) form. Students who wish to change to a program outside of their home department must submit an application for admission. If a student changes or is accepted into another program and wishes to pursue only the new degree, the student should notify the department graduate coordinator, so that the old plan may be removed from the student’s record. Students are allowed to pursue multiple degrees, but should discuss these plans with both program advisors.

**Credit/No Credit**

Graduate students may select the Credit/No Credit option for certain courses. Students should follow the policy outlined in the University Senate Rules and Regulations (http://policy.ku.edu/governance/USRR/), Section 2, article 2.27.

**Honors**

Graduate student can obtain honors only at the time of the final defense or final exam (and comprehensive exam for Ph.D. students). Students enrolling in coursework only degree programs do not have the opportunity to receive honors at the graduate level. Students who complete a project, thesis or dissertation will have the opportunity to receive honors at the time of the final exam or defense. Students should discuss the requirements for graduation with their program advisor if seeking honors. Only 10-15% of graduate students receive this high distinction.

**Entry and Employment in the Profession**

**Initial Licensing**

Formal study in an accredited engineering program is the principal means of becoming licensed to practice engineering in Kansas and other states. During the junior or senior year, a student may take the national Fundamentals of Engineering examination. After 4 or more years (licensing regulations vary among states) of practice satisfactory to the board, the student may take the examination to become a registered professional engineer.

**Job Search Assistance**

The Engineering Career Center (http://ecc.ku.edu/) offers a comprehensive array of services to students seeking permanent employment and career-related summer or co-op employment. These include on-campus interviewing; 2 career fairs each year; individual advising and group workshops on résumés; interviewing, and job search strategies; online interviewing sign-up; online job postings from many employers not interviewing on campus; a library of employer and career literature; and an online résumé book searchable by employers.

The Engineering Career Center offers services to all engineering students. Students are encouraged to visit the Engineering Career Center early in their undergraduate or graduate studies. Many employers actively seek KU engineering and computer science students. Some prefer to hire students as early as the first-year level for internships. The Career Center is in 1410 LEEP2; additional information is available from 785-864-3891.

**Aerospace Engineering Courses**

**AE 211. Computing for Engineers. 3 Credits.**
Introduction to computing concepts. Introduction to the MATLAB computing language using a suite of simulations in science and engineering in a progression which adds new MATLAB constructs - as well as logical and mathematical constructs - with each simulation. Simulations include numerical integration, coordinate transformations and primitive reinforcement learning constructs. Prerequisite: MATH 125 or MATH 145 with a grade of C- or higher.

**AE 221. Introduction to Global History of Aerospace Technologies. 1-3 Credits.**
This History of Aerospace Technology starts in neolithic times with a description of a variety of flying implements being used for hunting and warfare. Their basic designs, mechanics, impact on human evolution, migration and societal development are brought forward to the development of gunpowder, ballistics and rocketry. Lighter than air flight innovations from 1783 forward show an intermingling of civil and military uses through WWI, shaping world events and the fortunes of nations. Heavier than air inhabited flight exploration begins with Cayley, includes the contributions of technologists Lilienthal, Chanute, visionaries and writers Mouillard and Verne, and concludes in a vertical exploration by region, nation and manufacturer, including: Douglas, Boeing, Lockheed, Fokker, Heinkel, Messerschmitt, Fairey, Handley Page, Piaggio, Tupelov, Mikoyan-Gurevich, Kamov, Mitsubishi, Hindustan Aeronautics, Sud Aviation and others. This course represents a very unique opportunity for students to study under one of the most important, famous and well published Aerospace Technologists and Historians ever to practice.

**AE 241. Private Flight Course. 1 Credits.**
One hour of academic credit is given upon the awarding of the private pilot's license by the Federal Aviation Administration. Required documentation includes a letter from the F.A.A. designated examiner giving the check ride and a copy of the private license. The Department of Aerospace Engineering provides no ground or flight instruction. Graded on a satisfactory/fail basis. Prerequisite: Aerospace Engineering students only, with consent of instructor.

**AE 242. Private Flight Aeronautics. 3 Credits.**
Three hours of academic credit is given for the successful completion of the F.A.A. private pilot's written examination. Required documentation is a copy of the written score. Available only to Aerospace Engineering transfer students as a course substitute for AE 245.

**AE 245. Introduction to Aerospace Engineering. 3 Credits.**
Basic systems of an aerospace vehicle, meteorology, vehicle performance, navigation and safety. Specific examples emphasize general aviation. Open to students with less than 60 hours completed. Other students need permission of instructor. Prerequisite: Corequisite: MATH 125 or MATH 145.

**AE 290. Aerospace Colloquium. 0.25 Credits.**
This is a required course for all aerospace engineering majors each fall semester. Topics of importance and new developments are discussed by aerospace industry representatives and representatives of F.A.A., D.O.T., D.O.D., N.A.S.A., related sciences, and engineering disciplines. A forum for student activities at all levels. Open enrollment.

**AE 345. Fluid Mechanics. 3 Credits.**
Study of fundamental aspects of fluid motions and basic principles of gas dynamics with application to the design and analysis of aircraft. Prerequisite: Corequisite: AE 245, CE 260, and MATH 220; or permission of instructor.

**AE 360. Introduction to Astronautics. 3 Credits.**
Introduction to astronautical engineering. The history of astronauts, including rocketry and space flight. Fundamentals of astronautics, including space environment, astrodynamics and the analysis and design of spacecraft systems. Design, construction and launch of a prototype earth-satellite using a high-altitude balloon. Prerequisite: MATH 126 or MATH 146 with a grade of C- or higher. Corequisite: A course in computer programming.

AE 400. Special Topics: ______. 1-3 Credits.
A course in a topic related to undergraduate studies in Aerospace Engineering. Varies by topic or with consent of instructor.

AE 421. Aerospace Computer Graphics. 3 Credits.
Development of skills in depicting aerospace vehicles and their components and subsystems for the purpose of illustration, design, and analysis using traditional and modern (Computer Aided Design) drafting tools. Prerequisite: Corequisite: CE 260 or equivalent, or permission of instructor.

AE 430. Aerospace Instrumentation Laboratory. 3 Credits.
Review and hands-on laboratory experiments with basic electronic elements (resistors, capacitors, conductors, transistors, linear circuits, logic devices, and integrated circuits). Overview and hands-on laboratory experiments using various experimental techniques available to the aerospace engineers (pressure probes, thermocouples, strain gauges, hot-wire anemometer, laser Doppler velocimeter, and flow visualization techniques). Prerequisite: AE 445 with a grade of C- or higher, and EECS 316.

AE 441. Advanced Flight Training. 1-3 Credits.
Academic credit is given for the successful completion of advanced flight training beyond the private pilot rating. One hour is given for each of the following: commercial, instrument rating, certified flight instructor. The Aerospace Engineering Department provides no ground or flight instruction. Open enrollment. Graded on a satisfactory/fail basis. Prerequisite: AE 241.

AE 445. Aircraft Aerodynamics and Performance. 3 Credits.
Study of airfoil and wing aerodynamics, component drag, static and special performance, and maneuvers of aircraft. Open enrollment. Prerequisite: AE 345 and CE 260, both with grades of C- or higher.

AE 490. Aerospace Industrial Internship. 1 Credits.
Engineering internship in an approved company. Internship hours do not satisfy any course requirements for the bachelors degree in Aerospace Engineering but will appear on the official transcript. Credit assigned after review of report on internship experience. Graded on a satisfactory/fail basis. Prerequisite: Completion of junior year.

AE 506. Aerospace Structures I, Honors. 3 Credits.
In depth analysis and design of aerospace structures from the standpoint of preliminary design. Deflection and stress analysis of structural components, including thin-walled beams and built-up (semimonocoque) structures. Material failure of highly stressed components, including connections. Buckling of thin-walled beams and semimonocoque structures. Durability and damage tolerance strategies for aerospace structures to avoid corrosion, fatigue, and fracture. Prerequisite: CE 310 with a grade of C- or higher.

AE 508. Aerospace Structures II. 3 Credits.
Stress and deflection analysis of aerospace structures using the finite element method. Introduction to work-energy principles, including Castigliano's theorems, for the analysis of statically indeterminate structures. Rod, beam, shaft, membrane, and plate finite elements. Prerequisite: AE 506 or AE 507, and MATH 290 with a grade of C- or higher.

AE 509. Honors Aerospace Structures II. 3 Credits.
Indeterminate structures, principle of virtual work, Castigliano's theorems, displacement method of finite element analysis; rod, beam, shaft, and membrane elements; analysis of aerospace structures with the finite element method. Prerequisite: AE 506 or AE 507, and MATH 290 with a grade of C- or higher, and minimum 3.25 KU GPA.

AE 510. Aerospace Materials and Processes. 4 Credits.
Properties and applications of aircraft materials, forming methods, and manufacturing processes. Ethics and social responsibility for engineers. Oral technical presentations. Prerequisite: AE 507 or AE 506, and a grade of C- or higher in CHEM 150 or CHEM 130 and CHEM 149.

AE 520. Space Systems Design I. 4 Credits.
Preliminary design techniques for a space system. Systems engineering; orbital mechanics; spacecraft subsystems including propulsion, attitude control, power, thermal command and data, communications, and structures; and ethics and social responsibility for engineers. Written technical reports. Prerequisite: AE 360 or EPHX 521, AE 421, AE 508 or AE 509, EECS 316, ME 212, and CHEM 150 or CHEM 130 and CHEM 149, or permission of instructor.

AE 521. Aerospace Systems Design I. 4 Credits.
Preliminary design techniques for an aerospace system. Aerodynamic design, drag prediction, stability and control criteria, civil and military specifications. Weight and balance. Configuration integration, design and safety, design and ethics, and social responsibility for engineers. Written technical reports. Prerequisite: AE 421, AE 508 or AE 509, AE 551, AE 572 or AE 573, and CHEM 150 or CHEM 130 and CHEM 149 or permission of instructor.

AE 522. Aerospace Systems Design II. 4 Credits.
Preliminary design project of a complete aircraft system. Technical written reports and oral presentations. Prerequisite: AE 521 or AE 520 and permission of instructor.

AE 523. Space Systems Design II. 4 Credits.
Preliminary design project of a complete space system. Technical written reports and oral presentations. Prerequisite: AE 521 or AE 520 and permission of instructor.

AE 524. Propulsion Systems Design I. 4 Credits.
Preliminary design project of a complete propulsion system, including the airframe. Technical written reports and oral presentations. Prerequisite: AE 521, or AE 520 and permission of instructor.

AE 545. Fundamentals of Aerodynamics. 4 Credits.
Basic gas dynamic equations, potential flow for airfoils and bodies, thin airfoil theory, finite wing, subsonic similarity rules, one and two dimensional supersonic flow, boundary layers, heat transfer, and laboratory experiments. Prerequisite: A grade of C- or higher in AE 445, ME 212, MATH 127 or MATH 147, and MATH 220 or MATH 221.

AE 546. Aerodynamics, Honors. 4 Credits.
Basic gas dynamic equations, potential flow for airfoils and bodies, thin airfoil theory, finite wing, subsonic similarity rules, one and two dimensional supersonic flow, boundary layers and viscous flow, heat
transfer, and laboratory experiments. A special project in aerodynamics for AE 546 students. Prerequisite: AE 445, ME 212, MATH 220 and MATH 290.

AE 550. Dynamics of Flight I. 4 Credits.
Introduction to Tensors Algebra. Frames and coordinates in dynamics systems. General equations of motion of rigid airplanes and reduction to steady state flight situations. Steady state forces and moments. Stability derivatives. Static stability, control and trim. Trim envelope. Relationships with handling quality requirements. Engine-out flight. Effects of the control system. Implications to airplane design. Prerequisite: Grade of C- or higher in AE 211 and MATH 220 or MATH 221. Corequisite: AE 545 or AE 546 and a grade of C- or higher in AE 211 and MATH 220 or MATH 291, or permission of instructor.

AE 551. Dynamics of Flight II. 4 Credits.
General equations of motion of rigid airplanes and reduction to perturbed state flight situations. Mathematical modeling of airplane and control system analysis in state space. Dynamic stability, phugoid, short period, dutch roll, roll, spiral, and other important modes. Transfer functions and their application. Relationships with handling quality requirements. Fundamentals of classical control theory and applications to automatic flight controls. Implications to airplane design. Prerequisite: AE 545 or AE 546, AE 550, and a grade of C- or higher in MATH 290 or MATH 291.

AE 552. Honors Dynamics of Flight II. 4 Credits.
General equations of motion of rigid airplanes and reduction to perturbed state flight situations. Perturbed state forces and moments, stability derivatives, dynamic stability, phugoid, short period, dutch roll, roll, spiral, and other important modes. Transfer functions and their application. Relationships with handling quality requirements. Fundamentals of classical control theory and applications to automatic flight controls. Implications to airplane design. Prerequisite: AE 545 or AE 546, AE 550, and a grade of C- or higher in MATH 290 or MATH 291, and minimum 3.25 KU GPA.

AE 560. Spacecraft Systems. 3 Credits.
Fundamentals of spacecraft systems and subsystems. Spacecraft systems engineering, space environment; basic astrodynamics; and the following spacecraft subsystems; attitude determination and control; electrical power; thermal; propulsion; structures and mechanisms; command, telemetry, and data handling; and communications. Prerequisite: AE 360, AE 507 or AE 506, EECS 316, and ME 212.

AE 571. Fundamentals of Airplane Reciprocating Propulsion Systems. 3 Credits.
Study of the basic principles of operation and systems of internal and external combustion engines with emphasis on airplane reciprocating engines. Cycle analysis, propeller theory, propeller selection and performance analysis. Prerequisite: AE 445 and ME 212 with grades of C- or higher.

AE 572. Fundamentals of Jet Propulsion. 3 Credits.
Lecture and laboratory, study of basic principles of propulsion systems with emphasis on jets and fan systems. Study of inlet, compressor, burners, fuels, turbines, jets, methods of analysis, testing, performance; environmental considerations. Prerequisite: AE 545 or AE 546, AE 571, and a grade of C- or higher in CHEM 150 or CHEM 130 and CHEM 149.

AE 573. Honors Propulsion. 3 Credits.
Lecture and laboratory, study of basic principles of propulsion systems with emphasis on jets and fan systems. Study of inlet, compressor, burners, fuels, turbines, jets, methods of analysis, testing, performance; environmental considerations. Prerequisite: AE 545 or AE 546, AE 571, and a grade of C- or higher in CHEM 150 or CHEM 130 and CHEM 149, and minimum 3.25 KU GPA.

AE 590. Aerospace Senior Seminar. 1 Credits.
Presentation and discussion of technical and professional paper reports. Methods for improving oral communication. Discussion of topics such as ethics, registration, interviewing, professional societies, personal planning. Prerequisite: Senior standing.

AE 592. Special Projects in Aerospace Engineering for Undergraduate Students. 0.25-5 Credits.
Directed design and research projects in aerospace engineering. Prerequisite: Consent of instructor.

AE 593. Honors Research. 1-5 Credits.
Directed design and research projects in aerospace engineering. Prerequisite: Consent of instructor.

AE 600. Special Topics: ____. 1-3 Credits.
A graduate course or colloquium in a topic related to graduate studies in Aerospace Engineering. This course does not count towards hours needed for completion of degree program. Prerequisite: Varies by topic or with consent of instructor.

AE 621. Advanced Aircraft Design Techniques I. 3 Credits.
The purpose of this course is to provide aerospace engineering students with an opportunity to gain more in-depth airplane design education through design work. This design work will involve detailed design of efforts in such areas as: landing gear design, systems design, propulsion system integration, structures design and aerodynamic design. Prerequisite: AE 507, AE 521, AE 545, AE 551, and AE 571. AE 521 may be taken concurrently.

AE 690. Professional Development for Graduate Studies. 0.25 Credits.
Professional development for graduate students. Responsible conduct of research. Presentation and discussion of graduate student research. Oral communication to a range of audiences, including short presentations by students on a range of topics. One semester of enrollment required for all MS and ME candidates, and two semesters of enrollment required for all PhD and DE aspirants and candidates. Graded on a satisfactory/unsatisfactory basis.

AE 700. Special Topics: ____. 1-5 Credits.
Courses on special items of current interest in aerospace engineering, given as need arises. May be repeated for additional credit. Prerequisite: Approval of instructor.

AE 704. Dynamics and Vibrations. 3 Credits.
Problems in engineering dynamics and vibrations. Topics include applications of generalized forces and coordinates, Lagrange equations, and a study of the performance of single and multiple degree of freedom in vibrational systems. (Same as CE 704.) Prerequisite: AE 508.

AE 705. Structural Vibrations and Modal Testing. 4 Credits.

AE 708. Structures. 3 Credits.
Fiber materials, tapes, cloths, resin systems; general aerolotropic theory, elastic constants, matrix formulation; computer analysis, strength, theory of failure; introduction to design with composites, preliminary design, optimization, processing variables, product design. Prerequisite: CHEM 150 or CHEM 130 and CHEM 149, AE 508 or AE 509 or CE 761, and AE 510 or ME 306 or CE 710.

AE 710. Advanced Structural Composites. 3 Credits.
The course objectives are to provide each student with a more in-depth understanding of and practical hands-on experiences with available
fiber and matrix materials, manufacturing methods, and the mechanical behavior of composite materials and structures. Modern software tools and manufacturing methods are addressed, to include optimization techniques and design for manufacturability. Classical plate theory, bending, buckling, and vibration of anisotropic plates is addressed. Damage tolerance and repairability, as well as nondestructive evaluation techniques are also covered. Skills learned in previous composite courses will be utilized to design, analyze, and fabricate structures of current industrial relevance. Prerequisite: AE 508 or similar, AE 709 or similar, or consent of instructor.

AE 712. Techniques of Engineering Evaluation. 3 Credits.
The formulation of problems arising in aerodynamics, heat transfer, stress analysis, thermodynamics, and vibrations. The expression of these problems in a form amenable to quantitative evaluation by dimensional reasoning, analog techniques, relaxation methods, and classical analysis.

AE 721. Aircraft Design Laboratory I. 4 Credits.
The purpose of this course is to provide aerospace engineering students with an opportunity to gain more in-depth airplane design education through team design work. This team design work will involve detailed design efforts in such areas as: landing gear design, systems design, propulsion system integration, structures design, and aerodynamic design. Prerequisite: AE 507 or AE 506, AE 545 or AE 546, AE 551 or AE 552, AE 571 and corequisite of AE 521 or AE 520 and permission of instructor.

AE 722. Aircraft Design Laboratory II. 4 Credits.
The purpose of this course is to provide aerospace engineering students with an opportunity to gain more in-depth airplane design education through team design work. This team design work will involve detailed design efforts in such areas as: landing gear design, systems design, propulsion system integration, structures design, and aerodynamic design. Prerequisite: AE 507, AE 521, AE 545, AE 551, and AE 571. AE 522 may be taken concurrently.

AE 724. Propulsion System Design and Integration. 3 Credits.
Theory and design of propulsion systems for both low and high speed aircraft and their integration into the overall configuration. Internal and external design and analysis of inlets and nozzles including their effect on the external aerodynamics of the aircraft. Engine/inlet compatibility and the problems of matching both steady state and dynamic characteristics to obtain peak, stable performance. Prerequisite: AE 572 or AE 573.

AE 725. Numerical Optimization and Structural Design. 3 Credits.
Classical theories of unconstrained and constrained optimization. Numerical techniques for unconstrained optimization, including the steepest descent, conjugate gradient and "Newton's" methods. Numerical techniques for constrained optimization, including sequential approximate problem techniques as well as the method of feasible directions. Computer aided solutions to practical design problems in aerospace engineering. Final design project. Prerequisite: MATH 220 and MATH 290 or junior status.

AE 727. Aircraft Antenna Systems. 3 Credits.
Aircraft antenna integration and design process. Overview of common aircraft communication, navigation, and sensing systems. CAD tools and analysis and measurement techniques for designing and assessing systems. Low-observable vehicle design concepts. Prerequisite: PHSX 212, EECs 316, MATH 127, AE 421 or other CAD experience and CE 310 or equivalent recommended; or by consent of instructor.

AE 730. Advanced Experimental Fluid Dynamics. 3 Credits.
Theory, methods and data analysis of various modern flow measurement techniques including: hotwire cluster, laser-Doppler velocimetry, particle image velocimetry, holography, pressure detection, temperature probing, vorticity measurements, Lagrange particle tracking. Specific experimental technique covers optical measurements in turbulent flow, microfluidic experiments, and spray and multiphase flow measurement. Prerequisite: AE 430, AE 545 or AE 546 or consent of instructor.

AE 732. Introduction to Flight Test Engineering. 3 Credits.
Course presents flight test principles, instrumentation, planning, and operation of aerospace vehicle flight testing. Course is structured with lectures, laboratories, and flight experiments. Student teams plan and execute a series of flight test experiments including: familiarization with flight test measurements, static system calibration, rate-of-climb performance, and determination of vehicle flight dynamics. Prerequisite: AE 445 and AE 550 or consent of instructor.

AE 743. Compressible Aerodynamics. 3 Credits.
Compressible flow with heat and friction; shock polars, 1-D unsteady gas dynamics, shock tube, conical flows, methods of characteristics, hypersonic flow theory. Prerequisite: AE 545 or AE 546.

AE 744. Introduction to Turbulent Flow. 3 Credits.
Reynolds averaged equations for turbulent flow, basic energy relations and spectra in turbulent flow, analysis of turbulent boundary layer, turbulent pipe flow, turbulence models and simulation. Prerequisite: AE 545 or AE 546 or equivalent.

AE 746. Computational Fluid Dynamics. 3 Credits.
Applications of numerical techniques and digital computers to solving fluid flow problems. Solutions involving incompressible and compressible flows, inviscid and viscous flows. Finite difference techniques for different types of partial differential equations governing the fluid flow. Prerequisite: AE 545 or AE 546.

AE 747. Introduction to Transonic Aerodynamics. 3 Credits.

AE 748. Helicopter Aerodynamics. 3 Credits.
Helicopter components and their functioning: rotor aerodynamics, performance, stability and control, aeroelastic effects and vibrations. Prerequisite: AE 551 or AE 552.

AE 750. Applied Optimal Control. 3 Credits.
Introduction to optimal control analysis and design tools useful for the design of Multi-Input/Multi-Output controllers. Linear Quadratic Regulator problem extended by including advanced command techniques and advanced controller structures. The techniques are illustrated with aerospace applications. Prerequisite: AE 551 or AE 552 or ME 682 or consent of instructor.

AE 752. Linear Multivariable Control. 3 Credits.
Introduction to the modeling and analysis of multi-input, multi-output control systems. Topics include state space representation, solutions of linear systems, stability analysis, LQR design, cooperative controller design, etc. Prerequisite: AE 551 or AE 552, or EECS 444 or equivalent; or by consent of instructor.

AE 753. Digital Flight Controls. 3 Credits.
Introduction to the analysis and design tools useful for the design of aircraft guidance and flight control systems containing continuous dynamics and a digital computer. Topics include Z-plane analysis, autopilot design using successive loop closure, guidance design models, path planning, vision-guided navigation, etc. Prerequisite: AE 551 or AE 552 or ME 682 or consent of instructor.

AE 755. Robust and Nonlinear Control. 3 Credits.
The robustness is one of the most critical qualities of an appropriately designed feedback control system. In this course the ability of the closed-loop system to continue performing satisfactorily despite uncertainties in estimated state variables and/or large variations in the (open-loop) plant dynamics will be investigated. This course will lay down the mathematical and theoretical background needed for the analysis and design of robust feedback control systems. Modern controller design methods (e.g. H-inf control) will be used to design controller highly nonlinear and transient dynamics. Prerequisite: AE 550, AE 551, AE 750, MATH 590 or consent of instructor.

AE 756. Rule-Based Control Systems. 3 Credits.
Introduction to rule-based systems with an emphasis on a cognitive architecture. Realistic examples of using such systems will be covered in the context of unmanned aircraft control. A brief review of programming in LISP language, on which the cognitive architecture is based. Prerequisite: EECS 316 and AE 551 or AE 552 or equivalent.

AE 758. Introduction to Robotics. 3 Credits.
An introduction to robotics covering spatial descriptions and transformations, manipulator kinematics, Jacobians, and dynamics and control of manipulators. The successful completion of this course will prepare students for advanced studies in robotics. Prerequisite: AE 551 or AE 552, and MATH 290, or by consent of instructor.

AE 759. Estimation and Control of Unmanned Autonomous Systems. 3 Credits.
An introduction to the modeling, estimation, and control of unmanned autonomous systems. Topics include motion description, navigation sensors, complementary filters, Kalman filters, attitude estimation, position estimation, attitude keeping controller, etc. The successful completion of this course will prepare students for advanced studies in robotics & controls. (Same as EECS 759.) Prerequisite: MATH 627, AE 551 or AE 552 or EECS 444, or by consent of instructor.

AE 760. Spacecraft Systems. 3 Credits.
Fundamentals of spacecraft systems and subsystems. Spacecraft systems engineering, space environment; basic astrodynamics; and the following spacecraft subsystems; attitude determination and control; electrical power; thermal; propulsion; structures and mechanisms; command, telemetry, and data handling; and communications. Same as AE 560 with the addition of a research paper. Not available for students that have taken AE 560. Prerequisite: AE 507, EECS 318, MATH 124, and AE 512 or equivalent.

AE 765. Orbital Mechanics. 3 Credits.
Motion of space vehicles under the influence of gravitational forces. Two body trajectories, orbit determination, orbit transfer, universal variables, mission planning using patched conics. Transfer orbits. Prerequisite: MATH 220, MATH 290, and CE 260 or equivalent.

AE 766. Spacecraft Attitude Dynamics and Control. 3 Credits.
Dynamics of rigid spacecraft, attitude control devices including momentum exchange, mass movement, gravity gradient and reactor rockets. Design of feedback control systems for linear and bang-bang control devices. Prerequisite: AE 551 or AE 552 or permission of instructor.

AE 767. Spacecraft Environments. 3 Credits.
Fundamentals of spacecraft environments. Description and analysis of the natural environment in which spacecraft operate post-launch. Includes optical, electromagnetic, corpuscular radiation, plasma and dust from low Earth orbit, through outer heliosphere. Prerequisite: PHSX 212 required, PHSX 313 or PHSX 351 recommended.

AE 768. Orbit Determination. 3 Credits.
Develops the theory of batch and sequential (Kalman filter) estimation theory related to orbit estimation, including a review of necessary concepts of probability and statistics. Course work includes a term project that allows students to apply classroom theory to an actual satellite orbit determination problem. Prerequisite: AE 360. Corequisite: AE 560 or AE 760.

AE 771. Rocket Propulsion. 3 Credits.
Basic elements of rocket propulsion: systems, propellants, and performance. Prerequisite: AE 545 or AE 546 or equivalent.

AE 772. Fluid Mechanics of Turbomachinery. 3 Credits.

AE 773. Propulsion Systems for Emerging Aircraft. 3 Credits.
Advanced study of the principles of operation and propulsion systems for UAVs, UAMs and general aviation aircraft. Prerequisite: AE 445, AE 571, ME 212.

AE 774. Introduction to Combustion. 3 Credits.
Study of advanced concepts and principles of combustion, including thermal analysis, chemical reaction, and computational methods. Prerequisite: ME 212 and a class in computer programming.

AE 778. Introduction to Adaptive Aerostructures. 3 Credits.
This course covers the basic material properties and modeling techniques for structures that are capable of changing some physical property in response to a command signal. The course will be useful for students from nearly every branch of engineering and includes a fabrication and testing practicum introducing basic post processing and integration techniques used with piezoelectric, shape memory alloy and magnetorheological materials. The course concludes with an overview of applications and examples of adaptive products. Prerequisite: ME 311 or equivalent.

AE 790. Special Problems in Aerospace Engineering for Masters Students. 1-5 Credits.
Directed studies of advanced problems in aerospace engineering. Open only to graduate students with departmental approval.

AE 803. Aeroelasticity. 3 Credits.
Introduction to self-excited vibrations, wing flutter, panel flutter, unsteady aerodynamics, launch vehicle structural vibrations. Prerequisite: AE 508, AE 545 or AE 546, AE 551 or AE 552, and AE 704.

AE 821. Advanced Aircraft Design I. 3 Credits.
Aerodynamic design optimization. Aircraft cost prediction methods: development, manufacturing, and operating. Minimization of operation costs and implications to configuration design. Design to minimize lifecycle costs. Design decision making on the basis of cost.

AE 822. Advanced Aircraft Design II. 3 Credits.
Design of flight control systems, fuel systems, hydraulic systems, and electrical systems. Weapon system integration problems, design for low radar cross sections. The kinematics of landing gear retraction systems.

AE 846. Advanced Computational Fluid Dynamics and Heat Transfer. 3 Credits.
Present recent advances in computational fluid dynamics and heat transfer with a focus on numerical algorithms designed for unstructured grids, including grid generation, convergence acceleration techniques, high-order algorithms and parallel computing on CPU and GPU clusters. It is expected that the students will understand the basics of the finite volume method for unstructured grids, and be able to program a 2D Euler...
solver for arbitrary grids after taking this class. Prerequisite: AE 746. This class is not open to undergraduate students.

**AE 892. Special Problems in Aerospace Engineering for Doctoral Students. 1-8 Credits.** Directed studies of advanced problems in aerospace engineering. Open only to graduate students with consent of instructor.

**AE 895. M.S. Thesis or Project. 1-6 Credits.** Original research or project which satisfies the requirements for the degree of Master of Science in Aerospace Engineering. Restricted to Aerospace MS students. Graded on a satisfactory progress/limited progress/no progress basis.

**AE 996. Ph.D. Dissertation. 1-9 Credits.** Restricted to Aerospace Ph.D. candidates. Graded on a satisfactory progress/limited progress/no progress basis.

**AE 997. DE Project. 1-16 Credits.** A major design problem or system study satisfying the project requirements for the Doctor of Engineering in Aerospace Engineering degree. Restricted to Aerospace DE candidates. Graded on a satisfactory progress/limited progress/no progress basis. Prerequisite: Successful completion of Comprehensive Oral Exam.

### Bioengineering Courses

**BIOE 800. Bioengineering Colloquium. 0.5-1 Credits.** A colloquium series featuring speakers from industry, government, other universities, research centers and research organizations of the university campus presenting talks on various topics related to bioengineering.

**BIOE 801. Responsible Conduct of Research in Engineering. 1 Credit.** Lectures and discussion on ethical issues in the conduct of a scientific career, with emphasis on practical topics of special importance in bioengineering. Topics include the nature of ethics, the roles of the scientist as a reviewer, entrepreneur, employer and teacher, research ethics in the laboratory, social responsibility and research ethics regulation. (Same as ME 801.) Prerequisite: Permission of instructor.

**BIOE 802. Bioengineering Internship. 1-6 Credits.** An approved bioengineering industrial or clinical internship. The student is supervised by a preceptor at the internship site. Biweekly reports and a final report detailing work performed are filed with the course instructor. Prerequisite: Permission of instructor.

**BIOE 860. Advanced Bioengineering Problems. 1-3 Credits.** An analytical or experimental study of problems or subjects of immediate interest to a student and faculty member and which is intended to develop students capability for independent research or application of engineering science and technology. Maximum credit toward any degree is three hours unless waived in writing by the academic director. Prerequisite: Consent of instructor.

**BIOE 890. Special Topics: ____. 1-5 Credits.** Advanced courses on special topics of current interest in bioengineering, given as the need arises. Prerequisite: Approval of instructor.

**BIOE 899. Independent Investigation. 1-6 Credits.** An original and independent research or design investigation involving analytical, experimental and/or modeling methodology applied to solve a bioengineering problem as a part of the degree requirements for the Master of Science. Graded on a satisfactory progress/limited progress/no progress basis.

**BIOE 999. Independent Investigation. 1-12 Credits.** An original and independent research or design investigation involving analytical, experimental and/or modeling methodology applied to solve a bioengineering problem as a part of the degree requirements for the Doctor of Philosophy. Graded on a satisfactory progress/limited progress/no progress basis.

### Chemical & Petroleum Engr Courses

**C&PE 111. Introduction to the Chemical Engineering Profession. 1 Credit.** The career opportunities for chemical engineers are described and students are introduced to the resources available to them at KU, in the School of Engineering, and in the Chemical and Petroleum Engineering Department. The students are introduced to the curriculum requirements and emphasis options, engineering ethics, basic safety considerations, teamwork, and technical writing. The course includes fundamental calculations and laboratory experiences in material and energy balances and fluid flow. Prerequisite: Corequisite: MATH 104 or MATH 125 or MATH 145.

**C&PE 112. Introduction to Chemical Engineering Profession II. 1 Credit.** Students are introduced to engineering ethics, basic safety considerations, teamwork, and technical writing. The course includes fundamental calculations and laboratory experiences in material and energy balances and fluid flow. Prerequisite: Corequisite: CHEM 130 or CHEM 170 or CHEM 190.

**C&PE 117. Energy in the Modern World. 1 Credit.** A survey course on global energy supply and demand, production methods and energy economics. Course begins with the matrix of energy supply and demand focusing on fossil fuels and nuclear energy and includes transportation/distribution patterns and issues and current production technologies. We then analyze alternate energy realities and potentials such as solar energy, wind energy, biomass utilization, hydrogen, fuel cells, hydroelectric, geothermal, wave/tidal, and others based on thermodynamic principles and economics. Course is also open to non-engineering students.

**C&PE 127. Introduction to Petroleum Engineering Profession. 1 Credit.** An introduction to principles of reservoir engineering and an application of economic principles will be introduced along with the use of computer spreadsheets. A mini petroleum engineering design project will be assigned to illustrate the integration of petroleum engineering principles and the use of computers. C&PE 127 is required of all Petroleum Engineering freshmen but is optional for others. Course is also open to non-engineering students.

**C&PE 211. Material and Energy Balances. 4 Credits.** The application of the laws of chemistry, physics, and mathematics to the solution of material and energy balance problems occurring in the process industries. Prerequisite: MATH 125 or MATH 145; CHEM 135 or CHEM 175 or CHEM 195; consent of department.

**C&PE 217. Introduction to Petroleum Drilling Engineering. 2 Credits.** An introduction to modern rotary drilling. Topics covered include: rig systems/hardware, management practices, cost analysis, drilling fluid function formulations and testing, well control systems, cement formulation and placement, drilling bits.

**C&PE 219. Drilling Fluids Laboratory. 1 Credits.** Laboratory study of formulation and properties of drilling fluids. "Mud" measurements covered include density, solids content, filtration control and viscosity. Other measurements include compressive strength of cement and cuttings transport properties. Prerequisite: Corequisite: C&PE 217.
C&PE 221. Chemical Engineering Thermodynamics. 3 Credits.
Fundamentals and applications of the First and Second Laws of Thermodynamics with strong emphasis on material, energy and entropy balances to solve engineering problems involving pure components. Topics include: Cycles (Rankine, Brayton, refrigeration, etc.), the calculus of thermodynamics, equations of state for realistic thermodynamic properties, departure functions, equilibrium and stability criteria, fugacity, and single component phase equilibrium (vaporization, melting, sublimation). Prerequisite: MATH 122 or MATH 142 or MATH 126 or MATH 146; and C&PE 211. Prerequisite or Corequisite: PHSX 210 or PHSX 211 or PHSX 213; or consent of department.

C&PE 226. Fundamentals of Biomedical and Biomolecular Engineering. 3 Credits.
Introduction to the building blocks of human and other living organisms with a focus on structure/function mechanisms that are critical for design, modeling, and analysis in living systems. Application of chemical engineering principles, including mass, energy, momentum and charge balances and molecular thermodynamics to analysis of living systems. Applies biochemistry, molecular biology and cell biology to fundamental issues in biochemical engineering, biomedical engineering and biotechnology. Prerequisite: C&PE 211, or consent of instructor. Corequisite: C&PE 221 or ME 212.

C&PE 325. Numerical Methods and Statistics for Engineers. 3 Credits.
An introduction to numerical methods and statistics and their application to engineering problems. Numerical methods topics include finding roots of a single nonlinear equation, numerical solution of ordinary differential equations, numerical integration, and solutions of ordinary differential equations. Statistical topics include regression and curve fitting, probability and probability distributions, expected value and hypothesis testing, and optimization of single and multiple-variable systems. Implementing numerical algorithms using computer programming will be emphasized, along with the fundamentals of programming, including data typing, branching, and iteration. Applications specific to chemical and petroleum engineering systems will be considered. Prerequisite: MATH 126 or MATH 146; and CHEM 135 or CHEM 175 or CHEM 195. Corequisite: MATH 220 or MATH 221 or MATH 320 or MATH 321; and MATH 290 or MATH 291; or consent of department.

C&PE 327. Reservoir Engineering. 4 Credits.
Properties of porous rocks, reservoir fluids, and fluid saturated rocks. Introduction to multiphase flow in porous media including concepts of wettability, capillary pressure and relative permeability. Prerequisite: CHEM 135 or CHEM 175 or CHEM 195.

C&PE 511. Momentum Transfer. 3 Credits.
Solutions of continuity, momentum, and energy equations applied to fluids in confined flow or flowing past submerged objects. Laminar and turbulent flows of both incompressible and compressible fluids are considered. Engineering applications include pressure drop and network analysis of piping lines, flow measurements, fluid moving equipment including the performance of pumps. Prerequisite: C&PE 221 or ME 212; C&PE 121 or C&PE 325; and a grade of C- or higher in MATH 127 or MATH 147; and MATH 220 or MATH 221 or MATH 320 or MATH 321; or consent of department. The Department has a GPA requirement for progression in the program. Details can be found in the catalog.

C&PE 512. Chemical Engineering Thermodynamics II. 3 Credits.
Further application of the laws of thermodynamics to multi-component mixtures and in multi-phase equilibria with focus on vapor-liquid, liquid-liquid, and solid-liquid equilibria. Mixture Fugacity expressions are developed using equations of state with mixing rules or Excess Gibbs Free Energy/activity coefficient models for data correlation or prediction. Chemical equilibrium of reactions is also discussed. Prerequisite: C&PE 121 or C&PE 325; C&PE 211; C&PE 221; and CHEM 330 or CHEM 380; or consent of department. The Department has a GPA requirement for progression in the program. Details can be found in the catalog.

C&PE 519. Drilling Fluids Laboratory. 1 Credits.
Laboratory study of formulation and properties of drilling fluids. "Mud" measurements covered include density, solids content, filtration control and viscosity. Other measurements include compressive strength of cement and cuttings transport properties. Prerequisite: C&PE 511.

C&PE 521. Heat Transfer. 3 Credits.
An applied study of the various (conductive, convective, and radiative) heat transfer mechanisms in solid and fluid systems both transient and steady-state. Engineering applications include: conduction in solids and fluids, free and forced convection in fluids, radiation, boiling and condensing fluids, and design of heat exchangers. Prerequisite: C&PE 121 or C&PE 325; C&PE 221 or ME 312; C&PE 511 or ME 510; MATH 122 or MATH 142 or MATH 127 or MATH 147; and MATH 220 or MATH 221 or MATH 320 or MATH 321; or consent of instructor. The Department has a GPA requirement for progression in the program. Details can be found in the catalog.

C&PE 522. Economic Appraisal of Chemical and Petroleum Projects. 2 Credits.
Consideration of the economic factors important in the development of the chemical or petroleum enterprise. Applications of economic evaluation methods to engineering project development. Consideration of risk and uncertainty in project development. Prerequisite: C&PE 121 or C&PE 325; and a grade of C- or higher in MATH 126 or MATH 146 and PHSX 210 or PHSX 213; or consent of department.

C&PE 524. Chemical Engineering Kinetics and Reactor Design. 3 Credits.
Development and solution of the material and energy balance equations for continuous and batch reactors. These balance equations are applied in (a) the determination of intrinsic kinetics, (b) the design of reactors and (c) the analysis of reactor behavior. Both homogeneous and heterogeneous reaction systems are considered. Prerequisite: C&PE 511; C&PE 512; and a grade of C- or higher in MATH 220 or MATH 221 or MATH 320 or MATH 321; or consent of department. Corequisite: C&PE 525. The Department has a GPA requirement for progression in the program. Details can be found in the catalog.

C&PE 525. Heat and Mass Transfer. 4 Credits.
An applied study of the various heat and mass transfer mechanisms in solid and fluid systems. Heat transfer mechanisms include conduction and the concept of conductivity at the molecular level, convection, and radiation. Mass transfer fundamentals include diffusion and the concepts of diffusivity at the molecular level and shell mass balances including diffusion, convention, and consumption or generation source terms. Steady state and transient heat and mass transfer engineering applications will be considered. Prerequisite: C&PE 221 or ME 212; C&PE 325; C&PE 511 or ME 510; and a grade of C- or higher in MATH 220 and MATH 127; or consent of department. The Department has a GPA requirement for progression in the program. Details can be found in the catalog.

C&PE 527. Reservoir Engineering II. 4 Credits.
Lectures on single phase flow and pressure distribution in reservoirs. Calculations in drawdown, buildup, multiple rate, fractured systems, gas and injection well testing. Material balance calculations for gas, gas-condensate, undersaturated, and saturated reservoirs. Prerequisite: C&PE 327; ME 212 or C&PE 221; a grade of C- or higher in MATH 220 or MATH 221 or MATH 320 or MATH 321; or consent of department. The
Petroleum major has a GPA requirement for specific courses to progress to junior year courses. Details can be found in the catalog.

**CPE 528. Well Logging. 3 Credits.**
Analysis of well logs to determine properties of reservoir rocks, fluid saturations and lithology, and production logging. Prerequisite: C&PE 327 or consent of department. The Petroleum major has a GPA requirement for specific courses to progress to the junior year courses. Details can be found in the catalog.

**CPE 601. Undergraduate Topics in Chemical and Petroleum Engineering. 1-4 Credits.**
Undergraduate study in various branches of Chemical and Petroleum Engineering on topics that may vary from year to year. Prerequisite: Varies.

**CPE 611. Design of Unit Operations. 3 Credits.**
Application of chemical engineering principles to design pumps, heat exchangers, and separation equipment. Staged separation processes including distillation, extraction and absorption, membrane separations, and modes of operation will be considered. Sizing of equipment, energy consumption and materials of construction will also be addressed. Prerequisite: C&PE 211; C&PE 511; C&PE 512; C&PE 521 or C&PE 525; C&PE 523 or C&PE 525; C&PE 524; or consent of department. The Department has a GPA requirement for progression in the program. Details can be found in the catalog.

**CPE 612. Environmental Assessment of Chemical Processes. 3 Credits.**
A discussion and project-based survey of environmental issues in chemical engineering, including environmentally conscious design, environmental fate and transport, green chemistry, and life cycle analysis. Focus will be on the design, implementation and management of comprehensive environmental assessments for existing and new industrial facilities with an emphasis on the technical and economic impacts of catalytic systems on pollution control strategies.

**CPE 613. Chemical Engineering Design I. 4 Credits.**
Synthesis, design and economic analysis of petrochemical, and chemical plants. Applications in computer aided engineering applied to these topics. Prerequisite: C&PE 611 and C&PE 615; or consent of department. The Department has a GPA requirement for progression in the program. Details can be found in the catalog.

**CPE 614. Reaction Engineering for Environmentally Benign Processes. 3 Credits.**
Principles of reaction engineering and green chemistry applied to processes of the future. With a case-based introduction to the design and optimization of catalytic processes and reaction systems, focus will be on key reaction engineering concepts, including catalysis, mechanisms, reaction kinetics, heterogeneous reactions, reactor types and economic evaluation. Students will develop a multidisciplinary understanding of chemical, biological and molecular concepts and of the multiscale character of developing and designing processes from the micro level to the macro level. Prerequisite: Senior standing in engineering or the physical/biological sciences.

**CPE 615. Introduction to Process Dynamics and Control. 3 Credits.**
The behavior of chemical processing equipment in the presence of disturbances in operating conditions is analyzed. Control systems are designed based on the criteria of system stability and optimal system performance. Prerequisite: C&PE 511; C&PE 512; C&PE 524; and C&PE 525; or consent of department. The Department has a GPA requirement for progression in the program. Details can be found in the catalog.

**CPE 616. Chemical Engineering Laboratory I. 4 Credits.**
Laboratory study of chemical engineering concepts of thermodynamics, fluid flow, heat transfer, mass transfer, and reaction kinetics. Includes emphasis on technical communication skills. Prerequisite: C&PE 511; C&PE 512; C&PE 524; C&PE 525; and ENGL 102 or ENGL 105; or consent of department. The Department has a GPA requirement for progression in the program. Details can be found in the catalog.

**CPE 617. Drilling and Well Completion. 3 Credits.**
Design and analysis of rotary drilling and well completion systems: casing design, cementing, and perforating. Safety and ethical considerations in drilling and fluid disposal operations. Prerequisite: C&PE 217; C&PE 219; C&PE 327; C&PE 511 or ME 510; or consent of department. The Petroleum major has a GPA requirement for specific courses to progress to the senior year courses. Details can be found in the catalog.

**CPE 618. Improved Oil Recovery. 3 Credits.**
Improved Oil Recovery processes such as primary, secondary, and tertiary oil recovery techniques will be presented. This includes miscible/immiscible displacement, chemical processes such as polymer flood, surfactant and micellar flood, and thermal recovery techniques such as steam flooding, in-situ combustion, and other EOR techniques. Design of waterfloods including preparation of a reservoir description for waterflood evaluation. Prerequisite: C&PE 527; or consent of the department. The Petroleum major has a GPA requirement for specific courses to progress to the junior year courses. Details can be found in the catalog.

**CPE 619. Petroleum Engineering Laboratory I. 3 Credits.**
Laboratory study of methods to determine rock and fluid properties related to petroleum engineering including phase behavior, viscosity, permeability, porosity, capillary pressure, oil recovery, water/oil displacement, fluid flow, and heat transfer coefficients. Analysis of experimental uncertainty. Oral and written presentations are required. Prerequisite: ENGL 203 (Writing for Engineers); C&PE 219; C&PE 327; C&PE 511 or ME 510; or consent of department. The Petroleum major has a GPA requirement for specific courses to progress to junior year courses. Details can be found in the catalog.

**CPE 620. Enhanced Oil Recovery. 3 Credits.**
Enhanced Oil Recovery processes such as primary, secondary, and tertiary oil recovery techniques will be presented. This includes miscible/immiscible displacement, chemical processes such as polymerflood, surfactant and micellar flood, and thermal recovery techniques such as steam flooding, in-situ combustion, and other EOR techniques. Prerequisite: C&PE 527 and C&PE 618 or consent of instructor.

**CPE 624. Process Safety and Sustainability. 3 Credits.**
An introductory course designed to acquaint students with the necessary global aspects and ethics of risk-based process safety and sustainability. Topics will include elements of process safety, process safety management, historical and contemporary case studies of major accidents in the chemical and petroleum industry, overview of current government regulation (e.g. OSHA, EPA, etc.), and ethics. Students will receive an introduction to sustainable ("green") chemistry and engineering followed by more quantitative Life Cycle Analysis (LCA) to compare technologies and products. Prerequisite: C&PE 511 or ME 510; and senior standing in chemical or petroleum engineering; or consent of department. The Department has a GPA requirement for progression in the program. Details can be found in the catalog.

**CPE 625. Unconventional Reservoirs. 3 Credits.**
Principles of unconventional reservoir engineering including properties and use of shale reservoirs, hydraulic fracturing, and relevant environmental and economic factors. Prerequisite: C&PE 511; C&PE 522; C&PE 527; C&PE 528; ME 211 or CE 201 and CE 310; GEOL 331 or GEOL 591; Geology for Petroleum Engineers; or consent of department.
The Petroleum major has a GPA requirement for specific courses to progress to the senior year courses. Details can be found in the catalog.

**C&PE 626. Chemical Engineering Laboratory II. 3 Credits.**
Laboratory study of chemical engineering concepts of thermodynamics, fluid flow, heat transfer, mass transfer, reaction kinetics, and process control. Includes emphasis on technical communication skills.
Prerequisite: ENGL 102 or ENGL 105; C&PE 511; C&PE 512; C&PE 524; C&PE 525; C&PE 615; and C&PE 616; or consent of department. The Department has a GPA requirement for progression in the program. Details can be found in the catalog.

**C&PE 627. Petroleum Production. 3 Credits.**
Design and analysis of natural production and artificial lift systems, including beam pumping, gas lift, and submersible pumps. Vertical and horizontal two phase flow, compression, metering, acidizing, fracturing, and pipeline flow systems. Treatment of ethics considerations in production contracts and leasing arrangements.
Prerequisite: C&PE 327; C&PE 511 or ME 510; or consent of department. The Petroleum major has a GPA requirement for specific courses to progress to the senior year courses. Details can be found in the catalog.

**C&PE 628. Petroleum Engineering Design. 3 Credits.**
Design problems related to petroleum reservoir development such as selection of optimum well spacing for a specified reservoir, evaluation of a producing property or installation of a waterflood. Designs consider economic, uncertainty analysis, as well as conservation, environmental, and professional ethics factors.
Prerequisite: C&PE 522; C&PE 527; C&PE 528; C&PE 618; C&PE 619; GEOL 535; or consent of department. The Petroleum major has a GPA requirement for specific courses to progress to the senior year courses. Details can be found in the catalog.

**C&PE 640. Natural Gas Engineering. 3 Credits.**
Principles of natural gas engineering including resource distribution and evaluation, composition and properties, production, processing, transportation, storage and relevant environmental and economic aspects.
Prerequisite: C&PE 625 and C&PE 627, or consent of department.

**C&PE 651. Undergraduate Problems. 1-3 Credits.**
Investigation of a particular problem in the field of chemical or petroleum engineering. The problem or research topic is identified jointly by the student and the faculty research supervisor. A final report is required.

**C&PE 654. Biocatalysis. 3 Credits.**
Introductory and advanced topics in biocatalysis with focus on enzymatic reactions. Enzymology will provide the fundamental basis for discussion of kinetics and bio-process development. Advanced topics include: enzymes in non-aqueous solvents, immobilization techniques, whole-cell transformations, bio-reactors.

**C&PE 655. Introduction to Semiconductor Processing. 3 Credits.**
An overview of various processes to fabricate semiconductor devices and integrated circuits. Topics covered include crystal growth, oxidation, solid-state diffusion, ion implantation, photolithography, chemical vapor deposition, epitaxial growth, metalization, and plasma etching of thin films.
(Same as EECS 670.) Prerequisite: Senior standing in C&PE or EECS, or consent of instructor.

**C&PE 656. Introduction to Biomedical Engineering. 3 Credits.**
An interdisciplinary introduction to the field of biomedical engineering. This course covers a breadth of topics including biotransport, biomechanics, biomaterials, tissue engineering, drug delivery, biomedical imaging, computational biology, and biotechnology. Students are exposed to these broad topics, and go further in depth in a topic of their choice with the semester project. Prerequisite: Junior or Senior-level standing in Engineering or consent of instructor.

**C&PE 657. Polymer Science and Technology. 3 Credits.**
Introduction to polymer chemistry, science, technology, and processing. The course covers the principles of polymer synthesis and the structure-property relationships in the solid state and in solution, such as solubility, rheology and mechanical properties.
Prerequisite: C&PE 626. Students will learn to understand from an engineering perspective how polymers are created and used. Prerequisite: Senior or graduate student standing in chemical engineering, chemistry, or consent of instructor.

**C&PE 661. Undergraduate Honors Research. 1-3 Credits.**
This course involves the investigation of a particular problem in the field of chemical or petroleum engineering. C&PE 661 should be taken, rather than C&PE 651, for students seeking Departmental Honors in Chemical Petroleum Engineering. C&PE 661 may also be used by students in the Honors Program to help satisfy the course requirement of this program. The design or research topic is identified jointly by the student and faculty research supervisor.
Prerequisite: C&PE 121 or C&PE 325; C&PE 211; C&PE 511; C&PE 512; overall GPA >3.5; and engineering GPA >3.5, or consent of the instructor.

**C&PE 671. Senior Thesis. 3 Credits.**
This course involves the investigation of a particular problem in the field of chemical or petroleum engineering as a continuation for students with previous research experience, by invitation. The design or research topic is identified jointly by the student and faculty research supervisor and faculty committee. Students will present periodically and receive instruction and feedback on their presentations.
A written thesis and public oral defense with committee are also required. Prerequisite: C&PE 651 or C&PE 661; and invitation and permission of instructor, open to seniors only.

**C&PE 676. Principles of Biomolecular Engineering. 3 Credits.**
Application of chemical engineering principles, including transport phenomena, reaction kinetics and thermodynamics, to analysis of living systems.
Prerequisite: C&PE 511, C&PE 512, or consent of instructor.
Corequisite: C&PE 524, C&PE 525, or consent of instructor.

**C&PE 678. Applied Optimization Methods. 3 Credits.**
Study of methods for solving optimization problems encountered in engineering and the natural sciences, with specific applications illustrating analytical and numerical techniques. Topics covered include methods, penalty functions, linear programming, nonlinear and integer programming, stochastic optimization approaches, and treatment of constrained problems. A semester project is required. Prerequisite: Senior standing or consent of instructor.

**C&PE 686. Bioprocess Engineering. 3 Credits.**
Provides students with essential knowledge and understanding of biochemical engineering fundamentals to the design, development, operation and control of biologically based industrial processes.
The course will cover unit operations key to the production of chemicals and pharmaceuticals using cultured cells, such as bioreactors, separations, centrifuges, chromatography and lyophilizers. Issues unique to biologically-based processes such as the need for aseptic conditions, clean-in-place procedures, containment, material handling, sequencing, safety and biohazard, multi-purpose plant design, and process measurement and control.
Prerequisite: Senior or graduate student standing in Chemical Engineering, or consent of the instructor.

**C&PE 701. Methods of Chemical and Petroleum Calculations. 3 Credits.**
The utilization of advanced mathematical methods and computing techniques in the solution of problems in these fields.

C&PE 710. Subsurface Methods in Formation Evaluation. 3 Credits.
Study of subsurface methods and their applications to exploration, evaluation, and production of hydrocarbon reservoirs. Emphasis is on fundamentals of quantitative well log interpretations and the use of well log data in solving geologic and reservoir engineering problems, e.g., porosity, hydrocarbon saturation, permeable bed thickness, permeability, correlation, structural mapping, and stratigraphic and paleoenvironmental studies. Laboratory. Prerequisite: GEOL 535 or C&PE 517 or consent of instructor.

C&PE 712. Environmental Assessment of Chemical Processes. 3 Credits.
A discussion and project-based survey of environmental issues in chemical engineering, including environmental conscious design, environmental fate and transport, green chemistry, and life cycle analysis. Focus will be on the design, implementation and management of comprehensive environmental assessments for existing and new industrial facilities with in-depth analysis of the technical and economic impacts of catalytic systems on pollution control strategies. A comprehensive research paper is required as a final project.

C&PE 714. Reaction Engineering for Environmentally Benign Processes. 3 Credits.
Principles of reaction engineering and green chemistry applied to processes of the future. With a case-based introduction to the design and optimization of catalytic processes and reaction systems, focus will be on key reaction engineering concepts, including catalysis, mechanisms, reaction kinetics, heterogeneous reactions, reactor types and economic evaluation. Students will develop a multidisciplinary understanding of chemical, biological and molecular concepts, and will develop and design processes from the micro level to the macro level. A final research paper is required.

C&PE 715. Topics in Chemical and Petroleum Engineering: _______. 1-4 Credits.
Study in various branches of Chemical and Petroleum Engineering on topics that may vary from year to year.

C&PE 721. Chemical Engineering Thermodynamics. 3 Credits.
Chemical engineering applications of advanced thermodynamics and physical chemistry. Prerequisite: C&PE 512.

C&PE 722. Kinetics and Catalysis. 3 Credits.
Modeling and analysis of chemical reactors with emphasis on heterogenous catalytic reaction systems. Prerequisite: C&PE 524.

C&PE 725. Cellular and Molecular Pharmaceutics. 3 Credits.
The pharmaceutical relevance of fundamental and advanced concepts in cell biology and the molecular interactions responsible for cell and tissue functions, homeostasis in health and disease will be presented. Current analytical methods for examining cells and tissues, and molecular components important in understanding drug and protein biodistribution and metabolism will be discussed. Discussion topics will include the chemical and physical properties of small molecules, proteins, nucleic acids and lipids and their impact on cellular and subcellular structures and ultimately of either adverse or therapeutic benefit. (Same as PHCH 725.) Prerequisite: Graduate standing or consent of instructor.

C&PE 731. Convective Heat and Momentum Transfer. 3 Credits.
The formulation and solution of steady- and unsteady-state convective heat and momentum transfer problems. Applications of boundary layer equations to free and forced convection with study of similarity and integral methods of solution for laminar and turbulent flow; development of analogies; transport properties from kinetic theory of gases viewpoint; introduction to numerical methods. Prerequisite: ME 610/C&PE 511 and ME 612/C&PE 521 or equivalent. A concurrent course in partial differential equations is helpful.

C&PE 732. Advanced Transport Phenomena II. 3 Credits.
The formulation and solution of steady- and unsteady-state mass transfer problems (including those complicated by momentum and heat transfer). This course is the sequel to C&PE 731 and relies upon much of the material treated there. The mathematical approach predominates and the methods available for determining suitable mass transfer coefficients are covered.

C&PE 751. Basic Rheology. 3 Credits.
Basic rheology including classification of classical bodies based on their stress and strain tensors, rheological equation of state, material functions, generalized Newtonian and general linear viscoelastic fluids, mechanical models such as those of Jeffreys and Maxwell. Prerequisite: C&PE 511 or an equivalent course in fluid mechanics.

C&PE 752. Tissue Engineering. 3 Credits.
An introduction to the rapidly growing and continuously evolving field of tissue engineering. Tissue engineering applies principles and methods of engineering and life sciences toward understanding and development of biological substitutes to restore, maintain and improve tissues functions. In this course, students study the basic science, engineering and medicine required for tissue engineering, learn state-of-the-art technology and practice, and create a literature-based proposal for a tissue engineered medical product. Prerequisite: Senior or graduate standing in engineering; or consent of instructor.

C&PE 753. Introduction to Electrochemical Engineering. 3 Credits.
Basic principles of electrochemical engineering as they are applied to energy conversion and storage devices, industrial electrolytic processes and corrosion. Areas covered range from electrochemical thermodynamics, ionic phase equilibria, electro-kinetics and ionic mass transport to mathematical modeling of electrochemical systems. Prerequisite: Graduate standing; C&PE 511, C&PE 512, C&PE 524 or equivalent; knowledge of a programming language.

C&PE 754. Biocatalysis. 3 Credits.
Introductory and advanced topics in biocatalysis with focus on enzymatic reactions. Enzymology will provide the fundamental basis for discussion of kinetics and bio-process development. Advanced topics include: enzymes in non-aqueous solvents, immobilization techniques, whole-cell transformations, bio-reactors. Knowledge of the theoretical basis for these techniques and processes will be demonstrated within a class project.

C&PE 755. Introduction to Semiconductor Processing. 3 Credits.
An overview of various processes to fabricate semiconductor devices and integrated circuits. Topics covered include crystal growth, oxidation, solid-state diffusion, ion implantation, photolithography, chemical vapor deposition, epitaxial growth, metallization, and plasma etching of thin films. A term paper on an approved topic of fabrication referencing current peer reviewed literature is required.

C&PE 756. Introduction to Biomedical Engineering. 3 Credits.
The graduate elective form of C&PE 656. Additional assignments commensurate with the graduate-level course designation are required for this section. Prerequisite: Graduate-level standing in Engineering, or consent of instructor.

C&PE 757. Polymer Science and Technology. 3 Credits.
The graduate elective form of C&PE 657. Additional assignments on current research directions in the field commensurate with the graduate-
level course designation are required for this section. Prerequisite: Graduate-level standing in engineering, or consent of instructor.

C&PE 765. Corrosion Engineering. 3 Credits.
Electrochemical basis of corrosion. Types of corrosion and corrosive atmospheres. Corrosion control measures and industrial problems. Prerequisite: ME 306 or CHEM 135 or CHEM 175 or CHEM 195.

C&PE 771. Advanced Reservoir Engineering. 3 Credits.
Physical principles of petroleum production; gas drive performance; partial water drive performance; pressure maintenance through gas and water injection. Prerequisite: C&PE 527.

C&PE 778. Applied Optimization Methods. 3 Credits.
Study of methods for solving optimization problems encountered in engineering and the natural sciences, with specific applications illustrating analytical and numerical techniques. Topics covered include gradient methods, penalty functions, linear programming, nonlinear and integer programming, stochastic optimization approaches, and treatment of constrained problems. Homework problems involving theoretical concepts and a theoretically-based semester project are required.

C&PE 790. Introduction to Flow in Porous Media. 3 Credits.
Generalized Darcy's law, vector equations, solutions of partial differential equations with various boundary conditions as applied to the flow of fluids in porous media. Prerequisite: C&PE 527.

C&PE 795. Enhanced Petroleum Recovery. 3 Credits.
A study of improved oil recovery processes such as miscible displacement, microemulsion displacement, and thermal methods. Prerequisite: C&PE 618 or permission of instructor.

C&PE 798. Phase Equilibrium. 3 Credits.
A study of phase behavior and equilibrium from a molecular perspective. Focus will be on vapor-liquid, liquid-liquid and solid-liquid equilibrium with advanced topics in compressed and supercritical fluids, petroleum applications, ionic solutions and others.

C&PE 800. Seminar. 0.5-1 Credits.
Every fall, five to six seminar sessions will be devoted to providing incoming students information on available thesis/dissertation research projects, library resources, computing environment and topics related to the issues of responsible scholarship in the fields of Chemical and Petroleum Engineering. For the remainder of the year, the seminar will involve presentation of current research and other topics of interest to chemical and petroleum engineers. These presentations will be made by invited guests, faculty, and advanced graduate students. Student attendance is required. Graded on a satisfactory/unsatisfactory basis.

C&PE 801. Introduction to Research. 1 Credits.
One hour per week in which the staff introduces entering graduate students to research. Topics include discussion of research methods, methods of effectively tapping library resources, preparation of literature surveys, and presentation of results. Faculty members of the department will make presentations of their current research interests. Offered fall only. Prerequisite: Corequisite: C&PE 800.

C&PE 802. CEBP Colloquium. 0.5-1 Credits.
A forum in which graduate and postdoctoral students, and faculty present the results of CEBP research and literature surveys that support the mission of CEBP.

C&PE 803. Research. 1-6 Credits.
For M.S. candidates.

C&PE 804. Petroleum Management Seminar. 1 Credits.
Structure, operation, and problems of the petroleum industry from a management viewpoint. Presentations will be made by faculty, advanced students, and invited guests. Prerequisite: Permission of instructor.

C&PE 825. Graduate Problems in Chemical and Petroleum Engineering. 1-5 Credits.
Advanced laboratory problems, special research problems, or library reading problems. Three hours maximum acceptable for master's degree.

C&PE 902. Preparation for the Ph.D. Comprehensive Examination. 3 Credits.
Preparation of a research proposal in an area assigned by the student's advisory committee. The grade received on the Ph.D. comprehensive examination will apply to this credit.

C&PE 904. Research. 1-12 Credits.
For Ph.D. candidates.

C&PE 910. Industrial Development of Catalytic Processes. 3 Credits.
Students adopt an interdisciplinary team approach to developing strategies for the design and optimization of catalytic processes. Examples of case studies will be derived from industry or from research testbeds. Students collaborate in multiscale process development involving catalyst and reactor design, reaction system design, modeling and optimization, economic analysis and environmental assessment needed for the development of a catalytic process at either the pilot or production scale.

C&PE 911. Industrial Practicum. 1-3 Credits.
Graduate students engage in an industrial research internship experience with collaborators in industry.

C&PE 912. Teaching College Level Engineering and Science Practicum. 1 Credits.
Future university instructors learn how to critically examine course content and teaching strategies, and prepare courses that will address the learning needs of the diverse student populations of the future. Students participate in weekly in-class workshops and symposia, as well as a teaching practicum experience during this course.

C&PE 919. Advanced Topics in Process Modeling Simulation or Control: _____ . 1-4 Credits.
Advanced study in process modeling, simulation or control on topics which may vary from year to year.

C&PE 929. Advanced Topics in Chemical and Petroleum Engineering: _____ . 1-4 Credits.
Advanced study in various branches of chemical and petroleum engineering on topics which may vary from year to year.

C&PE 933. Heat and Mass Transport in Porous Media. 3 Credits.
A study of industrial problems involving heat and mass transport in porous media such as packed columns, reactor beds, chemical reactors, and petroleum reservoirs. Mechanisms of interphase and intraphase transport, diffusion, and dispersion. Included are methods of solution of the describing differential equations.

C&PE 934. Heat Transport with Phase Change. 3 Credits.
A fundamental treatment of heat transfer occurring during boiling and condensation. Included are nucleate and film boiling, film and dropwise condensation, and two-phase flow.

C&PE 936. Industrial Separation Processes. 3 Credits.
Determination and treatment of vapor-liquid separations, including methods for obtaining and treating equilibrium data, procedures for calculating multi-component separations by distillation, absorption, extraction, and adsorption.
C&PE 937. Applied Rheology. 3 Credits.
Industrial applications of fluid mechanics including compressible flow, flow of non-Newtonian fluids, flow of drag reducing systems all to be considered in laminar and turbulent flow regimes, and within conduits, and porous media.

C&PE 939. Advanced Topics in the Transport Phenomena: 1-4 Credits.
Advanced study in various branches of transport phenomena on topics which may vary from year to year.

C&PE 940. Data Analysis in Engineering and Natural Sciences. 3 Credits.
Statistical inference and data analysis, emphasizing interpretation of observations from areas of engineering and natural sciences where controlled experimentation is not possible. The basics of elementary statistics and matrix algebra are covered, followed by topics in time series analysis, map analysis, including automatic contouring, and multivariate procedures such as principal components, discrimination and factor analysis. A suite of computer programs is provided. Students are encouraged to use data from their own graduate research in class projects.

Civil, Envr & Arch Engineering Courses

ARCE 101. Introduction to Architectural Engineering. 2 Credits.
An introduction to the study of and careers in architectural engineering. Topics include problem solving and study skills, the building design and construction process, design documents, and professional practice issues such as licensing requirements and ethics.

ARCE 217. Computer-Assisted Building Design. 3 Credits.
Introduction to computer-aided design (CAD) tools. The course covers 2D drafting and 3D modeling using Autodesk’s AutoCAD® and building information modeling (BIM) software Revit®. Includes architectural and structural design; mechanical, electrical, and plumbing (MEP) design; and modeling using the Family Editor in Revit. Prerequisite: Must be eligible for MATH 125 or MATH 145, or consent of instructor.

ARCE 315. Electric Circuits and Machines. 3 Credits.
Introduction to DC and AC electrical circuit analysis techniques, AC power calculations, transformers, three-phase systems, magnetic circuits, and DC and AC machines with a focus on applications. Not open to electrical or computer engineering majors. (Same as EECS 315.) Prerequisite: A course in differential equations and eight hours of physics.

ARCE 350. Building Materials Science. 3 Credits.
An introduction to the structural, thermal, electrical, and optical properties of building materials. Manufacturing, testing, integration, and specification of materials with emphasis on commercial, institutional, and industrial buildings. Prerequisite: PHSX 212 and CHEM 150 or CHEM 149, or consent of instructor.

ARCE 351. Building Materials Science, Honors. 3 Credits.
An introduction to the structural, thermal, electrical, and optical properties of building materials. Manufacturing, testing, integration, and specification of materials with emphasis on commercial, institutional, and industrial buildings with added honors-enhancement activities. The activities include one or more of the following: extra meetings outside the classroom, written work, projects, and presentations. Prerequisite: PHSX 212 and CHEM 150 or CHEM 149, or consent of instructor.

ARCE 390. Special Problems. 1-3 Credits.
Special problems in architectural engineering. The study of a particular problem involving individual research and report. Prerequisite: Students must submit, in writing, a proposal including a statement of the problem the student wishes to pursue, the methodology the student plans to use in the program, and objectives of the special problems. The student must also have a signed agreement with the faculty member proposed as instructor for the course. Consent of the instructor.

ARCE 620. Architectural Acoustics. 3 Credits.
An introduction to the physics of sound. Objective and subjective evaluation and control of sound as applied to architectural spaces. Room shaping, mechanical and electrical system noise and vibration control, and electro-acoustic sound reinforcement. Prerequisite: PHSX 212, PHSX 236, and ARCE 661 or equivalent, or consent of instructor.

ARCE 621. Electro-Acoustical Systems. 3 Credits.
A study of electro-acoustic sound reinforcement and reproduction systems for buildings. Prerequisite: PHSX 212, PHSX 236, and ARCE 315 or equivalent, or consent of instructor.

ARCE 629. Problems in Architectural Acoustics. 1.5 Credits.
Capstone architectural engineering design course that includes the analysis, design, and integration of a building’s acoustical system. Building codes, standards, performance, and sustainability are addressed. Prerequisite: CMGT 457, ARCE 640, and senior standing, or consent of instructor. Corequisite: CMGT 500.

ARCE 640. Power Systems Engineering I. 3 Credits.
This course introduces the design of commercial and industrial power systems. Emphasis is placed on the proper selection, specification, and installation of materials and equipment that comprise commercial and industrial power systems. This course covers the application of materials and equipment in accordance with industry standards, independent laboratory testing, and the National Electrical Code. Prerequisite: ARCE 315 or EECS 315 or consent of instructor.

ARCE 641. Power Systems Engineering II. 3 Credits.
A continuation of ARCE 640 that integrates system components into functional, safe, and reliable power distribution systems for commercial, industrial, and institutional (CII) facilities. Service entrance design, distribution system layout and reliability, emergency and standby power system design, medium-voltage distribution systems, symmetrical fault analysis, and special equipment and occupations. (Same as EECS 441.) Prerequisite: ARCE 640 or EECS 212 and Upper-Level EECS Eligibility.

ARCE 642. Power System Protection. 3 Credits.
This course introduces techniques and methods used to analyze and predict the performance of commercial and industrial power systems and equipment under balanced and unbalanced fault conditions. Emphasis is placed on the selection, application, and coordination of protective devices to detect and clear power system faults in a safe and reliable manner. Prerequisite: ARCE 640 or EECS 212 or consent of instructor.

ARCE 645. Electric Energy Production and Storage. 3 Credits.
An introduction to the design of utility scale and small scale (distributed generation) electric energy production and storage systems. This course addresses the technical, operational, economic, and environmental characteristics associated with both traditional and nontraditional electric energy production systems along with associated grid integration, energy delivery, and regulatory issues. Traditional energy production systems covered include fossil fuel, hydroelectric, and nuclear power plants. Non-traditional energy production systems covered include fuel cells, photovoltaics (PV), concentrated solar power (CSP), wind, geothermal, and other emerging technologies. (Same as EECS 545.) Prerequisite: ARCE 640, or EECS 212 and Upper-Level EECS Eligibility.

ARCE 647. Power System Analysis I. 3 Credits.
Introduction to the analysis of commercial, industrial, and utility power systems. Emphasis is placed on modeling system components which include transmission and distribution lines, transformers, induction machines, and synchronous machines and the development of a power
system model for analysis from these components. System modeling will be applied to short-circuit studies and used to analyze symmetrical faults, to develop sequence networks using symmetrical components, and analyze unsymmetrical faults. (Same as EECS 547.) Prerequisite: ARCE 640, or EECS 212 and Upper-Level EECS Eligibility.

**ARCE 648. Power System Analysis II. 3 Credits.**
Continuation of ARCE 647 or EECS 547 that uses power system modeling developed in ARCE 647 or EECS 547 to analyze power system load flow, operation and economic dispatch, stability, and transient response. The impact of alternative energy sources, energy storage, DC transmission and interties, and other emerging technologies on power system operation and reliability will be addressed throughout the course. (Same as EECS 548.) Prerequisite: ARCE 647 or EECS 547 or consent of instructor.

**ARCE 650. Illumination Engineering. 3 Credits.**
Students are introduced to lighting fundamentals, measurement, and technology and to their application in the analysis and design of architectural lighting systems. Prerequisite: PHSX 212 or consent of instructor.

**ARCE 660. Building Thermal Science. 3 Credits.**
The fundamentals of moist air processes, air and moisture exchange, and building heat transfer. Determination of heating and cooling loads under steady-state and transient conditions. Prerequisite: ME 212. Corequisite: CE 330 or ME 510 or AE 345 or C&PE 511; or consent of instructor.

**ARCE 661. HVAC&R Systems Design. 3 Credits.**
Analysis and design of heating, ventilating, air-conditioning, and refrigeration equipment and systems. Prerequisite: ARCE 660 or ARCE 670 or consent of the instructor.

**ARCE 662. Water Systems Design. 3 Credits.**
The analysis and design of hydronic systems for buildings including piping, plumbing, pumping, and the water-side of heating, ventilating, and air-conditioning (HVAC). Prerequisite: ME 510, AE 345, CE 330, or C&PE 511, or consent of the instructor.

**ARCE 663. Energy Management. 3 Credits.**
Energy usage in commercial buildings and industry, energy auditing methodology, utility analysis, management measures, and economic evaluation are covered. Includes fieldwork. Prerequisite: Corequisite: ARCE 660 or ARCE 670, or consent of instructor.

**ARCE 664. Fire Protection Engineering. 3 Credits.**
An introduction to human response, fire science, combustion calculations, compartment fires, piping and sprinkler design, and smoke management. Analytical methods, experimental data, codes, case-studies, and videos are presented in this engineering design course. Prerequisite: ME 212 or C&PE 221, and ME 510, AE 345, CE 330, or C&PE 511, or consent of instructor.

**ARCE 665. Solar Energy Systems Design. 3 Credits.**
A quantitative and qualitative study of active, passive, wind, and photovoltaic energy conversion systems for buildings. Solar radiation and system performance prediction. Prerequisite: ME 212 or C&PE 221, or consent of instructor.

**ARCE 670. Building Thermal Science, Honors. 3 Credits.**
The fundamentals of moist air processes, air and moisture exchange, and building heat transfer. Determination of heating and cooling loads under steady-state and transient conditions with added honors-enhancement activities. The activities include one or more of the following: extra meetings outside the classroom, written work, projects, and presentations. Prerequisite: ME 312. Corequisite: CE 330 or ME 510 or AE 345 or C&PE 511; or consent of instructor.

**ARCE 671. HVAC&R Systems Design, Honors. 3 Credits.**
Analysis and design of heating, ventilating, air-conditioning, and refrigeration equipment and systems. The discussion section and its assignments are required. Not open for those with credit for ARCE 661. Prerequisite: ARCE 660, ARCE 670, or consent of the instructor.

**ARCE 675. Sound and Vibration Control. 3 Credits.**
An introduction to the physics and measurement of sound, wave phenomena, acoustics, and methods of noise and excessive vibration control for various applications. Prerequisite: PHSX 212 and MATH 220 or MATH 221 or MATH 320; or consent of instructor.

**ARCE 690. Special Problems. 1-3 Credits.**
The study of a particular problem in architectural engineering involving individual research and presentation. Prerequisite: Student must submit, in writing, a proposal including a statement of the problem the student wishes to pursue, the methodology the student plans to use in the program, and objectives of the special problems. The student must also have a signed agreement with the faculty member proposed as instructor for the course. Consent of instructor.

**ARCE 691. Honors Research. 3 Credits.**
Research a particular architectural engineering problem. Research will involve defining the problem, developing a research methodology, applying the research methodology and gathering data, analyzing and interpreting the data, and presenting the results of the research. The student must have a faculty sponsor and submit a proposal in writing stating the objective of the research, the planned research method that will be used, and the method of reporting the results. Prerequisite: Participation in the University Honors Program, consent of instructor, and approval of the chair are required.

**ARCE 698. Comprehensive Design Project. 3 Credits.**
Capstone architectural engineering design course that includes the analysis, design, and integration of a building’s structural, mechanical, electrical, and lighting systems. Building codes, standards, performance, and sustainability are addressed, and BIM software utilized. Prerequisite: CMGT 457 or CMGT 500, or ARCE 620, or ARCE 640 and ARCE 650, or ARCE 660, or CE 562 or CE 563.

**ARCE 700. Directed Readings in Architectural Engineering. 1-3 Credits.**
Individual study of special topics and problems. May be repeated for credit. Prerequisite: Student must submit, in writing, a proposal including a statement of the problem the student wishes to pursue and a bibliography of the articles and books required to complete the project. The student must also have a signed agreement with the faculty member proposed as instructor for the course. Consent of instructor.

**ARCE 750. Daylighting. 3 Credits.**
This course will cover daylighting design concepts, solar position, daylight availability, sky luminance distribution models, daylight delivery methods, integration of daylighting and electric lighting controls, physical modeling, and computer analysis techniques. Prerequisite: PHSX 212, or ARCH 531, or consent of instructor.

**ARCE 751. Advanced Lighting Design. 3 Credits.**
Advanced analysis, design, and modeling of luminous environments. It covers impact of lighting on human perception and interaction with space, human factors in lighting, camera-aided light measurement technologies, advanced computer-aided lighting simulations, effective and efficient integration of natural and artificial lighting, modeling and analysis of light sources and spaces, simulation of lighting systems, and design of lighting control systems. Prerequisite: ARCE 217 and ARCE 650 or consent of instructor.

**ARCE 752. Lighting Measurement and Design. 3 Credits.**
This course will cover conventional lighting and solid-state lighting measurement, daylighting measurement, camera-aided lighting measurement technologies and applications, and design and development of custom luminaries in an LED workshop and innovative daylighting devices. Prerequisite: ARCE 650, or consent of instructor.

ARCE 760. Automatic Controls for Building Mechanical Systems. 3 Credits.
An introduction to controls for building mechanical systems. Discussions of the theory, design, and equipment used for control systems. The benefits of pneumatic, electrical, and electronic (DDC) controls will be examined. Prerequisite: ARCE 660 or ARCE 670; or consent of instructor.

ARCE 764. Advanced Thermal Analysis of Buildings. 3 Credits.
Manual and computational methods for determining steady-state and transient thermal loads in buildings. Advanced analysis of energy consumption given choices in building materials and mechanical systems. Prerequisite: ARCE 217 and ARCE 660 or ARCE 670; or consent of instructor.

ARCE 895. Master’s Project. 1-3 Credits.
Directed study and reporting of a specialized topic of interest to the architectural engineering profession. Prerequisite: Consent of instructor.

ARCE 899. Master’s Thesis. 1-6 Credits.
Directed research and reporting of a specialized topic of interest to the architectural engineering profession. Prerequisite: Consent of instructor.

Civil, Envir & Arch Engineering Courses

CE 191. Introduction to Civil Engineering. 2 Credits.
A discussion of engineering logic through examination of current concepts in engineering education, practice and professional development. Not open to juniors and seniors.

CE 201. Statics. 2 Credits.
The principles of statics, with particular attention to engineering applications. Prerequisite: EPHX 210 or PHSX 210 or PHSX 211 or PHSX 201, and MATH 125 or MATH 145.

CE 240. Geomatics. 3 Credits.
This course introduces engineering applications of surveying and geographic information systems (GIS) using surveying instruments and ArcGIS. The focus of this course is on practical application of geomatics to civil engineering problems. Two lectures periods and one lab period per week. Prerequisite: MATH 125 or MATH 145, ARCE 217; or consent of instructor.

CE 250. Dynamics. 3 Credits.
The principles of kinematics and kinetics, with particular attention to engineering applications. Prerequisite: CE 201 or ME 201 or ME 211, and MATH 126 or MATH 146.

CE 260. Statics and Dynamics. 5 Credits.
A combination of statics and dynamics covered in CE 201 and CE 250. This course must be taken as a five-hour unit. Prerequisite: EPHX 210 OR PHSX 210 or PHSX 211 or PHSX 201, and MATH 126 or MATH 146.

CE 310. Strength of Materials. 4 Credits.
Principles of stress and deformation in solid objects. Prerequisite: CE 201 or ME 201 or ME 211 or CE 260 or CE 301. Corequisite: MATH 220 or MATH 221; or consent of instructor.

CE 312. Strength of Materials, Honors. 4 Credits.
Principles of stress and strain in solid objects with added honors-enhancement activities. The activities include one or more of the following: extra meetings outside the classroom, written work, projects, and presentations. Prerequisite: CE 201 or ME 201 or ME 211 or CE 260 or CE 301. Corequisite: MATH 220 or MATH 221; or consent of instructor.

CE 330. Fluid Mechanics. 3 Credits.
This course covers the fundamentals of fluid mechanics and includes the topics fluid properties, hydrostatics, applications of conservation of mass, energy and momentum equations, pipe flow, dimensional analysis and open channel flow. Prerequisite: ENGL 101, ENGL 102, CE 300 or CE 301 or CE 250 or CE 260.

CE 331. Fluid Mechanics Lab. 1 Credits.
This is an experimental course that consists of several laboratory experiments intended to illustrate the concepts presented in CE 330, Fluid Mechanics. Prerequisite: ENGL 101, ENGL 102, CE 250 or CE 260 or CE 300 or CE 301. Corequisite: CE 330.

CE 412. Structural Engineering Materials. 3 Credits.
Study of the engineering properties of structural materials and their control with emphasis on timber, concrete, and steel. Two one-hour lectures and one three-hour laboratory. Prerequisite: CE 310 or CE 312 and ENGL 102 or ENGL 105; or consent of instructor.

CE 413. Structural Engineering Materials, Honors. 3 Credits.
Study of the engineering properties of structural materials and their control with emphasis on timber, concrete, and steel. Two one-hour lectures and one three-hour laboratory. Prerequisite: CE 310 or CE 312 and ENGL 102 or ENGL 105. Open only to students admitted to the University Honors Program or by consent of instructor.

CE 455. Hydrology. 3 Credits.
An introduction to the fundamentals of hydrologic analysis. Subjects covered include collection and initial reduction of hydrologic data; rainfall-runoff relationships, hydrograph development; hydrologic routing, well equations and their application and hydrologic frequency analysis. Prerequisite: ENGL 101, ENGL 102 or ENGL 105. Co or pre-requisite: CE 330.

CE 461. Structural Analysis. 4 Credits.
Three one-hour lectures and one two-hour laboratory. Analysis of statically determinate and indeterminate beams, frames, and trusses using classical methods and introducing computer-based methods. Prerequisite: CE 310 or CE 312.

CE 477. Introduction to Environmental Engineering and Science. 3 Credits.
Application of fundamental scientific principles to the protection of atmospheric, aquatic, and terrestrial environments through the use of pollution abatement processes, with consideration also given to economic, social, political, and legal aspects of pollution control. Prerequisite: ENGL 102 or ENGL 105, MATH 101 or MATH 104, and CHEM 135 or CHEM 175 or CHEM 195 or CHEM 149 or CHEM 150.

CE 479. Introduction to Environmental Engineering and Science, Honors. 3 Credits.
Application of fundamental scientific principles to the protection of atmospheric, aquatic, and terrestrial environments through the use of pollution abatement processes, with consideration also given to economic, social, political, and legal aspects of pollution control. Open only to students admitted to the University Honors Program or by consent of instructor. Prerequisite: ENGL 102 or ENGL 105, MATH 101 or MATH 104, and CHEM 135 or CHEM 175 or CHEM 195 or CHEM 150 or CHEM 149.

CE 480. Introduction to Transportation Engineering. 3 Credits.
Students are provided with a solid introduction to the principles of highway engineering and traffic analysis. This course will present a large number
of practical problems, and in sufficient depth, such that the student will be capable of solving real highway-related problems. Prerequisite: CE 240.

**CE 484. Materials for Transportation Facilities. 3 Credits.**
Principles involved in the testing, behavior, and selection of materials for use in the transportation field. Emphasis is on bituminous materials, aggregate, and soil stabilization. Prerequisite: CE 310 or CE 312.

**CE 485. Materials for Transportation Facilities, Honors. 3 Credits.**
Principles involved in the testing, behavior, and selection of materials for use in the transportation field. Emphasis is on bituminous materials, aggregate, and soil stabilization with added honors-enhancement activities. The activities include one or more of the following: extra meetings outside the classroom, written work, projects, presentations, and lab activities. Prerequisite: CE 310 or consent of instructor.

**CE 487. Soil Mechanics. 4 Credits.**
Three lecture periods and one laboratory period. Fundamental theories of soil mechanics and their applications in engineering. Prerequisite: CE 310 or CE 312, corequisite or prerequisite CE 330.

**CE 490. Special Problems. 1-5 Credits.**
An advanced study related to a special problem in the field of civil engineering or allied fields, for upper-division undergraduate students.

**CE 495. Special Topics: _____, 1-3 Credits.**
A course or colloquium to present topics of special interest. Prerequisite: Varies by topic.

**CE 501. Engineering Ethics. 3 Credits.**
An examination of the ethical and social implications of being a professional engineer. Through the use of case studies, issues such as professional responsibility to clients, employers, and the public will be evaluated in light of professional codes of ethics. Prerequisite: Junior or Senior standing.

**CE 525. Applied Probability and Statistics. 3 Credits.**
Course topics include data description, measures of central tendency and dispersion, sampling and sampling designs, quality control, persistence, periodicity, sampling distributions, hypothesis testing, ANOVA, correlation, linear regression, multiple correlation, and multiple regression. Applications and real world problems are stressed. This course is offered at the 500 and 700 level with additional assignments at the 700 level. May not be taken for credit by students with credit in CE 725. Prerequisite: MATH 125 or MATH 145 or MATH 115 and MATH 116.

**CE 535. Engineering Applications of GIS. 3 Credits.**
This course introduces engineering applications of geographic information system (GIS) using ArcGIS. The focus of this course is on practical application of GIS to civil engineering problems. Prerequisite: Junior or Senior standing, or consent of instructor.

**CE 550. Life Cycle Assessment. 3 Credits.**
Life cycle assessment (LCA) is a tool used across engineering fields to determine the life cycle, cradle-to-grave environmental impacts of a product or process. LCA practice helps develop a systems-thinking perspective and a deeper understanding of sustainability. Students will evaluate LCA methods and design appropriate LCA frameworks. Prerequisite: CE 477 or CE 479 or C&E 511.

**CE 552. Water Resources Engineering Design. 4 Credits.**
Three one-hour lectures and one three-hour laboratory. Study of water resources structures and systems with design emphasis on the hydraulic features: dams, drainage, river engineering, pipelines, channels and hydraulic machinery. Prerequisite: CE 330 and CE 455.

**CE 555. Open Channel Flow. 3 Credits.**
Study of uniform and non-uniform steady flow of water in open channels, including backwater curves, the hydraulic jump, and the delivery of canals. Prerequisite: CE 330 or equivalent.

**CE 562. Design of Steel Structures. 3 Credits.**
Two one-hour lectures and one three-hour laboratory. Fundamentals of structural design with steel. Prerequisite: CE 461.

**CE 563. Design of Reinforced Concrete Structures. 3 Credits.**
Two one-hour lectures and one three-hour laboratory. Fundamentals of structural design with reinforced concrete. Prerequisite: CE 461; CE 412 or CE 413 or CE 484; or consent of the instructor.

**CE 570. Concepts of Environmental Chemistry. 3 Credits.**
The fundamentals of aquatic chemistry, with emphasis on application to water purification and wastewater treatment. Prerequisite: Undergraduate standing, CE 477 or CE 479, and MATH 115 or MATH 125 or MATH 145.

**CE 571. Environmental Engineering Laboratory. 3 Credits.**
A laboratory course introducing standard practices for measurement, analysis, and reporting of environmental data. Emphasis is placed on learning common analytical techniques used in environmental engineering and science. Prerequisite: Undergraduate standing, CE 477 or CE 479 or equivalent, and MATH 115 or MATH 125 or MATH 145.

**CE 573. Biological Principles of Environmental Engineering. 3 Credits.**
A basic study of the microorganisms of importance in environmental engineering. Emphasis is placed on the microbiology of dilute nutrient solutions. Microbial physiology, microbial ecology, and biochemistry will be discussed as they pertain to environmental engineering and science. Both biodegradation and public health aspects are included. Prerequisite: Undergraduate standing, CE 477 or CE 479 or equivalent, and MATH 115 or MATH 125 or MATH 145.

**CE 574. Design of Air Pollution Control Systems. 3 Credits.**
This course emphasizes understanding of air pollution problems and their solution through engineering design and science. Topics covered include: types of air pollutants; monitoring of air pollutants; transport of air pollutants in the atmosphere; and control of air pollution emissions from both stationary and mobile sources. Prerequisite: CE 330, CE 477 or CE 479, MATH 126 or MATH 146, PHSX 212; or consent of instructor.

**CE 576. Municipal Water Supply and Wastewater Treatment. 4 Credits.**
The principles of public water supply design, including source selection, collection, purification, and distribution; for municipal wastewater, collection, treatment, and disposal. Prerequisite: CE 330 or C&PE 511, CE 477 or CE 479.

**CE 577. Industrial Water and Wastes. 3 Credits.**
A review of the methods of industrial water treatment and the fundamentals of industrial water pollution control. Topics include: water budgets, cooling tower and boiler treatment, corrosion control, government regulations, wastewater characterization, waste minimization, pilot plants, pretreatment, final treatment, and site selection. Prerequisite: Undergraduate standing, and CE 477 or CE 479 or equivalent.

**CE 582. Highway Engineering. 3 Credits.**
A comprehensive study of the planning, design, construction, operations, and maintenance of highway systems with emphasis on the design aspects of a highway. Prerequisite: CE 455 and CE 480.

**CE 588. Foundation Engineering. 3 Credits.**
A study of the interaction of the characteristics of soil or rocks and structures. The estimation of settlement and bearing capacity of foundation elements. Principles governing the choice and design of footings, rafts, piers, and piles. Prerequisite: CE 487.
CE 677. Graduate Fundamentals of Environmental Engineering. 3 Credits.
Application of fundamental scientific principles to the protection of atmospheric, aquatic, and terrestrial environments through the use of pollution abatement processes, with consideration also given to economic, social, political, and legal aspects of pollution control. May not be taken for credit by students with credit in CE 477. Prerequisite: ENGL 102 or ENGL 105, MATH 101 or MATH 104, and CHEM 135 or CHEM 175 or CHEM 150.

CE 684. Materials for Transportation Facilities. 3 Credits.
Principles involved in the testing, behavior, and selection of materials for use in the transportation field. Emphasis is on bituminous materials, aggregate, and soil stabilization. Readings. Prerequisite: CE 310 and CE 487.

CE 701. Engineering Ethics. 3 Credits.
An examination of the ethical and social implications of being a professional engineer and doing engineering research. Through the use of case studies, issues such as professional responsibility to clients, employers, and the public will be evaluated in light of professional codes of ethics. May not be taken for credit by students with credit in CE 501. Prerequisite: Graduate standing.

CE 704. Dynamics and Vibrations. 3 Credits.
Problems in engineering dynamics and vibrations. Topics include applications of generalized forces and coordinates, Lagrange equations, and a study of the performance of single and multiple degree of freedom in vibrational systems. (Same as AE 704.) Prerequisite: AE 508.

CE 710. Structural Mechanics. 3 Credits.
Basic concepts in the analysis of stress and strain and the behavior of materials. Topics include elementary theory and problems in elasticity, theories of failure of materials including fracture mechanics and introduction to plasticity.

CE 711. Probabilistic Design and Reliability. 3 Credits.
Learn to evaluate statistical data and develop engineering design criteria for natural and man-made random phenomena. Develop and be able to use material or system fragility curves. Analyze complex systems or alternate system probabilities using Monte Carlo Simulation. Determine system reliability for statistically evaluated hazard probabilities. Techniques are applied to realistic design problems in Civil Engineering. Prerequisite: Graduate standing or permission of the instructor.

CE 712. Structural Engineering Materials. 3 Credits.
Study of the engineering properties of structural materials and their control with emphasis on timber, concrete, and steel. Two one-hour lectures and one three-hour laboratory. Not open for credit to students with credit in CE 412 or CE 413. Prerequisite: CE 310 or CE 312 or equivalent, and ENGL 102 or ENGL 105 or equivalent, or consent of instructor.

CE 713. Cold-formed Steel and Aluminum Design. 3 Credits.
Learn the principles of designing thin cold-formed and extruded materials. Focus is on cold-formed-steel with basic application to aluminum and concepts of curtainwall design. Load bearing and non-load bearing applications. Determine properties and strengths of columns and beams composed of arbitrary formed shapes. Learn to apply Direct Design. Seismic and wind design of cold formed steel structures. Prerequisite: CE 562.

CE 714. Professional Practice. 3 Credits.
This course is the business of engineering. Topics include: case studies of design and construction litigation, proposals and contracts, managing risk and liability, principles of management and leadership, developing professional relationships, developing a quality culture, project and design accounting, errors and omissions, insurance, organizational structures, globalization, total quality management, and communications. Class participation is required. Prerequisite: Graduate standing or permission of the instructor.

CE 715. Corrosion Engineering. 3 Credits.
Electrochemical basis of corrosion. Estimating probability and rate of corrosion. Identifying different conditions likely to cause specific types of corrosion. Corrosion mitigation techniques. Prerequisite: CHEM 135, CHEM 150 or equivalent.

CE 721. Experimental Stress Analysis. 3 Credits.
Introduction to experimental stress-analysis techniques. Theory and application of mechanical strain gages, electrical strain gages, photoelastic techniques, and brittle coatings.

CE 725. Applied Probability and Statistics. 3 Credits.
Course topics include data description, measures of central tendency and dispersion, sampling and sampling designs, quality control, persistence, periodicity, sampling distributions, hypothesis testing, ANOVA, correlation, linear regression, multiple correlation, and multiple regression. Applications and real world problems are stressed. This course is offered at the 500 and 700 level with additional assignments at the 700 level. May not be taken for credit by students with credit in CE 525. Prerequisite: MATH 125 or MATH 145 or MATH 115 and MATH 116.

CE 730. Intermediate Fluid Mechanics. 3 Credits.
Fall semester. Principles of steady and unsteady flows, theories of potential, viscous, and turbulent flows, and applications in water resources engineering. Prerequisite: CE 330 and MATH 320.

CE 731. Applied Groundwater Modeling. 3 Credits.
This course focuses on how to construct simple to complex computer models of groundwater systems and systems in which water flows between groundwater and surface water bodies such as springs, streams and lakes. We consider water flow, transport of solutes, and density effects (from saltwater or brines). We consider the conjunctive use of groundwater and surface water (demand-driven, supply-limited problems), and managed aquifer recharge (MAR). We consider three aspects of model development: (1) how to compare the computer models we construct to the systems modelers intend them to represent, (2) how accurate the models are likely to be and how uncertainty can be quantified, and (3) how useful the models are in practice. (Same as GEOL 758.) Prerequisite: GEOL 751 or CE 752, or approved by the professor.

CE 733. Engineering Applications of GIS. 3 Credits.
This course introduces engineering applications of geographic information system (GIS) using ArcGIS. The focus of this course is on practical application of GIS to civil engineering problems.

CE 736. Environmental Monitoring and Field Methods. 3 Credits.
A lecture-laboratory-field sampling course to familiarize students with environmental monitoring techniques and open source data availability. Dimensions of environmental monitoring will be considered for air, soil, and water measurements. The major emphasis will be on surface water monitoring techniques and their principles, utility, and limitations. Prerequisite: CE 330 or consent of instructor.

CE 749. Solid and Hazardous Wastes. 3 Credits.
Fundamental issues associated with solid and hazardous wastes are presented. Topics include government regulations, waste characteristics and quantities, the transport and attenuation of wastes in the environment, risk assessment, and handling, treatment and disposal techniques. Special emphasis is placed on hazardous waste remediation.
strategies in terrestrial systems. Prerequisite: Graduate standing in the Environmental Science and Engineering program, or consent of instructor.

CE 751. Physical Hydrology. 3 Credits.
In this course students will develop a land surface model based on the underlying physics and mechanisms of radiative transfer, precipitation, snow processes, evapotranspiration, infiltration and runoff generation. The course will also cover numerical and uncertainty issues associated with hydrologic modeling and its application to real world problems. Prerequisite: CE 455 or equivalent.

CE 752. Physical Hydrogeology. 3 Credits.
Study of fluid flow in subsurface hydrologic systems. Investigation of the groundwater environment including porosity, and hydraulic conductivity and their relationship to typical geologic materials. Examination of Darcy's law and the continuity equation leading to the general flow equations. Discussion of typical hydraulic testing methods to estimate aquifer parameters in various situations and apply these to water resource problems. Study of the basic mechanisms that determine the behavior of typical regional flow systems. (Same as GEOL 751.)

CE 753. Chemical and Microbial Hydrogeology. 3 Credits.
Lecture and discussion of chemical and microbiological controls on groundwater chemistry. Topics include thermodynamic and microbiological controls on water-rock reactions; kinetics; and microbiological, chemical and isotopic tools for interpreting water chemistry with respect to chemical weathering and shallow diagenesis. Origins of water chemistry, changes along groundwater flow paths, and an introduction to contaminant biogeochemistry will be discussed through the processes of speciation, solubility, sorption, ion exchange, oxidation-reduction, elemental and isotopic partitioning, microbial metabolic processes and microbial ecology. An overview of the basics of environmental microbiology, including cell structure and function, microbial metabolism and respiration, microbial genetics and kinetics of microbial growth will be covered. (Same as GEOL 753.) Prerequisite: One year of chemistry, one year of calculus, one year of biology, an introductory course in hydrogeology, or consent of the instructors.

CE 754. Contaminant Transport. 3 Credits.
A study of the transport of conservative and non-conservative pollutants in subsurface waters. Case studies are used to illustrate and develop a conceptual understanding of such processes as diffusion, advection, dispersion, retardation, chemical reactions, and biodegradation. Computer models are developed and used to quantify these processes. (Same as GEOL 754.) Prerequisite: Introductory Hydrogeology or consent of instructor.

CE 755. Open Channel Flow. 3 Credits.
A study of uniform and non-uniform steady flow of water in open channels, including water level curves, the hydraulic jump, and the delivery of canals. Prerequisite: CE 330.

CE 756. Wetlands Hydrology and Introduction to Management. 3 Credits.
A study of the basic structure and functions of wetlands; the physical, chemical, and biological processes involved; and an introduction to the management of wetlands. Also a brief introduction to the legal aspects of wetlands, the Section 404 permitting processes, and mitigation requirements. Prerequisite: Senior or graduate standing in engineering or a science area, or consent of instructor.

CE 757. Pipe-Flow Systems. 3 Credits.
Hydraulic analysis and design of pipelines, pipe networks, and pumping systems. Analysis and control of hydraulic transients. Engineering of water distribution systems. Prerequisite: CE 330 or equivalent.

CE 759. Water Quality Modeling. 3 Credits.
Analytical and numerical modeling of transport and transformation processes in the aquatic environment. Mass balance principles in multidimensional transport phenomena including advection, turbulent diffusion, and dispersion. Prerequisite: CE 330, MATH 127 or MATH 147, and MATH 220 or MATH 221 or equivalent.

CE 760. Stochastic Hydrology. 3 Credits.
This methods-based course includes probability models, parameter estimation, ensemble forecasting and verification, time series analysis, multivariate distributions, principal component analysis along with other stochastic methods imperative to hydrologic analysis and prediction. The application of these methods will be explored through examples in hydrology related to rainfall, streamflow, groundwater and land-atmosphere interactions. Prerequisite: CE 455, MATH 290 or MATH 291 or equivalent.

CE 761. Matrix Analysis of Framed Structures. 3 Credits.
Analysis of 2-D and 3-D frame and truss structures by the direct stiffness method. Computer techniques required to implement the analysis procedure.

CE 762. Plastic Analysis and Design of Structures. 3 Credits.
Investigate the inelastic behavior of materials and cross sections. Study plastic analysis methods and identify the fundamental assumption and theorems to study structures up to collapse. Design ductile structures for extreme loads using plastic design methods. Two lectures one hour and fifteen minute lectures per week. Prerequisite: CE 562 or consent of instructor.

CE 763. Design of Prestressed Concrete Structures. 3 Credits.
The theory and design of prestressed concrete structures based on service load and strength criteria. Prerequisite: CE 563.

CE 764. Advanced Design of Reinforced Concrete Structures. 3 Credits.
The theory and design of reinforced concrete members and structures with emphasis on frames and slabs. Introduction to bridge design and earthquake design. Prerequisite: CE 563.

CE 765. Advanced Steel Design - Building Structures. 3 Credits.
The theory and design of standard steel framed structures (primarily buildings). Design philosophies, stability, composite design, structural behavior, preliminary design, and connections. Prerequisite: CE 562 or equivalent.

CE 766. Advanced Steel Design - Bridge Structures. 3 Credits.
Introduction to simple plastic design principles. Analysis and design of steel bridges including composite and noncomposite plate girders, curved girders, box girders, and other specialized bridge types. Fatigue and connection design considered. Prerequisite: CE 562 or equivalent.

CE 767. Introduction to Fracture Mechanics. 3 Credits.
Theories and modes of structural failure as related to structural design. Application of fracture mechanics to failure analysis, fracture control plans, fatigue crack growth, and stress-corrosion crack growth. Prerequisite: CE 310 or CE 312 plus a structural or mechanical design course.

CE 768. Design of Timber Structures. 3 Credits.
Provide an introduction to behavior, analysis and design of timber components and systems. Prerequisite: CE 461.

CE 769. Design of Masonry Structures. 3 Credits.
Provide an introduction to behavior, analysis and design of masonry components and systems. Prerequisite: CE 461.

CE 770. Concepts of Environmental Chemistry. 3 Credits.
The fundamentals of aquatic chemistry, with emphasis on application to water purification and wastewater treatment. May not be taken for credit.
by students with credit in CE 570. Prerequisite: CE 477 or CE 479 or equivalent, calculus, and five hours of chemistry.

CE 771. Environmental Engineering Laboratory. 3 Credits. 
A laboratory course introducing standard practices for measurement, analysis, and reporting of environmental data. Emphasis is placed on learning common analytical techniques used in environmental engineering and science. May not be taken for credit by students with credit in CE 571. Prerequisite: CE 477 or CE 479 or equivalent, calculus, and five hours of chemistry.

CE 772. Physical Principles of Environmental Engineering Processes. 3 Credits. 
Physical principles of suspensions, kinetics, fluid flow, filtration, and gas transfer are applied to various environmental physical processes. Prerequisite: CE 477 or CE 479 or equivalent, calculus, and four hours of physics.

CE 773. Biological Principles of Environmental Engineering. 3 Credits. 
A basic study of the microorganisms of importance in environmental engineering. Emphasis is placed on the microbiology of dilute nutrient solutions. Microbial physiology, microbial ecology, and biochemistry will be discussed as they pertain to environmental engineering and science. Both biodegradation and public health aspects are included. May not be taken for credit by students with credit in CE 573. Prerequisite: CE 477 or CE 479 or equivalent, calculus, and five hours of chemistry.

CE 774. Chemical Principles of Environmental Engineering Processes. 3 Credits. 
Chemical principles of stoichiometry, thermodynamics, and kinetics are applied to various chemical processes having application in the field of environmental engineering and science, including adsorption, ion exchange, coagulation, oxidation, and precipitation. Prerequisite: CE 477 or CE 479 or equivalent, calculus, and credit or registration in CE 570 or CE 770.

CE 775. Stormwater Treatment Systems Design. 3 Credits. 
This course will address the design of stormwater treatment systems to provide hydrological control and water quality improvement. Specific topics include common stormwater pollutants, contaminant loading during storm events, design of structural BMPs (detention basins, traps, filters, and vegetated control systems) and low impact development practices. Prerequisite: CE 477 or CE 479, either CE 455 or C&PE 511 or consent of instructor.

CE 776. Water Reuse. 3 Credits. 
This course addresses past and current water reclamation and reuse practices; health and environmental concerns associated with water reuse; technologies and systems for water treatment, reclamation, and reuse; water reuse applications, including agricultural reuse, direct and indirect potable reuse, landscape irrigation, industrial uses, urban non-irrigation applications, environmental and recreational uses, and groundwater recharge; and planning and implementation of water reuse systems. Prerequisite: CE 477 or CE 479 or equivalent.

CE 777. Industrial Water and Wastes. 3 Credits. 
A review of the methods of industrial water treatment and the fundamentals of industrial wastewater pollution control. Topics include: water budgets, cooling tower and boiler treatment, corrosion control, government regulations, wastewater characterization, waste minimization, pilot plants, pretreatment, final treatment, and site selection. May not be taken for credit by students with credit in CE 577. Prerequisite: CE 477 or CE 479 or equivalent.

CE 778. Air Quality. 3 Credits. 
The course is intended to provide a working knowledge of pollutant sources, effects, meteorological factors, measurements, modeling approaches, legislation and controls associated with air quality problems. Students work on problems drawn from typical industrial situations, and use models to address specific air pollution scenarios. Prerequisite: CE 477 or CE 479 or equivalent, and MATH 115 or MATH 125 or MATH 145.

CE 781. Traffic Engineering Characteristics. 3 Credits. 
A study of fundamental traits and behavior patterns of the road user and his or her vehicle in traffic. The major content involves techniques for obtaining data, analyzing data and interpreting data on traffic speed, volume, streamflow, parking and accidents. Capacity analyses using the most up to date procedures for major traffic facilities such as undivided highways, city streets, freeways, interchanges and intersections are also discussed at length. Prerequisite: CE 582 or equivalent.

CE 783. Railroad Engineering. 3 Credits. 
A comprehensive study of the railroad industry, including the development of the railway system, an overview of the railroad industry, basic track work, right-of-way and roadway concerns, drainage, track design, railroad structures, electrification, and rail passenger service. A final design project is required. Prerequisite: CE 240; CE 582 or equivalent.

CE 786. Highway Safety. 3 Credits. 
Several topics dealing with highway safety are presented and discussed. Typical topics are railroad/highway crossings, accident reconstruction, distractions to the drivers, speed and crashes, elderly drivers, traffic control devices, roadside design, access management, traffic calming devices, and crash rates.

CE 787. Advanced Soil Mechanics. 3 Credits. 
A comprehensive study of soil behavior. Topics include stress-strain behavior for soils under a variety of loading conditions, critical state soil mechanics theory, consolidation prediction, modeling subsurface water flow, and other topics. Prerequisite: CE 487 or equivalent.

CE 788. Geotechnical Engineering Testing. 3 Credits. 
Three lectures. Field testing techniques, sampling methods, and laboratory testing procedures used to determine soil properties for engineering projects. Prerequisite: CE 487.

CE 790. Traffic Simulation Modeling and Analysis. 3 Credits. 
This course introduces popular tools for modeling, analyzing and optimizing various transportation elements. Students will learn to formulate and apply basic principles of simulation modeling; use simulation and optimization techniques for improving traffic operations of a signalized intersection, an urban street network, and a freeway facility; and apply processes for developing simulation applications. Prerequisite: CE 781 or equivalent, or consent of instructor.

CE 797. Environmental Engineering and Science in Developing Countries. 3 Credits. 
This course begins with a focus on basic sanitation, including control of infectious diseases, water supply and treatment, and proper disposal of excreta, wastewater, and solid wastes. The course then delves into other environmental topics such as sustainability, wastewater reuse, project planning and implementation, air pollution, deforestation, hazardous waste disposal, and the roles of various governmental and non-governmental organizations in addressing environmental issues. The course topics are addressed by a combination of lectures, guest lectures, and student presentations, with each student choosing a presentation topic of personal or professional interest that is relevant to the course. Prerequisite: CE 477 or CE 479 or permission of instructor.

CE 801. Energy Methods. 3 Credits.
The methods of analysis by energy methods of mechanics problems. Includes variational energy principles, calculus of variations, stationary energy and complementary energy principles, and the principle of virtual work. Applications. Prerequisite: CE 310 or CE 312 and MATH 320.

**CE 804. Advanced Structural Dynamics. 3 Credits.**
Advanced topics in structural dynamics, including experimental modal analysis, digital signal processing, data acquisition and analysis, random vibration concepts, system identification, structural health monitoring and damage detection, and introduction to smart structures technology (e.g. smart sensing, estimation, and control). This course provides practical laboratory experience through state-of-the-art commercial testing equipment and software. Prerequisite: CE 704 or consent of instructor.

**CE 810. Theory of Elastic Stability. 3 Credits.**
Buckling of columns in the elastic or hyperelastic region. Lateral and torsional buckling of straight and curved members. Buckling of plates and shells.

**CE 815. Viscoelasticity of Solids. 3 Credits.**
This course provides the basics of mechanical and mathematical modeling and characterization of linear viscoelastic materials. Topics include different viscoelastic models, experimental methods for characterization of viscoelastic materials, design methods for viscoelastic members, and introduction to temperature effects and nonlinear viscoelastic response of materials. Prerequisite: CE 310 or CE 312 or equivalent.

**CE 848. Pavement Materials Characterization. 3 Credits.**
Laboratory and field test methods for determining engineering properties of bituminous pavements. Asphalt mix design methods and the relationship between mix design and pavement structural design and performance. Prerequisite: CE 484 or consent of instructor.

**CE 850. Life Cycle Assessment. 3 Credits.**
Life cycle assessment (LCA) is a tool used across engineering fields to determine the life cycle, cradle-to-grave environmental impacts of a product or process. LCA practice helps develop a systems-thinking perspective and a deeper understanding of sustainability. Students will evaluate LCA methods and design appropriate LCA frameworks. Prerequisite: CE 477 or CE 479 or CPE 211 or equivalent.

**CE 855. Free Surface Flow II. 3 Credits.**
The course addresses computer modeling of open channel flow using HEC-RAS (Hydraulic Engineering Center - River Analysis System). 1D, 2D and mixed 1D-2D HEC-RAS models will be developed for steady and unsteady flow conditions. ArcGIS will be used to develop HEC-RAS geometric input files and to process model results. Other 2D programs will also be introduced. Topics addressed are flood delineation, bridge hydraulics, bridge scour, sediment transport and stable channel design. Some knowledge of ArcGIS is desirable. Prerequisite: CE 330 or equivalent.

**CE 857. Sediment Transport. 3 Credits.**
A study of the transport of sediment in alluvial channels. Specific topics include properties of sediment, mechanics of bed forms, particle entrainment, scour analysis, prediction of suspended load and bed load, design of stable channels and diversion works, and sedimentation of reservoirs. Prerequisite: CE 755 or consent of instructor.

**CE 858. Urban Hydrology and Stormwater Management. 3 Credits.**
Hydrology of urban watersheds; floodplain management; hydrologic modeling; storm drainage; stormwater detention; water quality improvement; geomorphology of urban streams; stream corridor management and stream restoration. Prerequisite: CE 751.

**CE 859. Erosion and Sedimentation. 3 Credits.**
A study of sediment erosion, transport, and deposition at the watershed scale with particular application to water quality degradation and reservoir infilling. Prerequisite: Graduate standing.

**CE 861. Finite Element Methods for Solid Mechanics. 3 Credits.**
Stress analysis of 2-D and 3-D solids, plates, and shells by the finite element method. Element formulations and behavior with emphasis on the isoparametric concept. Computer modeling and interpretation of results. Introduction to material and geometric nonlinear analysis of solids. Prerequisite: CE 761 or equivalent.

**CE 862. Behavior of Reinforced Concrete Members. 3 Credits.**
This mechanics course covers in detail the constitutive behavior of reinforced concrete members subjected to various types of loading and presents the basis for modeling the response of reinforced concrete structures in the nonlinear range of response. Topics covered include: stress-strain behavior of concrete under multi axial states of stress; moment-curvature analysis; advanced analysis of r/c members subjected to shear (variable angle truss models, modified compression field theory, strut-and-tie models); behavior of r/c members subjected to cyclic loading; modeling and effects of slip at the interface between reinforcing steel and concrete. Suggested prerequisite CE 764 or equivalent. Prerequisite: CE 563.

**CE 864. Seismic Performance of Structures. 3 Credits.**
This course builds on topics from structural dynamics to introduce principles of structural performance during earthquake events. Emphasis is placed on estimating the response of building structures as represented by simple and complex models. Topics covered include strong ground motion, response of simple systems to ground motion, nonlinear response of building systems, and performance-based earthquake engineering. Prerequisite: CE 704.

**CE 874. Air Pollution Control. 3 Credits.**
The design of control devices for the abatement of air pollutants, both gaseous and particulate, emitted from stationary sources. This includes the basic theory of control device operation and economic factors associated with each type of control device design. Prerequisite: CE 772 and CE 778 or equivalent.

**CE 876. Wastewater Treatment Plant Design. 3 Credits.**
Application of physical, chemical, and biological principles to the design of wastewater treatment systems for domestic and other wastewaters. Special emphasis is placed on biological treatment processes. Prerequisite: CE 576 or equivalent, or CE 573 or CE 773 or equivalent.

**CE 877. Water Treatment Plant Design. 3 Credits.**
Application of physical, chemical, and biological principles to the design of water treatment plants and processes for domestic water supply from surface and ground water sources. Prerequisite: CE 774, or concurrent enrollment.

**CE 878. Air Quality Modeling. 3 Credits.**
Fundamental physical and mathematical principles applied to air quality modeling; considered are factors that influence the choice and application of air quality models, as well as the interpretation of model output data. Practical applications are stressed using standard models. Prerequisite: CE 778 or equivalent and MATH 125 or MATH 145 or MATH 526 or CE 625.

**CE 879. Environmental Research Seminar. 1 Credits.**
Discussion of current topics in environmental engineering and science and related fields by staff, students, and visiting lecturers. May be taken only once for credit.

**CE 881. Traffic Engineering Operations. 3 Credits.**
A study of theory and practical applications of a number of traffic operational and management tools to achieve the convenient, safe and efficient movement of people and goods in urban street networks. The major content involves signalized intersection capacity, design and operation; signalized intersection coordination; and modern roundabout design. Prerequisite: CE 582 or equivalent.

**CE 882. Geometric Design of Traffic Facilities.** 3 Credits.
A study of basic principles in the design of freeways, urban street systems, parking terminal and other traffic facilities with emphasis on capacity, safety, level of service, and dynamic design concept. Prerequisite: CE 781 or equivalent.

**CE 884. Principles of Pavement Design.** 3 Credits.
A study of the scientific principles of pavement design as applied to airfield and highway pavements, considering loading conditions, stress distribution, and the properties of the various pavement components, for both rigid and flexible pavements. Prerequisite: CE 487 or equivalent.

**CE 885. Advanced Foundation Engineering.** 3 Credits.
A study in the design, construction, and behavior of footings and rafts, piles and drilled shafts founded on soils and rocks. Prerequisite: CE 588 or equivalent.

**CE 887. Earth Structures.** 3 Credits.
Current theory and practice relating to the design of retaining walls, earth slopes, large embankments, and landslide mitigation. Application of geotextiles to the design of earth retaining structures and slope stabilization. Prerequisite: CE 588 or consent of instructor.

**CE 888. Ground Improvement.** 3 Credits.
Basic descriptions, classification, principles, advantages, and limitations of ground improvement techniques. Design, construction, and quality assurance/control of ground improvement techniques. Prerequisite: CE 588 or equivalent.

**CE 889. Designing with Geosynthetics.** 3 Credits.
Basic description and properties of geosynthetics including geotextiles, geogrids, geomembranes, geonets, geocomposites, and geosynthetic clay liners. Geosynthetic functions and mechanisms including separation, filtration, drainage, reinforcement, and containment. Design with geosynthetics for roadways, embankments/slopes, earth retaining structures, and landfills. Prerequisite: CE 588 or equivalent.

**CE 890. Master's Project.** 1-4 Credits.
Directed study and reporting of a specialized topic of interest in civil engineering or an allied field. Prerequisite: Consent of instructor.

**CE 891. Advanced Special Problems.** 1-3 Credits.
A directed study of a particular complex problem in an area of civil engineering or allied field. Prerequisite: Varies by topic, or with consent of instructor.

**CE 892. Structural Engineering and Mechanics Seminar.** 1 Credits.
Presentation and discussion of current research and design in structural engineering and engineering mechanics.

**CE 895. Advanced Special Topics: _____**. 1-3 Credits.
A graduate course or colloquium in a topic of civil engineering or an allied field. Prerequisite: Varies by topic, or with consent of instructor.

**CE 899. Master's Thesis.** 1-10 Credits.
Directed research and reporting of a specialize topic of interest in civil engineering or an allied field. Prerequisite: Consent of instructor.

**CE 912. Theory of Plasticity.** 3 Credits.

**CE 991. Research.** 1-15 Credits.
An investigation of a special problem directly related to civil engineering.

**CE 999. Ph.D. Dissertation.** 1-15 Credits.
Restricted to Ph.D. candidates. Before candidacy, aspirants performing their research should enroll in CE 991. Prerequisite: Consent of instructor.

**Civil, Envr & Arch Engineering Courses**

**CMGT 457. Construction Project Management.** 3 Credits.
An introduction to the management of construction projects with an emphasis on engineering economics. This course addresses time value of money, cash flow and interest, financial analysis of alternatives, and taxes and depreciation. Also included are projects management fundamentals, project scheduling, and project controls. Prerequisite: MATH 126 or MATH 146 or consent of the instructor.

**CMGT 500. Construction Engineering.** 3 Credits.
An introduction to the construction industry, construction project management, and construction operations. Topics include project participant roles and responsibilities; project delivery systems; procurement of construction services; sustainable construction; contracts, bonds, and insurance; equipment selection and use; constructability and value engineering; estimating and bidding; planning and scheduling; operations management; safety; and project commissioning and closeout. Prerequisite: Junior or Senior standing in the School of Engineering, or consent of the instructor.

**CMGT 700. Construction Project Management.** 3 Credits.
An introduction to the management of construction projects. This course addresses project delivery systems, project organization, estimating and bidding, planning and scheduling, legal and safety issues, among other topics. Prerequisite: Graduate standing or consent of instructor. Not open to those with credit in CMGT 500.

**CMGT 701. Construction Planning and Scheduling.** 3 Credits.
An introduction to the planning and scheduling of projects, for both construction and design. Emphasis is placed on the critical path method including network development, production of time schedules, time-cost considerations, and the efficient utilization of resources. Manual and computer techniques are covered. Prerequisite: Graduate standing or consent of instructor.

**CMGT 702. Construction Equipment and Methods.** 3 Credits.
This course introduces the student to the multitude of construction equipment employed in construction. The underlying technology and engineering principles are reviewed. Principles of equipment selection, equipment utilization, and equipment economic analysis are covered. Prerequisite: Graduate standing or consent of instructor.

**CMGT 703. Construction Quality, Productivity, and Safety.** 3 Credits.
Operations analysis for work improvement in construction using process charts, crew balancing, time-lapse photography, and planning techniques. Regulations, accident prevention, and safety management are covered. Prerequisite: Graduate standing or consent of instructor.

**CMGT 704. Construction Estimating and Bidding.** 3 Credits.
A study of the quantity survey, cost estimating, scheduling and project controls; construction operations; and methods of building construction. Prerequisite: Graduate standing or consent of instructor.

**CMGT 705. Construction Contracts, Bonds, and Insurance.** 3 Credits.
Legal doctrines relating to owners, design professionals, and contractors. Sources of law, forms of association, and agency. Contract formation, rights and duties, interpretation, performance problems, disputes, and claims. Surety bonds and insurance. Prerequisite: Graduate standing or consent of instructor.

CMGT 706. Construction Alternative Project Delivery Methods. 3 Credits.
Learn the types of alternative project delivery methods that are increasingly used in the design and construction industry, including Design-Build (DB), Contractor Manager at Risk (CMAR or CM/GC), Integrated Project Delivery (IPD), Public-Private-Partnerships (P3), and more. Within these methods, the course focuses on the industry’s expanding scope of preconstruction services and increasing integration between design and construction professionals. Prerequisite: Graduate standing or consent of instructor.

CMGT 707. Engineering Risk and Decision Analysis. 3 Credits.
The course investigates the fundamental principles and techniques of risk and decision analysis. It applies these principles in project-level decisions in which risk or uncertainty play a central role. The course examines various risk and decision tools including Monte Carlo analyses, influence diagrams, and other types of multi-criteria decision analyses. In addition to teaching the skills and techniques, the course will introduce students to new ideas and concepts regarding decision and risk analysis. Prerequisite: CMGT 500 or CMGT 700, CE 625 or MATH 526, or consent of instructor.

CMGT 711. Construction Safety. 3 Credits.
This course's primary purpose is to help students understand construction safety theories and practices. Methods used to improve construction safety are introduced. A class project is used to help students explore and identify opportunities to improve construction safety. Prerequisite: Graduate standing or consent of instructor.

CMGT 712. Construction Safety Solution Development. 3 Credits.
This course aims to help students develop solutions to improve construction safety. Solution development focuses on improving safety issues faced in the construction industry, including but not limited to software, hardware, processes, methods, and concepts. Prerequisite: Graduate standing or consent of instructor.

CMGT 713. Request for Proposals in Design and Construction. 3 Credits.
The design & construction industry is shifting away from low bid toward qualifications-based procurement methods. The course examines the most common Request for Proposal processes used by owners to select design & construction teams in a variety of delivery methods. The course will also introduce students to practical strategies to compete in these RFP scenarios. Prerequisite: Graduate standing or consent of instructor.

CMGT 801. Directed Readings in Construction Management. 1-3 Credits.
Graduate-level directed readings on a topic in construction management mutually agreed on by the student and instructor. Intended to build on one or more of the core course topics: project management; planning and scheduling; equipment and methods; quality; productivity and safety; estimating and bidding; contracts, bonds, and insurance. CMGT 801 may be repeated for credit to a maximum of three hours in the degree program. Mutually agreed course deliverable(s) required. Prerequisite: Approval of the course topic and deliverable(s) by the instructor, CMGT 500 or CMGT 700, CMGT 701, CMGT 702, CMGT 703, CMGT 704, and CMGT 705, or consent of instructor.

CMGT 802. Special Problems in Construction Management. 1-3 Credits.
Graduate-level investigation requiring research of a topic in construction management mutually agreed on by the student and instructor. Intended to build on one or more of the core course topics: project management; planning and scheduling; equipment and methods; quality; productivity and safety; estimating and bidding; contracts, bonds, and insurance. CMGT 802 may be repeated for credit to a maximum of three hours in the degree program. Mutually agreed course deliverable such as a paper summarizing the results of the investigation required. Prerequisite: Approval of the course topic and deliverable by the instructor, CMGT 500 or CMGT 700, CMGT 701, CMGT 702, CMGT 703, CMGT 704, and CMGT 705, or consent of instructor.

CMGT 805. Construction Accounting and Finance. 3 Credits.
Project level cost control concepts and structure, time and cost integration, data collection and reporting, equipment cost, job overhead cost, and cost control. Integrating construction project level cost with construction company financial accounting and financial management. Prerequisite: CMGT 702 and CMGT 704 or consent of instructor.

CMGT 895. Construction Management Project. 1-3 Credits.
Graduate-level investigation and report on a construction management topic mutually agreed on by the student and project advisor. This is the capstone course in the Master of Construction Management (MCM) degree program. Successful completion of this project requires acceptance of the written report and oral presentation to the student’s graduate committee. Prerequisite: Approval of project topic by project advisor, CMGT 500 or CMGT 700, CMGT 701, CMGT 702, CMGT 703, CMGT 704, CMGT 705, and nine elective credit hours, or consent of instructor.

Electrical Engr & Computer Sci Courses

EECS 101. New Student Seminar. 1 Credits.
A seminar intended to help connect freshmen and transfer EECS students to the EECS department, their chosen profession, and each other. Topics include overviews of the various disciplines, curricula and advising, ethics and professionalism, student organizations and extracurricular activities, senior projects, and career planning. Graded on a satisfactory/unsatisfactory basis. Prerequisite: Corequisite: MATH 104.

EECS 137. Visual Basic for Engineers. 3 Credits.
Introduction of computer-based problem solving techniques for engineering practice with emphasis on good programming practices and the integration of appropriate computational and related tools. Solutions are computed using Visual Basic, specifically VBA within Excel. Elementary numerical and statistical methods are applied to the solution of sets of linear and nonlinear algebraic equations, linear regression, and root finding. Microsoft Office is used with the computational tools to provide integrated report generation capability. Two lectures and a weekly laboratory instruction. Prerequisite: MATH 104.

EECS 138. Introduction to Computing: ______. 3 Credits. NM
Algorithm development, basic computer organization, syntax and semantics of a high-level programming language, including testing and debugging. Concept of structure in data and programs, arrays, top-down design, subroutines and library programs. Abstract data types. System concepts such as compilation and files. Nature and scope of computer science. Not open to electrical engineering, computer engineering, computer science, and interdisciplinary computing majors. Prerequisite: MATH 101 or MATH 104, or meeting the requirements to enroll in MATH 115 or MATH 125 or MATH 145.

EECS 140. Introduction to Digital Logic Design. 4 Credits.
An introductory course in digital logic circuits covering number representation, digital codes, Boolean Algebra, combinatorial logic design,
sequential logic design, and programmable logic devices. Grade of C (not C-) required to progress. Prerequisite: Corequisite: MATH 104.

EECS 141. Introduction to Digital Logic: Honors. 4 Credits.
An introductory course in digital logic circuits covering number representation, digital codes, Boolean algebra, combinatorial logic design, sequential logic design, and programmable logic devices. This course is intended for highly motivated students and includes honors-level assignments. Grade of C (not C-) required to progress. Prerequisite: Corequisite: MATH 104, plus either acceptance into the KU Honors Program or consent of instructor.

EECS 168. Programming I. 4 Credits.
Problem solving using a high level programming language and object oriented software design. Fundamental stages of software development are discussed: problem specification, program design, implementation, testing, and documentation. Introduction to programming using an object oriented language: using classes, defining classes, and extending classes. Introduction to algorithms and data structures useful for problem solving: arrays, lists, files, searching, and sorting. Students will be responsible for designing, implementing, testing, and documenting independent programming projects. Professional ethics are defined and discussed in particular with respect to computer rights and responsibilities. Grade of C (not C-) required to progress. Prerequisite: Corequisite: MATH 104.

EECS 169. Programming I: Honors. 4 Credits.
Problem solving using a high level programming language and object oriented software design. Fundamental stages of software development are discussed: problem specification, program design, implementation, testing, and documentation. Introduction to programming using an object oriented language: using classes, defining classes, and extending classes. Introduction to algorithms and data structures useful for problem solving: arrays, lists, files, searching, and sorting. Students will be responsible for designing, implementing, testing, and documenting independent programming projects. Professional ethics are defined and discussed in particular with respect to computer rights and responsibilities. This course is intended for highly motivated students and includes honors-level assignments. Grade of C (not C-) required to progress. Prerequisite: Corequisite: MATH 104, plus either acceptance into the KU Honors Program or consent of instructor.

EECS 202. Circuits I. 4 Credits.
Analysis of linear electrical circuits: Kirchoff's laws; source, resistor, capacitor and inductor models; nodal and mesh analysis; network theorems; transient analysis; Laplace transform analysis; steady-state sinusoidal analysis. The lab provides training and practice in the use of computational tools (e.g., Matlab), computer-aided circuit analysis (e.g., Pspice), and laboratory skills. Prerequisite: Corequisite: MATH 220 and MATH 290.

EECS 210. Discrete Structures. 4 Credits.
An introduction to the mathematical foundations and techniques of computer science. Throughout, there is an emphasis on general reasoning, problem solving, and technical communication. Topics include basic proof techniques and logic, induction, recurrences, relations, number theory, basic algorithm design and analysis, and applications. Grade of C (not C-) required to progress. Prerequisite: EECS 140 or EECS 141, EECS 168 or EECS 169 (or equivalent) and MATH 122 or MATH 126 or MATH 146.

EECS 212. Circuits II. 4 Credits.
Continued study of electrical circuits: Steady-state power analysis, three-phase circuits, transformers, frequency response, and two-port network analysis. Grade of C (not C-) required to progress. Prerequisite: EECS 211 or EECS 202.

EECS 220. Electromagnetics I. 4 Credits.
Vector analysis. Electrostatic and magnetostatic fields in a vacuum and material media. Electromagnetic fields and Maxwell's equations for time-varying sources. The relationship between field and circuit theory. Simple applications of Maxwell's equations. Grade of C (not C-) required to progress. Prerequisite: MATH 220, MATH 290, PHSX 210 or PHSX 211, and EECS 202.

EECS 221. Electromagnetics I. 3 Credits.
Electrostatic and magnetostatic fields in a vacuum and material media. Electromagnetic fields and Maxwell's equations for time-varying sources. The relationship between field and circuit theory. Simple applications of Maxwell's equations. Grade of C (not C-) required to progress. Prerequisite: MATH 127, MATH 220, EECS 211 or EECS 202, and either PHSX 210 or PHSX 211.

EECS 266. Programming II. 4 Credits.
This course continues developing problem solving techniques by focusing on the imperative and object-oriented styles using Abstract Data Types. Basic data structures such as queues, stacks, trees, and graphs will be covered. Recursion. Basic notions of algorithmic efficiency and performance analysis in the context of sorting algorithms. Basic Object-Oriented techniques. An associated laboratory will develop projects reinforcing the lecture material. Three class periods and one laboratory period per week. Grade of C (not C-) required to progress. Prerequisite: EECS 168 or EECS 169.

EECS 312. Electronic Circuits I. 3 Credits.
Introduction to diodes, BJTs and MOSFETs, and their use in electronic circuits, especially digital circuits. Prerequisite: Upper-level eligibility. Corequisite: EECS 212.

EECS 315. Electric Circuits and Machines. 3 Credits.
Introduction to DC and AC electrical circuit analysis techniques, AC power calculations, transformers, three-phase systems, magnetic circuits, and DC and AC machines with a focus on applications. Not open to electrical or computer engineering majors. (Same as ARCE 315.) Prerequisite: A course in differential equations and eight hours of physics.

EECS 316. Circuits, Electronics and Instrumentation. 3 Credits.
Introduction to DC and AC electrical circuit analysis, operational amplifiers, semiconductors, digital circuits and systems, and electronic instrumentation and measurements with a focus on applications. Not open to electrical or computer engineering majors. Students may not receive credit for both EECS 316 and EECS 317. Prerequisite: A course in differential equations and eight hours of physics.

EECS 317. Electronics and Instrumentation. 2 Credits.
Introduction to operational amplifiers, semiconductors, digital circuits and systems, and electronic instrumentation and measurements with a focus on applications. Not open to electrical or computer engineering majors. Students may not receive credit for both EECS 316 and EECS 317. Prerequisite: EECS 315.

EECS 318. Circuits and Electronics Lab. 1 Credits.
Laboratory exercises intended to complement EECS 316 and EECS 317. Experiments include DC circuits, analog electronics, and digital electronics. Not open to electrical or computer engineering majors. Prerequisite: Corequisite: EECS 316 or EECS 317.

EECS 330. Data Structures and Algorithms. 4 Credits.
A first course in abstract data structures and algorithmic design making use of these structures. Topics include asymptotic analysis, trees, dictionaries, heaps, disjoint set structures; divide and conquer, greedy,
and dynamic programming algorithms. Prerequisite: EECS 210, EECS 268, and upper-level EECS eligibility.

EECS 348. Software Engineering I. 4 Credits.
This course is an introduction to software development fundamentals and software engineering. It incorporates a thorough introduction to a compiled programming language. A baseline knowledge of tools and utilities is covered including the shell, common programs, version control, IDEs, editors, and build tools. Topics include: software development principles (e.g., design patterns, modularity, loose coupling), extending larger codebases, developing larger codebases, continuous integration, continuous deployment, debugging, unit testing, test-driven development, and databases. Grade of C (not C-) required to progress. Prerequisite: EECS 268.

EECS 360. Signal and System Analysis. 4 Credits.
Fourier signal analysis (series and transform); linear system analysis (continuous and discrete); Z-transforms; analog and digital filter analysis. Analysis and design of continuous and discrete time systems using MATLAB. Prerequisite: Upper level of EECS Eligibility, and EECS 212.

EECS 361. Signal and System Analysis. 3 Credits.
Fourier signal analysis (series and transform); linear system analysis (continuous and discrete); Z-transforms, analog and digital filter analysis; analysis and design of continuous and discrete time system using MATLAB. Prerequisite: EECS 212 and EECS Upper Level Eligibility.

EECS 368. Programming Language Paradigms. 3 Credits.
The course is a survey of programming languages: their attributes, uses, advantages, and disadvantages. Topics include scopes, parameter passing, storage management, control flow, exception handling, encapsulation and modularization mechanism, reusability through genericity and inheritance, and type systems. In particular, several different languages will be studied which exemplify different language philosophies (e.g., procedural, functional, object-oriented, logic, scripting). Prerequisite: EECS 268 and upper-level EECS eligibility.

EECS 388. Embedded Systems. 4 Credits.
This course will address internal organization of micro-controller systems, sometimes called embedded systems, used in a wide variety of engineered systems: programming in C and assembly language; input and output systems; collecting data from sensors; and controlling external devices. This course will focus on one or two specific microprocessors, software development and organization, and building embedded systems. Prerequisite: EECS 140 or EECS 141, EECS 168 or EECS 169, and upper-level EECS eligibility.

EECS 399. Projects. 1-5 Credits.
An electrical engineering, computer engineering, or computer science project pursued under the student's initiative, culminating in a comprehensive report, with special emphasis on orderly preparation and effective composition. Prerequisite: Upper-level EECS eligibility and consent of instructor.

EECS 412. Electronic Circuits II. 4 Credits.
Discrete and integrated amplifier analysis and design. Introduction to feedback amplifier analysis and design. Introduction to feedback amplifiers. Prerequisite: EECS 312 and upper-level EECS eligibility.

EECS 420. Electromagnetics II. 4 Credits.
This course applies electromagnetic analysis to high frequency devices and systems where wave propagation effects cannot be neglected. Topics covered include transmission lines, space waves, waveguides, radiation, and antennas. Laboratory experiments include transmission line, waveguide, and antenna measurements and characterizations. 3 hours lecture, 1 hour laboratory. Prerequisite: EECS 220 and upper-level EECS eligibility.

EECS 441. Power Systems Engineering II. 3 Credits.
A continuation of ARCE 640 that integrates system components into functional, safe, and reliable power distribution systems for commercial, industrial, and institutional (CII) facilities. Service entrance design, distribution system layout and reliability, emergency and standby power system design, medium-voltage distribution systems, symmetrical fault analysis, and special equipment and occupancies. (Same as ARCE 641.) Prerequisite: ARCE 640 or EECS 212 and Upper-Level EECS Eligibility.

EECS 443. Digital Systems Design. 4 Credits.
The design of digital systems from a hardware point of view. The implementation of functional and control units using programmable logic devices. Introduction to VHDL and its use in modeling and designing digital systems. Prerequisite: EECS 388.

EECS 444. Control Systems. 3 Credits.
An introduction to the modeling, analysis, and design of linear control systems. Topics include mathematical models, feedback concepts, state-space methods, time response, system stability in the time and transform domains, design using PID control and series compensation, and digital controller implementation. Prerequisite: EECS 212 and EECS 360.

EECS 447. Introduction to Database Systems. 3 Credits.
Introduction to the concept of databases and their operations. Basic concepts, database architectures, storage structures and indexing, data structures: hierarchical, network, and relational database organizations. Database design and normalization: ER model, candidates keys, functional dependencies, normal forms, decomposition. Emphasis on relational databases, relational algebra, and SQL. Introduction to views, transactions, and database access control. Introduction to database security, big data, NoSQL, CAP theorem, key-value stores. Prerequisite: Upper-level EECS eligibility or departmental consent.

EECS 448. Software Engineering II. 4 Credits.
This course is an introduction to software engineering, and it covers the systematic development of software products. It outlines the scope of software engineering, including life-cycle models, software process, teams, tools, testing, planning, and estimating. It concentrates on requirements, analysis, design, implementation, and maintenance of software products. The laboratory covers CASE tools, configuration control tools, UML diagrams, integrated development environments, and project specific components. Prerequisite: EECS 268 and upper-level EECS eligibility.

EECS 455. Cyber Defense Practice. 1 Credits.
The course introduces cyber defense methods and skills through hands-on practice. Each section will focus on aspects of securing operating systems, securing network access, and securing file systems. To earn three (3) credits, a student must complete three (3) sections. Prerequisite: EECS 268. Corequisite: EECS 388.

EECS 461. Probability and Statistics. 3 Credits.
Introduction to probability and statistics with applications. Reliability of systems. Discrete and continuous random variables. Expectations, functions of random variables, and linear regression. Sampling distributions, confidence intervals, and hypothesis testing. Joint, marginal, and conditional distribution and densities. Prerequisite: MATH 127 or MATH 147, and MATH 290 or MATH 291, and upper-level EECS eligibility.

EECS 465. Cyber Defense. 3 Credits.
An introduction to critical knowledge and skills needed to administer and defend computer networks and systems. This course focuses on hands-on activities, learning cybersecurity defensive techniques, and
understanding well known techniques used by adversaries. Prerequisite: EECS 268. Corequisite: EECS 388.

EECS 468. Programming Paradigms. 3 Credits.
This course is a survey of programming languages: their attributes, uses, advantages, and disadvantages. Topics include the evolution of programming languages; programming language processing (i.e., compilation, interpretation, and mixed approaches); imperative, functional, and declarative languages; parameter passing and evaluation order; iteration, recursion, and continuation; and the basics of cloud programming (i.e., web services, client/server, synchronous vs. asynchronous programming, building reliable systems, and programming at scale). Prerequisite: EECS 268 and upper-level EECS eligibility.

EECS 470. Electronic Devices and Properties of Materials. 3 Credits.
An introduction to crystal structures, and metal, insulator, and semiconductor properties. Topics covered include the thermal, electric, dielectric, and optical properties of these materials. A significant portion of this course is devoted to the properties of semiconductors and semiconductor devices. Prerequisite: PHSX 313 and upper-level EECS eligibility.

EECS 498. Honors Research. 1-2 Credits.
Arranged to allow students to satisfy the independent research requirement for graduation with departmental honors. Prerequisite: Consent of instructor and upper-level EECS eligibility.

EECS 501. Senior Design Laboratory I. 3 Credits.
A lecture/laboratory course involving the design and implementation of prototypes of electrical and computer type products and systems. The project specifications require consideration of ethics, economics, manufacturing, and safety. Intended for students graduating the following calendar year. EECS 501 should be immediately followed by EECS 502 in the following semester. Prerequisite: EECS 501. Corequisite: EECS 210, EECS 360, and EECS 412.

EECS 502. Senior Design Laboratory II. 3 Credits.
A lecture/laboratory course involving the design and implementation of prototypes of electrical and computer type products and systems. The project specifications require consideration of ethics, economics, health, manufacturing, and safety. Must be taken in semester immediately following completion of EECS 501. Prerequisite: EECS 501.

EECS 510. Introduction to the Theory of Computing. 3 Credits.
Finite state automata and regular expressions. Context-free grammars and pushdown automata. Turing machines. Models of computable functions and undecidable problems. The course emphasis is on the theory of computability, especially on showing limits of computation. (Same as MATH 510.) Prerequisite: EECS 210 and upper-level EECS eligibility.

EECS 512. Electronic Circuits III. 3 Credits.
Feedback amplifier circuit analysis, power amplifiers, analog IC op-amp techniques and analysis, filter approximation and realization, oscillators, wave generators and shapers. Prerequisite: EECS 412.

EECS 541. Computer Systems Design Laboratory I. 3 Credits.
A two semester lecture/laboratory course involving the specification, design, implementation, analysis, and documentation of a significant hardware and software computer system. Laboratory work involves software, hardware, and hardware/software trade-offs. Project requirements include consideration of ethics, economics, manufacturing, safety, and health aspects of product development. Intended for students graduating the following calendar year. EECS 541 should be immediately followed by EECS 542 in the following semester. Prerequisite: EECS 443 and EECS 348.

EECS 542. Computer Systems Design Laboratory II. 3 Credits.
A two semester lecture/laboratory course involving the specification, design, implementation, analysis, and documentation of a significant hardware and software computer system. Laboratory work involves software, hardware, and hardware/software trade-offs. Project requirements include consideration of ethics, economics, manufacturing, safety, and health aspects of product development. Must be taken in semester immediately following completion of EECS 541. Prerequisite: EECS 541.

EECS 545. Electric Energy Production and Storage. 3 Credits.
An introduction to the design of utility scale and small scale (distributed generation) electric energy production and storage systems. This course addresses the technical, operational, economic, and environmental characteristics associated with both traditional and nontraditional electric energy production systems along with associated grid integration, energy delivery, and regulatory issues. Traditional energy production systems covered include fossil fuel, hydroelectric, and nuclear power plants. Non-traditional energy productions systems covered include fuel cells, photovoltaics (PV), concentrated solar power (CSP), wind, geothermal, and other emerging technologies. (Same as ARCE 645.) Prerequisite: ARCE 640, or EECS 212 and Upper-Level EECS Eligibility.

EECS 547. Power System Analysis I. 3 Credits.
Introduction to the analysis of commercial, industrial, and utility power systems. Emphasis is placed on modeling system components which include transmission and distribution lines, transformers, induction machines, and synchronous machines and the development of a power system model for analysis from these components. System modeling will be applied to short-circuit studies and used to analyze symmetrical faults, to develop sequence networks using symmetrical components, and analyze unsymmetrical faults. (Same as ARCE 647.) Prerequisite: ARCE 640, or EECS 212 and Upper-Level EECS Eligibility.

EECS 548. Power System Analysis II. 3 Credits.
Continuation of ARCE 647 or EECS 547 that uses power system modeling developed in ARCE 647 or EECS 547 to analyze power system load flow, operation and economic dispatch, stability, and transient response. The impact of alternative energy sources, renewable storage, DC transmission and interties, and other emerging technologies on power system operation and reliability will be addressed throughout the course. (Same as ARCE 648.) Prerequisite: ARCE 647 or EECS 547 or consent of instructor.

EECS 560. Data Structures. 4 Credits.
Data abstraction and abstract data types. Topics include the design and implementation of dictionary, priority queues, concatenated queue, disjoint set structures, graphs, and other advanced data structures based on balanced and unbalanced tree structures. Special emphasis will be placed on the implementations of these structures and their performance tradeoffs. Both asymptotic complexity analysis and experimental profiling techniques will be introduced. Labs will be used to provide students with hands-on experience in the implementations of various abstract data types and to perform experimental performance analysis. Prerequisite: EECS 210. Corequisite: EECS 448.

EECS 562. Introduction to Communication Systems. 4 Credits.
A first course in communications, including lectures and integrated laboratory experiments. After a review of spectral analysis and signal transmission, analog and digital communications are studied. Topics include: sampling, pulse amplitude modulation, and pulse code modulation; analog and digital amplitude, frequency, and phase modulation; frequency and time division multiplexing; and noise
performance of analog modulation techniques. Prerequisite: EECS 212 and EECS 360 or EECS 361.

**EECS 563. Introduction to Communication Networks. 3 Credits.**
An introduction to the principles used in communication networks is given in this course. Topics include a discussion of the uses of communications networks, network traffic, network impairments, standards, layered reference models for organizing network functions. Local Area Network technology and protocols are discussed. Link, network, transport layer protocols, and security are introduced. TCP/IP networks are stressed. VoIP is used as an example throughout the course. Basic concepts of network performance evaluation are studied; both analytical and simulation techniques are considered. Prerequisite: EECS 168 and MATH 526 or EECS 461.

**EECS 565. Introduction to Information and Computer Security. 3 Credits.**
An introduction to the fundamentals of cryptography and information and computer security. Introduces the basic concepts, theories, and protocols in computer security. Discusses how to apply such knowledge to analyze, design and manage secure systems in the real world. Topic covered: the basics of cryptography, software security, operating system security, database security, network security, privacy and anonymity, social engineering, digital forensics, etc. Corequisite: EECS 678 and Prerequisite: Upper-Level EECS Eligibility.

**EECS 569. Computer Forensics. 3 Credits.**
This course covers both the theoretical and practical aspects of computer forensics. The course introduces the basic concepts, methodologies, and techniques to recover, preserve, and examine digital evidence on or transmitted by digital devices. Topics include: crime investigation and digital evidence, file system forensics, application analysis, network evidence acquisition and analysis, mobile device forensics, etc. Prerequisite: EECS 565.

**EECS 581. Software Engineering II. 3 Credits.**
This lecture/laboratory course covers the systematic development of software products. Topics include: scope of software engineering, life-cycle models, software process, teams, ethics, tools, testing, planning, and estimating. It concentrates on requirements, analysis, design, implementation, and maintenance of software products. Prerequisite: EECS 348, EECS 330, EECS 468, and upper-level EECS eligibility. Corequisite: EECS 565.

**EECS 582. Computer Science and Interdisciplinary Computing Capstone. 3 Credits.**
Team-oriented lecture/laboratory course involving the specification, design, implementation, testing, and documentation of a significant software project over the full course of the semester. The course includes the consideration of project management, economics, and technical writing. Prerequisite: EECS 581 and upper-level EECS eligibility.

**EECS 592. Cybersecurity Design. 3 Credits.**
Team-oriented lecture and laboratory course involving the specification, design, implementation, testing, and documentation of a significant cybersecurity projects over the full course of the semester. The course includes the consideration of project management, economics, and technical writing. Prerequisite: EECS 581.

**EECS 611. Electromagnetic Compatibility. 3 Credits.**
A study of unwanted generation and reception of radio-frequency radiation from analog and digital electronic systems and how these emissions/receptions can be reduced. Topics covered include sources of radiation, grounding, shielding, crosstalk, electrostatic discharge, and practical design and layout schemes for reducing unwanted radiation and reception. Also covered are the major governmental electromagnetic compatibility (EMC) regulations and standards that apply to commercial electronic devices and systems. Prerequisite: EECS 220 and EECS 312.

**EECS 622. Microwave and Radio Transmission Systems. 3 Credits.**
Introduction to radio transmission systems. Topics include radio transmitter and receiver design, radiowave propagation phenomenology, antenna performance and basic design, and signal detection in the presence of noise. Students will design radio systems to meet specified performance measure. Prerequisite: Corequisite: EECS 420 and MATH 526 or EECS 461.

**EECS 628. Fiber Optic Communication Systems. 3 Credits.**
Description and analysis of the key components in optical communication systems. Topics covered include quantum sources, fiber cable propagation and dispersion characteristics, receiver characteristics, and system gain considerations. Prerequisite: EECS 220 and PHSX 313 or equivalent and upper-level EECS eligibility.

**EECS 630. Advanced Data Structures and Algorithms. 3 Credits.**
A second course in abstract data structures and algorithmic design making use of these structures. Emphasis will be on understanding the high-level theoretical intuitions and principles, as well as a concrete understanding of implementation and applications. Topics include advanced treatment of trees, heaps, disjoint set structures, network flow, greedy algorithms, divide and conquer, dynamic programming, and complexity theory. Prerequisite: Upper-level EECS eligibility, EECS 330 and either EECS 461 or MATH 526.

**EECS 638. Fundamentals of Expert Systems. 3 Credits.**
Basic information about expert systems: architecture of an expert system, building expert systems, uncertainty in expert systems, taxonomy of expert systems. Knowledge representation: first order logic, production systems, semantic nets, frames. Uncertainty in expert systems, one-valued approaches: probability theory, systems using Bayes' rule, and systems using certainty theory; two-valued approaches: systems using Dempster-Shafer theory and system INFERNO; set-valued approaches: systems using fuzzy set theory and systems using rough set theory. Prerequisite: EECS 560 or consent of instructor.

**EECS 639. Introduction to Scientific Computing. 3 Credits.**
A basic introduction to scientific computing and numerical analysis. Topics include linear equation solving, least squares, nonlinear equation-solving, optimization, interpolation, numerical integration and differentiation, ordinary differential equations, and the fast Fourier transform (FFT). Vectorization, efficiency, reliability, and stability of numerical algorithms will be stressed. Applications of algorithms to real-world problems, such as image processing, medicine, electronic circuits, flight trajectories, and molecular modeling, will be emphasized. Students cannot receive credit for both EECS 639 and EECS 781 or MATH 781. Prerequisite: MATH 127, MATH 290, and EECS 168 or equivalent.

**EECS 643. Computer Architecture. 3 Credits.**
The structure and design of computing systems. Examination and analysis of computing systems. Examination and analysis of instruction set architectures, pipelined control and arithmetic units, vector processors, memory hierarchies, and performance evaluation. Prerequisite: EECS 443.

**EECS 644. Introduction to Digital Signal Processing. 3 Credits.**
Discrete time signal and systems theory, sampling theorem, z-transforms, digital filter design, discrete Fourier transform, FFT, and hardware considerations. Prerequisite: EECS 360 or EECS 361.

**EECS 645. Computer Architecture. 3 Credits.**
The structure, design, analysis, and evaluation of computer processors and systems. The design of instruction sets. Principles and techniques
of parallelism at the data transfer (memory hierarchy), data processing (pipelines), and concurrent instruction execution. Prerequisite: EECS 388.

EECS 647. Introduction to Database Systems. 3 Credits.
Introduction to the concept of databases and their operations. Basic concepts, database architectures, storage structures and indexing, data structures: hierarchical, network, and relational database organizations. Emphasis on relational databases and retrieval languages SQL, QBE, and ones based on relational algebra and relational calculus; brief description of predicate calculus. Theory of databases, normal forms, normalization, candidates keys, decomposition, functional dependencies, multi-valued dependencies. Introduction to the design of a simple database structure and a data retrieval language. Student cannot receive credit for both EECS 647 and EECS 746. Prerequisite: EECS 448.

EECS 649. Introduction to Artificial Intelligence. 3 Credits.
General concepts, search procedures, two-person games, predicate calculus and automated theorem proving, nonmonotonic logic, probabilistic reasoning, rule based systems, semantic networks, frames, dynamic memory, planning, machine learning, natural language understanding, neural networks. Prerequisite: Corequisite: EECS 368.

EECS 658. Introduction to Machine Learning. 3 Credits.
This course provides an introduction to the basic methods of machine learning and how to apply them to solve software engineering problems. Topics covered are: supervised learning, unsupervised learning, and reinforcement learning methods; feature selection techniques; structuring machine learning solutions; and evaluation metrics. Prerequisite: EECS 348 and upper-level EECS eligibility.

EECS 660. Fundamentals of Computer Algorithms. 3 Credits.
Basic concepts and techniques in the design and analysis of computer algorithms. Models of computations. Simple lower bound theory and optimality of algorithms. Computationally hard problems and the theory of NP-Completeness. Introduction to parallel algorithms. Prerequisite: EECS 560 and either EECS 461 or MATH 526.

EECS 662. Programming Languages. 3 Credits.
Formal definition of programming languages including specification of syntax and semantics. Simple statements including precedence, infix, prefix, and postfix notation. Global properties of algorithmic languages including scope of declaration, storage allocation, grouping of statements, binding time of constituents, subroutines, coroutines, and tasks. Run-time representation of program and data structures. Prerequisite: EECS 368 and EECS 560.

EECS 664. Introduction to Digital Communication Systems. 3 Credits.
An introduction to building digital communication systems in discrete time, including lectures and integrated laboratory exercises. Topics covered include signal spaces, base-band modulation, bandpass modulation, phase-locked loops, carrier phase recovery, symbol timing recovery, and basic performance analysis. Prerequisite: EECS 360 and EECS 461 or MATH 526.

EECS 665. Compiler Construction. 4 Credits.
Compilation of programming language constructs. Organization of a compiler including symbol tables, lexical analysis, syntax analysis, intermediate and object code generation, error diagnostics, code optimization techniques and run-time structures in a block-structured language such as C or Rust. Programming assignments include construction of various modules of a compiler. Prerequisite: EECS 348, EECS 468, EECS 510, and upper-level eligibility.

EECS 666. Introduction to Network Security. 3 Credits.
This course covers fundamental cryptographic algorithms, security designs, protocols, attacks, and controls in computer networks. Topics include security designs and analysis of network protocols such as TCP/IP, BGP, and DNS; network vulnerabilities and attacks such as spoofing, MITM, DDoS, and botnets; network security controls such as cryptography primitives, authentication, key management, firewall and intrusion detection; privacy and anonymity such as spams, web tracking, and Internet censorship. Prerequisite: EECS 563 and EECS 565 or instructor's consent.

EECS 670. Introduction to Semiconductor Processing. 3 Credits.
An overview of various processes to fabricate semiconductor devices and integrated circuits. Topics covered include crystal growth, oxidation, solid-state diffusion, ion implantation, photolithography, chemical vapor deposition, epitaxial growth, metallization, and plasma etching of thin films. (Same as C&PE 655.) Prerequisite: Senior standing in C&PE or EECS, or consent of instructor.

EECS 672. Introduction to Computer Graphics. 3 Credits.
Foundations of 2D and 3D computer graphics. Structured graphics application programming. Basic 2D and 3D graphics algorithms (modeling and viewing transformations, clipping, projects, visible line/surface determination, basic empirical lighting, and shading models), and aliasing. Prerequisite: EECS 348 and upper-level EECS eligibility.

EECS 675. Multicore and GPU Programming. 3 Credits.
This course covers concepts of single-machine multi-threaded programming; multicore programming across a network of machines; and general-purpose computing on GPUs. Typically, more than half of the course focuses on GPUs, including relevant architectural aspects required in order to achieve optimal performance on GPUs. Projects use C++ thread-related tools, OpenMPI, CUDA, and OpenCL. Prerequisite: EECS 348 and upper-level EECS eligibility.

EECS 677. Advanced Software Security Evaluation. 3 Credits.
Heuristic and formal analysis of software systems with an emphasis on integrity and secrecy. Students in the course will learn to assess the quality, vulnerabilities, and behavior of software. Topics include bug finding, anomaly detection, dynamic analysis, static analysis, dataflow analysis, fuzzing, linting, software supply chain auditing, and security best practices. Prerequisite: EECS 348 and upper-level EECS eligibility, or instructor's consent.

EECS 678. Introduction to Operating Systems. 4 Credits.
The objective of this course is to provide the students with the concepts necessary to enable them to: a) identify the abstract services common to all operating system, b) define the basic system components that support the operating system's machine independent abstractions on particular target architectures, c) consider how the design and implementation of different systems components interact and constrain one another, not merely how one or two important parts work in isolation, and d) understand the means by which fundamental problems in operating systems can be analyzed and addressed. Programming assignments address topics including process creation, inter-process communication, system call implementation, process scheduling and virtual memory. Laboratory exercises primarily focus on use of tools and concepts required for the programming assignments but include a small number of independent topics. Prerequisite: EECS 388, EECS 348, and upper-level EECS eligibility.

EECS 683. Introduction to Hardware Security and Trust. 3 Credits.
This course will investigate various security and trust issues related to integrated circuits and systems during their design and manufacturing process, as well as during field operation. A wide range of threats including piracy, reverse engineering, hardware Trojan insertion, side-channel attack, and various invasive non-invasive attacks will be introduced. Potential hardware and software-based countermeasures
to detect and prevent these attacks will be studied. Implementation of design-time solutions like physically unclonable functions (PUFs), true random number generator (TRNG), security monitors, hardware obfuscation, and many others will be covered. Prerequisite: EECS 388 and upper-level EECS eligibility.

EECS 685. Introduction to IoT Security. 3 Credits.
This course covers the concept of Internet of Things (IoT) including its components, architectures, and enabling technologies and introduces full-stack of security and privacy issues in IoT and its applications including hardware, software, network, and data. The goal is to expose students to new developments in cybersecurity for IoT as well as familiarize them with tools and techniques for IoT security design and analysis. Students will gain hands-on experiences on implementing security techniques for IoT through mini projects. Prerequisite: EECS 565 or instructor’s consent.

EECS 687. Mobile Security. 3 Credits.
Security and privacy issues through the lens of mobile computing. Topics include an overview of the mobile computing ecosystem, including smartphones and autonomous devices such as unmanned aerial systems; core security and privacy principles applied to mobile devices; an exploration of domain-relevant academic literature; exploration of attacks and defenses in mobile security. The course will expose students to new developments in cybersecurity for mobile security and security tools and techniques in the domain. Prerequisite: EECS 678 or instructor’s consent.

EECS 690. Special Topics: _______. 1-3 Credits.
Arranged as needed to present appropriate material to groups of students. May be repeated for additional credit. Prerequisite: Varies by topic, plus Upper-level EECS eligibility and consent of instructor.

EECS 692. Directed Reading. 1-3 Credits.
Reading under the supervision of an instructor on a topic chosen by the student with the advice of the instructor. May be repeated for additional credit. Consent of the department required for enrollment. Prerequisite: Upper-level EECS eligibility and consent of instructor.

EECS 695. Software Reverse Engineering. 3 Credits.
This hands-on course explains the basics of binary software, including binary generation, layout, structure, and execution. It will explain the basics of binary reverse engineering (RE), including binary analysis, disassembly, and instrumentation. The course teaches relevant tools and frameworks for RE. Students practice RE concepts using code problems. Topics include: Linux command-line tools, binary build process, high-level frameworks for RE. Students practice RE concepts using code problems. Prerequisite: EECS 388 or instructor’s consent.

EECS 700. Special Topics: _______. 1-5 Credits.
Courses on special topics of current interest in electrical engineering, computer engineering, or computer science, given as the need arises. May be repeated for additional credit. Prerequisite: Varies by topic.

EECS 711. Security Management and Audit. 3 Credits.
Administration and management of security of information systems and networks, intrusion detection systems, vulnerability analysis, anomaly detection, computer forensics, auditing and data management, risk management, contingency planning and incident handling, security planning, e-business and commerce security, privacy, traceability and cyber-evidence, human factors and usability issues, policy, legal issues in computer security. Prerequisite: Graduate standing in EECS, or permission of the instructor.

EECS 713. High-Speed Digital Circuit Design. 3 Credits.
Basic concepts and techniques in the design and analysis of high-frequency digital and analog circuits. Topics include: transmission lines, ground and power planes, layer stacking, substrate materials, terminations, vias, component issues, clock distribution, cross-talk, filtering and decoupling, shielding, signal launching. Prerequisite: EECS 312 and senior or graduate standing. EECS 420 recommended.

EECS 718. Graph Algorithms. 3 Credits.
This course introduces students to computational graph theory and various graph algorithms and their complexities. Algorithms and applications covered will include those related to graph searching, connectivity and distance in graphs, graph isomorphism, spanning trees, shortest paths, matching, flows in network, independent and dominating sets, coloring and covering, and Traveling Salesman and Postman problems. Prerequisite: EECS 330 or graduate standing with consent of instructor.

EECS 721. Antennas. 3 Credits.
Gain, Pattern, and Impedance concepts for antennas. Linear, loop, helical, and aperture antennas (arrays, reflectors, and lenses). Cylindrical and biconical antenna theory. Prerequisite: EECS 360 and EECS 420, or EECS 720, or permission of the instructor.

EECS 723. Microwave Engineering. 3 Credits.
Survey of microwave systems, techniques, and hardware. Guided-wave theory, microwave network theory, active and passive microwave components. Prerequisite: EECS 420.

EECS 725. Introduction to Radar Systems. 3 Credits.
Basic radar principles and applications. Radar range equation. Pulsed and CW modes of operation for detection, ranging, and extracting Doppler information. Prerequisite: EECS 360, EECS 420, EECS 461 or MATH 526. EECS 622 recommended.

EECS 727. Photonics. 3 Credits.
The course presents the theory and the design principles of photonic systems. Topics include: Light propagation, interference, and diffraction, permittivity models and effective media, electromagnetic propagation in complex media, dispersion engineering, and fundamentals of nonlinear optics. Prerequisite: EECS 420 or equivalent.

EECS 728. Fiber-optic Measurement and Sensors. 3 Credits.
The course will focus on fundamental theory and various methods and applications of fiber-optic measurements and sensors. Topics include: optical power and loss measurements, optical spectrum analysis, wavelength measurements, polarization measurements, dispersion measurements, PMD measurements, optical amplifier characterization, OTDR, optical components characterization and industrial applications of fiber-optic sensors. Prerequisite: EECS 628 or equivalent.

EECS 730. Introduction to Bioinformatics. 3 Credits.
This course provides an introduction to bioinformatics. It covers computational tools and databases widely used in bioinformatics. The underlying algorithms of existing tools will be discussed. Topics include: molecular biology databases, sequence alignment, gene expression data analysis, protein structure and function, protein analysis, and proteomics. Prerequisite: Data Structures class equivalent to EECS 330, and Introduction to Biology equivalent to BIOL 150, or consent of instructor.

EECS 739. Parallel Scientific Computing. 3 Credits.
This course is concerned with the application of parallel processing to real-world problems in engineering and the sciences. State-of-the-art serial and parallel numerical computing algorithms are studied along with contemporary applications. The course takes an algorithmic design, analysis, and implementation approach and covers an introduction to scientific and parallel computing, parallel computing platforms, design principles of parallel algorithms, analytical modeling of parallel algorithms, MPI programming, direct and iterative linear solvers, numerical PDEs and meshes, numerical optimization, GPU computing, and applications of parallel scientific computing. Prerequisite: MATH 126, MATH 290,
experience programming in C, C++, or Fortran; EECS 639 (or equivalent.) Highly recommended: MATH 127.

EECS 740. Digital Image Processing. 3 Credits.
This course gives a hands-on introduction to the fundamentals and applications of digital image processing. Topics include: image formation and camera calibration, image transforms, image filtering in spatial and frequency domains, image enhancement, image restoration and reconstruction, image segmentation, feature detection, segmentation, and the latest developments and applications in image processing. Prerequisite: MATH 290 and MATH 526, or consent from the instructor.

EECS 742. Static Analysis. 3 Credits.
This course presents an introduction to techniques for statically analyzing programs. Converge includes theoretical analysis, definition and implementation of data flow analysis, control flow analysis, abstract interpretation, and type and effects systems. The course presents both the underlying definitions and pragmatic implementation of these systems. Prerequisite: EECS 665 or EECS 662 or equivalent.

EECS 743. Advanced Computer Architecture. 3 Credits.
Topics of this course will be divided into three main categories: (a) theory of parallelism, (b) hardware technologies, and (c) parallel and scalable architectures. For example, principles of performance and scalability, processors and memory hierarchy, linear/nonlinear pipelining and superscalar techniques, and scalable multiprocessors and dataflow architectures will be among the topics to be covered. The course will also focus on emerging and heterogeneous architectures and their performance potential and programming models. For example, reconfigurable computing (RC), quantum computing (QC), and neuromorphic computing (NC) will be covered in some details. This would be achieved through practical experiments, and homework projects using realistic workloads on some state-of-the-art high-performance reconfigurable and quantum computers. Finally, students will select published related research work for discussions and oral presentations. Prerequisite: EECS 643 or EECS 645, or equivalent.

EECS 744. Digital Signal Processing Implementation in Programmable Logic Devices. 3 Credits.
Implementation of communication and radar DSP algorithms in programmable logic devices focusing on design methodology, resource utilization, and timing closure. Specific topics include number formats, numerical operators, waveform generation, mixed-signal converters (ADCs & DACs), digital filters, multi-rate designs, DFTs, software defined radios, and embedded processors. Course structure will consist of a combination of class lectures and hardware design projects. Prerequisite: An introductory course in DSP such as EECS 644, and digital system design using HDL such as EECS 443 or equivalent.

EECS 745. Implementation of Networks. 3 Credits.
EECS 745 is a laboratory-focused implementation of networks. Topics include direct link networks (encoding, framing, error detection, reliable transmission, SONET, FDDI, network adapters, Ethernet, 802.11 wireless networks); packet and cell switching (ATM, switching hardware, bridges and extended LANs); internetworking (Internet concepts, IPv6, multicast, naming/DNS); end-to-end protocols (UDP, TCP, APIs and sockets, RPCs, performance); end-to-end data (presentation formatting, data compression, security); congestion control (queueing disciplines, TCP congestion control and congestion avoidance); high-speed networking (issues, services, experiences); voice over IP (peer-to-peer calling, call managers, call signalling, PBX and call attendant functionality). Prerequisite: EECS 563 or EECS 780.

EECS 750. Advanced Operating Systems. 3 Credits.
In this course, we will study advanced topics in operating systems for modern hardware platforms. The topics include: multicore CPU scheduling, cache and DRAM management, flash-based storage systems and I/O management, power/energy management, and cloud systems. We will discuss classical and recent papers in each of these topics. We will also study advanced resource management capabilities in recent Linux kernels. The course will consist of lectures, student presentations, and a term project. Prerequisite: EECS 678.

EECS 752. Modern Computer Organization and Design. 3 Credits.
The main objective of this course is to discuss various computer architectures at an abstract level. A large number of machines, memory structures, and interconnections will be discussed. We will learn about state-of-the-art computer systems as they are designed today, including processors, memories, interconnects, and multiprocessors. The scope of the course is not on research but on actual, commercial, existing machines. The students taking the course will be ready to conduct research in the area of computer architecture or work on projects related to designing chip architecture for components of a computer system. More importantly, the students will gain experience in using architectural simulators and analytical models to design and evaluate future computer architectures. Prerequisite: EECS 645 or EECS 643 or instructor's consent.

EECS 753. Embedded and Real Time Computer Systems. 3 Credits.
This course will cover emerging and proposed techniques and issues in embedded and real time computer systems. Topics will include new paradigms, enabling technologies, and challenges resulting from emerging application domains. Prerequisite: EECS 645 and EECS 678.

EECS 755. Software Modeling and Analysis. 3 Credits.
Modern techniques for modeling and analyzing software systems. Course coverage concentrates on pragmatic, formal modeling techniques that support predictive analysis. Topics include formal modeling, static analysis, and formal analysis using model checking and theorem proving systems. Prerequisite: EECS 368 or equivalent.

EECS 759. Estimation and Control of Unmanned Autonomous Systems. 3 Credits.
An introduction to the modeling, estimation, and control of unmanned autonomous systems. Topics include motion description, navigation sensors, complementary filters, Kalman filters, attitude estimation, position estimation, attitude keeping controller, etc. The successful completion of this course will prepare students for advanced studies in robotics & controls. (Same as AE 759.) Prerequisite: MATH 627, AE 551 or AE 552 or EECS 444, or by consent of instructor.

EECS 762. Programming Language Foundation I. 3 Credits.
This course presents a basic introduction to the semantics of programming languages. The presentation begins with basic lambda calculus and mechanisms for evaluating lambda calculus terms. Types are introduced in the form of simply typed lambda calculus and techniques for type inference and defining type systems are presented. Finally, techniques for using lambda calculus to define, evaluate and type check common programming language constructs are presented. Prerequisite: EECS 662 or equivalent.

EECS 764. Analysis of Algorithms. 3 Credits.
Models of computations and performance measures; asymptotic analysis of algorithms; basic design paradigms including divide-and-conquer, dynamic programming, backtracking, branch-and-bound, greedy method and heuristics; design and analysis of approximation algorithms; lower bound theory; polynomial transformation and the theory of NP-Completeness; additional topics may be selected from arithmetic
complexity, graph algorithms, string matching, and other combinatorial problems. Prerequisite: EECS 630 or equivalent.

EECS 765. Introduction to Cryptography and Computer Security. 3 Credits.
Comprehensive coverage to the fundamentals of cryptography and computer and communication security. This course serves as the first graduate level security course, which introduces the core concepts, theories, algorithms and protocols in computer and communication security, and also prepares students for advanced security courses. This course first covers the mathematical foundation of cryptography and its applications in computer security. The course also covers a wide range of topics: information and database security, software and computer systems security, network security, Internet and web security. Prerequisite: EECS 678 and EECS 563 or EECS 780, or the instructor's approval.

EECS 767. Information Retrieval. 3 Credits.
This class introduces algorithms and applications for retrieving information from large document repositories, including the Web. Topics span from classic information retrieval methods for text documents and databases, to recent developments in Web search, including: text algorithms, indexing, probabilistic modeling, performance evaluation, web structures, link analysis, multimedia information retrieval, social network analysis. Prerequisite: EECS 447 or permission of instructor.

EECS 768. Virtual Machines. 3 Credits.
Understand the fundamental principles and advanced implementation aspects of key virtual machine concepts. Topics include principles of virtualization, binary translation, process and system level virtual machines, JIT compilation and optimizations in managed environments, garbage collection, virtual machine implementation issues, and virtual machine security. Includes in-depth coverage of the latest developments and research issues in the filed of virtual machines. Prerequisite: EECS 665 and either EECS 643 or EECS 645 or consent of instructor.

EECS 769. Information Theory. 3 Credits.
Information theory is the science of operations on data such as compression, storage, and communication. It is one of the few scientific fields fortunate enough to have an identifiable beginning - Claude Shannon's 1948 paper. The main topics of mutual information, entropy, and relative entropy are essential for students, researchers, and practitioners in such diverse fields as communications, data compression, statistical signal processing, neuroscience, and machine learning. The topics covered in this course include mathematical definitions and properties of information, mutual information, source coding theorem, lossless compression of data, optimal lossless coding, noisy communication channels, channel coding theorem, the source channel separation theorem, multiple access channels, broadcast channels. Gaussian noise, time-varying channels, and network information theory. Prerequisite: EECS 481 or MATH 526 or an equivalent undergraduate probability course.

EECS 773. Advanced Graphics. 3 Credits.
Advanced topics in graphics and graphics systems. Topics at the state of the art are typically selected from: photorealistic rendering; physically-based lighting models; ray tracing; radiosity; physically-based modeling and rendering; animation; general texture mapping techniques; point-based graphics; collaborative techniques; and others. Prerequisite: EECS 672 or permission of instructor.

EECS 774. Geometric Modeling. 3 Credits.
Introduction to the representation, manipulation, and analysis of geometric models of objects. Implicit and parametric representations of curves and surfaces with an emphasis on parametric freeform curves and surfaces such as Bezier and Nonuniform Rational B-Splines (NURBS). Curve and surface design and rendering techniques. Introduction to solid modeling: representations and base algorithms. Projects in C/C++ using OpenGL. Prerequisite: EECS 672 or permission of instructor.

EECS 775. Visualization. 3 Credits.
Data representations, algorithms, and rendering techniques typically used in Visualization applications. The emphasis is on Scientific Visualization and generally includes topics such as contouring and volumetric rendering for scalar fields, glyph and stream (integral methods) for vector fields, and time animations. Multidimensional, multivariate (MDMV) visualization techniques; scattered data interpolation; perceptual issues. Prerequisite: General knowledge of 3D graphics programming or instructor's permission.

EECS 776. Functional Programming and Domain Specific Languages. 3 Credits.
An introduction to functional programming. Topics include learning how to program in Haskell; IO and purity in software engineering; functional data structures and algorithms; monads and applicative functors; parsing combinators; Domain Specific Languages (DSLs) and DSL construction; advanced type systems; making assurance arguments; testing and debugging. Prerequisite: EECS 368 or equivalent or consent of instructor.

EECS 780. Communication Networks. 3 Credits.
Comprehensive in-depth coverage to communication networks with emphasis on the Internet and the PSTN (wired and wireless, and IoT—Internet of Things). Extensive coverage of protocols and algorithms will be presented at all levels, including: social networking, overlay networks, client/server and peer-to-peer applications; session control; transport protocols, the end-to-end arguments and end-to-end congestion control; network architecture, forwarding, routing, signaling, addressing, and traffic management, programmable and software-defined networks (SDN); quality of service, queuing and multimedia applications; LAN architecture, link protocols, access networks and MAC algorithms; physical media characteristics and coding; network security and information assurance; network management. Prerequisite: EECS 563 or equivalent or permission of instructor.

EECS 781. Numerical Analysis I. 3 Credits.
Finite and divided differences. Interpolation, numerical differentiation, and integration. Gaussian quadrature. Numerical integration of ordinary differential equations. Curve fitting. (Same as MATH 781.) Prerequisite: MATH 320 and knowledge of a programming language.

EECS 782. Numerical Analysis II. 3 Credits.
Direct and interactive methods for solving systems of linear equations. Numerical solution of partial differential equations. Numerical determination of eigenvectors and eigenvalues. Solution of nonlinear equations. (Same as MATH 782.) Prerequisite: EECS 781 or MATH 781.

EECS 784. Science of Communication Networks. 3 Credits.
Comprehensive introduction to the fundamental science that is the basis for the architecture, design, engineering, and analysis of computer networks. Topics covered will include foundations on: Structure of networks: graph theory, complex systems analysis, centrality, spectral analysis, network flows, and network topology; Identification of network entities: naming, addressing, indirectness, translation, and location; Operation of protocols and information transfer: automata, control theory, Petri nets, layering and cross-layering, protocol data units; Policy and tussle: game theory, decision theory; Resilience: dependability (reliability, availability, and maintainability), performability, fault tolerance, and survivability. Open-source tools will be used for network modelling and analysis. Prerequisite: EECS upper-level eligibility, graduate standing, or permission of the instructor.

EECS 786. Digital Very-Large-Scale-Integration. 3 Credits.
This course covers the basic concepts of Integrated Circuit (IC) design, various methods of designing VLSI circuits, and techniques to analyze and optimize performance metrics, such as: speed, area, power and signal integrity. Clocking, interconnect and scaling issues of IC will also be discussed. The topic will cover device, interconnect and circuit level implementation issues of both logic and memory circuits. It will also briefly introduce the high performance issues, fabrication technologies and system level implementation approaches of IC to establish bridges to the advanced courses. Prerequisite: EECS 312.

EECS 788. Analog Integrated Circuit Design. 3 Credits.
This course covers the analysis and design of analog and mixed signal integrated circuits, with an emphasis on design principles for realizing state-of-the-art analog circuits. Modern circuit design is a "mixed signal" endeavor thanks to the availability of sophisticated process technologies that allow bipolar and CMOS (Complementary Metal Oxide Semiconductor), power and signal, passive and active components on the same die. It is then up to the circuit designer's creativity and inclination to assemble these components into the analog and/or logic building blocks. The course will provide the critical concepts by giving physical and intuitive explanations in addition to the quantitative analysis of important analog building block circuits. First-order hand calculations and extensive computer simulations are utilized for performance evaluation and circuit design. Prerequisite: EECS 412.

EECS 800. Special Topics: ______. 1-5 Credits.
Advanced courses on special topics of current interest in electrical engineering, computer engineering, or computer science, given as the need arises. May be repeated for additional credit. Prerequisite: Varies by topic.

EECS 801. Directed Graduate Readings. 1-3 Credits.
Graduate level directed readings on a topic in electrical engineering, computer engineering, or computer science, mutually agreed-on by the student and instructor. May be repeated for credit on another topic. Prerequisite: Consent of instructor.

EECS 802. Electrical Engineering and Computer Science Colloquium and Seminar on Professional Issues. 1 Credits.
A colloquium/seminar series in which presentation are provided on a broad variety of scholarly and professional topics. Topics related to the issues of responsible scholarship in the fields of computing and electrical engineering will be discussed. Student are also required to attend a series of colloquia and submit written reports. Course will be graded Satisfactory/Fail and is required for all EECS graduate students. Prerequisite: Graduate standing in the EECS Department.

EECS 812. Software Requirements Engineering. 3 Credits.
Objectives, processes, and activities of requirements engineering and requirements management; characteristics of good requirements; types of requirements; managing changing requirements; languages, notations, and methodologies; formal and semi-formal methods of presenting and validating the requirements; requirements standards; traceability issues. Prerequisite: EECS 810.

EECS 820. Advanced Electromagnetics. 3 Credits.
A theorem-based approach to solving Maxwell's equations for modeling electromagnetic problems encountered in microwave systems, antennas, scattering. Topics include waves, source modeling, Schelkunoff equivalence principle, scattered filed formulations, electromagnetic induction, reciprocity principles, Babinet's principle, and construction of solutions in various coordinate systems. Prerequisite: EECS 420.

EECS 823. Microwave Remote Sensing. 3 Credits.
Description and analysis of basic microwave remote sensing systems including radars and radiometers as well as the scattering and emission properties of natural targets. Topics covered include plane wave propagation, antennas, radiometers, atmospheric effects, radars, calibrated systems, and remote sensing applications. Prerequisite: EECS 420 and EECS 622.

EECS 828. Advanced Fiber-Optic Communications. 3 Credits.
An advanced course in fiber-optic communications. The course will focus on various important aspects and applications of modern fiber-optic communications, ranging from photonic devices to systems and networks. Topics include: advanced semiconductor laser devices, external optical modulators, optical amplifiers, optical fiber nonlinearities and their impact in WDM and TDM optical systems, polarization effect in fiber-optic systems, optical receivers and high-speed optical system performance evaluation, optical solution systems, lightwave analog video transmission, SONET & ATM optical networking, and advanced multi-access lightwave networks. Prerequisite: EECS 628 or equivalent.

EECS 830. Advanced Artificial Intelligence. 3 Credits.
A detailed examination of computer programs and techniques that manifest intelligent behavior, with examples drawn from current literature. The nature of intelligence and intelligent behavior. Development of, improvement to, extension of, and generalization from artificially intelligent systems, such as theorem-provers, pattern recognizers, language analyzers, problem-solvers, question answerers, decision-makers, planners, and learners. Prerequisite: Graduate standing in the EECS department or Cognitive Science or permission of the instructor.

EECS 831. Introduction to Systems Biology. 3 Credits.
This course provides an introduction to systems biology. It covers computational analysis of biological systems with a focus on computational tools and databases. Topics include: basic cell biology, gene annotation, micro RNA identification, Single Nucleotide Polymorphism (SNP) analysis, genetic marker identification, protein-DNA interaction, computational Neurology, vaccine design, cancer drug development, and computational development biology. Prerequisite: Introduction to Bioinformatics equivalent to EECS 730, or consent of instructor.

EECS 835. Advanced Data Science. 3 Credits.
This course covers topics in data collection, data transmission, and data analysis, in support of discoveries and innovations based on massive amounts of data. EECS 731 surveys current topics in data science. It provides a comprehensive review of theory, algorithms, and tools that are used in data science and prepares students to take in-depth following up courses in EECS. EECS 731 is a project-oriented course. It offers hands-on experience for students to integrate knowledge from a wide-range of topics in data science without dwelling on any particular subfield of data science. Prerequisite: EECS 268 or experience with object oriented programming and large programs. MATH 290 or experience with linear algebra. EECS 461 or MATH 526 or experience with probability and statistics. Or consent from the instructor.

EECS 836. Machine Learning. 3 Credits.
"Machine learning is the study of computer algorithms that improve automatically through experience" (Tom Mitchell). This course introduces basic concepts and algorithms in machine learning. A variety of topics such as Bayesian decision theory, dimensionality reduction, clustering, neural networks, hidden Markov models, combining multiple learners, reinforcement learning, Bayesian learning etc. will be covered. Prerequisite: Graduate standing in CS or CoE or consent of instructor.

EECS 837. Data Mining. 3 Credits.
Validation of knowledge. Visualization of knowledge bases. Data mining under uncertainty, using approaches based on probability theory, fuzzy set theory, and rough set theory. Prerequisite: Graduate standing in CS or CoE or consent of instructor.

EECS 838. Applications of Machine Learning in Bioinformatics. 3 Credits.
This course is introduction to the application of machine learning methods in bioinformatics. Major subjects include: biological sequence analysis, microarray interpretation, protein interaction analysis, and biological network analysis. Common biological and biomedical data types and related databases will also be introduced. Students will be asked to present some selected research papers. Prerequisite: EECS 730 and EECS 738.

EECS 839. Mining Special Data. 3 Credits.
Problems associated with mining incomplete and numerical data. The MLEM2 algorithm for rule induction directly from incomplete and numerical data. Association analysis and the Apriori algorithm. KNN and other statistical methods. Mining financial data sets. Problems associated with imbalanced data sets and temporal data. Mining medical and biological data sets. Induction of rule generations. Validation of data mining: sensitivity, specificity, and ROC analysis. Prerequisite: Graduate standing in CS or CoE or consent of instructor.

EECS 841. Computer Vision. 3 Credits.
This course gives a hands-on introduction to the fundamentals and applications of computer vision. Topics include: Image processing fundamentals, feature detection and matching, projective geometry and transformation, camera geometry and calibration, two-view geometry and stereo vision, structure from motion, parameter estimation and optimization, and the latest developments and applications in computer vision. Prerequisite: MATH 290 and MATH 526, or consent from the instructor.

EECS 843. Programming Language Foundation II. 3 Credits.
This course presents advanced topics in programming language semantics. Fixed point types are presented followed by classes of polymorphism and their semantics. System F and type variables are presented along with universal and existential types. The lambda cube is introduced along with advanced forms of polymorphism. Several interpreters are developed implementing various type systems and associated type inference algorithms. Prerequisite: EECS 762.

EECS 844. Adaptive Signal Processing. 3 Credits.
This course presents the theory and application of adaptive signal processing. Topics include adaptive filtering, mathematics for advanced signal processing, cost function modeling and optimization, signal processing algorithms for optimum filtering, array processing, linear prediction, interference cancellation, power spectrum estimation, steepest descent, and iterative algorithms. Prerequisite: Background in fundamental signal processing (such as EECS 644.) Corequisite: EECS 861.

EECS 861. Random Signals and Noise. 3 Credits.
Fundamental concepts in random variables, random process models, power spectral density. Application of random process models in the analysis and design of signal processing systems, communication systems and networks. Emphasis on signal detection, estimation, and analysis of queues. This course is a prerequisite for most of the graduate level courses in radar signal processing, communication systems and networks. Prerequisite: An undergraduate course in probability and statistics, and signal processing.

EECS 862. Principles of Digital Communication Systems. 3 Credits.
A study of communication systems using noisy channels. Principal topics are: information and channel capacity, baseband data transmission, digital carrier modulation, error control coding, and digital transmission of analog signals. The course includes a laboratory/computer aided design component integrated into the study of digital communication systems. Prerequisite: EECS 562. Corequisite: EECS 861.

EECS 863. Network Analysis, Simulation, and Measurements. 3 Credits.
Prediction of communication network performance using analysis, simulation, and measurement. Topics include: an introduction to queueing theory, application of theory to prediction of communication network and protocol performance, and analysis of scheduling mechanisms. Modeling communication networks using analytic and simulation approaches, model verification and validation through analysis and measurement, and deriving statistically significant results. Analysis, simulation, and measurement tools will be discussed. Prerequisite: EECS 461 or MATH 526, and EECS 563 or EECS 780.

EECS 865. Wireless Communication Systems. 3 Credits.
The theory and practice of the engineering of wireless telecommunication systems. Topics include cellular principles, mobile radio propagation (including indoor and outdoor channels), radio link calculations, fading (including Rayleigh, Rician, and other models), packet radio, equalization, diversity, error correction coding, spread spectrum, multiple access techniques (including time, frequency, and code), and wireless networking. Current topics of interest will be covered. Prerequisite: Corequisite: EECS 861.

EECS 866. Network Security. 3 Credits.
This course provides in-depth coverage on the concepts, principles, and mechanisms in network security and secure distributed systems. The topics that will be covered include: network security primitives, risks and vulnerabilities, authentication, key management, network attacks and defense, secure communication protocols, intrusion detection, exploit defenses, traffic monitoring and analysis, and privacy mechanisms. Prerequisite: EECS 765 and EECS 563 or EECS 780, or the instructor's approval.

EECS 868. Mathematical Optimization with Applications. 3 Credits.
A mathematical study of the minimization of functions. The course provides an introduction to the mathematical theory, implementation, and application of a variety of optimization techniques, with an emphasis on real-world applications. Optimization problem formulation. Unconstrained and constrained minimization, including conditions for optimality. Specific techniques for solving linear and nonlinear programming problems. Convergence of algorithms. Prerequisite: MATH 590 or EECS 639, or the consent of the instructor.

EECS 869. Error Control Coding. 3 Credits.
A study of communication channels and the coding problem. An introduction to finite fields and linear block codes such as cyclic, Hamming, Golay, BCH, and Reed-Solomon. Convolutional codes and the Viberbi algorithm are also covered. Other topics include trellis coded modulation, iterative (turbo) codes, LDPC codes. Prerequisite: EECS: 562 or equivalent.

EECS 881. High-Performance Networking. 3 Credits.
Comprehensive coverage of the discipline of high-bandwidth low-latency networks and communication, including high bandwidth-delay products, with an emphasis on principles, architecture, protocols, and system design. Topics include high-performance network architecture, control, and signaling; high-speed wired, optical, and wireless links; fast packet, IP, and optical switching; IP lookup, classification, and scheduling; network processors, end system design and protocol optimization,
network interfaces; storage networks; data-center networks, end-to-end protocols, mechanisms, and optimizations; high-bandwidth low-latency applications and cloud computing. Principles will be illustrated with many leading-edge and emerging protocols and architectures. Prerequisite: EECS 563 or EECS 780, or permission of the instructor.

EECS 882. Mobile Wireless Networking. 3 Credits.
Comprehensive coverage of the disciplines of mobile and wireless networking, with an emphasis on architecture and protocols. Topics include cellular telephony, MAC algorithms, wireless PANs, LANs, MANs, and WANs; wireless and mobile Internet; mobile ad hoc networking; mobility management, sensor networks; satellite networks; and ubiquitous computing. Prerequisite: EECS 563 or EECS 780, or permission of the instructor.

EECS 888. Internet Routing Architectures. 3 Credits.
A detailed study of routing in IP networks. Topics include evolution of the Internet architecture, IP services and network characteristics, an overview of routing protocols, the details of common interior routing protocols and interdomain routing protocols, and the relationship between routing protocols and the implementation of policy. Issues will be illustrated through laboratories based on common routing platforms. Prerequisite: EECS 745.

EECS 891. Graduate Problems. 1-5 Credits.
Directed studies of advanced phases of electrical engineering, computer engineering, computer science or information technology not covered in regular graduate courses, including advanced laboratory work, special research, or library reading. Graded on a satisfactory progress/limited progress/no progress basis. Prerequisite: Consent of instructor.

EECS 899. Master’s Thesis or Report. 1-6 Credits.
Graded on a satisfactory progress/limited progress/no progress basis.

EECS 900. Seminar. 0.5-3 Credits.
Group discussions of selected topics and reports on the progress of original investigations. Prerequisite: Consent of instructor.

EECS 940. Theoretic Foundation of Data Science. 3 Credits.
A review of statistical and mathematical principles that are utilized in data mining and machine learning research. Covered topics include asymptotic analysis of parameter estimation, sufficient statistics, model selection, information geometry, function approximation and Hilbert spaces. Prerequisite: EECS 738, EECS 837, EECS 844 or equivalent.

EECS 965. Detection and Estimation Theory. 3 Credits.
Detection of signals in the presence of noise and estimation of signal parameters. Narrowband signals, multiple observations, signal detectability and sequential detection. Theoretical structure and performance of the receiver. Prerequisite: EECS 861.

EECS 983. Resilient and Survivable Networking. 3 Credits.
Graduate research seminar that provides an overview of the emerging field of resilient, survivable, disruption-tolerant, and challenged networks. These networks aim to remain operational and provide an acceptable performance of the receiver. Prerequisite: EECS 780; previous experience in simulation desirable.

EECS 998. Post-Master’s Research. 1-6 Credits.
Graded on a satisfactory progress/limited progress/no progress basis.

EECS 999. Doctoral Dissertation. 1-12 Credits.
Graded on a satisfactory progress/limited progress/no progress basis.

Engineering Courses
ENGR 101. Engineering Academic Success Seminar. 0 Credits.
This course will provide an introduction to the University and School of Engineering community and the value and role of higher education in our society, strategies for successful transition to and participation in that community, exploration of the University and School commitment to diversity and multiculturalism, and information about University and School resources and procedures. Graded on a satisfactory/unsatisfactory basis. Prerequisite: Eligible students must have fewer than thirty credit hours from the University of Kansas.

ENGR 102. Engineering Academic Recovery Program. 0 Credits.
The Engineering Academic Recovery Program is a mandatory course for freshman engineering students who are placed on academic probation (<2.0 GPA) after their first semester at KU. The course may also be recommended for other engineering students who are deemed to be at risk. ENGR 102 will provide guidance to students who need to improve their academic study habits. Particular attention will be given to the discussion of study skills such as test taking, learning strategies, and time management, and students will also become acquainted with the various resources available to them both through the School of Engineering and university at large. In addition, students will meet individually with an ENGR 102 advisor to both establish a plan for academic improvement and later to evaluate academic progress midway through the semester. The course will offered for zero (0) credit hours but will be a graded course (A-F).

ENGR 108. Introduction to Engineering. 2 Credits.
An introductory level course with emphasis on engineering problem definition, methods simulation, and solution, including approaches to engineering design; engineering units and terminology; engineering disciplines and career areas, and engineering code of ethics.

ENGR 111. Freshman Self Seminar. 0-1 Credits.
This seminar course will serve as an introduction to the Self Engineering Leadership Fellows Program and will focus on building student's skills in leadership, business, entrepreneurship, management, communication, engineering, and interpersonal skills. Prerequisite: Students must have applied, interviewed, and been accepted as a Self Engineering Leadership Fellow.

ENGR 112. Sophomore Self Seminar. 0-1 Credits.
This seminar course will focus on continued development of building student's skills in leadership, business, entrepreneurship, management, communication, engineering, and interpersonal skills. Students will use the principles of engineering project management to deliver objectives of the program. Prerequisite: ENGR 111 and students must have applied, interviewed, and been accepted as a Self Engineering Leadership Fellow.

ENGR 113. Junior Self Seminar. 0-1 Credits.
This seminar course will focus on continued development of building student's skills in leadership, business, entrepreneurship, management, communication, engineering, and interpersonal skills. Students will use the principles of engineering project management to deliver objectives of the program. Prerequisite: Students must have applied, interviewed, and been accepted as a Self Engineering Leadership Fellow.
ENGR 114. Senior Self Seminar. 0-1 Credits.
This seminar course will focus on continued development of building student's skills in leadership, business, entrepreneurship, management, communication, engineering, and interpersonal skills. Students will use the principles of engineering project management to deliver objectives of the program. Prerequisite: ENGR 113 and students must have applied, interviewed, and been accepted as a Self Engineering Leadership Fellow.

ENGR 177. First Year Seminar: ______. 3 Credits.
A limited-enrollment, seminar course for first-time freshmen, organized around current issues in mechanical engineering. Course is designed to meet the critical thinking learning outcome of the KU Core. May not contribute to major requirements for School of Engineering students. First year seminar topics are coordinated and approved through the Office of Academic Programs and Experiential Learning. Prerequisite: Open to Freshmen only (less than 30 hours).

ENGR 300. Cooperative Engineering Education Experience. 1 Credit.
Engineering work experience with a recognized engineering organization. The work must be professional in nature and not merely routine. A final summary report must be submitted to the student's major department at the conclusion of each continuous period of employment and may cover more than one sequential semester or summer session. Credit for this course cannot be used toward graduation requirements. Graded on a satisfactory/unsatisfactory basis. Prerequisite: Permission of major department.

ENGR 360. Special Topics: ______. 1-5 Credits.
Courses on special topics of current interest to engineers, such as ethics, engineering economics, engineering practice, communications, teamwork, and professional and career development. Prerequisite: Approval of the instructor.

ENGR 390. Engineering Internship or Research. 0-1 Credits.
Course combines job-related activities of an internship/research position with a goal setting (pre-experience) and reflection (post-experience) requirement. Internships for credit will have expanded requirements and must be approved by the coordinator prior to the internship/research experience. Graded on a satisfactory/unsatisfactory basis. Prerequisite: Approval of instructor.

ENGR 490. Engineering Internship. 1-6 Credits.
Engineering internship in an approved company. Internship hours do not satisfy any course requirements for a bachelors degree in any School of Engineering major, but will appear on the transcript. Credit assigned after review of report on internship experience.

ENGR 504. Technical Writing for Engineers. 1-3 Credits.
The process of planning, organizing, initiating, drafting, and editing engineering documents is covered through writing assignments and discussion. Writing, editing, and publishing the Kansas Engineer magazine. Graded on a satisfactory/unsatisfactory basis. Prerequisite: ENGL 102.

ENGR 515. Verbal Communications in Engineering. 1 Credit.
Meets one hour per week. Planning, preparing, and presenting speeches on a variety of topics throughout the semester. Includes preparing speeches, spontaneous speeches and the evaluation of speeches by other students. Prerequisite: Two English courses and at least junior or senior standing in engineering or consent of instructor.

ENGR 600. Engineering Applications in India: Technical, Business, and Implementation Issues. 3 Credits.
Business principles play a crucial role in shaping engineering solutions. This course will communicate key differences between the United States and India in how engineering challenges and opportunities are shaped by these principles and by culture. Students will travel to India to attend lectures from schools, visit companies, engage in class discussion/debate, and attend cultural excursions. Prerequisite: Major in Engineering.

ENGR 835. Project (ME). 3-6 Credits.
A design problem or system study satisfying the project requirement for the Master of Engineering degree.

ENGR 940. Project (DE). 1-16 Credits.
A major design problem or system study satisfying the project requirement for the Doctor of Engineering degree.

Engineering Physics Courses

EPHX 210. General Physics I for Engineers. 3 Credits. NP N
This course is an introduction to classical mechanics and thermodynamics designed for students in the School of Engineering who have completed MATH 125 or MATH 145 with a grade of C or better. Students not admitted to the School of Engineering must receive permission from instructor. EPHX 210 and PHSX 211 cannot both be taken for credit. Prerequisite: MATH 125 or MATH 145 with a grade of C or better. Corequisite: MATH 126 or MATH 146; courses in high school physics and/or chemistry recommended.

EPHX 211. General Physics I. 4 Credits. NP N
Introduction to classical mechanics and thermodynamics. Designed for students in engineering and physical science majors. Prerequisite: MATH 116 or MATH 125 or MATH 145; corequisite MATH 126 or MATH 146; courses in high school physics and/or chemistry are recommended.

EPHX 212. General Physics II. 3 Credits. NP N
Study of electricity, magnetism, waves, and optics. Prerequisite: PHSX 201, PHSX 210, PHSX 211 or PHSX 213; MATH 126 or MATH 146. Co-enrollment in MATH 127 or MATH 147 is strongly encouraged.

EPHX 400. Topics in Engineering Physics: ______. 1-3 Credits.
A course on special topics in engineering physics, given as the need arises. Course may be repeated for different topics. Each section may have additional prerequisites to be determined by the instructor.

EPHX 501. Honors Research. 1-4 Credits. N
This course is for students seeking Departmental Honors in Astronomy, Engineering Physics, or Physics to fulfill the undergraduate research requirement. At the completion of the required four hours of total enrollment, a written and oral report of the research is required. (Same as ASTR 501 and PHSX 501.) Prerequisite: Junior/Senior standing in Astronomy, Engineering Physics, or Physics, or permission of instructor.

EPHX 503. Undergraduate Research. 1-4 Credits. N
This course is for students seeking to fulfill the undergraduate research requirement. Students are expected to participate in some area of ongoing research in the department, chosen with the help of their advisor. At the end of the term, students will present their results in a seminar to other students and faculty. (Same as ASTR 503 and PHSX 503.) Prerequisite: Junior/Senior standing in Astronomy, Engineering Physics, or Physics, or permission of instructor.

EPHX 518. Mathematical Physics. 3 Credits. N
Applications of modern mathematical methods to problems in mechanics and modern physics. Techniques include application of partial differential equations and complex variables to classical field problems in continuous mechanics, unstable and chaotic systems, electrodynamics, hydrodynamics, and heat flow. Applications of elementary transformation theory and group theory, probability and statistics, and nonlinear analysis to selected problems in modern physics as well as to graphical
representation of experimental data. (Same as PHSX 518.) Prerequisite: PHSX 313; MATH 220 or MATH 221 or MATH 320; or permission of instructor.

EPHX 521. Mechanics I. 3 Credits. N
Newton's laws of motion. Motion of a particle in one, two, and three dimensions. Motion of a system of particles. Moving coordinate systems. (Same as PHSX 521.) Prerequisite: PHSX 213 or PHSX 211 and PHSX 216; MATH 127 or MATH 147; MATH 290 or MATH 291; and MATH 220, MATH 221 or MATH 320.

EPHX 531. Electricity and Magnetism. 3 Credits. N
This course will explore the properties of electric and magnetic fields, including electrostatics, Gauss' Law, boundary value methods, electric fields in matter, electromagnetic induction, magnetic fields in matter, the properties of electric and magnetic dipoles, and of dielectric and magnetic materials. (Same as PHSX 531.) Prerequisite: PHSX 214, or PHSX 212 and PHSX 236, or PHSX 202; PHSX 521 or EPHX 521 or special permission; MATH 127 or MATH 147; MATH 290 or MATH 291; and MATH 220, MATH 221, or MATH 320.

EPHX 536. Electronic Circuit Measurement and Design. 4 Credits. N LFE
A laboratory course that explores the theory and experimental techniques of analog and digital electronic circuit design and measurement. Topics include transient response, transmission lines, transistors, operational amplifiers, and digital logic. (Same as PHSX 536.) Prerequisite: PHSX 214 or PHSX 212 and PHSX 236; MATH 127 or MATH 147; and MATH 290 or MATH 291. PHSX 313 and 316 recommended.

EPHX 600. Special Topics in Physics and Astrophysics: _____. 3 Credits. N
Different topics will be covered as needed. This course will address topics in physics and astrophysics not covered in regularly offered courses. May be repeated if topic differs. (Same as PHSX 600.) Prerequisite: Permission of instructor.

EPHX 601. Design of Physical and Electronic Systems. 4 Credits. N LFE
A laboratory course emphasizing the application of physical principles to the design of systems for research, monitoring, or control. Topics include the use of microcomputers as controllers, interfacing microcomputers with measurement devices, and use of approximations and/or computer simulation to optimize design parameters, linear control systems, and noise. (Same as PHSX 601.) Prerequisite: Twelve hours of junior-senior credit in physics or engineering, including one laboratory course.

EPHX 611. Introductory Quantum Mechanics. 3 Credits. N
An introduction to quantum mechanics, emphasizing a physical overview. Topics include the formalism of nonrelativistic quantum mechanics with emphasis on linear algebra, the 3-dimensional Schrodinger equation with applications to the hydrogen atom; harmonic oscillator; and time-independent perturbation theory. (Same as PHSX 511.) Prerequisite: PHSX 313, PHSX 521 or EPHX 521, and MATH 290 or MATH 291.

EPHX 615. Numerical and Computational Methods in Physics. 3 Credits. N
An introduction to the use of numerical methods in the solution of problems in physics for which simplifications allowing closed-form solutions are not applicable. Examples are drawn from mechanics, electricity, magnetism, thermodynamics, and optics. (Same as PHSX 615.) Prerequisite: PHSX 313, MATH 320 or equivalent, and EECS 138 or equivalent.

EPHX 616. Physical Measurements. 4 Credits. N LFE
A laboratory course emphasizing experimental techniques and data analysis, as well as scientific writing and presentation skills. Experiments will explore a range of classical and modern physics topics. Students will also practice ethical decision making using case studies appropriate for the discipline. (Same as PHSX 616.) Prerequisite: PHSX 313, PHSX 316 or EPHX 316, and PHSX 521 or EPHX 521. (PHSX 521 or EPHX 521 may be taken concurrently.)

EPHX 621. Mechanics II. 3 Credits. N
Continuation of PHSX 521. Lagrange's equations and generalized coordinates. Mechanics of continuous media. Tensor algebra and rotation of a rigid body. Special relativity and relativistic dynamics. (Same as PHSX 621.) Prerequisite: EPHX 521 or PHSX 521.

EPHX 631. Electromagnetic Theory. 3 Credits. N
Maxwell's equations, wave propagation, optics and waveguides, radiation, relativistic transformations of fields and sources, use of covariance and invariance in relativity. Normally a continuation of PHSX 531. (Same as PHSX 631.) Prerequisite: EPHX 531 or PHSX 531.

EPHX 641. Introduction to Nuclear Physics. 3 Credits. N
Experimental methods in nuclear physics, elementary concepts and simple considerations about nuclear forces, alpha and beta decay, gamma radiation, nuclear structure, and reaction systematics. (Same as PHSX 641.) Prerequisite: PHSX 313 and PHSX 611 or EPHX 611.

EPHX 655. Optics. 3 Credits. N
Geometric optics. Wave properties of light: interference, diffraction, coherence. Propagation of light through matter. Selected topics in modern optics, e.g., lasers, fibers. (Same as PHSX 655.) Prerequisite: PHSX 531 or EPHX 531 or PHSX 212 or PHSX 214 and special permission from instructor.

EPHX 661. Introduction to Elementary Particle Physics. 3 Credits. N
This course covers properties and interactions of quarks, leptons, and other elementary particles; symmetry principles and conservation laws; broken symmetry; gauge bosons; the fundamental interactions, grand unified theories of strong, electromagnetic, and weak interactions; the cosmological implications of elementary particle physics. (Same as PHSX 661.) Prerequisite: PHSX 611 or EPHX 611, and MATH 220, MATH 221, or MATH 320.

EPHX 671. Thermal Physics. 3 Credits. N
This course introduces thermodynamics from statistical considerations and presents the associated techniques for calculating the thermodynamic properties of systems. Highlighted applications of these techniques include the elementary kinetic theory of transport processes and statistical descriptions of both Fermi-Dirac and Bose-Einstein systems. (Same as PHSX 671.) Prerequisite: PHSX 611 or EPHX 611.

EPHX 681. Introduction to Solid State Physics. 3 Credits. N
This course is an introduction to the properties of solids, including lattice vibrations and thermal properties, with a particular emphasis on the behavior of electrons and holes in the energy bands of metals, semiconductors, superconductors, and insulators. (Same as PHSX 681.) Prerequisite: PHSX 313 and PHSX 611 or EPHX 611.

EPHX 691. Astrophysics I. 3 Credits. N
An introduction to radiation processes, thermal processes, and radiative transfer in stellar atmospheres and the interstellar medium. (Same as ASTR 691 and PHSX 691.) Prerequisite: PHSX 313 or consent of instructor.

EPHX 693. Gravitation and Cosmology. 3 Credits. N
An overview of topics relevant to gravitation and modern cosmology: special relativity, tensor notation, the equivalence principle, the Schwarzschild solution, black holes, and Friedmann models. Cosmic black body radiation, dark matter, and the formation of large-scale...
Mechanical Engineering Courses

ME 101. Mechanical Engineering Freshman Seminar. 0-1 Credits.
This seminar is intended to provide the student with an overview of the mechanical engineering profession. Seminar topics will include an overview of the engineering profession, career opportunities within mechanical engineering, an introduction to the mechanical engineering department (faculty, research and student groups), and strategies to be successful at the university. Prerequisite: Fewer than 30 credit hours from the University of Kansas.

ME 201. Statics. 2 Credits.
The principles of statics, with particular attention to engineering applications. Prerequisite: PHSX 210 or PHSX 211.

ME 208. Introduction to Digital Computational Methods in Mechanical Engineering. 3 Credits.
Digital computing methods for solving mechanical engineering problems utilizing current programming languages and commercial software. Topics from the course are applied through open-ended team projects throughout the semester which also give students an introduction to mechanical engineering. One lecture and lab meets with ME 228, therefore ME 208 cannot be taken concurrently with ME 228, but should be taken in back-to-back semesters. Prerequisite: Corequisite: MATH 116 or MATH 125 or MATH 145.

ME 210. Introduction to Mechanics. 1 Credits.
An introduction to mechanics of materials including stress, strain, and axial loading. Prerequisite: ME 201 or CE 201.

ME 211. Statics and Introduction to Mechanics. 3 Credits.
The principles of statics, with particular attention to engineering applications and an introduction to mechanics of materials. This course is a combination of material covered in ME 201 and ME 210. Prerequisite: EPHX 210 or PHSX 210 or PHSX 211 or PHSX 213 or PHSX 201.

ME 212. Basic Engineering Thermodynamics. 3 Credits.
An introduction to the concepts of heat, work, the first and second laws of thermodynamics and equations of state. These concepts are applied to flow and nonflow systems including power and refrigeration cycles. Prerequisite: EPHX 210 or PHSX 210 or PHSX 211 or PHSX 201 and MATH 126 or MATH 146, with a grade of C- or higher.

ME 228. Computer Graphics. 3 Credits.
An introduction to solid modeling computer graphics used in mechanical design. Visualization skills and drawing practices are developed. Topics from the course are applied through open-ended team projects throughout the semester which also give students an introduction to mechanical engineering. One lecture and lab meets with ME 228, therefore ME 228 cannot be taken concurrently with ME 228, but should be taken in back-to-back semesters.

ME 306. Science of Materials. 3 Credits.
An introductory course on materials. Emphasis is placed on structure and the relation of structure to the behavior and properties of engineering materials. Prerequisite: CHEM 150 or CHEM 130 or CHEM 135 or CHEM 170 or CHEM 190 or CHEM 184 or CHEM 185 or consent of instructor.

ME 307. Engineering Materials Laboratory. 2 Credits.
Laboratory to supplement lecture on engineering materials properties and selection, manufacturing processes, and design for manufacturing. Prerequisite: CHEM 150 or CHEM 130 or CHEM 170 or ME 228. Corequisite: ME 306 and ME 311.

ME 309. Introduction to Mechanical Design. 1 Credits.
An introduction to mechanical design after completing a course in mechanics of materials. Topics include theories of failure and energy methods. ME 201, CE 310, and ME 309 together are equivalent to ME 211 and ME 311. Prerequisite: Permission of instructor.

ME 311. Mechanics of Materials. 3 Credits.
The principles of mechanics of materials with particular emphasis on mechanical systems including theories of failure. Prerequisite: ME 211 or ME 210 with a grade of C- or higher, and MATH 126 or MATH 146, with a grade of C- or higher.

ME 320. Dynamics. 3 Credits.
Kinematics and kinetics of particles and of rigid bodies as applied to mechanical engineering problems. Prerequisite: ME 201 or ME 211 or CE 201 or ME 210, with a grade of C- or higher, and MATH 220 or MATH 221 or MATH 320, and MATH 290 or MATH 291.

ME 321. Dynamics Simulations. 1 Credits.
Introduction to dynamics simulations on the computer. Prerequisite: Corequisite: ME 320.

ME 360. Mechanical Engineering Problems. 1-3 Credits.
An analytical or experimental study of problems or subjects of immediate interest to a student and faculty member and which is intended to develop student capability for independent research or application of engineering science and technology. After completion of the project, a report is required. Maximum credit is three hours. Not open to students who have taken ME 361. Prerequisite: Approval of an outline of the proposed project by the instructor and department chair.

ME 361. Undergraduate Honors Research. 1-3 Credits.
Investigation of a particular mechanical engineering problem. Research will involve defining the problem, developing a research methodology, applying the research methodology and gathering data, analyzing and interpreting the data, and presenting the results of the research. The student must have a faculty sponsor and submit a proposal in writing stating the objective of the research, the planned research method that will be used, and the method of reporting the results. Maximum credit is three hours. Not open to students who have taken ME 360. Prerequisite: Participation in the University Honors Program, consent of instructor, and approval of the chair required.

ME 390. Special Topics: . 1-5 Credits.
Courses on special topics of current interest in mechanical engineering, given as the need arises. Prerequisite: Approval of instructor.

ME 412. Thermal Systems. 3 Credits.
Application of the principles of thermodynamics to the analysis and design of thermal systems. Prerequisite: ME 212 or ME 312.

ME 420. Mechanisms. 3 Credits.
Design and analysis of mechanisms composed of linkages, cams, and gears. Mechanical vibration. Prerequisite: PHSX 211 and MATH 220.

ME 455. Mechanical Engineering Measurements and Experimentation. 4 Credits.
Lectures and laboratories on the basics of measurement, instrumentation, data acquisition, analysis, design and execution of experiments, and written and oral reports. Topics selected from heat transfer, fluid mechanics, thermodynamics, mechanics, strength of materials, and dynamics. Prerequisite: ME 208 or C&PE 121 or EECS 168 or EECS 138 or AE 211, ME 307, ME 320, and MATH 365 or MATH 526. Corequisite: EECS 318 and ME 612.

ME 501. Mechanical Engineering Design Process. 2 Credits.
The design process of a mechanical or thermal system. Establishment of specifications and consideration of realistic constraints such as safety, codes, economic factors, reliability, and written communications, and other factors as they impact the design process. Prerequisite: ME 228 and ME 311.

ME 508. Numerical Analysis of Mechanical Engineering Problems. 3 Credits.
Introduction to numerical methods for solution of mechanical engineering problems by use of digital computers. Prerequisite: ME 208 or equivalent, MATH 220 and MATH 290.

ME 510. Fluid Mechanics. 3 Credits.
An introduction to the mechanics of fluid flow. The principles of conservation of mass, momentum, and energy are developed in differential and integral form. Laws of dimensional analysis and similarity are presented as the basis for empirical correlations. Engineering applications include: calculation of hydrostatic forces on submerged objects, analysis of flow and pressure loss in piping systems, estimation of aerodynamic lift and drag, and performance characteristics of pumps and fans. Prerequisite: ME 211, ME 201, CE 301 or CE 201 or CE 260 with a grade of C- or higher, and MATH 127 or MATH 147 and ME 212 or ME 312, with a grade of C- or higher.

ME 590. Special Topics. 1-5 Credits.
Courses on special topics of current interest in mechanical engineering, given as the need arises. Prerequisite: Approval of instructor.

ME 612. Heat Transfer. 3 Credits.
An applied study of conductive, convective, and radiative heat transfer mechanisms in solid and fluid systems. Engineering applications include solid conduction, free and forced convection in fluids, thermal radiation and heat exchangers, evaporators, and furnaces. Prerequisite: MATH 220 and ME 510 or C&PE 511.

ME 617. Research for Design Project Option B. 1 Credit.
Basic research in one targeted area of vehicle design, and competition rules, based on the student's plan for ME 627 and ME 642. Prerequisite: ME 501 and permission of instructor.

ME 627. Automotive Design. 3 Credits.
Basic concepts of automotive design and manufacture. Primary focus of course on vehicle design and performance. Design is subdivided into vehicle components of frame, suspension, front and rear axle, steering power train, front and rear wheel drive, and braking. Integration of these ideas into a vehicle design project with analysis of its performance culminates the course. Prerequisite: ME 617 and permission of instructor.

ME 628. Mechanical Design. 3 Credits.
Design of mechanical components and systems. Prerequisite: ME 311.

ME 633. Basic Biomechanics. 3 Credits.
Provides an overview of musculoskeletal anatomy. Biomechanics includes linear and angular dynamics of human movement, energy expenditure and power required to perform a given activity. Students will learn to determine joint forces and torques (in 2-D) from kinematic data for body segments and force plate data. The tissue mechanics section builds on mechanics of materials. Students will learn about tissue properties, appropriate constitutive models and determination of stresses and strains in tissues and structures under normal loading conditions. Prerequisite: ME 311 and ME 320 or equivalent.

ME 636. Internal Combustion Engines. 3 Credits.
Study and analysis of internal combustion engine physical phenomena dynamic function, components, and system design. Emphasis on spark ignition and compression ignition engine analysis. Performance, current technology, thermodynamics, fluid-mechanics, combustion products and pollution, fuels and lubrication, and mechanical design. Prerequisite: ME 412.

ME 637. Steam Power Plants. 3 Credits.
A study of steam power plant equipment including thermodynamic analysis, design and performance of modern steam generators, prime movers, and auxiliaries. Prerequisite: ME 412 or permission of instructor.

ME 639. Alternative Energy Systems. 3 Credits.
This course is a survey of energy resources and the available technology for meeting current energy needs with alternative energy systems. An overview of the U.S. energy system and world-wide energy consumption is included to provide context. The primary course objective is to develop the students' ability to apply engineering fundamentals to the design and operation of alternative energy systems. The students will be introduced to databases and modeling methods used to represent alternative energy resources. Assignments will include: engineering problem analysis, group design projects, individual research papers, oral and written presentations. Prerequisite: ME 510, AE 345, or C&PE 511.

ME 640. Design Project. 2 Credits.
Planning for a capstone design project. Development of a formal project proposal is required. Must be used with two credit hours of ME 641 or ME 643 in the subsequent semester to complete the capstone design requirements. Prerequisite: ME 501 and ME 628.

ME 641. Design Project Option A. 2 Credits.
Design and development of a mechanical or thermal/fluid system. An individual or group report that includes designs, analysis/testing, drawings, and/or schematics is required. Establishment of specifications and consideration of realistic constraints such as safety, economic factors, design impact, aesthetics, and reliability are required. Prerequisite: ME 640. Corequisite: ME 455.

ME 642. Design Project Option B. 3 Credits.
Manufacturing and testing of a mechanical system designed and developed in ME 627 - Vehicle Design. A group report with individual assignments which details the manufacturing procedures and testing procedures and results is required. A completed, working project with a design file documenting all aspects of the project development must be submitted. Prerequisite: ME 627, ME 501 and ME 628. Corequisite: ME 455.

ME 643. Design Project Option C. 2 Credits.
Design and development of a mechanical system related to biomechanics that has been investigated in ME 633 - Basic Tissue Mechanics and Biodynamics. A report that includes designs, analysis/testing, drawings and/or schematics is required. Establishment of specifications and consideration of realistic constraints such as safety, ergonomics, economic factors, design impact, aesthetics, and reliability are required. Prerequisite: ME 633 and ME 640. Corequisite: ME 455.

ME 644. Design Project Option D. 2-3 Credits.
Design and development of a thermal or fluid system. A group report that includes design, analysis/testing, drawings, and/or schematics is required. Establishment of specifications and consideration of realistic constraints such as safety, economic factors, design impact, aesthetics, and reliability are required. Prerequisite: ME 412, ME 455, and ME 501. Corequisite: ME 628.

ME 645. Design Project Option E. 2-3 Credits.
Design and development of a mechanical, electrical or thermal/fluid system related to a sustainable approach to automobiles and energy infrastructure. This may include, but is not limited to alternative fuels, biomass, batteries and advanced vehicle powertrains along with solar/ wind energy at various scales. An individual or group report that includes designs, analysis/testing, drawings and/or schematics is required.
Establishment of specifications and consideration of realistic constraints such as safety, economic factors, design impact, aesthetics and reliability are required. Prerequisite: ME 501, ME 510, and ME 628. Corequisite: ME 412 and ME 455.

ME 661. The Finite Element Method. 3 Credits.
An introduction to the underlying theory of the finite element (FE) method and its application to linear solid and structural mechanics. FE formulations are derived for bars, beams, 2D formulations such as: plane stress, plane strain, and 3D solids. Basic issues are treated such as assembly and generation of FE equations, computation, post-processing, and interpretation of FE solutions (e.g. stresses and strains analysis). Prerequisite: ME 311 or ME 309, MATH 220 or MATH 221 or MATH 320, and MATH 290 or MATH 291.

ME 682. System Dynamics and Control Systems. 3 Credits.
An introduction to the modeling and analysis of analog linear systems and the design of control systems. Topics include mathematical models of mechanical, electrical, fluid and thermal systems, feedback concepts, transient response, frequency response and vibration, system stability, and design of feedback control systems including PID. Prerequisite: ME 320.

ME 696. Design for Manufacturability. 3 Credits.
Tools to incorporate manufacturing and life-cycle concerns into the design of products. Prerequisite: ME 501 or equivalent.

ME 702. Mechanical Engineering Analysis. 3 Credits.
A study of advanced methods for engineering analysis of practical problems utilizing fundamental principles from engineering disciplines. The emphasis is on the solution of these problems and the interpretation and generalization of the results. Prerequisite: A course in differential equations.

ME 708. Microcomputer Applications in Mechanical Engineering. 3 Credits.
Design and implementation of interfaces of microcomputers to mechanical equipment. Includes laboratory experiments presenting selected industrial applications. Emphasis on human factors, functional design parameters and microprocessor interfaces. Includes instruction concerning specifications of practical hardware configurations and writing of programs necessary to accomplish mechanical systems applications. Prerequisite: Permission of instructor.

ME 711. Bearings and Bearing Lubrication. 3 Credits.
Theoretical aspects of lubrication, determination of pressure distribution in bearings from viscous flow theory, application of hydrodynamic and hydrostatic bearing theories to the design of bearings, high speed bearing design problems, properties of lubricants, methods of testing. Prerequisite: ME 510 and a course in differential equations.

ME 712. Advanced Engineering Thermodynamics. 3 Credits.
An advanced course in thermodynamics, mathematical in nature, with emphasis on a critical re-evaluation of the laws of thermodynamics, thermodynamics of one-dimensional gas flow, development of the classical thermodynamic relations and their application to engineering problems. Prerequisite: ME 212 with a grade of C- or higher.

ME 716. Introduction to Surface and Interface Science. 3 Credits.
Surface and Interface Science plays a crucial role in various industrial, environmental, and biomedical areas, as well as in emerging technologies. These include wetting, water purification, enhanced oil recovery and other petrochemical processes. Surface and Interface Science also provides an intriguing arena for the integration of fundamental concepts, theoretical methods, and experimental techniques from a variety of scientific disciplines including engineering, physics, chemistry, biology, and medicine. This course presents fundamental and applied aspects of this rapidly developing field. The first segment of the course is devoted to understanding interfacial phenomena by examining the roles of surface composition and surface texture. The second segment covers how this fundamental understanding can be used to design bio-inspired surfaces for various applications that involve self-cleaning mechanisms, anti-reflective coating, fog harvesting and de-icing. Prerequisite: ME 312 or physical chemistry or equivalent.

ME 718. Fundamentals of Fuel Cells. 3 Credits.
The principles of fuel cells, with focus on low temperature fuel cells using polymer electrolytes. Prerequisite: A course in engineering thermodynamics (e.g., ME 412), heat transfer (e.g., ME 612), and fluid Mechanics (e.g., ME 510.)

ME 720. Advanced Dynamics of Machinery. 3 Credits.
Dynamics of particles and of rigid bodies with advanced engineering applications; generalized coordinates; Hamilton's principles; Lagrange's equations; Hamilton-Jacobi theory. Prerequisite: ME 320 or equivalent.

ME 722. Modeling Dynamics of Mechanical Systems. 3 Credits.
Modeling, analysis and simulation of dynamic mechanical systems. Emphasis on the analysis of kinematics and dynamics of rigid mechanical multibody systems undergoing large overall motion using interactive computer simulation programs. Applications to the design and control of dynamic systems such as robots, machine tools, and artificial limbs. Prerequisite: ME 320 or CE 300.

ME 736. Catalytic Exhaust Aftertreatment Modeling. 3 Credits.
Fundamental concepts behind catalytic exhaust aftertreatment devices for automobiles including both monolithic catalysts and particulate filters. Studies of other catalytic devices intended for applications in the mechanical and chemical engineering fields. Topics covered are the development of governing equations based on conservation laws and their numerical solutions using finite difference methods. Studies will include a monolithic catalyst. Project assignments will be included. Prerequisite: ME 412 and ME 510 or equivalents.

ME 751. Experimental Methods in Biomechanics. 3 Credits.
This course will focus on methods of experimental measurement and computational modeling used in biomechanics. Instrumentation used to measure three-dimensional motion, ground reaction forces, center of pressure and EMG measures are considered. Methods used for inverse dynamics, direct dynamics and simulation are introduced. Prerequisite: ME 320 or equivalent.

ME 752. Acoustics. 3 Credits.
This course will teach the production, propagation, and effects of sound waves. Detailed topics include plane wave, spherical wave, and cylindrical wave propagation in free space and waveguides, wave reflection and transmission on an interface, piston radiation, wave scattering and diffraction. Prerequisite: ME 320 or permission of instructor.
ME 753. Bone Biomechanics. 3 Credits.
Provides an in-depth knowledge of bone as a living mechanical system. Topics include the microstructure, biology, mechanical properties, mechanical modeling, adaptation of bone to the mechanical environment, and its simulation. Students assignments include homework, a poster presentation, basic finite element analysis laboratory, and bone remodeling simulations. Prerequisite: ME 311 or equivalent.

ME 754. Medical Imaging. 3 Credits.
This course will focus on the fundamental physics of modern medical imaging technologies, which includes X-Ray, Computed Tomography, Magnetic Resonance Imaging, ultrasound imaging, optical imaging, and more. Recent trends in medical imaging technology development will also be introduced. Prerequisite: ME 508 or permission of instructor.

ME 755. Computer Simulation in Biomechanics. 3 Credits.
Provides an in-depth knowledge of 1) the process of developing a research question to be addressed with computer simulation, 2) various techniques for medical imaging to obtain model geometries (including hands-on experience with low-field MR imaging), 3) image segmentation techniques, 4) issues affecting geometric accuracy in model building, 5) the determination and specification of loading and/or kinematic boundary conditions, 6) the interpretation of model results in the context of the model limitations and the medical application. Knowledge and/or experience with finite elements is desirable, but not required. Prerequisite: ME 311 and ME 320 or equivalent.

ME 756. Biofluid Dynamics. 3 Credits.
An introduction to the fundamentals of biofluid dynamics, and the application of these principles to a variety of biological flows. Fluid flows in physiology, drug delivery, and biotechnology are investigated at a variety of scales, ranging from subcellular to organ systems. Topics include non-Newtonian constitutive equations, solution techniques, and principles of modeling and simulating. Prerequisite: ME 208 and ME 510 or equivalents.

ME 757. Biomechanical Systems. 3 Credits.
A course on the dynamics and motor control of human and animal motion. The course will focus on applying mechanical principles of dynamics, lumped parameter systems, and control theory to problems in biomechanics. Topics include muscle mechanics and dynamics, reflex and voluntary control, proprioception, anatomy of the muscular and nervous systems, and system dynamics in locomotion and other movements. Prerequisite: ME 682 or permission of instructor.

ME 758. Physiological System Dynamics. 3 Credits.
This course covers the use of engineering systems modeling approaches to understand the function of physiological systems. Systems covered include the cardiovascular system, the respiratory system, the renal system, the gastrointestinal system, and the musculoskeletal system. Prerequisite: ME 510, ME 320, Physics 212 or permission of instructor.

ME 759. Biomedical Product Development. 3 Credits.
Introduction to methods of taking medical product inventions from conception to initial stage production. Students work in cross-functional teams to investigate development potential of inventions. Topics covered include product development processes, regulatory issues with the FDA, quality system requirements, SBIR/STTR funding pathways, biomaterial and biomechanics issues in medical product design, and ethical considerations. Prerequisite: Senior or graduate student standing in engineering, business, industrial design, or an applicable life science field and permission of instructor.

ME 765. Biomaterials. 3 Credits.
An introductory course on biomaterials science and consideration of biomaterials in the design of biomedical implants. Topics including ethical considerations in biomaterials research and the role of the FDA in medical device design are also presented. Prerequisite: ME 306.

ME 767. Molecular Biomimetics. 3 Credits.
The lessons learned from biological materials are discussed toward developing novel biomimetic materials and systems using environmentally benign processing. Upon completing this course, students will be able to understand the essential features of biological sciences combined with nano- and molecular technologies for next generation bioinspired, biomimetic and bio-enabled materials and systems. Prerequisite: CHEM 130, CHEM 150 or equivalent; introductory course in Material Science (e.g., ME 306.)

ME 770. Conductive Heat Transfer. 3 Credits.
The formulation of steady- and unsteady-state conduction heat transfer problems and their solution by analytical and numerical methods. Prerequisite: ME 612 or equivalent.

ME 774. Radiative Heat Transfer. 3 Credits.
The formulation of steady and unsteady radiation heat transfer problems and their solution by analytical and numerical methods. Prerequisite: ME 612 or equivalent.

ME 778. Optimal Estimation. 3 Credits.
Covers the principles of optimal estimation theory, with particular focus on Kalman filtering and its engineering applications. Prerequisite: A course in elementary linear algebra (e.g., MATH 290), statistics (e.g., MATH 365, MATH 526, or DSCI 202), and system dynamics and control systems (e.g., ME 682.)

ME 779. Energy Storage Systems and Control. 3 Credits.
This course offers an introduction to the mechanisms, modeling, monitoring and control of energy storage systems with a primary focus on batteries but includes coverage of fuel cells and ultra-capacitors. A major theme is to offer students state-of-the-art knowledge of energy storage systems and aid them in developing the ability to apply estimation and control theory in order to address the problems arising in energy storage management. After completion of the course, a student is expected to: 1) understand the respective work mechanisms, advantages and disadvantages of batteries, fuel cells and ultra-capacitors, 2) understand the mathematical modeling methodologies for batteries, 3) understand the key estimation/control methods and tools, and 4) build effective solutions for energy storage management problems leveraging with estimation/ control theory. Prerequisite: ME 682 or equivalent.

ME 790. Special Topics: . 1-5 Credits.
Advanced courses on special topics of current interest in mechanical engineering, given as the need arises. Prerequisite: Approval of instructor.

ME 797. Materials for Energy Applications. 3 Credits.
Focus on fundamentals of materials for energy applications. The main topics covered will be: 1) introduction to material science & engineering and electrochemical technologies, 2) microscopic view of solid materials, 3) mass transfer by migration and diffusion, 4) energy related materials and devices, 5) electrochemical engineering fundamentals, etc. Prerequisite: Basic Engineering Thermodynamics (e.g., ME 312) or equivalent.

ME 798. Manufacturing for Energy Applications. 3 Credits.
The focus of the course is on fundamentals of materials for energy applications. The main topics covered include: 1) introduction and overview of manufacturing, 2) material properties and engineering materials, 3) traditional and nontraditional manufacturing processes, 4) surface engineering and processing, and 5) energy-related materials and device fabrication. Prerequisite: ME 508 or equivalent and ME 797.
ME 801. Responsible Conduct of Research in Engineering. 1 Credit.
Lectures and discussion on ethical issues in the conduct of a scientific career, with emphasis on practical topics of special importance in bioengineering. Topics include the nature of ethics, the roles of the scientist as a reviewer, entrepreneur, employer and teacher, research ethics in the laboratory, social responsibility and research ethics regulation. (Same as BIOE 801.) Prerequisite: Permission of instructor.

ME 808. Advanced Microprocessor Application. 3 Credits.
Advanced design and development of microprocessor based mechanical systems. Individual and team projects involving the development and integration of hardware and software into a "smart" system which includes the sensing, processing, and controlling functions are accomplished. Emphasis is on the use of the latest sensors and development tools. Prerequisite: Permission of instructor.

ME 810. Advanced Fluid Mechanics. 3 Credits.
Topics include kinematic and dynamic behavior of fluids, derivation of Navier-Stokes equations, flow classification, solutions of viscous and inviscid flows for simple geometries, potential flow theory and laminar and turbulent boundary layer theory. Prerequisite: ME 510 or equivalent.

ME 831. Convective Heat and Momentum Transfer. 3 Credits.
The formulation and solution of steady and unsteady convective heat, mass, and momentum transfer problems. Topics include boundary layers, duct flows, natural convection with and without phase change, development of analogies, transport properties, numerical methods. Prerequisite: ME 612 or equivalent.

ME 832. Computational Fluid Dynamics and Heat Transfer. 3 Credits.
The fundamentals of the finite-difference method are presented and applied to the formulation of numerical models for heat and momentum transfer. The accuracy, stability, and computational efficiency of different algorithms are analyzed. Computer programs are developed for classical benchmark problems. Prerequisite: ME 508, ME 510, and ME 612 or equivalents.

ME 833. Radiative Heat Transfer. 3 Credits.
The formulation of steady and unsteady radiation heat transfer problems and their solution by analytical and numerical methods. Prerequisite: ME 612 or equivalent.

ME 836. Hybrid and Electric Vehicles. 3 Credits.
Topics covered include history of electrified vehicles, vehicle modeling, battery chemistry, and electric motors. Review of fundamental electrical engineering concepts provided. Application of real world driving profiles through homework assignments. Laboratories will explore battery and motor fundamentals. Homework assignments will be included along with a semester project involving the design, construction, and testing of a scale electric vehicle. Prerequisite: ME 636 or permission of instructor.

ME 840. Continuum Mechanics I. 3 Credits.
Principles of Continuum Mechanics for solids, fluids, and gases. Frames of references, measures of motion, deformation, strains, stresses, their rates, objectivity and invariance. Conservation laws, constitutive equations, equations of state and thermodynamic principles for developing mathematical models of continuum matter. Theoretical solutions of model problems. Prerequisite: Background in Calculus and Differential Equations is recommended.

ME 841. Continuum Mechanics II. 3 Credits.
Fundamental principles of Continuum Plasticity, measures of plastic strains, stresses and constitutive equations for flow theory of plasticity. Internal variable theory of thermo-mechanical behaviors and endochronic theory of plasticity and viscoplasticity. Anisotropic plasticity and advanced topics. Continuum mechanics principles for viscoelastic solids with emphasis on constitutive equations. Development of complete mathematical models and solutions of selected model problems. Prerequisite: ME 840.

ME 854. Continuum Mechanics for Soft Tissues. 3 Credits.
An introductory course in the analysis of the mechanical behavior of materials modeled on the continuum assumption. The course will provide background on soft tissue properties and will focus on the tools necessary to model soft tissues, including the essential mathematics, stress principles, kinematics of deformation and motion, and viscoelasticity. Prerequisite: ME 311 or equivalent.

ME 860. Advanced Mechanical Engineering Problems. 1-3 Credits.
An analytical or experimental study of problems or subjects intended to develop a student's capability for independent research or application of engineering science and technology. For students also enrolled in thesis or dissertation hours, the topic should be demonstrably distinct from their research efforts. Maximum credit toward any degree is three hours unless approved in writing by the departmental chairperson. Prerequisite: Approval of instructor.

ME 861. Theory of the Finite Element Method. 3 Credits.
Finite element method for solid mechanics, heat transfer, fluid mechanics, and dynamics. Modeling techniques, software implementation, and solution of problems. Prerequisite: Background in Calculus and Differential Equations is recommended.

ME 862. Finite Element Method for Transient Analysis. 3 Credits.
Advanced treatment of dynamic and transient response for linear and nonlinear problems in solid mechanics. Formulation and solution of time dependent linear and nonlinear field problems using finite element techniques. Prerequisite: ME 861.

ME 864. Mesh Generation and Adaptivity for Finite Element Simulations in Engineering. 3 Credits.
The generation of Finite Element meshes in the analysis and simulation of engineering systems. Important topics are treated such as initial mesh generation and refinements (i.e. geometric modeling and mesh adaptivity or grading), choice of type of element, and assessment of solution accuracy (i.e. error estimation). Assignments include solving problems using FE software. Prerequisite: ME 661, ME 861, or equivalent.

ME 882. Advanced Control Systems. 3 Credits.
Advanced methods in the modeling, analysis and design of linear and nonlinear control systems. Topics include but not limited to digital controls methods, energy-based modeling, and state-space methods. Prerequisite: ME 682.

ME 890. Special Topics: ______. 1-5 Credits.
Advanced courses on special topics of current interest in mechanical engineering, given as the need arises. Prerequisite: Approval of instructor.

ME 899. Independent Investigation. 1-6 Credits.
An analytical or experimental investigation of an engineering problem requiring independent research. If the thesis option is selected six credit hours are required for the degree. If the project option is selected three credit hours are required for the degree. (See requirements for the Master of Science degree for additional details.) Graded on a satisfactory progress/limited progress/no progress basis.

ME 961. Finite Element Method for Nonlinear Problems in Solid Mechanics. 3 Credits.
Advanced treatment of finite element techniques for structural analysis including material and geometric non-linearity as well as large strain deformation. Prerequisite: ME 861 or equivalent.
ME 962. p-Approximation, Error Estimation, and Other Advanced Topics in the Finite Element Method. 3 Credits.
Advanced treatment of p-Approximation, error estimation, and other advanced topics in the finite element method. Prerequisite: ME 861 or equivalent.

ME 965. Mathematical Modeling and Computational Method in Multi-Scale Processes. 3 Credits.
An overview of classical averaging and homogenization methods, as well as current multi-scale modeling techniques for the analysis of the micro- and nano-mechanics of materials. Models and numerical techniques are introduced based on continuum as well as particle descriptions. Assignments include the simulation of micro- and nano-mechanics problems by using existing finite element software and molecular dynamics packages. Prerequisite: ME 861 and ME 840.

ME 990. Special Topics: ______. 1-5 Credits.
Advanced courses on special topics of current interest in mechanical engineering, given as the need arises. Prerequisite: Approval of instructor.

ME 999. Independent Investigation. 1-16 Credits.
An analytical or experimental investigation of an engineering problem requiring independent research. Twenty four hours as a minimum are awarded for the Ph.D. dissertation. An original contribution suitable for publication in a refereed journal is required of Ph.D. candidates. Graded on a satisfactory progress/limited progress/no progress basis.

School of Engineering Minor in Biomedical Engineering

The purpose of the Biomedical Engineering (BME) minor is to more strongly attract and serve engineering undergraduate students who are seriously interested in biomedical engineering careers. The minor will provide substantial exposure to biomedical engineering concepts and applications, and provide a stronger credential for students seeking jobs in the biomedical field. It will also better prepare students to be more effective in careers in the field, and will help better prepare students who are seeking graduate studies in biomedical engineering.

The general goals and objectives for the BME Minor are:

1. Provide students with exposure and experiences with the application of engineering principles, physics, chemistry, physiology, and modern biology to BME applications;
2. Train students to apply basic sciences and engineering principles to biological problems;
3. Train students to apply research/design to relevant BME problems.

In order to declare a minor in Biomedical Engineering, students must have been admitted to the School of Engineering and to the major of their choice. Students must declare the BME minor by completing a declaration form and are strongly encouraged to do so as early as possible. This will allow the best opportunity for advising to minimize the number of courses/credits required beyond the major degree requirements.

The BME minor requires a minimum of 18 credit hours. Students must complete the courses required with a cumulative GPA of 2.0 or better. All Biomedical Engineering minor courses must be taken for a letter grade; neither S/U nor credit/no credit is permitted. Students who complete the BME minor are not eligible for the Bioengineering Undergraduate Certificate.

Bioengineering students are often involved in measurements, analysis, modeling, computations, design, and development. This certificate will provide skills useful for careers in the medical device and pharmaceutical industries as well as graduate programs in Bioengineering and Biomedical Engineering.

Please contact Bioengineering program (bioe@ku.edu) for more information.

This undergraduate certificate is open to those majoring in engineering disciplines (Mechanical, Electrical, Chemical, Aerospace, Petroleum, Computer, Architectural, or Civil Engineering or Engineering Physics), or Computer Science. To complete this certificate a student will also need to complete their degree in one of these disciplines. To be admitted, a student would need to have completed:

- 30 credit hours, majoring in an engineering discipline with a minimum 2.0 GPA, and
- Math 127 Calculus III (or Math 122 or equivalent)

The following requirements must be met with a 2.0 GPA or higher in these courses to receive this certificate.

**Undergraduate Certificate in Bioengineering**

The Bioengineering certificate introduces engineering and computer science students to Bioengineering. This undergraduate certificate grounds students in fundamentals of biological sciences, allows the students to take both survey and depth courses in Bioengineering, and has a capstone research or design experience.

The goals are:

1. To train students to apply basic sciences and engineering principles to biological and biomedical problems, and
2. To train students to do bioengineering research and solve problems related to the design and development of technologies that improve human health.
MISSION STATEMENT

KUAE fosters a world-class community of choice for students, educators, researchers and industry partners by strategically aligning our teaching, research and service missions to prepare students for successful professional careers by providing them with foundational knowledge in and experience with aerospace engineering disciplines and interdisciplinary systems integration, while advancing the state-of-the-art research:

- We are an international leader in undergraduate, graduate and continuing aerospace education, balancing theory and practice to best prepare our graduates for professional practice and for higher education.
- We provide world class graduate and undergraduate research experiences focused on designing, simulating, building, testing and flying aerospace vehicles and systems, including practical experience in applying aerospace fundamentals to interdisciplinary research and advancing knowledge.
- We invest in research infrastructure and select and develop outstanding and diverse students, faculty and staff to maintain an intellectually stimulating and collegial atmosphere in which to conduct globally significant basic and applied research.
- We support the aerospace profession by educating the public through outreach, educating working professionals through the KU Aerospace Short Course program and advising policy-makers in government, industry and professional organizations.
- We partner with the aerospace industry through directed research, internships and professional mentoring to ensure that our graduates are recognized and hired as those best prepared for professional success.

KUAE STRATEGIC GOALS

To support our teaching mission:

- Attract, develop and retain the highest quality students representing broad demographics
- Provide immersive, experiential learning opportunities integrated across the curriculum
- Expand the number and frequency of higher level graduate course offerings
- Attract, advance, and retain an outstanding and diverse technical staff to support cutting edge, holistic, education and research
- Achieve and maintain a state-of-the-art distance education capability to expand educational outreach to remote learners and increase access to remote expertise for local learners
- Develop and modernize facilities appropriate to providing intellectually stimulating curricular experiences

To increase the quality and volume of funded research:

- Attract, advance, and retain a diverse and continuously growing number of world-class faculty and research staff
- Attract and develop the highest quality graduate students representing broad demographics, with a particular emphasis on increasing the number of doctoral students
- Develop high quality, state-of-the-art research facilities appropriate to enabling globally significant basic and applied research
- Attract, advance, and retain an outstanding and diverse technical staff to support cutting edge, holistic, education and research

**Department of Aerospace Engineering**

**Aerospace Engineering**

The aerospace engineering discipline involves the design, production, operation, and support of aircraft and spacecraft. Aerospace engineers solve problems, design aircraft and spacecraft, conduct research, and improve processes for the aerospace industry.

**VISION**

KU Aerospace Engineering (KUAEE) is a world-class community of choice for outstanding students, educators, and researchers shaping the next generation of aerospace systems.
• Strategically target and transition technologies of national importance to enhance interdisciplinary, collaborative research
• Expand partnerships with industry leaders in directed research

To provide service:
• Be leaders in preparing our graduates for successful professional careers
• Be leaders in national and international technical and academic societies and editorial boards
• Expand the internationally renowned KU Aerospace Short Course and distance learning programs

Undergraduate Programs

The curriculum includes traditional courses in aerodynamics, flight dynamics and control, propulsion, structures, manufacturing, instrumentation, and spacecraft systems. Capstone design courses are offered in aircraft, propulsion, and spacecraft design.

The Bachelor of Science degree in aerospace engineering is accredited by the Engineering Accreditation Commission of ABET, http://www.abet.org/.

Graduate Programs

The Department of Aerospace Engineering offers traditional Master of Science (MSAE) and Doctor of Philosophy (PhDAE) programs which emphasize original analytical and experimental research. In addition, two unique programs are offered: the Master of Engineering (MSEE) and the Doctor of Engineering (DEAE), which emphasize system design and management. Each of these programs provide excellent preparation for employment in industry or in private and government laboratories. The doctoral programs also prepare for an academic career in teaching and research. The Master of Science and Master of Engineering programs have options for an in-person or online degree.

Graduate course work is available in the following areas of aerospace engineering:

• aerodynamics
• computational fluid dynamics
• propulsion
• structures
• flight dynamics and control
• aircraft design
• spacecraft design
• orbital mechanics

Graduate courses are taught by faculty with a strong background in graduate education and in industry and government laboratory experience. All faculty are currently active in funded or unfunded research in their areas of expertise. Department research programs are typically funded by: NASA, DOD, DOE, NSF, FAA, and the Aerospace industry.

Courses

AE 211. Computing for Engineers. 3 Credits.
Introduction to computing concepts. Introduction to the MATLAB computing language using a suite of simulations in science and engineering in a progression which adds new MATLAB constructs - as well as logical and mathematical constructs - with each simulation. Simulations include numerical integration, coordinate transformations and primitive reinforcement learning constructs. Prerequisite: MATH 125 or MATH 145 with a grade of C- or higher.

AE 221. Introduction to Global History of Aerospace Technologies. 1-3 Credits.
This History of Aerospace Technology starts in neolithic times with a description of a variety of flying implements being used for hunting and warfare. Their basic designs, mechanics, impact on human evolution, migration and societal development are brought forward to the development of gunpowder, ballistics and rocketry. Lighter than air flight innovations from 1783 forward show an intermingling of civil and military uses through WWI, shaping world events and the fortunes of nations. Heavier than air inhabited flight exploration begins with Cayley, includes the contributions of technologists Lilienthal, Chanute, visionaries and writers Mouillard and Verne, and concludes in a vertical exploration by region, nation and manufacturer, including: Douglas, Boeing, Lockheed, Fokker, Heinkel, Messerschmitt, Fairey, Handley Page, Piaggio, Tupelov, Mikoyan-Gurevich, Kamov, Mitsubishi, Hindustan Aeronautics, Sud Aviation and others. This course represents a very unique opportunity for students to study under one of the most important, famous and well published Aerospace Technologists and Historians ever to practice.

AE 241. Private Flight Course. 1 Credits.
One hour of academic credit is given upon the awarding of the private pilot’s license by the Federal Aviation Administration. Required documentation includes a letter from the F.A.A. designated examiner giving the check ride and a copy of the private license. The Department of Aerospace Engineering provides no ground or flight instruction. Graded on a satisfactory/fail basis. Prerequisite: Aerospace Engineering students only, with consent of instructor.

AE 242. Private Flight Aeronautics. 3 Credits.
Three hours of academic credit is given for the successful completion of the F.A.A. private pilot’s written examination. Required documentation is a copy of the written score. Available only to Aerospace Engineering transfer students as a course substitute for AE 245.

AE 245. Introduction to Aerospace Engineering. 3 Credits.
Basic systems of an aerospace vehicle, meteorology, vehicle performance, navigation and safety. Specific examples emphasize general aviation. Open to students with less than 60 hours completed. Other students need permission of instructor. Prerequisite: Corequisite: MATH 125 or MATH 145.

AE 290. Aerospace Colloquium. 0.25 Credits.
This is a required course for all aerospace engineering majors each fall semester. Topics of importance and new developments are discussed by aerospace industry representatives and representatives of F.A.A., D.O.T., D.O.D., N.A.S.A., related sciences, and engineering disciplines. A forum for student activities at all levels. Open enrollment.

AE 345. Fluid Mechanics. 3 Credits.
Study of fundamental aspects of fluid motions and basic principles of gas dynamics with application to the design and analysis of aircraft. Prerequisite: Corequisite: AE 245, CE 260, and MATH 220; or permission of instructor.

AE 360. Introduction to Astronautics. 3 Credits.
Introduction to astronautical engineering. The history of astronautics, including rocketry and space flight. Fundamentals of astronautics, including space environment, astrodynamics and the analysis and design of spacecraft systems. Design, construction and launch of a prototype earth-satellite using a high-altitude balloon. Prerequisite: MATH 126 or MATH 146 with a grade of C- or higher. Corequisite: A course in computer programming.

AE 400. Special Topics: ______. 1-3 Credits.
A course in a topic related to undergraduate studies in Aerospace Engineering. Varies by topic or with consent of instructor.

**AE 421. Aerospace Computer Graphics. 3 Credits.**
Development of skills in depicting aerospace vehicles and their components and subsystems for the purpose of illustration, design, and analysis using traditional and modern (Computer Aided Design) drafting tools. Prerequisite: Corequisite: CE 260 or equivalent, or permission of instructor.

**AE 430. Aerospace Instrumentation Laboratory. 3 Credits.**
Review and hands-on laboratory experiments with basic electronic elements (resistors, capacitors, conductors, transistors, linear circuits, logic devices, and integrated circuits). Overview and hands-on laboratory experiments using various experimental techniques available to the aerospace engineers (pressure probes, thermocouples, strain gauges, hot-wire anemometer, laser Doppler velocimeter, and flow visualization techniques). Prerequisite: AE 445 with a grade of C- or higher, and EECS 316.

**AE 441. Advanced Flight Training. 1-3 Credits.**
Academic credit is given for the successful completion of advanced flight training beyond the private pilot rating. One hour is given for each of the following: commercial, instrument rating, certified flight instructor. The Aerospace Engineering Department provides no ground or flight instruction. Open enrollment. Graded on a satisfactory/fail basis. Prerequisite: AE 241.

**AE 445. Aircraft Aerodynamics and Performance. 3 Credits.**
Study of airfoil and wing aerodynamics, component drag, static and special performance, and maneuvers of aircraft. Open enrollment. Prerequisite: AE 345 and CE 260, both with grades of C- or higher.

**AE 490. Aerospace Industrial Internship. 1 Credits.**
Engineering internship in an approved company. Internship hours do not satisfy any course requirements for the bachelors degree in Aerospace Engineering but will appear on the official transcript. Credit assigned after review of report on internship experience. Graded on a satisfactory/fail basis. Prerequisite: Completion of junior year.

**AE 506. Aerospace Structures I, Honors. 3 Credits.**
In depth analysis and design of aerospace structures from the standpoint of preliminary design. Deflection and stress analysis of structural components, including thin-walled beams and built-up (semimonocoque) structures. Material failure of highly stressed components, including connections. Buckling of thin-walled beams and semimonocoque structures. Durability and damage tolerance strategies for aerospace structures to avoid corrosion, fatigue, and fracture. Prerequisite: CE 310 with a grade of C- or higher and permission of instructor. Must have minimum 3.25 KU GPA.

**AE 507. Aerospace Structures I. 3 Credits.**
Analysis and design of aerospace structures from the standpoint of preliminary design. Deflection and stress analysis of structural components, including thin-walled beams and built-up (semimonocoque) structures. Material failure of highly stressed components, including connections. Buckling of thin-walled beams and semimonocoque structures. Durability and damage tolerance strategies for aerospace structures to avoid corrosion, fatigue, and fracture. Prerequisite: CE 310 with a grade of C- or higher.

**AE 508. Aerospace Structures II. 3 Credits.**
Stress and deflection analysis of aerospace structures using the finite element method. Introduction to work-energy principles, including Castigliano's Theorems, for the analysis of statically indeterminate structures. Rod, beam, shaft, membrane, and plate finite elements. Prerequisite: AE 506 or AE 507, and MATH 290 with a grade of C- or higher.

**AE 509. Honors Aerospace Structures II. 3 Credits.**
Indeterminate structures, principle of virtual work, Castigliano's theorems, displacement method of finite element analysis; rod, beam, shaft, and membrane elements; analysis of aerospace structures with the finite element method. Prerequisite: AE 506 or AE 507, and MATH 290 with a grade of C- or higher, and minimum 3.25 KU GPA.

**AE 510. Aerospace Materials and Processes. 4 Credits.**
Properties and applications of aircraft materials, forming methods, and manufacturing processes. Ethics and social responsibility for engineers. Oral technical presentations. Prerequisite: AE 507 or AE 506, and a grade of C- or higher in CHEM 150 or CHEM 130 and CHEM 149.

**AE 520. Space Systems Design I. 4 Credits.**
Preliminary design techniques for a space system. Systems engineering; orbital mechanics; spacecraft subsystems including propulsion, attitude control, power, thermal command and data, communications, and structures; and ethics and social responsibility for engineers. Written technical reports. Prerequisite: AE 360 or EPHX 521, AE 421, AE 508 or AE 509, EECS 316, ME 212, and CHEM 150 or CHEM 130 and CHEM 149, or permission of instructor.

**AE 521. Aerospace Systems Design I. 4 Credits.**
Preliminary design project of a complete aircraft system. Technical written reports and oral presentations. Prerequisite: AE 521 or AE 520 and permission of instructor.

**AE 522. Aerospace Systems Design II. 4 Credits.**
Preliminary design project of a complete space system. Technical written reports and oral presentations. Prerequisite: AE 521 or AE 520 and permission of instructor.

**AE 523. Space Systems Design II. 4 Credits.**
Preliminary design project of a complete space system. Technical written reports and oral presentations. Prerequisite: AE 520 or AE 521 and permission of instructor.

**AE 524. Propulsion Systems Design I. 4 Credits.**
Preliminary design project of a complete propulsion system, including the airframe. Technical written reports and oral presentations. Prerequisite: AE 521, or AE 520 and permission of instructor.

**AE 545. Fundamentals of Aerodynamics. 4 Credits.**
Basic gas dynamic equations, potential flow for airfoils and bodies, thin airfoil theory, finite wing, subsonic similarity rules, one and two dimensional supersonic flow, boundary layers, heat transfer, and laboratory experiments. Prerequisite: A grade of C- or higher in AE 445, ME 212, MATH 127 or MATH 147, and MATH 220 or MATH 221.

**AE 546. Aerodynamics, Honors. 4 Credits.**
Basic gas dynamic equations, potential flow for airfoils and bodies, thin airfoil theory, finite wing, subsonic similarity rules, one and two dimensional supersonic flow, boundary layers and viscous flow, heat transfer, and laboratory experiments. A special project in aerodynamics for AE 546 students. Prerequisite: AE 445, ME 212, MATH 220 and MATH 290.

**AE 550. Dynamics of Flight I. 4 Credits.**
Introduction to Tensors Algebra. Frames and coordinates in dynamics systems. General equations of motion of rigid airplanes and reduction to steady state flight situations. Steady state forces and moments. Stability
derivatives. Static stability, control and trim. Trim envelope. Relationships with handling quality requirements. Engine-out flight. Effects of the control system. Implications to airplane design. Prerequisite: Grade of C- or higher in AE 211 and MATH 220 or MATH 221. Corequisite: AE 545 or AE 546 and MATH 290 or MATH 291 or permission of instructor.

AE 551. Dynamics of Flight II. 4 Credits.
General equations of motion of rigid airplanes and reduction to perturbed state flight situations. Mathematical modeling of airplane and control system analysis in state space. Dynamic stability, phugoid, short period, dutch roll, roll, spiral, and other important modes. Transfer functions and their application. Relationships with handling quality requirements. Fundamentals of classical control theory and applications to automatic flight controls. Implications to airplane design. Prerequisite: AE 545 or AE 546, AE 550, and a grade of C- or higher in MATH 290 or MATH 291.

AE 552. Honors Dynamics of Flight II. 4 Credits.
General equations of motion of rigid airplanes and reduction to perturbed state flight situations. Perturbed state forces and moments, stability derivatives, dynamic stability, phugoid, short period, dutch roll, roll, spiral, and other important modes. Transfer functions and their application. Relationships with handling quality requirements. Fundamentals of classical control theory and applications to automatic flight controls. Implications to airplane design. Prerequisite: AE 545 or AE 546, AE 550, and a grade of C- or higher in MATH 290 or MATH 291, and minimum 3.25 KU GPA.

AE 560. Spacecraft Systems. 3 Credits.
Fundamentals of spacecraft systems and subsystems. Spacecraft systems engineering, space environment; basic astrodynamics; and the following spacecraft subsystems: attitude determination and control; electrical power; thermal; propulsion; structures and mechanisms; command, telemetry, and data handling; and communications. Prerequisite: AE 360, AE 507 or AE 506, EECS 316, and ME 212.

AE 571. Fundamentals of Airplane Reciprocating Propulsion Systems. 3 Credits.
Study of the basic principles of operation and systems of internal and external combustion engines with emphasis on airplane reciprocating engines. Cycle analysis, propeller theory, propeller selection and performance analysis. Prerequisite: AE 445 and ME 212 with grades of C- or higher.

AE 572. Fundamentals of Jet Propulsion. 3 Credits.
Lecture and laboratory, study of basic principles of propulsion systems with emphasis on jets and fan systems. Study of inlets, compressors, burners, fuels, turbines, jets, methods of analysis, testing, performance; environmental considerations. Prerequisite: AE 545 or AE 546, AE 571, and a grade of C- or higher in CHEM 150 or CHEM 130 and CHEM 149.

AE 573. Honors Propulsion. 3 Credits.
Lecture and laboratory, study of basic principles of propulsion systems with emphasis on jets and fan systems. Study of inlets, compressors, burners, fuels, turbines, jets, methods of analysis, testing, performance; environmental considerations. Prerequisite: AE 545 or AE 546, AE 571, and a grade of C- or higher in CHEM 150 or CHEM 130 and CHEM 149, and minimum 3.25 KU GPA.

AE 590. Aerospace Senior Seminar. 1 Credits.
Presentation and discussion of technical and professional paper reports. Methods for improving oral communication. Discussion of topics such as ethics, registration, interviewing, professional societies, personal planning. Prerequisite: Senior standing.

AE 592. Special Projects in Aerospace Engineering for Undergraduate Students. 0.25-5 Credits.
Directed design and research projects in aerospace engineering. Prerequisite: Consent of instructor.

AE 593. Honors Research. 1-5 Credits.
Directed design and research projects in aerospace engineering. Prerequisite: Consent of instructor.

AE 600. Special Topics: 1-3 Credits.
A graduate course or colloquium in a topic related to graduate studies in Aerospace Engineering. This course does not count towards hours needed for completion of degree program. Prerequisite: Varies by topic or with consent of instructor.

AE 621. Advanced Aircraft Design Techniques I. 3 Credits.
The purpose of this course is to provide aerospace engineering students with an opportunity to gain more in-depth airplane design education through design work. This design work will involve detailed design of efforts in such areas as: landing gear design, systems design, propulsion system integration, structures design and aerodynamic design. Prerequisite: AE 507, AE 521, AE 545, AE 551, and AE 571. AE 521 may be taken concurrently.

AE 690. Professional Development for Graduate Studies. 0.25 Credits.
Professional development for graduate students. Responsible conduct of research. Presentation and discussion of graduate student research. Oral communication to a range of audiences, including short presentations by students on a range of topics. One semester of enrollment required for all MS and ME candidates, and two semesters of enrollment required for all PhD and DE aspirants and candidates. Graded on a satisfactory/unsatisfactory basis.

AE 700. Special Topics: 1-5 Credits.
Courses on special items of current interest in aerospace engineering, given as need arises. May be repeated for additional credit. Prerequisite: Approval of instructor.

AE 704. Dynamics and Vibrations. 3 Credits.
Problems in engineering dynamics and vibrations. Topics include applications of generalized forces and coordinates, Lagrange equations, and a study of the performance of single and multiple degree of freedom in vibrational systems. (Same as CE 704.) Prerequisite: AE 508.

AE 705. Structural Vibrations and Modal Testing. 4 Credits.

AE 709. Structural Composites. 3 Credits.
Fiber materials, tapes, cloths, resin systems; general aerolotropie theory, elastic constants, matrix formulation; computer analysis, strength, theory of failure; introduction to design with composites, preliminary design, optimization, processing variables, product design. Prerequisite: CHEM 150 or CHEM 130 and CHEM 149, AE 508 or AE 509 or CE 761, and AE 510 or ME 306 or CE 710.

AE 710. Advanced Structural Composites. 3 Credits.
The course objectives are to provide each student with a more in-depth understanding of and practical hands-on experiences with available fiber and matrix materials, manufacturing methods, and the mechanical behavior of composite materials and structures. Modern software tools and manufacturing methods are addressed, to include optimization techniques and design for manufacturability. Classical plate theory, bending, buckling, and vibration of anisotropic plates is addressed. Damage tolerance and repairability, as well as nondestructive evaluation
AE 712. Techniques of Engineering Evaluation. 3 Credits.
The formulation of problems arising in aerodynamics, heat transfer, stress analysis, thermodynamics, and vibrations. The expression of these problems in a form amenable to quantitative evaluation by dimensional reasoning, analog techniques, relaxation methods, and classical analysis.

AE 721. Aircraft Design Laboratory I. 4 Credits.
The purpose of this course is to provide aerospace engineering students with an opportunity to gain more in-depth airplane design education through team design work. This team design work will involve detailed design efforts in such areas as: landing gear design, systems design, propulsion system integration, structures design, and aerodynamic design. Prerequisite: AE 507 or AE 506, AE 545 or AE 546, AE 551 or AE 552, AE 571 and corequisite of AE 521 or AE 520 and permission of instructor.

AE 722. Aircraft Design Laboratory II. 4 Credits.
The purpose of this course is to provide aerospace engineering students with an opportunity to gain more in-depth airplane design education through team design work. This team design work will involve detailed design efforts in such areas as: landing gear design, systems design, propulsion system integration, structures design, and aerodynamic design. Prerequisite: AE 507, AE 521, AE 545, AE 551, and AE 571. AE 522 may be taken concurrently.

AE 724. Propulsion System Design and Integration. 3 Credits.
Theory and design of propulsion systems for both low and high speed aircraft and their integration into the overall configuration. Internal and external design and analysis of inlets and nozzles including their effect on the external aerodynamics of the aircraft. Engine/inlet compatibility and the problems of matching both steady state and dynamic characteristics to obtain peak, stable performance. Prerequisite: AE 572 or AE 573.

AE 725. Numerical Optimization and Structural Design. 3 Credits.
Classical theories of unconstrained and constrained optimization. Numerical techniques for unconstrained optimization, including the steepest descent, conjugate gradient and “Newton’s” methods. Numerical techniques for constrained optimization, including sequential approximate problem techniques as well as the method of feasible directions. Computer aided solutions to practical design problems in aerospace engineering. Final design project. Prerequisite: MATH 220 and MATH 290 or junior status.

AE 727. Aircraft Antenna Systems. 3 Credits.
Aircraft antenna integration and design process. Overview of common aircraft communication, navigation, and sensing systems. CAD tools and analysis and measurement techniques for designing and assessing systems. Low-observable vehicle design concepts. Prerequisite: PHSX 212, EECS 316, MATH 127, AE 421 or other CAD experience and CE 310 or equivalent recommended; or by consent of instructor.

AE 730. Advanced Experimental Fluid Dynamics. 3 Credits.
Theory, methods and data analysis of various modern flow measurement techniques including: hotwire cluster, laser-Doppler velocimetry, particle image velocimetry, holography, pressure detection, temperature probing, vorticity measurements, Lagrange particle tracking. Specific experimental technique covers optical measurements in turbulent flow, microfluidic experiments, and spray and multiphase flow measurement. Prerequisite: AE 430, AE 545 or AE 546 or consent of instructor.

AE 732. Introduction to Flight Test Engineering. 3 Credits.
Course presents flight test principles, instrumentation, planning, and operation of aerospace vehicle flight testing. Course is structured with lectures, laboratories, and flight experiments. Student teams plan and execute a series of flight test experiments including: familiarization with flight test measurements, static system calibration, rate-of-climb performance, and determination of vehicle flight dynamics. Prerequisite: AE 445 and AE 550 or consent of instructor.

AE 734. Compressible Aerodynamics. 3 Credits.
Compressible flow with heat and friction; shock polars, 1-D unsteady gas dynamics, shock tube, conical flows, methods of characteristics, hypersonic flow theory. Prerequisite: AE 545 or AE 546.

AE 744. Introduction to Turbulent Flow. 3 Credits.
Reynolds averaged equations for turbulent flow, basic energy relations and spectra in turbulent flow, analysis of turbulent boundary layer, turbulent pipe flow, turbulence models and simulation. Prerequisite: AE 545 or AE 546 or equivalent.

AE 746. Computational Fluid Dynamics. 3 Credits.
Applications of numerical techniques and digital computers to solving fluid flow problems. Solutions involving incompressible and compressible flows, inviscid and viscous flows. Finite difference techniques for different types of partial differential equations governing the fluid flow. Prerequisite: AE 545 or AE 546.

AE 747. Introduction to Transonic Aerodynamics. 3 Credits.

AE 748. Helicopter Aerodynamics. 3 Credits.
Helicopter components and their functioning: rotor aerodynamics, performance, stability and control, aeroelastic effects and vibrations. Prerequisite: AE 551 or AE 552.

AE 750. Applied Optimal Control. 3 Credits.
Introduction to optimal control analysis and design tools useful for the design of Multi-Input/Multi-Output controllers. Linear Quadratic Regulator problem extended by including advanced command techniques and advanced controller structures. The techniques are illustrated with aerospace applications. Prerequisite: AE 551 or AE 552 or ME 682 or consent of instructor.

AE 752. Linear Multivariable Control. 3 Credits.
An introduction to the modeling and analysis of multi-input, multi-output control systems. Topics include state space representation, solutions of linear systems, stability analysis, LQR design, cooperative controller design, etc. Prerequisite: AE 551 or AE 552, or EECS 444 or equivalent; or by consent of instructor.

AE 753. Digital Flight Controls. 3 Credits.
Introduction to the analysis and design tools useful for the design of aircraft guidance and flight control systems containing continuous dynamics and a digital computer. Topics include Z-plane analysis, autopilot design using successive loop closure, guidance design models, path planning, vision-guided navigation, etc. Prerequisite: AE 551 or AE 552 or ME 682 or consent of instructor.

AE 755. Robust and Nonlinear Control. 3 Credits.
The robustness is one of the most critical qualities of an appropriately designed feedback control system. In this course the ability of the closed-loop system to continue performing satisfactorily despite uncertainties in estimated state variables and/or large variations in the (open-loop) plant dynamics will be investigated. This course will lay down the mathematical and theoretical background needed for the analysis and design of robust
feedback control systems. Modern controller design methods (e.g. H-inf control) will be used to design controller highly nonlinear and transient dynamics. Prerequisite: AE 550, AE 551, AE 750, MATH 590 or consent of instructor.

AE 756. Rule-Based Control Systems. 3 Credits.
Introduction to rule-based systems with an emphasis on a cognitive architecture. Realistic examples of using such systems will be covered in the context of unmanned aircraft control. A brief review of programming in LISP language, on which the cognitive architecture is based. Prerequisite: EECS 316 and AE 551 or AE 552 or equivalent.

AE 758. Introduction to Robotics. 3 Credits.
An introduction to robotics covering spatial descriptions and transformations, manipulator kinematics, Jacobians, and dynamics and control of manipulators. The successful completion of this course will prepare students for advanced studies in robotics. Prerequisite: CE 260, AE 551 or AE 552, and MATH 290, or by consent of instructor.

AE 759. Estimation and Control of Unmanned Autonomous Systems. 3 Credits.
An introduction to the modeling, estimation, and control of unmanned autonomous systems. Topics include motion description, navigation sensors, complementary filters, Kalman filters, attitude estimation, position estimation, attitude keeping controller, etc. The successful completion of this course will prepare students for advanced studies in robotics & controls. (Same as EECS 759.) Prerequisite: MATH 627, AE 551 or AE 552 or EECS 444, or by consent of instructor.

AE 760. Spacecraft Systems. 3 Credits.
Fundamentals of spacecraft systems and subsystems. Spacecraft systems engineering, space environment; basic astrodynamics; and the following spacecraft subsystems; attitude determination and control; electrical power; thermal; propulsion; structures and mechanisms; command, telemetry, and data handling; and communications. Same as AE 560 with the addition of a research paper. Not available for students that have taken AE 560. Prerequisite: AE 507, EECS 318, MATH 124, and ME 312 or equivalents.

AE 765. Orbital Mechanics. 3 Credits.
Motion of space vehicles under the influence of gravitational forces. Two body trajectories, orbit determination, orbit transfer, universal variables, mission planning using patched conics. Transfer orbits. Prerequisite: MATH 220, MATH 290, and CE 260 or equivalent.

AE 766. Spacecraft Attitude Dynamics and Control. 3 Credits.
Dynamics of rigid spacecraft, attitude control devices including momentum exchange, mass movement, gravity gradient and reactor rockets. Design of feedback control systems for linear and bang-bang control devices. Prerequisite: AE 551 or AE 552 or permission of instructor.

AE 767. Spacecraft Environments. 3 Credits.
Fundamentals of spacecraft environments. Description and analysis of the natural environment in which spacecraft operate post-launch. Includes optical, electromagnetic, corpuscular radiation, plasma and dust from low Earth orbit, through outer heliosphere. Prerequisite: PHSX 212 required, PHSX 313 or PHSX 351 recommended.

AE 768. Orbit Determination. 3 Credits.
Develops the theory of batch and sequential (Kalman filter) estimation theory related to orbit estimation, including a review of necessary concepts of probability and statistics. Course work includes a term project that allows students to apply classroom theory to an actual satellite orbit determination problem. Prerequisite: AE 360. Corequisite: AE 560 or AE 760.

AE 771. Rocket Propulsion. 3 Credits.
Basic elements of rocket propulsion: systems, propellants, and performance. Prerequisite: AE 545 or AE 546 or equivalent.

AE 772. Fluid Mechanics of Turbomachinery. 3 Credits.

AE 773. Propulsion Systems for Emerging Aircraft. 3 Credits.
Advanced study of the principles of operation and propulsion systems for UAVs, UAMs and general aviation aircraft. Prerequisite: AE 445, AE 571, ME 212.

AE 774. Introduction to Combustion. 3 Credits.
Study of advanced concepts and principles of combustion, including thermal analysis, chemical reaction, and computational methods. Prerequisite: ME 212 and a class in computer programming.

AE 781. Introduction to Adaptive Aerostructures. 3 Credits.
This course covers the basic material properties and modeling techniques for structures that are capable of changing some physical property in response to a command signal. The course will be useful for students from nearly every branch of engineering and includes a fabrication and testing practicum introducing basic post processing and integration techniques used with piezoelectric, shape memory alloy and magnetorheological materials. The course concludes with an overview of applications and examples of adaptive products. Prerequisite: ME 311 or equivalent.

AE 790. Special Problems in Aerospace Engineering for Masters Students. 1-5 Credits.
Directed studies of advanced problems in aerospace engineering. Open only to graduate students with departmental approval.

AE 803. Aeroelasticity. 3 Credits.
Introduction to self-excited vibrations, wing flutter, panel flutter, unsteady aerodynamics, launch vehicle structural vibrations. Prerequisite: AE 508, AE 545 or AE 546, AE 551 or AE 552, and AE 704.

AE 821. Advanced Aircraft Design I. 3 Credits.
Aerodynamic design optimization. Aircraft cost prediction methods: development, manufacturing, and operating. Minimization of operation costs and implications to configuration design. Design to minimize lifecycle costs. Design decision making on the basis of cost.

AE 822. Advanced Aircraft Design II. 3 Credits.
Design of flight control systems, fuel systems, hydraulic systems, and electrical systems. Weapon system integration problems, design for low radar cross sections. The kinematics of landing gear retraction systems.

AE 846. Advanced Computational Fluid Dynamics and Heat Transfer. 3 Credits.
Present recent advances in computational fluid dynamics and heat transfer with a focus on numerical algorithms designed for unstructured grids, including grid generation, convergence acceleration techniques, high-order algorithms and parallel computing on CPU and GPU clusters. It is expected that the students will understand the basics of the finite volume method for unstructured grids, and be able to program a 2D Euler solver for arbitrary grids after taking this class. Prerequisite: AE 746. This class is not open to undergraduate students.

AE 892. Special Problems in Aerospace Engineering for Doctoral Students. 1-8 Credits.
Directed studies of advanced problems in aerospace engineering. Open only to graduate students with consent of instructor.

AE 895. M.S. Thesis or Project. 1-6 Credits.
Original research or project which satisfies the requirements for the degree of Master of Science in Aerospace Engineering. Restricted to Aerospace MS students. Graded on a satisfactory progress/limited progress/no progress basis.

Restricted to Aerospace Ph.D. candidates. Graded on a satisfactory progress/limited progress/no progress basis.

AE 997. DE Project. 1-16 Credits.
A major design problem or system study satisfying the project requirements for the Doctor of Engineering in Aerospace Engineering degree. Restricted to Aerospace DE candidates. Graded on a satisfactory progress/limited progress/no progress basis. Prerequisite: Successful completion of Comprehensive Oral Exam.

Bachelor of Science in Aerospace Engineering

Careers

Professional Opportunities
Aerospace engineers design, develop, and test aircraft, spacecraft, and missiles and supervise manufacture of these products. They explore advances in air flight and space exploration. Aerospace engineers typically work for aircraft, guided missile and space vehicle industries, national research laboratories, commercial airlines, and federal government agencies.

Undergraduate Admission to the School of Engineering

Admission to the KU School of Engineering (and its degree programs) is selective. Students may be admitted to an engineering or computer science degree program (https://engr.ku.edu/2021-curriculum-guide-links/) as freshmen (first year) students, but all admissions, for both in-state and out-of-state students, are selective. Applications are judged on several factors, such as high school record, scores on national tests, academic record at college or university level, and trend of grades and more. High school transcripts are required.

Minimum Academic Standards for Admission to the School of Engineering

To be considered for admission to the School of Engineering, beginning first-year students must meet or exceed the following minimum standards:

- Must be admissible (https://admissions.ku.edu/major-specific-requirements/) to the University of Kansas by assured admissions or individual review, AND
- Have a 3.0+ high school GPA, AND
- Demonstrate mathematics preparedness by:
  - Obtaining a mathematics ACT score of 22+ (or math SAT score of 660+), or
  - Achieving a ‘C’ or better in a high school calculus course; or
  - Earning credit via IB or AP credit for the above-mentioned courses in accordance with KU placement credit requirements; or
- Achieving at minimum a qualifying score for MATH 125 on the ALEKS mathematics placement exam.

Minimum Academic Standards for Direct Admission into Degree Program for incoming Freshmen

Students with a 26+ Math ACT (600+ Math SAT) or meet eligibility requirements for MATH 125 (Calculus I) (p. 1622) may be admitted directly into their chosen major, with the exception of those seeking admission into the Electrical Engineering, Computer Science, Computer Engineering, and Interdisciplinary Computing (EECS) majors. For EECS program admission, students must:

- Be admissible (https://admissions.ku.edu/major-specific-requirements/) to the University of Kansas by assured admissions or individual review, AND
- Have a 3.0+ high school GPA, AND
- Demonstrate mathematics preparedness by:
  - Obtaining a mathematics ACT score of 28+ (or math SAT score of 660+), or
  - Achieving a ‘C’ or better in a high school calculus course; or
  - Earning credit via IB or AP credit for the above-mentioned course in accordance with KU placement credit requirements; or
- Achieving at minimum a qualifying score for MATH 125 on the ALEKS mathematics placement exam.

Students who are not admissible to their desired major are admitted to the School of Engineering as undecided engineering undergraduate students.

Exploring Engineering

Students not admitted directly to the School of Engineering or their major but who are admissible to the university may be admitted to the College of Liberal Arts and Sciences as an Undecided student. They can later re-apply to the School of Engineering during the semester they are completing the admission requirements for transfer students.

Transfer Admission Standards

Applications from all transfer students, whether from other institutions or from other academic schools at the University of Kansas, are evaluated on a case-by-case basis. Transfer students must be admissible (http://admissions.ku.edu/apply/requirements/ustransfer/) to KU AND have a cumulative college transferable grade-point average of 2.5+ to be considered. In addition, students must have grades of “C” or better in those courses in math (must include MATH 125 Calculus I or equivalent), science, and engineering applicable to the engineering degree.

Current KU Students admitted to other academic units may apply to the School of Engineering by completing a Change of School form (https://inowformsprivate.ku.edu/imagenowforms/fs/?form=OUR%20Change%20of%20School%20Form).

Already Applied to KU, But Not Engineering?

Don’t worry. It’s not too late to change your mind if you’ve already applied to KU and selected a major outside the School of Engineering. If you
think one of the 12 engineering or computer science majors is a better fit for your talents, you can still change your requested major — preferably before May 1 — and be considered for admission to the School of Engineering and all the benefits that go with it.

To update your application, visit Undergraduate Admissions (http://admissions.ku.edu/update-your-application/) and click on “Change application term, major, mailing address, and/or email address.”

Please contact a member of our recruitment team (studyengineering@ku.edu), 785-864-3881, if you have any difficulty.

**Application Deadlines For New Freshman and Transfer Applicants**

- **September 15**  
  Priority deadline for current KU students to apply for spring admission to Engineering.

- **November 1**  
  Final deadline for scholarship consideration for incoming freshmen planning to enter in fall or summer semesters.

- **December 1**  
  Final deadline to apply for the Self Engineering Leadership Fellows Program for incoming freshmen.

- **February 1**  
  Final deadline for scholarship consideration for transfer students planning to enter in fall or summer semesters. Applications available for the Engineering Learning Community.

- **February 15**  
  Priority deadline for current KU students to apply for summer or fall admission to Engineering.

- **May 1**  
  Enrollment Deposit due.

**Four Year Degree Completion Plan**

**Total Hours 129**

**Requirements for Enrollment in Junior-Level Aerospace Courses**

Enrollment in junior-level aerospace courses is limited to students who have received grades of C- or higher in all first- and second-year courses in mathematics, physics, ME 212, CE 260, CE 310, AE 211, AE 245, AE 345, and AE 445.

**Curriculum Notes**

*Students must ensure the electives they choose fulfill all remaining KU Core requirements.

**Technical electives are selected from upper-level aerospace courses, approved courses from other engineering departments, or approved math courses.
Students with credit in CHEM 130 may add CHEM 149 to meet the CHEM 150 requirement.

Honors equivalent course is available.

**Bachelor of Science in Aerospace Engineering Degree Requirements**

The typical number of credit hours required for a Bachelor's of Science in Aerospace Engineering is 129 hours:

**Technical Electives**

Technical Electives are selected from upper level aerospace courses, approved courses from other engineering departments, or approved math courses.

**Total Hours**: 129

Credit for ROTC Courses: A student enrolled in one of the ROTC programs can receive 3 hours of technical electives if the ROTC program is completed.

*The Written Communication and Global Awareness goals can be satisfied in ways other than standard coursework. See [http://kucore.ku.edu/](http://kucore.ku.edu/) for your options.

**Departmental Honors**

To complete the departmental honors program, an aerospace engineering undergraduate student must

- Graduate with a KU grade-point average of 3.5.
- Take at least 2 departmental honors courses and earn a grade of B or better in each. At least one course of which must include an independent research component
- An AE 700-level technical elective can be used for one of these courses
- The departmental honors courses are

Students require permission of instructor to enroll in honors courses. The Application for Departmental Honors ([https://deptsec.ku.edu/~engr/forms/form/50/](https://deptsec.ku.edu/~engr/forms/form/50/)) form must be completed by April 1 during the year of graduation in order to be recognized.

**Master of Engineering in Aerospace Engineering**

**Aerospace Engineering**

The aerospace engineering discipline involves the design, production, operation, and support of aircraft and spacecraft. Aerospace engineers solve problems, design aircraft and spacecraft, conduct research, and improve processes for the aerospace industry.
Mission

KU Aerospace Engineering is an international leader in aerospace education and is committed to developing a global community for students, educators, and researchers by strategically aligning teaching, research, and service missions. A world-class graduate and undergraduate education focused on designing, simulating, building, testing, and flying aerospace vehicles is provided. The department invests in research infrastructure and chooses outstanding students who will work with faculty and staff to conduct basic and applied research of relevance to aerospace vehicles and systems. The department supports the aerospace profession by educating the public, by maintaining the KU aerospace short-course program, and by advising policy-makers in government, industry, and disciplinary professional organizations.

Educational Objectives

The Aerospace Engineering graduate program objective is that our graduates contribute to the aerospace profession, related fields, and other disciplines through skilled professional practice in industry, government, and/or academia. Within a few years after graduation, we expect that:

1. Graduates are meaningfully employed or continuing graduate study in aerospace or other high technology fields, with the majority retained in aerospace or closely related engineering
2. Graduates have a positive professional career path including promotions, leadership, and/or continued education
3. Graduates recognize the value of their educational preparation for their current and future professional endeavors

Educational Outcomes

The Master of Engineering program in Aerospace Engineering (MEAE) is a program that emphasizes systems design and management concepts in writing and orally at a professional level.

1. The ability to effectively communicate advanced aerospace engineering and management concepts in writing and orally at a professional level.
2. The ability to acquire new information to learn new concepts, build new skills, and engage in lifelong learning.

Graduate Admission to the Department of Aerospace Engineering

Application Requirements

In order for applications to be considered complete, the following materials must be submitted as part of the application (https://gradapply.ku.edu/apply/) by the posted deadline:

1. Official transcripts from each college attended. For processing purposes, you may attach scanned versions of official transcripts to your application. Documents labeled as unofficial or printouts from a student portal are NOT considered official copies.
   a. Transcripts that are in a language other than English must be accompanied by English translations.
   b. If admitted to the program and accept the admission offer, you will be required to submit an official, final transcript that shows your degree has been conferred.
2. Three letters of recommendation. Letters must be signed and on letterhead. Recommenders will receive instructions on how to submit their documents at the time the application is submitted.
3. Resume or CV
4. Statement of Objectives
5. Official GRE score report (optional but recommended)
6. Official TOEFL, IELTS, or PTE score report. Official reports are those sent directly to KU from the testing agency. (International students only)
7. Statement of Financial Resources (International students only)

*Please note: All application materials must be received before any kind of decision is made. Documentation sent in addition to that requested above is not required and may be destroyed. Do not send paper documents unless requested.

Admissions Deadlines

Fall Admission:
- Priority Deadline: December 1
- Final Deadline: April 1

Spring Admission:
- Priority Deadline: September 1
- Final Deadline: December 1

Summer Admission:
- Final Deadline: April 1

For full consideration for fellowships, scholarships, and research/teaching assistantships, applications should be received by the priority deadline. Application materials should indicate an interest in financial assistance or research/teaching assistantships.

Application Fees

Domestic: $65
International: $85

Document Specifications

Letters of Recommendation

The letter of recommendation form should be on letterhead and signed. Recommenders will receive instructions on how to submit their documents at the time the application is submitted.

Proof of Finances

As a part of the application process, all international students must submit credible evidence of financial support for the first year of study. Further details and requirements for financial documentation can be found at this link (https://iss.ku.edu/proof-finances/).

Admissions Standards

Students who wish to apply for admission to the Aerospace Engineering graduate program must have, as a minimum, a BSAE degree or a BS degree in a closely-related field from a university or college with a program equivalent to the KU BSAE program. Students applying with either a BS degree from an engineering program that is not equivalent to the KU BSAE program or a BS degree from a non-aerospace engineering program may have to make up certain undergraduate AE courses at the discretion of the department graduate advisor. Such students will
be admitted on probation until a plan of study for make-up courses is completed.

**Regular Admission**

Master’s program regular admission requires an undergraduate GPA of at least a 3.0.

Doctoral program regular admission requires an undergraduate GPA of at least 3.0 and a GPA of at least 3.5 for courses taken as part of a master’s program.

In exceptional cases, applicants with a GPA between 2.75-2.99 may be granted admission. Such students would be admitted as Aerospace Engineering Master of Engineering students. If approved by the student's graduate advisor and the departmental graduate advisor, the student may change to an alternate Aerospace Engineering degree program after successful completion of the first semester and receiving a minimum 3.0 GPA.

**GRE Requirements**

The GRE is not required, however, is strongly recommended. Preferred scores are a minimum of 50% on the Verbal and Analytical sections of the GRE and 85% on the Quantitative section.

**English Proficiency Requirement**

International students and students who indicated English as a second language, are required to show proof of English proficiency for admission purposes and must check in at the Applied English Center (https://aec.ku.edu/) (AEC) upon arrival on campus for orientation. This process serves to confirm each student's level of English proficiency and determine whether English courses will be included as a requirement of the student’s academic program.

Refer to the University Policy (http://policy.ku.edu/graduate-studies/english-proficiency-international-students/) on English Proficiency Requirements for Admission to Graduate Study.

**Funding**

Scholarships/Fellowships - The Aerospace Engineering department nominates applicants for University and School of Engineering scholarships and fellowships based on academic merit and other selection criteria.

Graduate Teaching Assistantships (GTAs) - Teaching Assistantships are available and are awarded competitively based on academic qualifications through the department or school.

Graduate Research Assistantships (GRAs) - Students work with their potential academic advisor/mentor to obtain a funded position on a research project.

*Important note: acceptance into the graduate program DOES NOT guarantee financial aid. To be considered for financial aid, applications must be received by the priority deadline.

**Visit Us**

The graduate program staff is happy to work with all prospective students in determining the fit between the student and the program. In order to determine this, we feel that visiting our campus in Lawrence is a very important step. In order to facilitate your visit to KU, there are two main options:

The first, and most preferred, option entails simply applying for admission to the program. All prospective students are welcome to attend the School of Engineering Open House. Eligible admitted students are invited to participate in Campus Visit Days in late February (prior to the fall semester of your intended matriculation). These organized campus visit opportunities will allow you to gather a great deal of first-hand information which we hope will help you in making a final decision about whether to attend KU.

The second option is to make arrangements to visit us on your own, outside of organized events. With early notification, we will do our best to work with you to provide information and schedule appointments with faculty when possible. Please contact us if you feel that this is the best option for you.

**Contact Information**

Please contact the AE Graduate Program Coordinator at aerohawk@ku.edu or (785) 864-2960, to schedule a visit or with questions about the application process.

**The University of Kansas**

**AE Graduate Program**

1530 W. 15th Street
2120 Learned Hall
Lawrence, Kansas, 66045

**M.E. Degree Requirements**

The Master of Engineering program in Aerospace Engineering (MEAE) is a program that emphasizes systems design and management skills and procedures.

**General Description**

The minimum course requirements for the M.E. degree are:

- At least 30 credit hours of graduate-level courses; which shall include either 3 or more credit hours in aerospace design or at least 3 and up to 6 semester hours of approved management courses.
- Students must take at least one semester of AE 690, Professional Development for Graduate Students.
- No more than two courses below the 700 level may be used to satisfy degree requirements, in addition to the required AE 690 course. All AE courses other than AE 690 must be 700 level and above.

**Plan of Study**

Each student selects or is assigned a faculty advisor in their first semester. Unlike the M.S. degree, the M.E. degree does not require a three-person committee. The student will work with their faculty advisor to develop a formal Plan of Study that includes a sequence of courses through the semester of graduation that are consistent with the student’s academic background and identified degree goals. All plan of study changes in subsequent semesters are approved by the student’s graduate advisor and the department graduate advisor. The Plan of Study also identifies the intended graduation semester.
Completion of MEAE

The MEAE degree does not require a full committee, only a graduate advisor. All plan of study changes are approved by the student’s graduate advisor and the department graduate advisor.

Upon completion of all coursework, the student’s plan of study must meet final approval and the student must complete the ME Completion Form and submit it to the AE graduate program manager.

Master of Science in Aerospace Engineering

Aerospace Engineering

The aerospace engineering discipline involves the design, production, operation, and support of aircraft and spacecraft. Aerospace engineers solve problems, design aircraft and spacecraft, conduct research, and improve processes for the aerospace industry.

Mission

KU Aerospace Engineering is an international leader in aerospace education and is committed to developing a global community for students, educators, and researchers by strategically aligning teaching, research, and service missions. A world-class graduate and undergraduate education focused on designing, simulating, building, testing, and flying aerospace vehicles is provided. The department invests in research infrastructure and chooses outstanding students who will work with faculty, and staff to conduct basic and applied research of relevance to aerospace vehicles and systems. The department supports the aerospace profession by educating the public, by maintaining the KU aerospace short-course program, and by advising policy-makers in government, industry, and disciplinary professional organizations.

Educational Objectives

The Aerospace Engineering graduate program objective is that our graduates contribute to the aerospace profession, related fields, and other disciplines through skilled professional practice in industry, government, and/or academia. Within a few years after graduation, we expect that:

- Graduates are meaningfully employed or continuing graduate study in aerospace or other high technology fields, with the majority retained in aerospace or closely related engineering
- Graduates have a positive professional career path including promotions, leadership, and/or continued education
- Graduates recognize the value of their educational preparation for their current and future professional endeavors

Educational Outcomes

The Master of Science program in Aerospace Engineering (MSAE) is a program in which students conduct original work related to Aerospace Engineering. Our program is designed to achieve our objectives by establishing measurable learning outcomes which graduates of the program must demonstrate:

1. The ability to apply fundamental physics, mathematics, AE principles, and underlying technologies to solve realistic problems
2. The ability to effectively communicate advanced AE concepts in writing and orally at a professional level
3. The ability to effectively communicate advanced aerospace engineering and management concepts in writing and orally at a professional level
4. The ability to acquire new information, to learn new concepts, build new skills, and engage in lifelong learning

Graduate Admission to the Department of Aerospace Engineering

Application Requirements

In order for applications to be considered complete, the following materials must be submitted as part of the application (https://gradapply.ku.edu/apply/) by the posted deadline:

1. Official transcripts from each college attended. For processing purposes, you may attach scanned versions of official transcripts to your application. Documents labeled as unofficial or printouts from a student portal are NOT considered official copies.
   a. Transcripts that are in a language other than English must be accompanied by English translations.
   b. If admitted to the program and accept the admission offer, you will be required to submit an official, final transcript that shows your degree has been conferred.
2. Three letters of recommendation. Letters must be signed and on letterhead. Recommenders will receive instructions on how to submit their documents at the time the application is submitted.
3. Resume or CV
4. Statement of Objectives
5. Final Deadline: April 1
6. Official GRE score report (optional but recommended)
7. Statement of Financial Resources (International students only)

* Please note: All application materials must be received before any kind of decision is made. Documentation sent in addition to that requested above is not required and may be destroyed. Do not send paper documents unless requested.

Admissions Deadlines

Fall Admission:
- Priority Deadline: December 1
- Final Deadline: April 1

Spring Admission:
- Priority Deadline: September 1
- Final Deadline: December 1

Summer Admission:
- Final Deadline: April 1

For full consideration for fellowships, scholarships, and research/teaching assistantships, applications should be received by the priority deadline. Application materials should indicate an interest in financial assistance or research/teaching assistantships.

Application Fees

Domestic: $65
International: $85

**Document Specifications**

**Letters of Recommendation**
The letter of recommendation form should be on letterhead and signed. Recommenders will receive instructions on how to submit their documents at the time the application is submitted.

**Proof of Finances**
As a part of the application process, all international students must submit credible evidence of financial support for the first year of study. Further details and requirements for financial documentation can be found at this link (https://iss.ku.edu/proof-finances/).

**Admissions Standards**
Students who wish to apply for admission to the Aerospace Engineering graduate program must have, as a minimum, a BSAE degree or a BS degree in a closely-related field from a university or college with a program equivalent to the KU BSAE program. Students applying with either a BS degree from an engineering program that is not equivalent to the KU BSAE program or a BS degree from a non-aerospace engineering program may have to make up certain undergraduate AE courses at the discretion of the department graduate advisor. **The University of Kansas**
**AE Graduate Program**
**1530 W. 15th Street**
**2120 Learned Hall**
**Lawrence, Kansas, 66045**

**M.S. Degree Requirements**
The Master of Science program in Aerospace Engineering (M.SAE) is a program in which students conduct original work related to Aerospace Engineering.

The Master of Science (M.S.) program in Aerospace Engineering (AE) has 2 options.
• The Thesis Option requires a minimum of 30 credit hours of graduate work. The course work includes 6 hours earned in the satisfactory completion of a thesis.
• The Project Option requires a minimum of 30 hours of graduate work. The course work includes 3 hours in the satisfactory completion of a project (AE 895, M.S. Thesis or Project).
• Students must take at least one semester of AE 690, Professional Development for Graduate Students.

No more than two courses below the 700 level may be used to satisfy degree requirements, in addition to the required AE 690 course. Graduate mathematics courses are considered those taken at the 600 level and higher, however, Master's students may also use no more than 1 mathematics course (up to 3 hours) at the 500 level to meet degree requirements. All AE courses other than AE 690 must be 700 level and above.

The candidate must pass a final oral examination in which the thesis or research project (results of the independent investigation) is defended and the candidate demonstrates a working knowledge in aerospace engineering.

Thesis or Project Committee

As part of the Plan of Study (https://gradplan.engr.ku.edu/accounts/login/?next=/) a student is required to form a thesis or project committee with a minimum of three Graduate Faculty, a minimum of two must be AE faculty members. Additional committee members may be selected by the student from either AE or other School of Engineering faculty members. The chair of the committee must be an AE faculty member.

Plan of Study

Before the end of the first semester of graduate study the student must complete an online Plan of Study (https://gradplan.engr.ku.edu/accounts/login/?next=/) which includes the following information:

1. A committee chair (advisor) and at least two committee members
2. Proposed area of research
3. Proposed sequence of courses through the semester of graduation
4. Proposed semester of graduation

Doctor of Engineering in Aerospace Engineering

Aerospace Engineering

The aerospace engineering discipline involves the design, production, operation, and support of aircraft and spacecraft. Aerospace engineers solve problems, design aircraft and spacecraft, conduct research, and improve processes for the aerospace industry.

Mission

KU Aerospace Engineering is an international leader in aerospace education and is committed to developing a global community of choice for students, educators, and researchers by strategically aligning teaching, research, and service missions. A world-class graduate and undergraduate education focused on designing, simulating, building, testing, and flying aerospace vehicles is provided. The department invests in research infrastructure and chooses outstanding students, faculty, and staff to conduct basic and applied research of relevance to aerospace vehicles and systems. The department supports the aerospace profession by educating the public, by maintaining the KU aerospace short-course program, and by advising policy-makers in government, industry, and disciplinary professional organizations.

Educational Objectives

The Aerospace Engineering graduate program objective is that our graduates contribute to the aerospace profession, related fields, and other disciplines through skilled professional practice in industry, government, and/or academia. Within a few years after graduation, we expect that:

• Graduates are meaningfully employed or continuing graduate study in aerospace or other high technology fields, with the majority retained in aerospace or closely related engineering
• Graduates have a positive professional career path including promotions, leadership, and/or continued education
• Graduates recognize the value of their educational preparation for their current and future professional endeavors

Educational Outcomes

The Doctor of Engineering program in Aerospace Engineering (DEAE) emphasizes system design and management skills. The program also requires students to successfully demonstrate their abilities in a broad spectrum of aerospace technology, mathematics, and original research. Our program is designed to achieve our objectives by establishing measurable learning outcomes which graduates of the program must demonstrate:

1. The ability to effectively communicate advanced aerospace engineering and management concepts in writing and orally at a professional level
2. The ability to acquire new information, learn new concepts, build new skills, and engage in lifelong learning

Graduate Admission to the Department of Aerospace Engineering

Application Requirements

In order for applications to be considered complete, the following materials must be submitted as part of the application (https://gradapply.ku.edu/apply/) by the posted deadline:

1. Official transcripts from each college attended. For processing purposes, you may attach scanned versions of official transcripts to your application. Documents labeled as unofficial or printouts from a student portal are NOT considered official copies.
   a. Transcripts that are in a language other than English must be accompanied by English translations.
   b. If admitted to the program and accept the admission offer, you will be required to submit an official, final transcript that shows your degree has been conferred.
2. Three letters of recommendation. Letters must be signed and on letterhead. Recommenders will receive instructions on how to submit their documents at the time the application is submitted.
3. Resume or CV
4. Statement of Objectives
5. Official GRE score report (optional but recommended)
Admissions Deadlines

**Fall Admission:**
- Priority Deadline: December 1
- Final Deadline: April 1

**Spring Admission:**
- Priority Deadline: September 1
- Final Deadline: December 1

**Summer Admission:**
- Final Deadline: April 1

For full consideration for fellowships, scholarships, and research/teaching assistantships, applications should be received by the priority deadline. Application materials should indicate an interest in financial assistance or research/teaching assistantships.

Application Fees

- Domestic: $65
- International: $85

Document Specifications

**Letters of Recommendation**
The letter of recommendation form should be on letterhead and signed. Recommenders will receive instructions on how to submit their documents at the time the application is submitted.

**Proof of Finances**

As a part of the application process, all international students must submit credible evidence of financial support for the first year of study. Further details and requirements for financial documentation can be found at this link [https://iss.ku.edu/proof-finances/](https://iss.ku.edu/proof-finances/).

Admissions Standards

Students who wish to apply for admission to the Aerospace Engineering graduate program must have, as a minimum, a BSAE degree or a BS degree in a closely-related field from a university or college with a program equivalent to the KU BSAE program. Students applying with either a BS degree from an engineering program that is not equivalent to the KU BSAE program or a BS degree from a non-aerospace engineering program may have to make up certain undergraduate AE courses at the discretion of the department graduate advisor. Such students will be admitted on probation until a plan of study for make-up courses is completed.

Regular Admission

Master’s program regular admission requires an undergraduate GPA of at least 3.0.

Doctoral program regular admission requires an undergraduate GPA of at least 3.0 and a GPA of at least 3.5 for courses taken as part of a master’s program.

In exceptional cases, applicants with a GPA between 2.75-2.99 may be granted admission. Such students would be admitted as Aerospace Engineering Master of Engineering students. If approved by the student’s graduate advisor and the departmental graduate advisor, the student may change to an alternate Aerospace Engineering degree program after successful completion of the first semester and receiving a minimum 3.0 GPA.

GRE Requirements

The GRE is not required, however, is strongly recommended. Preferred scores are a minimum of 50% on the Verbal and Analytical sections of the GRE and 85% on the Quantitative section.

English Proficiency Requirement

International students and students who indicated English as a second language, are required to show proof of English proficiency for admission purposes and must check in at the Applied English Center ([https://aec.ku.edu/](https://aec.ku.edu/)) upon arrival on campus for orientation. This process serves to confirm each student’s level of English proficiency and determine whether English courses will be included as a requirement of the student’s academic program.

Refer to the University Policy ([http://policy.ku.edu/graduate-studies/english-proficiency-international-students/](http://policy.ku.edu/graduate-studies/english-proficiency-international-students/)) on English Proficiency Requirements for Admission to Graduate Study.

Funding

Scholarships/Fellowships - The Aerospace Engineering department nominates applicants for University and School of Engineering scholarships and fellowships based on academic merit and other selection criteria.

Graduate Teaching Assistantships (GTAs) - Teaching Assistantships are available and are awarded competitively based on academic qualifications through the department or school.

Graduate Research Assistantships (GRAs) - Students work with their potential academic advisor/mentor to obtain a funded position on a research project.

*Important note: acceptance into the graduate program DOES NOT guarantee financial aid. To be considered for financial aid, applications must be received by the priority deadline.*

In order to determine this, we feel that visiting our campus in Lawrence is a very important step. In order to facilitate your visit to KU, there are two main options:

The first, and most preferred, option entails simply applying for admission to the program. All prospective students are welcome to attend the School of Engineering Open House. Eligible admitted students are invited to participate in Campus Visit Days in late February (prior to the fall semester of your intended matriculation). These organized campus visit opportunities will allow you to gather a great deal of first-hand information...
which we hope will help you in making a final decision about whether to attend KU.

The second option is to make arrangements to visit us on your own, outside of organized events. With early notification, we will do our best to work with you to provide information and schedule appointments with faculty when possible. Please contact us if you feel that this is the best option for you.

Contact Information
Please contact the AE Graduate Program Coordinator at aerohawk@ku.edu or (785) 864-2960, to schedule a visit or with questions about the application process.

The University of Kansas
AE Graduate Program
1530 W. 15th Street
2120 Learned Hall
Lawrence, Kansas, 66045

Doctor of Engineering in Aerospace Engineering

The Doctor of Engineering emphasizes systems design and management skills, often in applied rather than theoretical research and requires 66 credit hours beyond the B.S degree. These 66 credit hours consist of at least 24 credit hours of DE project and at least 42 credit hours of coursework. The 42 hours of coursework can include up to 24 credit hours of relevant coursework from an MS degree completed at a recognized graduate school. Students must complete at least 18 hours of approved coursework as a KUAE Graduate student. The minimum coursework requirements are as follows:

- Core courses of at least 9 credit hours of graduate mathematics beyond the B.S. are required. The 9 credit hours must include a minimum of 6 credit hours of graduate-level courses from the Mathematics Department.
  - Graduate mathematics courses are those taken that are 600 level and higher, plus MATH 590, Linear Algebra.
  - Only AE 712, Techniques of Engineering Evaluation, is a mathematics-intensive engineering course and the only non-MATH course that meets the Core requirement.
- Depth and breadth technical courses comprising at least 21 credit hours of technical courses (beyond 600 level) which must be distributed in the areas of:
  - structures and materials
  - aerodynamics
  - design
  - dynamics and controls
  - propulsion
  - astronautics
- Depth management courses of at least 12 credit hours (beyond 600 level) must be taken in Engineering Management courses
- At least 24 credit hours of DE Project

Students must also take at least .5 hours of AE 690, Professional Development for Graduate Students.

No more than three courses below the 700 level may be used to satisfy degree requirements, in addition to the required AE 690 course. All AE courses other than AE 690 must be 700 level and above.

It is required that the doctoral qualifying exam (DQE) be taken within the first year for students with a master’s degree, and within the second year for students without a master's degree. In order to be eligible for the DQE, students must be in good academic standing and have a KU GPA of 3.0. If the student fails to meet these requirements, they will work with their major advisor to develop an alternate plan of study.

The DQE tests the breadth of knowledge and determines the student’s ability to formulate mathematical representations of real physical situations. The examination covers mathematics and 2 of these 5 areas:

- Aerodynamics
- Astronautics
- Dynamics and controls
- Propulsion
- Structures and materials

A student is allowed only 2 attempts to pass this examination. If a student has completed AE 712 with a grade of B or higher, the mathematics section of the qualifying exam is waived.

The aspirant forms a project committee and completes a Plan of Study after the first semester and before the end of the second semester. The project committee must have at least 5 members, including 3 tenured or tenure-track faculty from aerospace engineering and at least 1 member from engineering management. The committee approves the aspirant’s program and administers the comprehensive examination and the formal oral defense and project.

When the aspirant has completed most of the course work and satisfied the research skills, responsible scholarship and residency requirements, they must take the comprehensive examination. The comprehensive exam cannot be taken until research skills, responsible scholarship, and residency requirements have been met.

- The research skill requirement provides the aspirant with a research skill distinct from, but strongly supportive of, the dissertation research. One research skill is required. Possible research skills include computer science, mathematics, statistics, specific laboratory skills, and specific skills in the physical or biological sciences. The selected research skill must be listed on the Plan of Study.
- The responsible scholarship requirement serves to ensure that students are trained in responsible research practices. Aspirants must satisfy the responsible scholarship requirement by enrolling in 2 semesters of AE 690, Professional Development for Graduate Students. This course covers ethical behavior for graduate students, intellectual property, and technical writing.
- The residency requirement is met by completing 2 semesters, which may include 1 summer session, in resident study and enrollment in 6 credit hours or more. During the period of residence, the student must be involved full time in academic pursuits, which may include up to half-time teaching or research.

The comprehensive exam is made up of two parts. The first part must consist of a written project proposal outlining in some detail the work to be done for the project. The second part is an oral examination in which they must defend the project plans and demonstrate competence in their particular and related areas. Upon passing the comprehensive examination, the aspirant becomes a candidate for the D.E. The project
committee directs the preparation of the approved project topic. A formal oral and public defense of the project is required before the committee, any other interested members of the graduate faculty, and the general public. Candidates for the D.E. must satisfy the university’s general requirements for the degree.

To be awarded the D.E. degree in Aerospace Engineering all the following requirements must be satisfied:

1. Complete all D.E. course requirements in accordance with an approved plan of study
2. Pass the Doctoral Qualifying Examination (DQE)
3. Complete the Research Skills and Responsible Scholarship requirement
4. Satisfy the residency requirements
5. Pass a comprehensive oral exam
6. Prepare and defend an approved D.E. dissertation which must contain an original contribution to the field by the candidate.

Maximum Tenure

The dissertation must be completed within eight years after being admitted to the D.E. program in AE. In cases that require more than eight years, the dissertation committee may grant an appeal for an extension of this period.

Doctor of Philosophy in Aerospace Engineering

Aerospace Engineering

The aerospace engineering discipline involves the design, production, operation, and support of aircraft and spacecraft. Aerospace engineers solve problems, design aircraft and spacecraft, conduct research, and improve processes for the aerospace industry.

Mission

KU Aerospace Engineering is an international leader in aerospace education and is committed to developing a global community of choice for students, educators, and researchers by strategically aligning teaching, research, and service missions. A world-class graduate and undergraduate education focused on designing, simulating, building, testing, and flying aerospace vehicles is provided. The department invests in research infrastructure and chooses outstanding students to work with faculty, and staff to conduct basic and applied research of relevance to aerospace vehicles and systems. The department supports the aerospace profession by educating the public, by maintaining the KU aerospace short-course program, and by advising policy-makers in government, industry, and disciplinary professional organizations.

Educational Objectives

The Aerospace Engineering graduate program objective is that our graduates contribute to the aerospace profession, related fields, and other disciplines through skilled professional practice in industry, government, and/or academia. Within a few years after graduation, we expect that:

- Graduates are meaningfully employed or continuing graduate study in aerospace or other high technology fields, with the majority retained in aerospace or closely related engineering
- Graduates have a positive professional career path including promotions, leadership, and/or continued education
- Graduates recognize the value of their educational preparation for their current and future professional endeavors

Educational Outcomes

The Doctor of Philosophy program in Aerospace Engineering (PhDAE) is a traditional program that requires students to conduct independent, publishable, and impactful research that makes a significant contribution to the field of Aerospace Engineering. Our program is designed to achieve our objectives by establishing measurable learning outcomes which graduates of the program must demonstrate:

1. A broad knowledge in the field of Aerospace Engineering
2. In-depth knowledge in (at least) one area of expertise in Aerospace Engineering.
3. Document and communicate a compelling, focused, and logical technical argument in writing and orally at a professional level

Graduate Admission to the Department of Aerospace Engineering

Application Requirements

In order for applications to be considered complete, the following materials must be submitted as part of the application (https://gradapply.ku.edu/apply/) by the posted deadline:

1. Official transcripts from each college attended. For processing purposes, you may attach scanned versions of official transcripts to your application. Documents labeled as unofficial or printouts from a student portal are NOT considered official copies.
   a. Transcripts that are in a language other than English must be accompanied by English translations.
   b. If admitted to the program and accept the admission offer, you will be required to submit an official, final transcript that shows your degree has been conferred.
2. Three letters of recommendation. Letters must be signed and on letterhead. Recommenders will receive instructions on how to submit their documents at the time the application is submitted.
3. Resume or CV
4. Statement of Objectives
5. Official GRE score report (optional but recommended)
6. Official TOEFL, IELTS, or PTE score report. Official reports are those sent directly to KU from the testing agency. (International students only)
7. Statement of Financial Resources (International students only)

* Please note: All application materials must be received before any kind of decision is made. Documentation sent in addition to that requested above is not required and may be destroyed. Do not send paper documents unless requested.

Admissions Deadlines

Fall Admission:
- Priority Deadline: December 1
- Final Deadline: April 1

Spring Admission:
- Priority Deadline: September 1
- Final Deadline: December 1
Summer Admission:
• Final Deadline: April 1

For full consideration for fellowships, scholarships, and research/teaching assistantships, applications should be received by the priority deadline. Application materials should indicate an interest in financial assistance or research/teaching assistantships.

Application Fees
Domestic: $65
International: $85

Document Specifications
Letters of Recommendation
The letter of recommendation form should be on letterhead and signed. Recommenders will receive instructions on how to submit their documents at the time the application is submitted.

Proof of Finances
As a part of the application process, all international students must submit credible evidence of financial support for the first year of study. Further details and requirements for financial documentation can be found at this link (https://iss.ku.edu/proof-finances/).

Admissions Standards
Students who wish to apply for admission to the Aerospace Engineering graduate program must have, as a minimum, a BSAE degree or a BS degree in a closely-related field from a university or college with a program equivalent to the KU BSAE program. Students applying with either a BS degree from an engineering program that is not equivalent to the KU BSAE program or a BS degree from a non-aerospace engineering program may have to make up certain undergraduate AE courses at the discretion of the department graduate advisor. Such students will be admitted on probation until a plan of study for make-up courses is completed.

Regular Admission
Master's program regular admission requires an undergraduate GPA of at least a 3.0.

Doctoral program regular admission requires an undergraduate GPA of at least 3.0 and a GPA of at least 3.5 for courses taken as part of a master's program.

In exceptional cases, applicants with a GPA between 2.75-2.99 may be granted admission. Such students would be admitted as Aerospace Engineering Master of Engineering students. If approved by the student's graduate advisor and the departmental graduate advisor, the student may change to an alternate Aerospace Engineering degree program after successful completion of the first semester and receiving a minimum 3.0 GPA.

GRE Requirements
The GRE is not required, however, is strongly recommended. Preferred scores are a minimum of 50% on the Verbal and Analytical sections of the GRE and 85% on the Quantitative section.

English Proficiency Requirement
International students and students who indicated English as a second language, are required to show proof of English proficiency for admission purposes and must check in at the Applied English Center (https://aec.ku.edu/) (AEC) upon arrival on campus for orientation. This process serves to confirm each student's level of English proficiency and determine whether English courses will be included as a requirement of the student's academic program.

Refer to the University Policy (http://policy.ku.edu/graduate-studies/english-proficiency-international-students/) on English Proficiency Requirements for Admission to Graduate Study.

Funding
Scholarships/Fellowships - The Aerospace Engineering department nominates applicants for University and School of Engineering scholarships and fellowships based on academic merit and other selection criteria.

Graduate Teaching Assistantships (GTAs) - Teaching Assistantships are available and are awarded competitively based on academic qualifications through the department or school.

Graduate Research Assistantships (GRAs) - Students work with their potential academic advisor/mentor to obtain a funded position on a research project.

*Important note: acceptance into the graduate program DOES NOT guarantee financial aid. To be considered for financial aid, applications must be received by the priority deadline.

Visit Us
The graduate program staff is happy to work with all prospective students in determining the fit between the student and the program. In order to determine this, we feel that visiting our campus in Lawrence is a very important step. In order to facilitate your visit to KU, there are two main options:

The first, and most preferred, option entails simply applying for admission to the program. All prospective students are welcome to attend the School of Engineering Open House. Eligible admitted students are invited to participate in Campus Visit Days in late February (prior to the fall semester of your intended matriculation). These organized campus visit opportunities will allow you to gather a great deal of first-hand information which we hope will help you in making a final decision about whether to attend KU.

The second option is to make arrangements to visit us on your own, outside of organized events. With early notification, we will do our best to work with you to provide information and schedule appointments with faculty when possible. Please contact us if you feel that this is the best option for you.

Contact Information
Please contact the AE Graduate Program Coordinator at aerohawk@ku.edu or (785) 864-2960, to schedule a visit or with questions about the application process.
The University of Kansas
AE Graduate Program
1530 W. 15th Street
2120 Learned Hall
Lawrence, Kansas, 66045
The Doctor of Philosophy program in Aerospace Engineering (PhDAE) is a traditional program that requires students to successfully demonstrate their abilities in a broad spectrum of aerospace technology, mathematics and original research. To earn the PhD degree students must:

- Complete PhD course requirements in accordance with an approved plan of study
- Pass the Doctoral Qualifying Exam (DQE)
- Complete the Research Skills and Responsible Scholarship (RS²) requirement
- Satisfy the residency requirements
- Pass a comprehensive oral examination
- Prepare and defend a PhD dissertation which must contain an original contribution to the field by the candidate.

Ph.D. Degree Requirements

The Ph.D. program requires 66 credit hours beyond the B.S. These 66 credit hours consist of at least 24 credit hours of dissertation and at least 36 credit hours of coursework. The 36 hours of coursework can include up to 24 credit hours of relevant coursework from an MS degree completed at a recognized graduate school. Students must complete at least 18 hours of approved coursework as a KUAE graduate student. The minimum coursework requirements are as follows:

- Core courses of at least 9 credit hours of graduate mathematics beyond the B.S. are required. The 9 credit hours must include a minimum of 6 credit hours of graduate-level courses from the Mathematics Department.
  - Graduate mathematics courses are MATH 590 or any other math course 600-level or above.
  - Only AE 712, Techniques of Engineering Evaluation, is considered a mathematics-intensive engineering course that meets the Core requirement.
- Breadth courses consist of 12 credit hours distributed outside the area of specialization in aerodynamics, structures and materials, dynamics and controls, design, propulsion, and astronautics.
- Depth courses consist of 15 credit hours of technical courses (600-level and above) in the area of specialization.

Students must also take at least .5 hours of AE 690, Professional Development for Graduate Students.

No more than three courses below the 700 level may be used to satisfy degree requirements, in addition to the required AE 690 course. All AE courses other than AE 690 must be 700 level and above.

It is required that the doctoral qualifying exam (DQE) be taken within the first year for students with a master's degree, and within the second year for students without a master's degree. In order to be eligible for the DQE, students must be in good academic standing and have a KU GPA of 3.0. If the student fails to meet these requirements, they will work with their major advisor to develop an alternate plan of study.

The DQE tests the breadth of knowledge and determines the student’s ability to formulate mathematical representations of real physical situations. The examination covers mathematics and 2 of these 5 areas:

- Aerodynamics
- Astronautics
- Dynamics and controls
- Propulsion
- Structures and materials

A student is allowed only 2 attempts to pass this examination. If a student has completed AE 712 with a grade of B or higher, the mathematics section of the qualifying exam is waived.

The aspirant forms a dissertation committee and completes a Plan of Study after the first semester and before the end of the second semester. The dissertation committee must have 5 members, including 3 tenured or tenure-track faculty from aerospace engineering and at least 1 member from a department other than aerospace engineering. The committee approves the aspirant’s program and administers the comprehensive examination and the formal oral defense and dissertation.

When the aspirant has completed most of the course work and satisfied the research skills, responsible scholarship and residency requirements, they must take the comprehensive examination. The comprehensive exam cannot be taken until research skills, responsible scholarship, and residency requirements have been met.

- The research skill requirement provides the aspirant with a research skill distinct from, but strongly supportive of, the dissertation research. One research skill is required. Possible research skills include computer science, mathematics, statistics, specific laboratory skills, and specific skills in the physical or biological sciences. The selected research skill must be listed on the Plan of Study form.
- The responsible scholarship requirement serves to ensure that students are trained in responsible research practices. Aspirants can satisfy the responsible scholarship requirement by enrolling in 2 semesters of AE 690 (https://catalog.ku.edu/search/?P=AE%20690), Professional Development for Graduate Students. This course covers ethical behavior for graduate students, intellectual property, and technical writing.
- The residency requirement is met by completing 2 semesters, which may include 1 summer session, in resident study and enrollment in 6 credit hours or more. During the period of residence, the student must be involved full-time in academic pursuits, which may include up to half-time teaching or research.

The comprehensive examination is made up of two parts. The first part must consist of a written research proposal outlining in some detail the work to be done for the dissertation. The second part is an oral examination in which they must defend the research plans and demonstrate competence in their particular and related areas. Upon passing the comprehensive oral examination the aspirant becomes a candidate for the AE Ph.D. degree. The dissertation committee directs the preparation of the approved dissertation topic and research. The candidate now completes the dissertation work or research and writes the dissertation. The dissertation must contain an original contribution made by the candidate to the field. In addition, a comprehensive review of the pertinent literature must be included. This dissertation must be approved by the candidate’s dissertation committee. A formal oral and public defense of the dissertation is required before the candidate’s committee, any other interested members of the graduate faculty, and the
general public. Candidates for the Ph.D. must also satisfy the university’s general requirements for the degree.

To be awarded the Ph.D. degree a student must:

1. Complete all coursework with a 3.0. Grades of C-, D, and F are not allowed.
2. Satisfy residency requirements.
3. Pass the Doctoral Qualifying Examination.
4. Satisfy the Research Skills and Responsible Scholarship requirements.
5. Pass the Comprehensive Exam.
6. Prepare and defend a Ph.D. dissertation that must contain an original contribution to the field by the candidate.

Note well:

a. The dissertation must be publicly defended in the presence of the candidate's dissertation committee. Public notice of this defense must be given at least two weeks before the defense. The dissertation defense must be public and reasonable questions from the public must be addressed by the candidate.

b. At least one month must elapse between passing the comprehensive oral examination and conducting the final dissertation defense.

Maximum Tenure

The dissertation must be completed within eight years after being admitted to the Ph.D. program in AE. In cases that require more than eight years, the dissertation committee may grant an appeal for an extension of this period.

Graduate Certificate in Computational Fluid Dynamics

This certificate will provide knowledge and education in the area of computational fluid dynamics (CFD). Completing this certificate will enable the student to use CFD tools effectively in the design process. The certificate requires 12 credits of coursework, and some of the courses may be available online. Courses offered online will consist of recorded lectures delivered using streaming media technology as well as teacher-student interaction via chat room, e-mail, and phone conversations.

The program will be most appropriate for those individuals with a bachelor's degree in a scientific and engineering discipline, who are pursuing a professional career, and who already have a strong base of engineering skill, including an understanding of fluid mechanics or aerodynamics. Applicants must meet all admissions requirements for certificate-seeking graduate admission as defined by the University's policy on Admission to Graduate Study (http://policy.ku.edu/graduate-studies/admission-to-graduate-study/).

Courses offered online will be assessed in the same way as regular courses. Students must have a GPA of 3.0 or better in the required courses.

In addition, applicants must have earned a previous degree in Aerospace Engineering or a closely related field and must demonstrate a GPA of at least a 3.0 (on a 4.0 scale). Candidates may be considered for admission by the Computational Fluid Dynamics supervisory committee if they do not meet all of these requirements, but otherwise show clear potential. However, all students must meet the university’s minimum requirements for admission to graduate study.

Admission into the certificate program will not guarantee admission into the master's or doctoral programs. If a student who earns a certificate wishes to obtain admission into the master's or doctoral programs, the student will need to apply for admission and gain acceptance by meeting the admission requirements as established by KUAЕ and the University admissions policies.

Application Requirements

In order for applications to be considered complete, the following materials must be submitted online with the application by the posted deadline:

1. One copy of an official transcript from each post-secondary institution should be uploaded with the application. (If admitted an official transcript will be required)
2. Resume or CV
3. Official scores from an English proficiency standardized test (e.g. TOEFL, IELTS, or PTE), sent by the testing agency to the University of Kansas. Official scores must be less than two years old. (Only for non-native English speakers)
4. Statement of Financial Resources may be required for International students

* Please note: All application materials must be received before any decision is made. Do not send paper documents unless requested.

Admission into the certificate program will not guarantee admission into the master's or doctoral programs. If a student who receives a certificate wishes to obtain admission into the master's or doctoral programs, the student will need to apply for admission and gain acceptance by meeting the admission requirements of KUAЕ and KU graduate programs.

Certificate Requirements

To earn the certificate, students must complete one mandatory course and three elective courses.

Courses offered online will be assessed in the same way as regular graduate courses. Home work, exams, and projects will be used as assessing tools. The completion requirements of the graduate certificate in Computational Fluid Dynamics include:

a. Students must have a GPA of 3.0 or better in the required courses
b. Grades of C- and below do not count toward fulfilling requirements and cannot be counted toward certificate completion
c. No credits may be transferred from another institution for this certificate
Bioengineering Graduate Program

Bioengineering

The bioengineering program prepares students to become leading researchers, educators, and entrepreneurs. The program provides knowledge breadth in engineering and the biological sciences and knowledge depth in the student's area of research interest. The program offers the Master of Science and Doctor of Philosophy degrees in bioengineering and the M.D./Ph.D. combined degree in conjunction with the KU School of Medicine (http://medicine.kumc.edu/). Students have access to innovative research and educational facilities on KU's Lawrence and KU Medical Center campuses. The student selects from 6 tracks:

1. Bioimaging
2. Computational bioengineering
3. Biomaterials and tissue engineering
4. Biomechanics and neural engineering
5. Biomedical product design and development
6. Biomolecular engineering

The student, in consultation with his or her advisor and advisory committee, develops a Plan of Study and a research program to satisfy degree requirements.

The program's goals are:

1. To give students an in-depth understanding of mathematics, engineering principles, physics, chemistry, physiology, and modern biology.
2. To train students to apply basic sciences to biological problems using engineering principles.
3. To train students to do bioengineering research and solve problems related to the design and development of diagnostic and therapeutic technologies that improve human health.
4. To train students to apply bioengineering research to commercially viable technologies.

Bioengineering research projects typically focus on 1 of 2 broad categories:

1. The development of fundamental scientific knowledge.
2. The development and application of materials, devices, and systems with the goal of improving biological processes, systems, and health care.

Bioengineering students are often involved in measurements, analysis, modeling, computations, design, and development. The program prepares students for careers in industry, academia, health care settings, or government.

Financial Aid

Once admitted, students become eligible for financial aid. Graduate students in the bioengineering program are often supported through research assistantships, teaching assistantships, or fellowships (e.g., the Madison and Lila Self Fellowship). Research assistantships are arranged by the student and faculty advisor with assistance from the Bioengineering Director if needed. Teaching assistantships are assigned by the Bioengineering Director. Highly qualified applicants are considered for additional support and fellowships. For more information about external and other KU funding options, please visit https://graduate.ku.edu/funding (https://graduate.ku.edu/funding/).

Courses

BIOE 800. Bioengineering Colloquium. 0.5-1 Credits.
A colloquium series featuring speakers from industry, government, other universities, research centers and research organizations of the university campus presenting talks on various topics related to bioengineering.

BIOE 801. Responsible Conduct of Research in Engineering. 1 Credit.
Lectures and discussion on ethical issues in the conduct of a scientific career, with emphasis on practical topics of special importance in bioengineering. Topics include the nature of ethics, the roles of the scientist as a reviewer, entrepreneur, employer and teacher, research ethics in the laboratory, social responsibility and research ethics regulation. (Same as ME 801.) Prerequisite: Permission of instructor.

BIOE 802. Bioengineering Internship. 1-6 Credits.
An approved bioengineering industrial or clinical internship. The student is supervised by a preceptor at the internship site. Biweekly reports and a final report detailing work performed are filed with the course instructor. Prerequisite: Permission of instructor.

BIOE 860. Advanced Bioengineering Problems. 1-3 Credits.
An analytical or experimental study of problems or subjects of immediate interest to a student and faculty member and which is intended to develop students capability for independent research or application of engineering science and technology. Maximum credit toward any degree is three hours unless waived in writing by the academic advisor. Prerequisite: Consent of instructor.

BIOE 890. Special Topics: ______. 1-5 Credits.
Advanced courses on special topics of current interest in bioengineering, given as the need arises. Prerequisite: Approval of instructor.

BIOE 899. Independent Investigation. 1-12 Credits.
An original and independent research or design investigation involving analytical, experimental and/or modeling methodology applied to solve a bioengineering problem as a part of the degree requirements for the Master of Science. Graded on a satisfactory progress/limited progress/no progress basis.

BIOE 999. Independent Investigation. 1-12 Credits.
An original and independent research or design investigation involving analytical, experimental and/or modeling methodology applied to solve a bioengineering problem as a part of the degree requirements for the Doctor of Philosophy. Graded on a satisfactory progress/limited progress/no progress basis.

Master of Engineering in Bioengineering

Bioengineering

The University of Kansas (KU) Master of Engineering in Bioengineering degree program is a coursework only master's degree. It is very similar to the Master of Science in Bioengineering degree at the University of Kansas. The primary difference is the elimination of research, the thesis and the thesis defense. The thesis credit hours are replaced with the same credit hours of coursework.

This degree will prepare students to be more effective in their careers in medicine, private commercial firms, and with entrepreneurship in a start-up company. The coursework-only Master of Engineering in
Bioengineering degree is an efficient way for baccalaureate graduates to get more in-depth background and credentials in bioengineering prior to seeking employment. The program is rigorous, and places high demands on the student who must demonstrate that they understand interdisciplinary concepts. The Master of Engineering in Bioengineering degree program provides knowledge breadth in engineering and the biological sciences, and knowledge depth in a particular focused area of coursework.

Applicants for the Master of Engineering in Bioengineering will have a baccalaureate degree in engineering, biological science, or a related field. Successful applicants will have strong academic credentials and demonstrated potential for advanced study by performance at the baccalaureate level. The completed Master of Engineering in Bioengineering is evidence of an ability to work as an engineer who is capable of advanced analysis and design. The holder of this degree will have completed significant course work to advance their knowledge and abilities in the area of bioengineering.

Master of Engineering students will choose an area of focus from the Bioengineering track list to determine their coursework requirements.

1. Bioimaging
2. Computational bioengineering
3. Biomaterials and tissue engineering
4. Biomechanics and neural engineering
5. Biomedical product design and development
6. Biomolecular engineering

The individual track requirements can be found on the Bioengineering website (http://bio. engr. ku. edu/). The student, in consultation with their academic advisor, develops a Plan of Study to satisfy the degree requirements.

Financial Aid

Once admitted, students become eligible for financial aid and are encouraged to file the FAFSA. Students pursuing the Master of Engineering in Bioengineering will not be considered for Graduate Assistantships within the Bioengineering Program and should plan to fund the ME degree through their own efforts or external funding.

Admission to the Bioengineering Graduate Program

All applicants are expected to have an undergraduate grade point average of 3.0 or higher on a 4.0 scale. The appropriate academic preparation includes both general and track prerequisites. General prerequisites include calculus I and II, differential equations, linear algebra, general physics I and II, chemistry, and biology. Track prerequisites depend on the student’s track of study. More complete details about academic preparation can be found on the program’s website (http://bio. engr. ku. edu/).

Applicants normally have a baccalaureate degree in an engineering discipline, physical sciences, the life sciences, or a closely related field. Depending on their preparation, students may be required to take additional courses that may or may not count toward the graduate degree. A student may be admitted to the Bioengineering Program without meeting all the prerequisites if approved by the Admissions Committee. This student must plan to complete the prerequisites in addition to the graduate degree requirements and consultation with the program is required to determine which courses satisfy these requirements. Course credits from prerequisites generally do not apply toward the graduate degree and must be completed with a grade of B or higher.

Submit your graduate application online (https://gradapply. ku. edu/apply/).

Application Information & Deadlines

A complete application package should be submitted by the following deadlines:

**Domestic Applicants:**
- **Fall:** July 1
- **Spring:** December 1
- **Summer:** April 15

**International Applicants:**
- **Fall:** May 15
- **Spring:** October 15
- **Summer:** March 1

**Application Materials Include:**

1. **Official Transcripts**
   - One official transcript from each degree granting institution that the student has attended is REQUIRED for admission. If courses from another university or junior college appear on the degree granting institution’s transcript, we do not need transcripts from the other university or junior college. **A scanned copy of the official transcript IS acceptable but it MUST be an official copy. Printouts from student portals or websites will NOT be accepted.** A final degree conferred transcript sent directly from the degree granting university will be required before the second semester of enrollment should the applicant be admitted and enroll in a program at KU.

2. **Letters of Recommendation**
   - Request 3 letters of recommendation from individuals who can speak to your academic preparedness. Include the correct e-mail addresses of your recommenders on your online application. An e-mail request with instructions on how to complete the required Recommendation Form and upload their letter to your application will be sent to these recommenders.

3. **A Statement of Your Academic Objectives**
   - Your statement is a very important part of your application. Please write a 1-2 page essay describing your academic and career objectives as they relate to bioengineering. It should indicate how and why you have decided to pursue graduate studies in your chosen field. **Please discuss the particular areas of focus within the track(s) you wish to study and why you feel KU specifically is a good fit for your particular interests and goals.** You may also include relevant information about your academic background, research experience, leadership skills, related work and/or volunteer experiences that you feel have prepared you for graduate study. This statement of objectives will be read and used by faculty in the track to evaluate your academic and leadership potential. Please make sure that it is of high quality and demonstrates your readiness for graduate level study and research at KU.

4. **Your Curriculum Vitae (CV) or Resume**
5. English Proficiency Scores (if English is NOT your native language)
   a. TOEFL, iBT (or IELTS) Scores (sent to us directly from the testing agency).
      i. The institution code for the University of Kansas is 6871.
      ii. The program/department code is 1603.
      iii. The department code is 69 for iBT.
   iv. NOTES:
      1. For REGULAR admission: All section scores must be at least 20 on the internet-based and computer based TOEFL.
      2. Admission will NOT be granted if you do not meet the above standard of English Proficiency. Due to a change in policy, we are no longer able to issue an I-20 for these instances.
      3. For more information regarding English Proficiency Requirements (http://graduate.ku.edu/english-proficiency-requirements/), see the graduate studies website.

6. Proof of Financial Support (International Applicants ONLY)
   a. Obtain the proper Financial Documentation. Scan the document and save it as a pdf file. KEEP THE PAPER COPIES. Be prepared to send the paper copies to the program office at the address below if requested! Although the financial statement is not required for making admission decisions, the U.S. Department of State mandates that evidence of financial resources, such as an official bank statement, be provided in order to issue an I-20 and student visa. It should have the name of the student on the account, not the parent’s name or any other name. See the International Support Services (https://iss.ku.edu/proof-finances/) website for more information.

Contact Information
Please contact Graduate Program Coordinator at bioe@ku.edu or (785) 864-5258 with questions about the Bioengineering application process.

The Master's aspirant works with an advisor familiar with their selected track area to develop a formal plan of study. The tracks are focused in major research and educational themes within the Bioengineering Graduate Program; each track has a track director and affiliated faculty. The student selects from among track courses to construct a comprehensive educational program that takes (a) advantage of the student's background, (b) builds and demonstrates academic skills, and (c) capitalizes on the strengths of the affiliated faculty. This approach follows a structure common to many of the top Bioengineering/Biomedical Engineering graduate programs nationally (Table 1).

Students select one of the tracks for their primary exposure to bioengineering concepts. All the tracks have the same required core courses (total 6 credit hours): C&PE 756 Introduction to Biomedical Engineering (3 credit hours), BIOE 800 Colloquium (2 credit hours total), and BIOE 801 Responsible Conduct of Research in Engineering (1 credit hour). The course C&PE 756 Introduction to Biomedical Engineering, permits them to delve into the subject area of their track, but also allows the student to sample the breadth of bioengineering topics across all of the tracks. BIOE 800 Colloquium provides some professional development as well as additional exposure to the breadth of applications in bioengineering. While BIOE 801 Responsible Conduct of Research in Engineering, might seem less relevant for a professional coursework-only Master of Engineering degree, the focus on professional engineering ethics is quite applicable and important for individuals in industry, as well.

Beyond the core courses, each track has 9 credit hours of required depth courses focused on the track, and an additional 15 credit hours of breadth courses. The detailed requirements of each track, the depth and breadth courses, as well as the Master Breadth Course List are provided as supporting documents. A Total of 30 credit hours of coursework are required for the proposed Master of Engineering in Bioengineering degree. Because of the varied nature of the tracks, there are some minor variations in core, depth and breadth requirements between the tracks (see detailed requirements of each track).

*No more than 9 credits may be taken at the 500-600 level for this degree.
No course graded CR or NC (credit/no-credit) can count toward the satisfaction of the degree requirements.

**Master of Science in Bioengineering**

**Bioengineering**
The bioengineering program prepares students to become leading researchers, educators, and entrepreneurs. The program provides knowledge breadth in engineering and the biological sciences and knowledge depth in the student’s area of research interest. The program offers the Master of Science and Doctor of Philosophy degrees in bioengineering and the M.D./Ph.D. combined degree in conjunction with the KU School of Medicine (http://medicine.kumc.edu/). Students have access to innovative research and educational facilities on KU’s Lawrence and KU Medical Center campuses. The student selects from 6 tracks:

1. Bioimaging
2. Computational bioengineering
3. Biomaterials and tissue engineering
4. Biomechanics and neural engineering
5. Biomedical product design and development
6. Biomolecular engineering

The student, in consultation with his or her advisor and advisory committee, develops a Plan of Study and a research program to satisfy degree requirements.

The program’s goals are:

1. To give students an in-depth understanding of mathematics, engineering principles, physics, chemistry, physiology, and modern biology.
2. To train students to apply basic sciences to biological problems using engineering principles.
3. To train students to do bioengineering research and solve problems related to the design and development of diagnostic and therapeutic technologies that improve human health.
4. To train students to apply bioengineering research to commercially viable technologies.

Bioengineering research projects typically focus on 1 of 2 broad categories:
1. The development of fundamental scientific knowledge.
2. The development and application of materials, devices, and systems with the goal of improving biological processes, systems, and health care.

Bioengineering students are often involved in measurements, analysis, modeling, computations, design, and development. The program prepares students for careers in industry, academia, health care settings, or government.

Financial Aid
Once admitted, students become eligible for financial aid. Graduate students in the bioengineering program are often supported through research assistantships, teaching assistantships, or fellowships (e.g., the Madison and Lila Self Fellowship). Research assistantships are arranged by the student and faculty advisor with assistance from the Bioengineering Director if needed. Teaching assistantships are assigned by the Bioengineering Director. Highly qualified applicants are considered for additional support and fellowships. For more information about external and other KU funding options, please visit https://graduate.ku.edu/funding (https://graduate.ku.edu/funding/).

Admission to the Bioengineering Graduate Program
All applicants are expected to have an undergraduate grade point average of 3.0 or higher on a 4.0 scale. The appropriate academic preparation includes both general and track prerequisites. General prerequisites include calculus I and II, differential equations, linear algebra, general physics I and II, chemistry, and biology. Track prerequisites depend on the student’s track of study. More complete details about academic preparation can be found on the program’s website (http://bio.engr.ku.edu/).

Applicants normally have a B.S. and/or an M.S. degree in an engineering discipline, physical sciences, the life sciences, or a closely related field. Depending on their preparation, students may be required to take additional courses that may or may not count toward the graduate degree.

A student may be admitted to the Bioengineering Program without meeting all the prerequisites if approved by the Admissions Committee. This student must plan to complete the prerequisites in addition to the graduate degree requirements and consultation with the program is required to determine which courses satisfy these requirements. Course credits from prerequisites generally do not apply toward the graduate degree and must be completed with a grade of B or higher.

A highly qualified applicant may apply for admission directly into the Ph.D. program after completing the B.S. degree. Generally, a student who does not have an undergraduate degree in an engineering discipline must complete the M.S. before entering the Ph.D. program. A strong applicant should have outstanding academic credentials, some formal research experience, research interests that fit one of the tracks of study, and a strong potential for advanced study.

Submit your graduate application online (https://gradapply.ku.edu/apply/).

Application Information & Deadlines
In order to receive full consideration, a complete application package should be submitted by the following deadlines:

Fall Admission: December 15

Spring Admission: September 30

Application Materials Include:

1. GRE (or MCAT or DAT) Scores
   a. Please request that ETS send a copy of your Graduate Record Exam (GRE) scores directly to the institution. ETS sends these scores electronically on regular intervals.
   i. The institution code for the University of Kansas is 6871.
   ii. The program/department code is 1603.
   b. If you have already taken the Medical College Admission Test (MCAT) or Dental Admission Test (DAT), submit the scores with your application as an additional document as the testing agency will not send them directly. They will be accepted in lieu of GRE scores.
   c. NOTE: The School of Engineering uses standardized test scores as an additional evaluation tool, but no specific minimum score is required for consideration of an application for admission. We review the entire application package to determine the overall academic preparation and whether the applicant’s interests, background and preparation are a good fit for our program.

2. Official Transcripts
   a. One official transcript from each degree granting institution that the student has attended is REQUIRED for admission. If courses from another university or junior college appear on the degree granting institution’s transcript, we do not need transcripts from the other university or junior college. A scanned copy of the official transcript is acceptable but it MUST be an official copy. Printouts from student portals or websites will NOT be accepted. A final degree conferred transcript sent directly from the degree granting university will be required before the second semester of enrollment should the applicant be admitted and enroll in a program at KU.

3. Letters of Recommendation
   a. Request 3 letters of recommendation from individuals who can speak to your academic and research preparedness. Include the correct e-mail addresses of your recommenders on your online application. An e-mail request with instructions on how to complete the required Recommendation Form and upload their letter to your application electronically will be sent to these recommenders.

4. A Statement of Your Academic Objectives
   a. Your statement is a very important part of your application. Please write a 1-2 page essay describing your academic and career objectives as they relate to bioengineering. It should indicate how and why you have decided to pursue graduate studies in your chosen field. Please discuss the particular areas of focus within the track(s) you wish to study and why you feel KU specifically is a good fit for your particular interests and goals. If you are interested in the research of particular KU faculty members, please identify and discuss. You may also include relevant information about your academic background, research experience, leadership skills, related work and/or volunteer experiences that you feel have prepared you for graduate study. This statement of objectives will be read and used by faculty in the track to evaluate your academic, research and leadership potential as well as to select graduate teaching and/or research assistants. It also plays a role in determining scholarship/fellowship nominations. Please make sure that it is of high quality and demonstrates your readiness for graduate level study and research at KU.
5. Your Curriculum Vitae (CV) or Resume

6. English Proficiency Scores (if English is NOT your native language)
   a. TOEFL iBT (or IELTS) Scores (sent to us directly from the testing agency).
      i. The institution code for the University of Kansas is 6871.
      ii. The program/department code is 1603.
      iii. The department code is 69 for iBT.
   b. NOTES:
      i. For REGULAR admission: All section scores must be at least 20 on the internet-based and computer based TOEFL.
      ii. Admission will NOT be granted if you do not meet the above standard of English Proficiency. Due to a change in policy, we are no longer able to issue an I-20 for these instances.
      iii. To qualify for a GTA offer, you must score at least a 24 on the SPEAKING portion of the iBT and/or score a 50 on the SPEAK test (administered at KU after you arrive).
      iv. For more information regarding English Proficiency Requirements (http://graduate.ku.edu/english-proficiency-requirements/), see the graduate studies website.

7. Proof of Financial Support (International Applicants ONLY)
   a. Obtain the proper Financial Documentation. Scan the document and save it as a pdf file. KEEP THE PAPER COPIES. Be prepared to send the paper copies to the program office at the address below if requested! Although the financial statement is not required for making admission decisions, the U.S. Department of State mandates that evidence of financial resources, such as an official bank statement, be provided in order to issue an I-20 and student visa. It should have the name of the student on the account, not the parent’s name or any other name. See the International Support Services (https://iss.ku.edu/proof-finances/) website for more information.

Funding
Scholarships/Fellowships - The Bioengineering graduate admissions committee nominates applicants for University and School of Engineering scholarships and fellowships based on academic merit and other selection criteria, as specified by the fellowship selection committees. Graduate Teaching Assistantships (GTAs) - Teaching Assistantships are available and are awarded competitively based on academic qualifications. You do not need a separate application to be considered. Graduate Research Assistantships (GRAs) - Students work with their potential academic advisor/mentor to obtain a funded position on a research project at the time of matriculation or within the first year. It is NOT required for prospective students to have KU faculty pledge a GRA position prior to your admission.

Visit Us
The graduate program staff are happy to work with all prospective students in determining the fit between the student and the program. We feel that visiting our campus in Lawrence is a very important step. In order to facilitate your visit to KU, there are two main options:

The first, and most preferred, option entails simply applying for admission to the program. All prospective students are welcome to attend our Open House in October or mid-March. Eligible admitted students may be invited to participate in Campus Sneak Peek in late February (prior to the fall semester of your intended matriculation). These organized campus visit opportunities will allow you to gather a great deal of first-hand information which we hope will help you in making a final decision about whether to attend KU.

The second option is making arrangements to visit us on your own, outside of organized events. With early notification, we will do our best to work with you to provide information and schedule appointments with faculty when possible. Please contact us if you feel that this is the best option for you.

Contact Information
Please contact Graduate Program Coordinator at bioe@ku.edu or (785) 864-5258 to schedule a visit or with questions about the Bioengineering application process.

M.S. Degree Requirements
In addition to general rules and regulations, the student must meet the program’s M.S. requirements. Requirements for the M.S. include course work, a thesis, and a final oral examination.

In the first semester, the student selects a track of study, an advisor, and an advisory committee. The advisory committee guides the student’s development through the Plan of Study (https://gradplan.engr.ku.edu/accounts/login/?next=/) in the chosen track, helps the student select a topic for research leading to the thesis, and participates in the final oral examination. Should the student’s interests change, the advisory committee membership may be changed accordingly, with the approval of the program’s Graduate Studies Director.

The student’s advisory committee consists of a minimum of 3 graduate faculty members and is chaired by the student’s advisor. A more detailed description is available on the program’s website (http://bio.engr.ku.edu/).

Course Requirements
The M.S. program requires a minimum of 30 credit hours* beyond the B.S. to meet degree requirements.

- Core Courses (6 hours)
- Track Courses (18 hours) Students must complete the depth, breadth, and elective courses required in the chosen track (see the program’s website (http://bio.engr.ku.edu/) for track requirements).
- Research (6 hours)

*No more than 9 credits may be taken at the 500-600 level for this degree. No course graded CR or NC (credit/no-credit) can count toward the satisfaction of the degree requirements.

Plan of Study
Students are expected to complete a Plan of Study before beginning the second semester of graduate study. To complete a Plan of Study, a student should have identified a research advisor and thesis committee. Students should work with their research advisors to identify an appropriate list of courses that fulfill degree requirements and support the student’s educational and research objectives. A Plan of Study can be completed online (https://gradplan.engr.ku.edu/accounts/login/?next=/). The advisor, committee members, and graduate studies director must approve the Plan of Study. The Plan of Study can be modified later, if needed, with approval of the advisor, committee members, and Graduate Studies Director. Students are required to complete their masters degree within 7 years from initial enrollment in the program, but typically finish

Thesis and Final Examination
The M.S. student is expected to conduct original research, prepare a written thesis detailing the results, and defend the thesis in a final oral examination. The research generally is expected to be of sufficient quality to permit publication in reputable scientific journals. The final oral examination is scheduled when the advisory committee agrees that the research is complete.

Doctor of Philosophy in Bioengineering

Bioengineering Program
The bioengineering program prepares students to become leading researchers, educators, and entrepreneurs. The program provides knowledge breadth in engineering and the biological sciences and knowledge depth in the student’s area of research interest. The program offers the Master of Science and Doctor of Philosophy degrees in bioengineering and the M.D./Ph.D. combined degree in conjunction with the KU School of Medicine (http://medicine.kumc.edu/). Students have access to innovative research and educational facilities on KU’s Lawrence and KU Medical Center campuses. The student selects from 6 tracks:

1. Bioimaging
2. Computational Bioengineering
3. Biomaterials & Tissue Engineering
4. Biomechanics & Neural Engineering
5. Biomedical Product Design & Development
6. Biomolecular Engineering

The student, in consultation with his or her advisor and advisory committee, develops a Plan of Study (https://gradplan.engr.ku.edu/accounts/login/?next=/) and a research program to satisfy degree requirements.

The program’s goals are:
1. To give students an in-depth understanding of mathematics, engineering principles, physics, chemistry, physiology, and modern biology;
2. To train students to apply basic sciences to biological problems using engineering principles;
3. To train students to do bioengineering research and solve problems related to the design and development of diagnostic and therapeutic technologies that improve human health; and
4. To train students to apply bioengineering research to commercially viable technologies.

Bioengineering research projects typically focus on 1 of 2 broad categories:
1. The development of fundamental scientific knowledge and
2. The development and application of materials, devices, and systems with the goal of improving biological processes, systems, and health care.

Bioengineering students are often involved in measurements, analysis, modeling, computations, design, and development. The program prepares students for careers in industry, academia, health care settings, or government.

Financial Aid
Once admitted, students become eligible for financial aid. Graduate students in the bioengineering program are most often supported through research assistantships, teaching assistantships, or fellowships (e.g., the Madison and Lila Self Fellowship). Research assistantships are arranged by the student and faculty advisor with assistance from the Bioengineering Director if needed. Teaching assistantships are assigned by the Bioengineering Director. Highly qualified applicants are considered for additional support and fellowships. For more information about external and other KU funding options, please visit https://graduate.ku.edu/funding (https://graduate.ku.edu/funding/).

Admission to the Bioengineering Graduate Program
All applicants are expected to have an undergraduate grade point average of 3.0 or higher on a 4.0 scale. The appropriate academic preparation includes both general and track prerequisites. General prerequisites include calculus I and II, differential equations, linear algebra, general physics I and II, chemistry, and biology. Track prerequisites depend on the student’s track of study. More complete details about academic preparation can be found on the program’s website (http://bio.engr.ku.edu/).

Applicants normally have a B.S. and/or an M.S. degree in an engineering discipline, physical sciences, the life sciences, or a closely related field. Depending on their preparation, students may be required to take additional courses that may or may not count toward the graduate degree.

A student may enter the Bioengineering Program before meeting all the prerequisites if approved by the Admissions Committee. This student must plan to complete the prerequisites in addition to the graduate degree requirements and consultation with the program is required to determine which courses satisfy these requirements. Course credits from prerequisites generally do not apply toward the graduate degree and must be completed with a grade of B or higher.

A highly qualified applicant may apply for admission directly into the Ph.D. program after completing the B.S. degree. Generally, a student who does not have an undergraduate degree in an engineering discipline must complete the M.S. before entering the Ph.D. program. A strong applicant should have outstanding academic credentials, some formal research experience, research interests that fit one of the tracks of study, and a strong potential for advanced study.

Submit your graduate application online (https://gradapply.ku.edu/apply/).

Application Information & Deadlines
In order to receive full consideration, a complete application package should be submitted by the following deadlines:

Fall Admission: December 15
Spring Admission: September 30

Application Materials Include:
1. GRE (or MCAT or DAT) Scores (sent to us directly from the testing agency)
a. Please request that ETS send a copy of your Graduate Record Exam (GRE) scores directly to the institution. ETS sends these scores electronically on regular intervals.
   i. The institution code for the University of Kansas is 6871.
   ii. The program/department code is 1603.

b. If you have already taken the Medical College Admission Test (MCAT) or Dental Admission Test (DAT), submit the scores with your application as an additional document as the testing agency will not send them directly. They will be accepted in lieu of GRE scores.

   NOTE: The School of Engineering uses standardized test scores as an additional evaluation tool, but no specific minimum score is required for consideration of an application for admission. We review the entire application package to determine the overall academic preparation and whether the applicant's interests, background and preparation are a good fit for our program.

2. Official Transcripts
a. One official transcript from each degree granting institution that the student has attended is REQUIRED for admission. If courses from another university or junior college appear on the degree granting institution's transcript, we do not need transcripts from the other university or junior college. A scanned copy of the official transcript is acceptable but it MUST be an official copy. Printouts from student portals or websites will NOT be accepted.
   A final degree conferred transcript sent directly from the degree granting university will be required before the second semester of enrollment should the applicant be admitted and enroll in a program at KU.

3. Letters of Recommendation
a. Request 3 letters of recommendation from individuals who can speak to your academic and research preparedness. Obtain the correct e-mail addresses of your recommenders and explain that he/she will be sent an e-mailed request with instructions on how to complete the required Recommendation Form and how to upload their letter to your application electronically.

4. A Statement of Your Academic Objectives (you attach to on-line application)
   a. Your statement is a very important part of your application. Please write a 1-2 page essay describing your academic and career objectives as they relate to bioengineering. It should indicate how and why you have decided to pursue graduate studies in your chosen field. Please discuss the particular areas of focus within the track(s) you wish to study and why you feel KU specifically is a good fit for your particular interests and goals. If you are interested in the research of particular KU faculty members, please discuss it. You may also include relevant information about your academic background, research experience, leadership skills, related work and/or volunteer experiences that you feel have prepared you for graduate study. This statement of objectives will be read and used by faculty in the track to evaluate your academic, research and leadership potential as well as to select graduate teaching and/or research assistants. It also plays a role in determining scholarship/fellowship nominations. Please make sure that it is of high quality and demonstrates your readiness for graduate level study and research at KU.

5. Your Curriculum Vitae (CV) or Resume (you attach to on-line application)

6. English Proficiency Scores (if English is NOT your native language)
   a. TOEFL, iBT (or IELTS) Scores (sent to us directly from the testing agency).
      i. The institution code for the University of Kansas is 6871.
      ii. The program/department code is 1603.
      iii. The department code is 69 for iBT.

   b. NOTES:
      i. For REGULAR admission: All section scores must be at least 20 on the internet-based and computer based TOEFL, or at least 53 on the paper based test.
      ii. Admittance will NOT be granted if you do not meet the above standard of English Proficiency. Due to a change in policy, we are no longer able to issue an I-20 for these instances.
      iii. To qualify for a GTA offer, you must score at least a 24 on the SPEAKING portion of the iBT and/or score a 50 on the SPEAK test (administered at KU after you arrive).
      iv. For more information regarding English Proficiency Requirements (http://graduate.ku.edu/english-proficiency-requirements/), see the graduate studies website.

7. Proof of Financial Support (International Applicants ONLY)
   a. Obtain the proper Financial Documentation. Scan the document and save it as a pdf file. KEEP THE PAPER COPIES. Be prepared to send the paper copies to the program office at the address below if requested! Although the financial statement is not required for making admission decisions, the U.S. Department of State mandates that evidence of financial resources, such as an official bank statement, be provided in order to issue an I-20 and student visa. It should have the name of the student on the account, not the parent’s name or any other name. See the following link (https://iss.ku.edu/proof-finances/) for more information.

Funding
Scholarships/Fellowships - The Bioengineering graduate admissions committee nominates applicants for University and School of Engineering scholarships and fellowships based on academic merit and other selection criteria, as specified by the fellowship selection committees.

Graduate Teaching Assistantships (GTAs) - Teaching Assistantships are available and are awarded competitively based on academic qualifications. You do not need a separate application to be considered.

Graduate Research Assistantships (GRAs) - Students work with their potential academic advisor/mentor to obtain a funded position on a research project at the time of matriculation or within the first year. It is NOT required for prospective students to have KU faculty pledge a GRA position prior to your admission.

Visit Us
The graduate program staff are happy to work with all prospective students in determining the fit between the student and the program. We feel that visiting our campus in Lawrence is a very important step. In order to facilitate your visit to KU, there are two main options:

The first, and most preferred, option entails simply applying for admission to the program. All prospective students are welcome to attend our Open House in October or mid-March. Eligible admitted students may be invited to participate in Campus Visit Days in February (prior to the fall semester of your intended matriculation). These organized campus visit
opportunities will allow you to gather a great deal of first-hand information which we hope will help you in making a final decision about whether to attend KU.

The second option is making arrangements to visit us on your own, outside of organized events. With early notification, we will do our best to work with you to provide information and schedule appointments with faculty when possible. Please contact us if you feel that this is the best option for you.

Contact Information

Please contact the Graduate Program Coordinator at bioe@ku.edu or (785) 864-5258 to schedule a visit or with questions about the bioengineering application process.

Ph.D. Degree Requirements

In addition to general rules and regulations, the student must meet the program’s Ph.D. requirements. Requirements for the Ph.D. include coursework, a doctoral qualifying examination, research skills and residence requirement, a comprehensive examination, a dissertation, and a final oral examination.

In the first semester, the student selects a track of study, an advisor, and an advisory committee. The advisory committee guides the student’s development through the Plan of Study (https://gradplan.engr.ku.edu/accounts/login/?next=) in the chosen track, participates in the comprehensive and final examination, and helps the student select a topic for research leading to the dissertation. Should the student’s interests change, the advisory committee membership may be changed accordingly, with the approval of the program’s Graduate Studies Director. The student’s advisory committee consists of a minimum of 5 graduate faculty members and is chaired by the student’s advisor. A more detailed description is available on the program’s website (http://bio.engr.ku.edu/).

Course Requirements

The Ph.D. program requires a minimum of 60 credit hours* beyond the B.S. to meet degree requirements.

- Core Courses (6 hours)
- Track Courses (30-36 hours) Students must complete the number of hours, including the depth and breadth courses, required in the chosen track (see the program’s website (http://bio.engr.ku.edu/) for track requirements).
- Research (18-24 hours)

*No more than 9 credits may be taken at the 500-600 level.

Plan of Study

Students are expected to complete a Plan of Study before beginning the second semester of graduate study. To complete a Plan of Study, a student should have identified a research advisor and dissertation committee. Students should work with their research advisors to identify an appropriate list of courses that fulfill degree requirements and support the student’s educational and research objectives. A Plan of Study can be completed online (https://gradplan.engr.ku.edu/accounts/login/?next=/). The advisor, committee members, and graduate studies director must approve the Plan of Study. The Plan of Study can be modified later, if needed, with approval of the advisor, committee members, and Graduate Studies Director. Students are required to complete their PhD degree within 8 years from initial enrollment in the program, but typically finish within 4-5 years. A timeline is available here (https://bioengr.ku.edu/sites/bioengr/files/documents/Docs/forms%20and%20docs/PhD%20Timeline.pdf).

Qualifying Examination

Each doctoral student must pass the doctoral qualifying examination, normally taken at the end of the first year of graduate study. The written and oral examination measures the student’s ability to comprehend and communicate technical literature in the chosen track of study. The qualifying examination may be taken twice in a student’s graduate career. A more detailed description of the examination is available on the program’s website (http://bio.engr.ku.edu/).

Research Skills and Responsible Scholarship

In addition to passing the qualifying examination, the doctoral student is required to demonstrate proficiency in research skills and responsible scholarship. The research skill requirement is fulfilled through successful completion of BIOE 800, Bioengineering Colloquium. The responsible scholarship requirement is fulfilled through successful completion of BIOE 801, Responsible Conduct of Research in Engineering or PHCH 817, Pharmaceutical Chemistry - Responsible Research Conduct.

Residence Requirement

Doctoral students must spend a minimum of 2 semesters, which may include the summer session, involved in full-time academic or professional pursuits beyond the baccalaureate degree in graduate study at KU. This may include an appointment for teaching or research and requires that the student be enrolled in a minimum of 6 credit hours a semester. More information can be found in the general doctoral degree requirements of the graduate catalog.

Comprehensive Examination

The comprehensive exam should be taken no later than the end of the Fall semester of the third year for graduate students. The exam consists of a written and oral component that is a grant-style proposal of work to be conducted towards the student’s dissertation research. The exam evaluates the student’s ability to write an original research proposal, design experiments, and interpret results in a sound and critical manner.

The final outcome is intended to establish the scope of the student’s dissertation research. The examining committee consists of the student’s Doctoral Dissertation Committee which is chaired or co-chaired by their research advisor. A more detailed description can be found on the program’s website (http://bio.engr.ku.edu/forms-documents/). Passing the examination advances the student to doctoral candidacy.

Dissertation and Final Examination

The doctoral candidate is expected to conduct original research, prepare a written dissertation detailing the results, and defend the dissertation in a final oral examination. The research is expected to be of sufficient quality to permit publication in reputable scientific journals. The final oral examination is scheduled when the advisory committee agrees that the research is complete.

M.D./Ph.D. Combined Degree Requirements

The Bioengineering Graduate Program offers the combined M.D./Ph.D. (http://www.kumc.edu/md-phd-program.html) degrees, in conjunction with the School of Medicine (http://www.kumc.edu/school-of-medicine.html), for the student who wishes to combine a focus on medicine with interests in bioengineering research. The requirements for the Ph.D. component

---

*No more than 9 credits may be taken at the 500-600 level.*
of the M.D./Ph.D. program are the same as for the Ph.D. program. The student applies to the M.D./Ph.D through the KU Medical Center and not to the Bioengineering program directly. Completion of the M.D./Ph.D. degrees is expected to take approximately 7 years. The M.D./Ph.D. student is encouraged to defend the dissertation before clinical rotations. Scholarships are available for both the M.D. and Ph.D. components of the program.

Graduate Certificate in Biomedical Product Design

The purpose of the certificate is to attract and serve regional professionals whose focus is on working in industry and who are seeking additional training in design and development of biomedical products. Also, because KU does not currently offer an undergraduate Bioengineering/Biomedical Engineering degree, the Certificate in Biomedical Product Design offers additional training in Bioengineering, that will better prepare them for a career in industry and may be a step toward a graduate degree. The certificate will prepare students to be more effective in their careers in private commercial firms or with entrepreneurship in a start-up company. Certificate in Biomedical Product Design may also serve part-time professional students as a stepping stone toward a graduate degree.

The admission requirements for the Certificate in Biomedical Product Design program are similar to the Bioengineering MS degree entrance requirements for the Biomedical Product Design & Development Track, though simplified. Students will apply to the BIOE program for the Certificate in Biomedical Product Design.

The application will include a resume and transcripts. The applications will undergo administrative review to ensure the applicant meets the minimum requirements. All applicants must meet the requirements of the University of Kansas Graduate School and the additional requirements below.

- Overall undergraduate Bachelor's Degree with a GPA: greater than 3.00 (out of 4.0) from a post-secondary institution
- Applicants for the Certificate in Biomedical Product Design should have a baccalaureate degree in engineering, the biological sciences, physical sciences, or a related field.
- For applicants with degrees from non-USA institutions:
  - TOEFL – Scores commensurate with Graduate School requirements, or
  - IELTS – Scores commensurate with Graduate School requirements
- In addition, the student must meet the general coursework requirements below for admission. Students who do not meet Biomedical Product Design & Development preparation requirements at the time of application may be admitted with deficiencies.
  - General Coursework:
    - Mathematics through differential equations and linear algebra (MATH 220 and MATH 290; or equivalents)
    - One year of physics (through PHSX 212, or the equivalent)
    - One course in general chemistry (CHEM 150 or CHEM 130, or the equivalent)
    - One course in molecular/cell/human biology (BIOL 100 or BIOL 150, or the equivalent)
  - Biomedical Product Design & Development preparation courses:

To receive the graduate Certificate in Biomedical Product Design, students must complete a minimum of 12 credit hours of coursework with the following requirements:

**Required Course (3 credit hours):**

<table>
<thead>
<tr>
<th>Code</th>
<th>Title</th>
<th>Hours</th>
</tr>
</thead>
<tbody>
<tr>
<td>ME 760</td>
<td>Biomedical Product Development</td>
<td>3</td>

Department of Chemical & Petroleum Engineering

Chemical and Petroleum Engineering

Chemical engineering has grown out of a combination of chemistry and engineering associated with industrial processes. Today, it comprises knowledge used in processes that change the physical state or composition of materials. Chemical engineers hold key roles in the design, development, production, and purification of materials that are considered essential to human life and well-being, such as food products, fuels and lubricants, pharmaceuticals, fertilizers, synthetic fibers, microelectronic components, and plastics. Chemical engineers are involved in reducing the use of energy to make these products in safe and sustainable ways. They are responsible for minimizing environmental effects of chemical production on the environment.

Petroleum engineering is concerned with the drilling, recovery, production, and distribution of petroleum and natural gas. Petroleum engineers use knowledge of fluid and rock properties in subsurface environments with methods of producing oil and gas safely and economically. At the University of Kansas, the focus is on reservoir engineering to improve production from oil and gas reservoirs. Reservoir engineers use geological detection with computerized mathematical analysis to produce these valuable raw materials. Through such techniques, petroleum engineers continue to extract oil and gas from reservoirs that were considered uneconomical only a few years ago. Petroleum engineering is uniquely challenging in that the raw product must be recovered far from observation.

Undergraduate Programs

The Department of Chemical and Petroleum Engineering offers a Bachelor of Science degree in chemical engineering and a Bachelor of Science degree in petroleum engineering and is accredited by the Engineering Accreditation Commission of ABET, http://www.abet.org (http://www.abet.org/).

The B.S. program in chemical engineering offers a General Program, a Biomedical emphasis, an Environmental emphasis, a Materials Science emphasis, a Petroleum emphasis, and a Premedical emphasis.

Graduate Programs

C&PE graduate programs provide an in-depth academic understanding of chemical engineering and petroleum engineering for students who plan careers in academia, research, or development. The department offers the Master of Science (M.S.) degree in chemical engineering or petroleum engineering and the Doctor of Philosophy (Ph.D.) degree in chemical and petroleum engineering. See the Graduate Studies (p. 2449) section of the online catalog for general university requirements for admission and degrees.

In the master’s program, the primary emphasis is on formal course work in engineering and related subjects. Students take a sequence of core courses in heat, mass and momentum transport, thermodynamics, reaction kinetics, applied mathematics, reservoir engineering, and petroleum recovery.

In the doctoral program, the student completes an independent and novel research project in a significant engineering area. Specific Ph.D. course work depends on the research area and the specific education needed by the student for the project. The general research area reflects the research interests of the faculty. In addition to specialized courses in the department, advanced courses in mathematics and computer science, life sciences, physical sciences, and other branches of engineering may be used to prepare the Ph.D. student for the research project.

These guidelines include departmental requirements and are intended to assist the student and advisory committee in preparing a Plan of Study for the graduate degree.

Courses

C&PE 111. Introduction to the Chemical Engineering Profession. 1 Credit.

The career opportunities for chemical engineers are described and students are introduced to the resources available to them at KU, in the School of Engineering, and in the Chemical and Petroleum Engineering Department. The students are introduced to the curriculum requirements and emphasis options, engineering ethics, basic safety considerations, teamwork, and technical writing. The course includes fundamental calculations and laboratory experiences in material and energy balances and fluid flow. Prerequisite: Corequisite: MATH 104 or MATH 125 or MATH 145.

C&PE 112. Introduction to Chemical Engineering Profession II. 1 Credit.

Students are introduced to engineering ethics, basic safety considerations, teamwork, and technical writing. The course includes fundamental calculations and laboratory experiences in material and energy balances and fluid flow. Prerequisite: Corequisite: CHEM 130 or CHEM 170 or CHEM 190.

C&PE 117. Energy in the Modern World. 1 Credit.

A survey course on global energy supply and demand, production methods and energy economics. Course begins with the matrix of energy supply and demand focusing on fossil fuels and nuclear energy and includes transportation/distribution patterns and issues and current production technologies. We then analyze alternate energy realities and potentials such as solar energy, wind energy, biomass utilization, hydrogen, fuel cells, hydroelectric, geothermal, wave/tidal, and others based on thermodynamic principles and economics. Course is also open to non-engineering students.

C&PE 127. Introduction to Petroleum Engineering Profession. 1 Credit.

An introduction to principles of reservoir engineering and an application of economic principles will be introduced along with the use of computer spreadsheets. A mini petroleum engineering design project will be assigned to illustrate the integration of petroleum engineering principles and the use of computers. C&PE 127 is required of all Petroleum Engineering freshmen but is optional for others. Course is also open to non-engineering students.

C&PE 211. Material and Energy Balances. 4 Credits.

The application of the laws of chemistry, physics, and mathematics to the solution of material and energy balance problems occurring in the process industries. Prerequisite: MATH 125 or MATH 145; CHEM 135 or CHEM 175 or CHEM 195; or consent of department.

C&PE 217. Introduction to Petroleum Drilling Engineering. 2 Credits.

An introduction to modern rotary drilling. Topics covered include: rig systems/hardware, management practices, cost analysis, drilling fluid function formulations and testing, well control systems, cement formulation and placement, drilling bits.
C&PE 219. Drilling Fluids Laboratory. 1 Credits.
Laboratory study of formulation and properties of drilling fluids. "Mud" measurements covered include density, solids content, filtration control and viscosity. Other measurements include compressive strength of cement and cuttings transport properties. Prerequisite: Corequisite: C&PE 217.

C&PE 221. Chemical Engineering Thermodynamics. 3 Credits.
Fundamentals and applications of the First and Second Laws of Thermodynamics with strong emphasis on material, energy and entropy balances to solve engineering problems involving pure components. Topics include: Cycles (Rankine, Brayton, refrigeration, etc.), the calculus of thermodynamics, equations of state for realistic thermodynamic properties, departure functions, equilibrium and stability criteria, fugacity, and single component phase equilibrium (vaporization, melting, sublimation). Prerequisite: MATH 122 or MATH 142 or MATH 126 or MATH 146; and C&PE 211. Prerequisite or Corequisite: PHSX 210 or PHSX 211 or PHSX 213; or consent of department.

C&PE 226. Fundamentals of Biomedical and Biomolecular Engineering. 3 Credits.
Introduction to the building blocks of human and other living organisms with a focus on structure/function mechanisms that are critical for design, modeling, and analysis in living systems. Application of chemical engineering principles, including mass, energy, momentum and charge balances and molecular thermodynamics to analysis of living systems. Applies biochemistry, molecular biology and cell biology to fundamental issues in biochemical engineering, biomedical engineering and biotechnology. Prerequisite: C&PE 211, or consent of instructor. Corequisite: C&PE 221 or ME 212.

C&PE 325. Numerical Methods and Statistics for Engineers. 3 Credits.
An introduction to numerical methods and statistics and their application to engineering problems. Numerical methods topics include finding roots of a single nonlinear equation, numerical solution of ordinary differential equations, numerical integration, and solutions of ordinary differential equations. Statistical topics include regression and curve fitting, probability and probability distributions, expected value and hypothesis testing, and optimization of single and multiple-variable systems. Implementing numerical algorithms using computer programming will be emphasized, along with the fundamentals of programming, including data typing, branching, and iteration. Applications specific to chemical and petroleum engineering systems will be considered. Prerequisite: MATH 126 or MATH 146; and CHEM 135 or CHEM 175 or CHEM 195. Corequisite: MATH 220 or MATH 221 or MATH 320 or MATH 321; and MATH 290 or MATH 291; or consent of department.

C&PE 327. Reservoir Engineering. 4 Credits.
Properties of porous rocks, reservoir fluids, and fluid saturated rocks. Introduction to multiphase flow in porous media including concepts of wettability, capillary pressure and relative permeability. Prerequisite: CHEM 135 or CHEM 175 or CHEM 195.

C&PE 511. Momentum Transfer. 3 Credits.
Solutions of continuity, momentum, and energy equations applied to fluids in confined flow or flowing past submerged objects. Laminar and turbulent flows of both incompressible and compressible fluids are considered. Engineering applications include pressure drop and network analysis of piping lines, flow measurements, fluid moving equipment including the performance of pumps. Prerequisite: C&PE 221 or ME 212; C&PE 121 or C&PE 325; and a grade of C- or higher in MATH 127 or MATH 147, and MATH 220 or MATH 221 or MATH 320 or MATH 321; or consent of department. The Department has a GPA requirement for progression in the program. Details can be found in the catalog.

C&PE 512. Chemical Engineering Thermodynamics II. 3 Credits.
Further application of the laws of thermodynamics to multi-component mixtures and in multi-phase equilibria with focus on vapor-liquid, liquid-liquid, and solid-liquid equilibria. Mixture Fugacity expressions are developed using equations of state with mixing rules or Excess Gibbs Free Energy/activity coefficient models for data correlation or prediction. Chemical equilibrium of reactions is also discussed. Prerequisite: C&PE 121 or C&PE 325; C&PE 211; C&PE 221; and CHEM 330 or CHEM 380; or consent of department. The Department has a GPA requirement for progression in the program. Details can be found in the catalog.

C&PE 519. Drilling Fluids Laboratory. 1 Credits.
Laboratory study of formulation and properties of drilling fluids. "Mud" measurements covered include density, solids content, filtration control and viscosity. Other measurements include compressive strength of cement and cuttings transport properties. Prerequisite: C&PE 511.

C&PE 521. Heat Transfer. 3 Credits.
An applied study of the various (conductive, convective, and radiative) heat transfer mechanisms in solid and fluid systems both transient and steady-state. Engineering applications include: conduction in solids and fluids, free and forced convection in fluids, radiation, boiling and condensing fluids, and design of heat exchangers. Prerequisite: C&PE 121 or C&PE 325; C&PE 221 or ME 312; C&PE 511 or ME 510; MATH 122 or MATH 142 or MATH 127 or MATH 147; and MATH 220 or MATH 221 or MATH 320 or MATH 321; or consent of instructor. The Department has a GPA requirement for progression in the program. Details can be found in the catalog.

C&PE 522. Economic Appraisal of Chemical and Petroleum Projects. 2 Credits.
Consideration of the economic factors important in the development of the chemical or petroleum enterprise. Applications of economic evaluation methods to engineering project development. Consideration of risk and uncertainty in project development. Prerequisite: C&PE 121 or C&PE 325; and a grade of C- or higher in MATH 126 or MATH 146 and PHSX 210 or PHSX 211 or PHSX 213; or consent of department.

C&PE 524. Chemical Engineering Kinetics and Reactor Design. 3 Credits.
Development and solution of the material and energy balance equations for continuous and batch reactors. These balance equations are applied in (a) the determination of intrinsic kinetics, (b) the design of reactors and (c) the analysis of reactor behavior. Both homogeneous and heterogeneous reaction systems are considered. Prerequisite: C&PE 511; C&PE 512; and a grade of C- or higher in MATH 220 or MATH 221 or MATH 320 or MATH 321; or consent of department. Corequisite: C&PE 525. The Department has a GPA requirement for progression in the program. Details can be found in the catalog.

C&PE 525. Heat and Mass Transfer. 4 Credits.
An applied study of the various heat and mass transfer mechanisms in solid and fluid systems. Heat transfer mechanisms include conduction and the concept of conductivity at the molecular level, convection, and radiation. Mass transfer fundamentals include diffusion and the concepts of diffusivity at the molecular level and shell mass balances including diffusion, convention, and consumption or generation source terms. Steady state and transient heat and mass transfer engineering applications will be considered. Prerequisite: C&PE 221 or ME 212; C&PE 325; C&PE 511 or ME 510; and a grade of C- or higher in MATH 220 and MATH 127; or consent of department. The Department has a GPA requirement for progression in the program. Details can be found in the catalog.

C&PE 527. Reservoir Engineering II. 4 Credits.
Lectures on single phase flow and pressure distribution in reservoirs. Calculations in drawdown, buildup, multiple rate, fractured systems, gas and injection well testing. Material balance calculations for gas, gas-condensate, undersaturated, and saturated reservoirs. Prerequisite: C&PE 327; ME 212 or C&PE 221; a grade of C- or higher in MATH 220 or MATH 221 or MATH 320 or MATH 321; or consent of department. The Petroleum major has a GPA requirement for specific courses to progress to junior year courses. Details can be found in the catalog.

C&PE 528. Well Logging. 3 Credits.
Analysis of well logs to determine properties of reservoir rocks, fluid saturations and lithology, and production logging. Prerequisite: C&PE 327 or consent of department. The Petroleum major has a GPA requirement for specific courses to progress to the Junior year courses. Details can be found in the catalog.

C&PE 601. Undergraduate Topics in Chemical and Petroleum Engineering. 1-4 Credits.
Undergraduate study in various branches of Chemical and Petroleum Engineering on topics that may vary from year to year. Prerequisite: Varies.

C&PE 611. Design of Unit Operations. 3 Credits.
Application of chemical engineering principles to design pumps, heat exchangers, and separation equipment. Staged separation processes including distillation, extraction and absorption, membrane separations, and modes of operation will be considered. Sizing of equipment, energy consumption and materials of construction will also be addressed. Prerequisite: C&PE 211; C&PE 511; C&PE 512; C&PE 521 or C&PE 525; C&PE 523 or C&PE 525; C&PE 524; or consent of department. The Department has a GPA requirement for progression in the program. Details can be found in the catalog.

C&PE 612. Environmental Assessment of Chemical Processes. 3 Credits.
A discussion and project-based survey of environmental issues in chemical engineering, including environmentally conscious design, environmental fate and transport, green chemistry, and life cycle analysis. Focus will be on the design, implementation and management of comprehensive environmental assessments for existing and new industrial facilities with an emphasis on the technical and economic impacts of catalytic systems on pollution control strategies.

C&PE 613. Chemical Engineering Design I. 4 Credits.
Synthesis, design and economic analysis of petrochemical, and chemical plants. Applications in computer aided engineering applied to these topics. Prerequisite: C&PE 611 and C&PE 615; or consent of department. The Department has a GPA requirement for progression in the program. Details can be found in the catalog.

C&PE 614. Reaction Engineering for Environmentally Benign Processes. 3 Credits.
Principles of reaction engineering and green chemistry applied to processes of the future. With a case-based introduction to the design and optimization of catalytic processes and reaction systems, focus will be on key reaction engineering concepts, including catalysis, mechanisms, reaction kinetics, heterogeneous reactions, reactor types and economic evaluation. Students will develop a multidisciplinary understanding of chemical, biological and molecular concepts and of the multiscale character of developing and designing processes from the micro level to the macro level. Prerequisite: Senior standing in engineering or the physical/biological sciences.

C&PE 615. Introduction to Process Dynamics and Control. 3 Credits.
The behavior of chemical processing equipment in the presence of disturbances in operating conditions is analyzed. Control systems are designed based on the criteria of system stability and optimal system performance. Prerequisite: C&PE 511; C&PE 512; C&PE 524; and C&PE 525; or consent of department. The Department has a GPA requirement for progression in the program. Details can be found in the catalog.

C&PE 616. Chemical Engineering Laboratory I. 4 Credits.
Laboratory study of chemical engineering concepts of thermodynamics, fluid flow, heat transfer, mass transfer, and reaction kinetics. Includes emphasis on technical communication skills. Prerequisite: C&PE 511; C&PE 512; C&PE 524; C&PE 525; and ENGL 102 or ENGL 105; or consent of department. The Department has a GPA requirement for progression in the program. Details can be found in the catalog.

C&PE 617. Drilling and Well Completion. 3 Credits.
Design and analysis of rotary drilling and well completion systems; casing design, cementing, and perforating. Safety and ethical considerations in drilling and fluid disposal operations. Prerequisite: C&PE 217; C&PE 219; C&PE 327; C&PE 511 or ME 510; or consent of department. The Petroleum major has a GPA requirement for specific courses to progress to the senior year courses. Details can be found in the catalog.

C&PE 618. Improved Oil Recovery. 3 Credits.
Improved Oil Recovery processes such as primary, secondary, and tertiary oil recovery techniques will be presented. This includes miscible/immiscible displacement, chemical processes such as polymer flood, surfactant and micellar flood, and thermal recovery techniques such as steam flooding, in-situ combustion, and other EOR techniques. Design of waterfloods including preparation of a reservoir description for waterflood evaluation. Prerequisite: C&PE 527; or consent of the department. The Petroleum major has a GPA requirement for specific courses to progress to the Junior year courses. Details can be found in the catalog.

C&PE 619. Petroleum Engineering Laboratory I. 3 Credits.
Laboratory study of methods to determine rock and fluid properties related to petroleum engineering including phase behavior, viscosity, permeability, porosity, capillary pressure, oil recovery, water/oil displacement, fluid flow, and heat transfer coefficients. Analysis of experimental uncertainty. Oral and written presentations are required. Prerequisite: ENGL 203 (Writing for Engineers); C&PE 219; C&PE 327; C&PE 511 or ME 510; or consent of department. The Petroleum major has a GPA requirement for specific courses to progress to junior year courses. Details can be found in the catalog.

C&PE 620. Enhanced Oil Recovery. 3 Credits.
Enhanced Oil Recovery processes such as primary, secondary, and tertiary oil recovery techniques will be presented. This includes miscible/immiscible displacement, chemical processes such as polymer flood, surfactant and micellar flood, and thermal recovery techniques such as steam flooding, in-situ combustion, and other EOR techniques. Prerequisite: C&PE 527 and C&PE 618 or consent of instructor.

C&PE 624. Process Safety and Sustainability. 3 Credits.
An introductory course designed to acquaint students with the necessary global aspects and ethics of risk-based process safety and sustainability. Topics will include elements of process safety, process safety management, historical and contemporary case studies of major accidents in the chemical and petroleum industry, overview of current government regulation (e.g. OSHA, EPA, etc.), and ethics. Students will receive an introduction to sustainable (“green”) chemistry and engineering followed by more quantitative Life Cycle Analysis (LCA) to compare technologies and products. Prerequisite: C&PE 511 or ME 510; and senior standing in chemical or petroleum engineering; or consent of
department. The Department has a GPA requirement for progression in the program. Details can be found in the catalog.

C&PE 625. Unconventional Reservoirs. 3 Credits.
Principles of unconventional reservoir engineering including properties and use of shale reservoirs, hydraulic fracturing, and relevant environmental and economic factors. Prerequisite: C&PE 511; C&PE 522; C&PE 527; C&PE 528; ME 211 or CE 201 and CE 310; GEOL 331 or GEOL 591; Geology for Petroleum Engineers; or consent of department. The Petroleum major has a GPA requirement for specific courses to progress to the senior year courses. Details can be found in the catalog.

C&PE 626. Chemical Engineering Laboratory II. 3 Credits.
Laboratory study of chemical engineering concepts of thermodynamics, fluid flow, heat transfer, mass transfer, reaction kinetics, and process control. Includes emphasis on technical communication skills. Prerequisite: ENGL 102 or ENGL 105; C&PE 511; C&PE 512; C&PE 524; C&PE 525; C&PE 615; and C&PE 616; or consent of department. The Department has a GPA requirement for progression in the program. Details can be found in the catalog.

C&PE 627. Petroleum Production. 3 Credits.
Design and analysis of natural production and artificial lift systems, including beam pumping, gas lift, and submersible pumps. Vertical and horizontal two phase flow, compression, metering, acidizing, fracturing, and pipeline flow systems. Treatment of ethics considerations in production contracts and leasing arrangements. Prerequisite: C&PE 327; C&PE 511 or ME 510; or consent of department. The Petroleum major has a GPA requirement for specific courses to progress to the senior year courses. Details can be found in the catalog.

C&PE 628. Petroleum Engineering Design. 3 Credits.
Design problems related to petroleum reservoir development such as selection of optimum well spacing for a specified reservoir, evaluation of a producing property or installation of a waterflood. Designs consider economic, uncertainty analysis, as well as conservation, environmental, and professional ethics factors. Prerequisite: C&PE 522; C&PE 527; C&PE 528; C&PE 618; C&PE 619; GEOL 535; or consent of department. The Petroleum major has a GPA requirement for specific courses to progress to the senior year courses. Details can be found in the catalog.

C&PE 640. Natural Gas Engineering. 3 Credits.
Principles of natural gas engineering including resource distribution and evaluation, composition and properties, production, processing, transportation, storage and relevant environmental and economic aspects. Prerequisite: C&PE 625 and C&PE 627; or consent of department.

C&PE 651. Undergraduate Problems. 1-4 Credits.
Investigation of a particular problem in the field of chemical or petroleum engineering. The problem or research topic is identified jointly by the student and the faculty research supervisor. A final report is required.

C&PE 654. Biocatalysis. 3 Credits.
Introductory and advanced topics in biocatalysis with focus on enzymatic reactions. Enzymology will provide the fundamental basis for discussion of kinetics and bio-process development. Advanced topics include: enzymes in non-aqueous solvents, immobilization techniques, whole-cell transformations, bio-reactors.

C&PE 655. Introduction to Semiconductor Processing. 3 Credits.
An overview of various processes to fabricate semiconductor devices and integrated circuits. Topics covered include crystal growth, oxidation, solid-state diffusion, ion implantation, photolithography, chemical vapor deposition, epitaxial growth, metalization, and plasma etching of thin films. (Same as EECS 670.) Prerequisite: Senior standing in C&PE or EECS, or consent of instructor.

C&PE 656. Introduction to Biomedical Engineering. 3 Credits.
An interdisciplinary introduction to the field of biomedical engineering. This course covers a breadth of topics including biotransport, biomechanics, biomaterials, tissue engineering, drug delivery, biomedical imaging, computational biology, and biotechnology. Students are exposed to these broad topics, and go further in depth in a topic of their choice with the semester project. Prerequisite: Junior or Senior-level standing in Engineering or consent of instructor.

C&PE 657. Polymer Science and Technology. 3 Credits.
Introduction to polymer chemistry, science, technology, and processing. The course covers the principles of polymer synthesis and the structure-property relationships in the solid state and in solution, such as solubility, rheology and mechanical properties. Principles of polymer processing are introduced. Students will learn to understand from an engineering perspective how polymers are created and used. Prerequisite: Senior or graduate student standing in chemical engineering, chemistry, or consent of instructor.

C&PE 661. Undergraduate Honors Research. 1-3 Credits.
This course involves the investigation of a particular problem in the field of chemical or petroleum engineering. C&PE 661 should be taken, rather than C&PE 651, for students seeking Departmental Honors in Chemical Petroleum Engineering. C&PE 661 may also be used by students in the Honors Program to help satisfy the course requirement of this program. The design or research topic is identified jointly by the student and faculty research supervisor. Prerequisite: C&PE 121 or C&PE 325; C&PE 211; C&PE 511; C&PE 512; overall GPA >3.5; and engineering GPA >3.5; or consent of the instructor.

C&PE 671. Senior Thesis. 3 Credits.
This course involves the investigation of a particular problem in the field of chemical or petroleum engineering as a continuation for students with previous research experience, by invitation. The design or research topic is identified jointly by the student and faculty research supervisor and faculty committee. Students will present periodically and receive instruction and feedback on their presentations. A written thesis and public oral defense with committee are also required. Prerequisite: C&PE 651 or C&PE 661; and invitation and permission of instructor, open to seniors only.

C&PE 676. Principles of Biomolecular Engineering. 3 Credits.
Application of chemical engineering principles, including transport phenomena, reaction kinetics and thermodynamics, to analysis of living systems. Applies biochemistry, molecular biology and cell biology to fundamental issues in biochemical engineering, biomedical engineering and biotechnology. Prerequisite: C&PE 511, C&PE 512, or consent of instructor. Corequisite: C&PE 524, C&PE 525, or consent of instructor.

C&PE 678. Applied Optimization Methods. 3 Credits.
Study of methods for solving optimization problems encountered in engineering and the natural sciences, with specific applications illustrating analytical and numerical techniques. Topics covered include methods, penalty functions, linear programming, nonlinear and integer programming, stochastic optimization approaches, and treatment of constrained problems. A semester project is required. Prerequisite: Senior standing or consent of instructor.

C&PE 686. Bioprocess Engineering. 3 Credits.
Provides students with essential knowledge and understanding of biochemical engineering fundamentals to the design, development, operation and control of biologically based industrial processes. The course will cover unit operations key to the production of chemicals and pharmaceuticals using cultured cells, such as bioreactors, separations, centrifuges, chromatography and lyophilizers. Issues unique to biologically-based processes such as the need for aseptic
conditions, clean-in-place procedures, containment, material handling, sequencing, safety and biohazard, multi-purpose plant design, and process measurement and control. Prerequisite: Senior or graduate student standing in Chemical Engineering, or consent of the instructor.

C&PE 701. Methods of Chemical and Petroleum Calculations. 3 Credits.
The utilization of advanced mathematical methods and computing techniques in the solution of problems in these fields.

C&PE 710. Subsurface Methods in Formation Evaluation. 3 Credits.
Study of subsurface methods and their applications to exploration, evaluation, and production of hydrocarbon reservoirs. Emphasis is on fundamentals of quantitative well log interpretations and the use of well log data in solving geologic and reservoir engineering problems, e.g., porosity, hydrocarbon saturation, permeable bed thickness, permeability, correlation, structural mapping, and stratigraphic and paleoenvironmental studies. Laboratory. Prerequisite: GEOL 535 or C&PE 517 or consent of instructor.

C&PE 712. Environmental Assessment of Chemical Processes. 3 Credits.
A discussion and project-based survey of environmental issues in chemical engineering, including environmental conscious design, environmental fate and transport, green chemistry, and life cycle analysis. Focus will be on the design, implementation and management of comprehensive environmental assessments for existing and new industrial facilities with in-depth analysis of the technical and economic impacts of catalytic systems on pollution control strategies. A comprehensive research paper is required as a final project.

C&PE 714. Reaction Engineering for Environmentally Benign Processes. 3 Credits.
Principles of reaction engineering and green chemistry applied to processes of the future. With a case-based introduction to the design and optimization of catalytic processes and reaction systems, focus will be on key reaction engineering concepts, including catalysis, mechanisms, reaction kinetics, heterogeneous reactions, reactor types and economic evaluation. Students will develop a multidisciplinary understanding of chemical, biological and molecular concepts, and will develop and design processes from the micro level to the macro level. A final research paper is required.

C&PE 715. Topics in Chemical and Petroleum Engineering: 1-4 Credits.
Study in various branches of Chemical and Petroleum Engineering on topics that may vary from year to year.

C&PE 721. Chemical Engineering Thermodynamics. 3 Credits.
Chemical engineering applications of advanced thermodynamics and physical chemistry. Prerequisite: C&PE 512.

C&PE 722. Kinetics and Catalysis. 3 Credits.
Modeling and analysis of chemical reactors with emphasis on heterogeneous catalytic reaction systems. Prerequisite: C&PE 524.

C&PE 725. Cellular and Molecular Pharmaceutics. 3 Credits.
The pharmaceutical relevance of fundamental and advanced concepts in cell biology and the molecular interactions responsible for cell and tissue functions, homeostasis in health and disease will be presented. Current analytical methods for examining cells and tissues, and molecular components important in understanding drug and protein biodistribution and metabolism will be discussed. Discussion topics will include the chemical and physical properties of small molecules, proteins, nucleic acids and lipids and their impact on cellular and subcellular structures and ultimately of either adverse or therapeutic benefit. (Same as PHCH 725.) Prerequisite: Graduate standing or consent of instructor.

C&PE 731. Convective Heat and Momentum Transfer. 3 Credits.
The formulation and solution of steady- and unsteady-state convective heat and momentum transfer problems. Applications of boundary layer equations to free and forced convection with study of similarity and integral methods of solution for laminar and turbulent flow; development of analogies; transport properties from kinetic theory of gases viewpoint; introduction to numerical methods. Prerequisite: ME 610/C&PE 511 and ME 612/C&PE 521 or equivalent. A concurrent course in partial differential equations is helpful.

C&PE 732. Advanced Transport Phenomena II. 3 Credits.
The formulation and solution of steady- and unsteady-state mass transfer problems (including those complicated by momentum and heat transfer). This course is the sequel to C&PE 731 and relies upon much of the material treated there. The mathematical approach predominates and the methods available for determining suitable mass transfer coefficients are covered.

C&PE 751. Basic Rheology. 3 Credits.
Basic rheology including classification of classical bodies based on their stress and strain tensors, rheological equation of state, material functions, generalized Newtonian and general linear viscoelastic fluids, mechanical models such as those of Jeffreys and Maxwell. Prerequisite: C&PE 511 or an equivalent course in fluid mechanics.

C&PE 752. Tissue Engineering. 3 Credits.
An introduction to the rapidly growing and continuously evolving field of tissue engineering. Tissue engineering applies principles and methods of engineering and life sciences toward understanding and development of biological substitutes to restore, maintain and improve tissues functions. In this course, students study the basic science, engineering and medicine required for tissue engineering, learn state-of-the-art technology and practice, and create a literature-based proposal for a tissue engineered medical product. Prerequisite: Senior or graduate standing in engineering; or consent of instructor.

C&PE 753. Introduction to Electrochemical Engineering. 3 Credits.
Basic principles of electrochemical engineering as they are applied to energy conversion and storage devices, industrial electrolytic processes and corrosion. Areas covered range from electrochemical thermodynamics, ionic phase equilibria, electro-kinetics and ionic mass transport to mathematical modeling of electrochemical systems. Prerequisite: C&PE 511, C&PE 512, C&PE 524 or equivalent; knowledge of a programming language.

C&PE 754. Biocatalysis. 3 Credits.
Introductory and advanced topics in biocatalysis with focus on enzymatic reactions. Enzymology will provide the fundamental basis for discussion of kinetics and bio-process development. Advanced topics include: enzymes in non-aqueous solvents, immobilization techniques, whole-cell transformations, bio-reactors. Knowledge of the theoretical basis for these techniques and processes will be demonstrated within a class project.

C&PE 755. Introduction to Semiconductor Processing. 3 Credits.
An overview of various processes to fabricate semiconductor devices and integrated circuits. Topics covered include crystal growth, oxidation, solid-state diffusion, ion implantation, photolithography, chemical vapor deposition, epitaxial growth, metallization, and plasma etching of thin films. A term paper on an approved topic of fabrication referencing current peer reviewed literature is required.

C&PE 756. Introduction to Biomedical Engineering. 3 Credits.
The graduate elective form of C&PE 656. Additional assignments commensurate with the graduate-level course designation are required for this section. Prerequisite: Graduate-level standing in Engineering, or consent of instructor.

C&PE 757. Polymer Science and Technology. 3 Credits.
The graduate elective form of C&PE 657. Additional assignments on current research directions in the field commensurate with the graduate-level course designation are required for this section. Prerequisite: Graduate-level standing in engineering, or consent of instructor.

C&PE 765. Corrosion Engineering. 3 Credits.
Electrochemical basis of corrosion. Types of corrosion and corrosive atmospheres. Corrosion control measures and industrial problems. Prerequisite: ME 306 or CHEM 135 or CHEM 175 or CHEM 195.

C&PE 771. Advanced Reservoir Engineering. 3 Credits.
Physical principles of petroleum production; gas drive performance; partial water drive performance; pressure maintenance through gas and water injection. Prerequisite: C&PE 527.

C&PE 778. Applied Optimization Methods. 3 Credits.
Study of methods for solving optimization problems encountered in engineering and the natural sciences, with specific applications illustrating analytical and numerical techniques. Topics covered include gradient methods, penalty functions, linear programming, nonlinear and integer programming, stochastic optimization approaches, and treatment of constrained problems. Homework problems involving theoretical concepts and a theoretically-based semester project are required.

C&PE 790. Introduction to Flow in Porous Media. 3 Credits.
Generalized Darcy’s law, vector equations, solutions of partial differential equations with various boundary conditions as applied to the flow of fluids in porous media. Prerequisite: C&PE 527.

C&PE 795. Enhanced Petroleum Recovery. 3 Credits.
A study of improved oil recovery processes such as miscible displacement, microemulsion displacement, and thermal methods. Prerequisite: C&PE 618 or permission of instructor.

C&PE 798. Phase Equilibrium. 3 Credits.
A study of phase behavior and equilibrium from a molecular perspective. Focus will be on vapor-liquid, liquid-liquid and solid-liquid equilibrium with advanced topics in compressed and supercritical fluids, petroleum applications, ionic solutions and others.

C&PE 800. Seminar. 0.5-1 Credits.
Every fall, five to six seminar sessions will be devoted to providing incoming students information on available thesis/dissertation research projects, library resources, computing environment and topics related to the issues of responsible scholarship in the fields of Chemical and Petroleum Engineering. For the remainder of the year, the seminar will involve presentation of current research and other topics of interest to chemical and petroleum engineers. These presentations will be made by invited guests, faculty, and advanced graduate students. Student attendance is required. Graded on a satisfactory/unsatisfactory basis.

C&PE 801. Introduction to Research. 1 Credits.
One hour per week in which the staff introduces entering graduate students to research. Topics include discussion of research methods, methods of effectively tapping library resources, preparation of literature surveys, and presentation of results. Faculty members of the department will make presentations of their current research interests. Offered fall only. Prerequisite: Corequisite: C&PE 800.

C&PE 802. CEBC Colloquium. 0.5-1 Credits.
A forum in which graduate and postdoctoral students, and faculty present the results of CEBC research and literature surveys that support the mission of CEBC.

C&PE 803. Research. 1-6 Credits.
For M.S. candidates.

C&PE 804. Petroleum Management Seminar. 1 Credits.
Structure, operation, and problems of the petroleum industry from a management viewpoint. Presentations will be made by faculty, advanced students, and invited guests. Prerequisite: Permission of instructor.

C&PE 825. Graduate Problems in Chemical and Petroleum Engineering. 1-5 Credits.
Advanced laboratory problems, special research problems, or library reading problems. Three hours maximum acceptable for master's degree.

C&PE 902. Preparation for the Ph.D. Comprehensive Examination. 3 Credits.
Preparation of a research proposal in an area assigned by the student’s advisory committee. The grade received on the Ph.D. comprehensive examination will apply to this credit.

C&PE 904. Research. 1-12 Credits.
For Ph.D. candidates.

C&PE 910. Industrial Development of Catalytic Processes. 3 Credits.
Students adopt an interdisciplinary team approach to developing strategies for the design and optimization of catalytic processes. Examples of case studies will be derived from industry or from research testbeds. Students collaborate in multiscale process development involving catalyst and reactor design, reaction system design, modeling and optimization, economic analysis and environmental assessment needed for the development of a catalytic process at either the pilot or production scale.

C&PE 911. Industrial Practicum. 1-3 Credits.
Graduate students engage in an industrial research internship experience with collaborators in industry.

C&PE 912. Teaching College Level Engineering and Science Practicum. 1 Credits.
Future university instructors learn how to critically examine course content and teaching strategies, and prepare courses that will address the learning needs of the diverse student populations of the future. Students participate in weekly in-class workshops and symposia, as well as a teaching practicum experience during this course.

C&PE 919. Advanced Topics in Process Modeling Simulation or Control: _____, 1-4 Credits.
Advanced study in process modeling, simulation or control on topics which may vary from year to year.

C&PE 929. Advanced Topics in Chemical and Petroleum Engineering: _____, 1-4 Credits.
Advanced study in various branches of chemical and petroleum engineering on topics which may vary from year to year.

C&PE 933. Heat and Mass Transport in Porous Media. 3 Credits.
A study of industrial problems involving heat and mass transport in porous media such as packed columns, catalyst beds, chemical reactors, and petroleum reservoirs. Mechanisms of interphase and intraphase transport, diffusion, and dispersion. Included are methods of solution of the describing differential equations.

C&PE 934. Heat Transport with Phase Change. 3 Credits.
A fundamental treatment of heat transfer occurring during boiling and condensation. Included are nucleate and film boiling, film and dropwise condensation, and two-phase flow.

**C&E 936. Industrial Separation Processes. 3 Credits.**
Determination and treatment of vapor-liquid separations, including methods for obtaining and treating equilibrium data, procedures for calculating multi-component separations by distillation, absorption, extraction, and adsorption.

**C&E 937. Applied Rheology. 3 Credits.**
Industrial applications of fluid mechanics including compressible flow, flow of non-Newtonian fluids, flow of drag reducing systems all to be considered laminar and turbulent flow regimes, and within conduits, and porous media.

**C&E 939. Advanced Topics in the Transport Phenomena: 1-4 Credits.**
Advanced study in various branches of transport phenomena on topics which may vary from year to year.

**C&E 940. Data Analysis in Engineering and Natural Sciences. 3 Credits.**
Statistical inference and data analysis, emphasizing interpretation of observations from areas of engineering and natural sciences where controlled experimentation is not possible. The basics of elementary statistics and matrix algebra are covered, followed by topics in time, series analysis, map analysis, including automatic contouring, and multivariate procedures such as principal components, discrimination and factor analysis. A suite of computer programs is provided. Students are encouraged to use data from their own graduate research in class projects.

**Bachelor of Science in Chemical Engineering**

**B.S. in Chemical Engineering Program**

Chemical engineering has grown out of a combination of chemistry and engineering associated with industrial processes. Today, it possesses a body of knowledge used in the synthesis, design testing, scale-up, operation, control, and optimization of processes that change the physical state or composition of materials. Chemical engineers have played central roles in the industrial development of materials that have had major social influence, such as the production of fuels and lubricants, fertilizer, synthetic fibers, and plastics. They will be centrally involved in reducing the polluting effects of certain byproducts and cleaning up unwanted residues from previous processes.

The first part of the program offers courses on the fundamental principles underlying the conversion of raw materials into a desired product by chemical and physical processes. Development of the concepts of engineering design begins with the application of fundamental principles to solve engineering problems in these courses and culminates in a series of senior-level design courses that require comprehensive integration of technical knowledge as well as consideration of economic, environmental, safety, and societal concerns. This experience is essential in preparing graduates for entry-level positions.

**Educational Objective**
The objective of the program is to prepare graduates for professional practice in industry, government, or post-undergraduate training in chemical engineering, medicine, and other related disciplines.

**Professional Opportunities**
Chemical engineers are concerned with the chemical processes that turn raw materials into valuable products. They serve industrial and other activities where processes occur in which materials undergo a chemical or physical change. Chemical engineers build a bridge between science and manufacturing, applying the principles of chemistry, biology and engineering to solve problems involving the production or use of chemicals. Chemical engineers typically work for manufacturing companies, environmental companies, health care and pharmaceuticals, petroleum industry, biotechnology, or consulting firms.

**Undergraduate Admission to the School of Engineering**

Admission to the KU School of Engineering (and its degree programs) is selective. Students may be admitted to an engineering or computer science degree program (https://engr.ku.edu/2021-curriculum-guide-links/) as freshmen (first year) students, but all admissions, for both in-state and out-of-state students, are selective. Applications are judged on several factors, such as high school record, scores on national tests, academic record at college or university level, and trend of grades and more. High school transcripts are required.

**Minimum Academic Standards for Admission to the School of Engineering**

To be considered for admission to the School of Engineering, beginning first-year students must meet or exceed the following minimum standards:

- Must be admissible (https://admissions.ku.edu/major-specific-requirements/) to the University of Kansas by assured admissions or individual review, AND
- Have a 3.0+ high school GPA, AND
- Demonstrate mathematics preparedness by:
  - Obtaining a mathematics ACT score of 22+ (or math SAT score of 540+), or
  - Achieving a ‘B’ or better in ‘college algebra’ or a more advanced mathematics course, or
  - Achieving a ‘C’ or better in a high school calculus course; or
  - Earning credit via IB or AP credit for the above-mentioned courses in accordance with KU placement credit requirements; or
  - Achieving at minimum a qualifying score for MATH 104 on the ALEKS mathematics placement exam.

**Minimum Academic Standards for Direct Admission into Degree Program for incoming Freshmen**

Students with a 26+ Math ACT (600+ Math SAT) or meet eligibility requirements for MATH 125 (Calculus I) (p. 1622) may be admitted directly into their chosen major, with the exception of those seeking admission into the Electrical Engineering, Computer Science, Computer Engineering, and Interdisciplinary Computing (EECS) majors. For EECS program admission, students must:

- Be admissible (https://admissions.ku.edu/major-specific-requirements/) to the University of Kansas by assured admissions or individual review, AND
- Have a 3.0+ high school GPA, AND
- Demonstrate mathematics preparedness by:
• Obtaining a mathematics ACT score of 28+ (or math SAT score of 660+), or
• Achieving a ‘C’ or better in a high school calculus course; or
• Earning credit via IB or AP credit for the above-mentioned course in accordance with KU placement credit requirements; or
• Achieving at minimum a qualifying score for MATH 125 on the ALEKS mathematics placement exam.

Students who are not admissible to their desired major are admitted to the School of Engineering as undecided engineering undergraduate students.

Exploring Engineering

Students not admitted directly to the School of Engineering or their major but who are admissible to the university may be admitted to the College of Liberal Arts and Sciences as an Undecided student. They can later re-apply to the School of Engineering during the semester they are completing the admission requirements for transfer students.

Transfer Admission Standards

Applications from all transfer students, whether from other institutions or from other academic schools at the University of Kansas, are evaluated on a case-by-case basis. Transfer students must be admissible (http://admissions.ku.edu/apply/requirements/ustransfer/) to KU AND have a cumulative college transferable grade-point average of 2.5+ to be considered. In addition, students must have grades of “C” or better in those courses in math (must include MATH 125 Calculus I or equivalent), science, and engineering applicable to the engineering degree.

Current KU Students admitted to other academic units may apply to the School of Engineering by completing a Change of School form (https://inowformsprivate.ku.edu/imagenowforms/fs/?form=OUR%20Change%20of%20School%20Form).

Already Applied to KU, But Not Engineering?

Don’t worry. It’s not too late to change your mind if you’ve already applied to KU and selected a major outside the School of Engineering. If you think one of the 12 engineering or computer science majors is a better fit for your talents, you can still change your requested major — preferably before May 1 — and be considered for admission to the School of Engineering and all the benefits that go with it.

To update your application, visit Undergraduate Admissions (http://admissions.ku.edu/update-your-application/) and click on “Change application term, major, mailing address, and/or email address.”

Please contact a member of our recruitment team (studyengineering@ku.edu), 785-864-3881, if you have any difficulty.

General Education Requirements

The KU Core is the university-wide curriculum that all incoming undergraduate students will complete as part of their degree requirements. It comprises three general education goals and three advanced education goals. Associated with each goal are one or more learning outcomes:

- GE 1.1, Goal 1, Outcome 1, Critical Thinking;
- GE 1.2, Goal 1, Outcome 2, Quantitative Literacy;
- GE 2.1, Goal 2, Outcome 1, Written Communication;
- GE 2.2, Goal 2, Outcome 2, Oral Communication;
- GE 3H, Goal 3, Outcome 1, Arts & Humanities;
- GE 3N Goal 3, Outcome 2, Natural Sciences;
- GE 3S Goal 3, Outcome 3, Social Sciences;
- AE 4.1, Goal 4, Outcome 1, Diversity;
- AE 4.2 Goal 4, Outcome 2 Culture;
- AE 5.1, Goal 5, Outcome 1, Social Responsibility & Ethics (course);
- AE 5.2, Goal 5, Outcome 2, Social Responsibility & Ethics (practice);
- AE 6.1, Goal 6, Outcome 1 and 2, Integration & Creativity.

Details of the KU Core can be found at kucore.ku.edu (http://kucore.ku.edu/). Some required courses in the Chemical Engineering curricula satisfy a KU Core goal and/or outcome. For these courses, the goal/outcome code is given in parentheses after the course on the pages below. Where required courses do NOT specifically satisfy KU Core goals (Goals GE 3H, GE 3S, AE 4.1, and AE 4.2) students must choose from a list of several courses to satisfy the required goals.

First- and Second-Year Preparation

Recommended enrollments for the first 2 years are as follows:
### Bachelor of Science in Chemical Engineering Degree Requirements

Following are descriptions of the Chemical Engineering Program, the Biomedical concentration, the Environmental concentration, the Materials Science concentration, the Petroleum concentration, and the Premedical concentration.

1. In order to progress to a junior year course (any C&PE course labeled 500 and above), a student must have earned a C# or better in the following courses: MATH 125, MATH 126, MATH 127, MATH 220, MATH 290; CHEM 170, CHEM 175 (CHEM 130/135 acceptable alternatives); PHSX 210 (PHSX 211 acceptable alternative), and PHSX 212. Honors versions of the listed courses would also be subject to the rule.

2. Chemical Engineering students must earn a cumulative 2.0 GPA in C&PE 211, C&PE 221, and C&PE 325 in order to progress to C&PE 511, C&PE 512, C&PE 524, or C&PE 525. The cumulative GPA is calculated using the highest grade earned in each course.

3. Chemical Engineering students must earn a cumulative 2.0 GPA in C&PE 511, C&PE 512, C&PE 524, and C&PE 525 in order to progress to C&PE 611, C&PE 613, C&PE 615, C&PE 616, C&PE 624, or C&PE 626. The cumulative GPA is calculated using the highest grade earned in each course.

4. Chemical Engineering students must attain a cumulative GPA of at least 2.0 in C&PE courses taken at KU for graduation with a B.S. degree in Chemical Engineering.

### Program Requirements

A total of 127 hours are required for the B.S. degree in Chemical Engineering. Students that are exempt from ENGL 101 based on ACT or SAT test score do not have to make up the 3 credit hours with another course. This exemption results in the total hours required for the B.S. degree in Chemical Engineering to be 124.

### Engineering Electives

A minimum of 3 engineering elective hours must be taken within the C&PE department. A maximum of 6 hours may be taken in engineering research. You can consult with your advisor to find out commonly selected electives.

**Basic Sciences**

- CHEM 170: Chemistry for the Chemical Sciences I 5
- CHEM 175: Chemistry for the Chemical Sciences II 5
- CHEM 331: Organic Chemistry I 3
- CHEM 352: Physical Chemistry for Engineers 4

**Advanced Chemistry**

- CHEM 210: General Physics I for Engineers (KU Core GE 1.1) 3
- PHSX 216: General Physics I Laboratory (KU Core AE 5) 1
- PHSX 212: General Physics II 3
- PHSX 236: General Physics II Laboratory 1

**Advanced Science Electives**

See approved list of Advanced Science Electives 6

**Mathematics**

- MATH 125: Calculus I 4
- MATH 126: Calculus II 4
- MATH 127: Calculus III 4
- MATH 220: Applied Differential Equations 3
- MATH 290: Elementary Linear Algebra 2

</tr>
</tbody>
</table>

Petroleum Concentration

The Petroleum concentration in chemical engineering is distinct from the B.S. in Petroleum Engineering degree (see below). Students completing a concentration are required to satisfy all the requirements for the Bachelor of Science degree in Chemical Engineering. The following advanced science and engineering elective courses must be completed
as part of the advanced science and engineering electives required for the Petroleum concentration:

<table>
<thead>
<tr>
<th>Code</th>
<th>Title</th>
<th>Hours</th>

Petroleum engineering elective 3

**Premedical Concentration**

Students completing a concentration are required to satisfy all the requirements for the Bachelor of Science degree in Chemical Engineering. Additional courses may be required by each specific medical school, and students should consult the medical school of interest to verify requirements for admission. The following advanced science courses must be completed as part of the advanced science electives required for the Premedical concentration:

<table>
<thead>
<tr>
<th>Code</th>
<th>Title</th>
<th>Hours</th>
</tr>
</thead>
<tbody>
<tr>
<td>CHEM 335</td>
<td>Organic Chemistry II</td>
<td>3</td>
</tr>
<tr>
<td>BIOL 150</td>
<td>Principles of Molecular and Cellular Biology</td>
<td>3</td>
</tr>
<tr>
<td>BIOL 152</td>
<td>Principles of Organismal Biology</td>
<td>3</td>
</tr>
<tr>
<td>BIOL 600</td>
<td>Introductory Biochemistry, Lectures</td>
<td>3</td>
</tr>
</tbody>
</table>

The following courses may be required for admission into specific medical schools or be recommended for the MCAT. These classes are recommended but not required:

<table>
<thead>
<tr>
<th>Code</th>
<th>Title</th>
<th>Hours</th>
</tr>
</thead>
<tbody>
<tr>
<td>BIOL 154</td>
<td>Introductory Biology Lab for STEM Majors (recommended, not required)</td>
<td>2</td>

<td>Mammalian Physiology (recommended, not required)</td>
<td>3</td>
</tr>
</tbody>
</table>

1. A cumulative 3.5 GPA in courses taken at KU
2. A cumulative 3.5 GPA in engineering courses taken at KU
3. Completion of an experience or an achievement that is deemed worthy of Departmental Honors. Examples of achievements include (not limited to):
   a. Completion of 3 hours of C&PE 661 (Honors research) or equivalent with an A or B
   b. Completion of Senior Thesis
   c. Co-author on a publication – may require research advisor verification
   d. Presentation at a National Conference – may require research advisor verification
   e. Receiving an award for scholarly work – may require research advisor verification

The application must include:

- Completed application form
- Approximately 200-500 word statement of the achievement or experience that is worthy of Departmental Honors.

A departmental committee will review all applications and make the final decision on the awarding of Departmental Honors. Some applications may require verification from the research advisor. Students awarded Departmental Honors will be recognized at the end of the year banquet.

**Bachelor of Science in Petroleum Engineering**

**B.S. in Petroleum Engineering Program**

Petroleum engineering is the branch of engineering concerned with the drilling, recovery, production, and distribution of petroleum and natural gas. It includes knowledge of the properties of fluids and rocks in surface and subsurface environments as well as methods of exploiting the economic production of oil and gas from petroleum reservoirs. A major subdivision at KU is reservoir engineering, or the development of processes to improve production from oil and gas reservoirs. Reservoir engineers use sophisticated mathematical techniques and computer technology to obtain optimum production. Through such techniques, petroleum engineers continue to extract oil and gas from reservoirs that only a few years ago would have been considered uneconomical. This branch of engineering is somewhat different from the other in that production is far removed from physical observation.

The curriculum develops fundamental concepts that describe the properties of fluids and rocks in surface and subsurface environments. These are integrated with courses covering fluid flow in reservoirs along with drilling and production equipment to develop a broad understanding of how fundamental concepts are used to solve technical problems. The development of engineering design concepts begins with the application of fundamental principles and concepts to solve engineering problems in these courses and culminates in a series of senior-level design courses that require comprehensive integration of technical knowledge as well as consideration of economic, environmental, safety, and societal concerns. This experience is essential in the preparation of graduates for entry-level positions.
Educational Objective

The objective of the program is to prepare graduates for professional practice in industry, government, or post-undergraduate training in petroleum engineering and other related disciplines.

Professional Opportunities

Petroleum engineers search the world for reservoirs containing oil and natural gas. Once these resources are discovered, petroleum engineers work to understand the geologic formation and properties of the rock containing the reservoir, determine the drilling methods to be used, and monitor drilling and production operations. They design equipment and processes to achieve the maximum profitable recovery of oil and gas. Petroleum engineers typically work for major oil companies, independent oil exploration, and production and service companies.

Undergraduate Admission to the School of Engineering

Admission to the KU School of Engineering (and its degree programs) is selective. Students may be admitted to an engineering or computer science degree program as freshmen (first year) students, but all admissions, for both in-state and out-of-state students, are selective. Applications are judged on several factors, such as high school record, scores on national tests, academic record at college or university level, and trend of grades and more. High school transcripts are required.

Minimum Academic Standards for Admission to the School of Engineering

To be considered for admission to the School of Engineering, beginning first-year students must meet or exceed the following minimum standards:

- Must be admissible to the University of Kansas by assured admissions or individual review, AND
- Have a 3.0+ high school GPA, AND
- Demonstrate mathematics preparedness by:
  - Obtaining a mathematics ACT score of 28+ (or math SAT score of 660+), or
  - Achieving a “C” or better in a high school calculus course; or
  - Earning credit via IB or AP credit for the above-mentioned course in accordance with KU placement credit requirements; or
  - Achieving at minimum a qualifying score for MATH 125 on the ALEKS mathematics placement exam.

Students who are not admissible to their desired major are admitted to the School of Engineering as undecided engineering undergraduate students.

Exploring Engineering

Students not admitted directly to the School of Engineering or their major but who are admissible to the university may be admitted to the College of Liberal Arts and Sciences as an Undecided student. They can later re-apply to the School of Engineering during the semester they are completing the admission requirements for transfer students.

Transfer Admission Standards

Applications from all transfer students, whether from other institutions or from other academic schools at the University of Kansas, are evaluated on a case-by-case basis. Transfer students must be admissible to KU and have a cumulative college transferable grade-point average of 2.5+ to be considered. In addition, students must have grades of “C” or better in those courses in math (must include MATH 125 Calculus I or equivalent), science, and engineering applicable to the engineering degree.

Current KU Students admitted to other academic units may apply to the School of Engineering by completing a Change of School form (https://inowformsprivate.ku.edu/imagenowforms/is?form=OUR%20Change%20of%20School%20Form).

Already Applied to KU, But Not Engineering?

Don’t worry. It’s not too late to change your mind if you’ve already applied to KU and selected a major outside the School of Engineering. If you think one of the 12 engineering or computer science majors is a better fit for your talents, you can still change your requested major — preferably before May 1 — and be considered for admission to the School of Engineering and all the benefits that go with it.

To update your application, visit Undergraduate Admissions and click on “Change application term, major, mailing address, and/or email address.”

Please contact a member of our recruitment team (studyengineering@ku.edu), 785-864-3881, if you have any difficulty.

**General Education Requirements**

The KU Core is the university-wide curriculum that all incoming undergraduate students will complete as part of their degree requirements. It comprises three general education goals and three advanced education goals. Associated with each goal are one or more learning outcomes:

- GE 1.1, Goal 1, Outcome 1, Critical Thinking;
- GE 1.2, Goal 1, Outcome 2, Quantitative Literacy;
- GE 2.1, Goal 2, Outcome 1, Written Communication;
- GE 2.2, Goal 2, Outcome 2, Oral Communication;
- GE 3H, Goal 3, Outcome 1, Arts & Humanities;
- GE 3N Goal 3, Outcome 2, Natural Sciences;
- GE 3S Goal 3, Outcome 3, Social Sciences;
- AE 4.1, Goal 4, Outcome 1, Diversity;
- AE 4.2 Goal 4, Outcome 2 Culture;
- AE 5.1, Goal 5, Outcome 1, Social Responsibility & Ethics (course);
- AE 5.2, Goal 5, Outcome 2, Social Responsibility & Ethics (practice);
- AE 6.1, Goal 6, Outcome 1 and 2, Integration & Creativity.

Details of the KU Core can be found at kucore.ku.edu. Some required courses in the Petroleum Engineering curriculum satisfy a KU Core goal and/or outcome. For these courses, the goal/outcome code is given in parentheses after the course on the pages below. Where required courses do NOT specially satisfy KU Core goals (GE 2.2, GE 3H, GE 3S, AE 4.1, AE 4.2, AE 5) students must choose from a list of several courses to satisfy each of the required goals.

**Plan of Study**

Recommended enrollments are as follows, but may vary according to existing credits:

<table>
<thead>
<tr>

Credit for ROTC Courses

Only ROTC courses qualifying as engineering electives and humanities/social sciences may be used.

Departmental Honors

Students wishing to receive Departmental Honors in Chemical and Petroleum Engineering must apply to the Department in writing by September 1st for a December graduation or February 1st for a May graduation. The criteria for Departmental Honors are:

1. A cumulative 3.5 GPA in courses taken at KU
2. A cumulative 3.5 GPA in engineering courses taken at KU
3. Completion of an experience or an achievement that is deemed worthy of Departmental Honors. Examples of achievements include (not limited to):
   a. Completion of 3 hours of C&PE 661 (Honors research) or equivalent with an A or B
   b. Completion of Senior Thesis
   c. Co-author on a publication – may require research advisor verification
   d. Presentation at a National Conference – may require research advisor verification
   e. Receiving an award for scholarly work – may require research advisor verification

The application must include:

- Completed application form
- Approximately 200-500 word statement of the achievement or experience that is worthy of Departmental Honors.

A departmental committee will review all applications and make the final decision on the awarding of Departmental Honors. Some applications may require verification from the research advisor. Students awarded Departmental Honors will be recognized at the end of the year banquet.
Master of Science in Chemical Engineering

Mission Statement
KU Chemical & Petroleum Engineering integrates teaching excellence and research innovation to educate students and produce future leaders.

Key Research Fields
- Biomedical and Biomolecular Engineering
- Catalysis (Electro-, Photo-, Heterogeneous, Homogeneous)
- Ionic Liquids
- Sustainability
- Energy Storage and Fuel Cells
- Alternative Fuels

Associated Research Centers
- CEBC: Center for Environmentally Beneficial Catalysis (https://cebc.ku.edu/)
- ISE: Institute for Sustainable Engineering (https://ise.ku.edu/)

New Program Options
- 1 year MS in Chemical Engineering with a Data Science focus

Graduate Admission
To qualify for study in any of the graduate programs in the Department of Chemical & Petroleum Engineering a student generally must have earned an accredited bachelor's degree in chemical or petroleum engineering. However, a student with good preparation in another engineering discipline or a related field, such as chemistry, physics, geology, or other engineering disciplines may qualify by taking the appropriate prerequisite undergraduate courses. These courses are determined on a case-by-case basis by the Department's Graduate Admissions Committee/Director.

Application Deadlines
- Fall Priority Deadline: January 5; final deadline March 1
- Spring Deadline: October 1

All application materials must be submitted before the final deadlines, March 1 for Fall semester and October 1 for Spring semester, to be considered for admission. All admitted students are considered for any funding opportunities for which they qualify. See our Graduate Admissions (http://cpe.engr.ku.edu/graduate-admissions/) page or the Graduate Studies website (http://www.graduate.ku.edu/) for the application procedure and fees. Additional resources for International applicants can be found on the International Support Services Website (https://iss.ku.edu/).

Application Materials
- Application (https://gradapply.ku.edu/apply/) (online only)
- Statement of Purpose
- Resume or Curriculum Vitae
- Official transcript (http://graduate.ku.edu/transcripts/)
- Three letters of recommendation
- TOEFL, PTE, or IELTS scores (international students)

The following documents are required only after a student has been admitted:
- Financial Statement (International students only if no department funding offered)
- One (1) Official Transcript sent directly from the applicant’s university to the University of Kansas

*TOEFL Scores
- Institution Code – 6871
- Program Code – 64

IELTS Scores
- Email the electronic version to cpegrad@ku.edu.
  - As of October 2020, GRE scores are no longer required.

Students admitted with baccalaureate degrees in chemical or petroleum engineering enroll in the graduate core courses listed in our Graduate Program Manual (https://cpe.ku.edu/enrollment-resources-and-course-listings/). Up to 9 credit hours from an outside institution may be transferred into upon approval of both department and university offices. Learn more about the degree requirements on the CPE Graduate Degree webpage (https://cpe.ku.edu/degrees/).

All graduate applications must be submitted online (https://gradapply.ku.edu/apply/).

Regular Status
For admission to regular status, the student must have an undergraduate grade point average of at least B (3.0 on a 4.0 scale). For students whose undergraduate GPA is below 3.0, admission on provisional status will be considered on a case-by-case basis. Graduate Record Examination scores are required.

Non-native English Speakers
For up-to-date details about the University's English Proficiency Requirements, visit the Graduate Studies Website (https://gradapply.ku.edu/english-requirements/).

Visit Us
Graduate program staff can assist prospective students in determining the fit between the student and the program. In order to determine this, we feel that visiting our campus in Lawrence is an important step. If you would like to schedule a visit, there are two main options:

The first, and most preferred, entails simply applying for admission to the program. All prospective students are welcome to attend our Open House in mid-October or mid-March. Eligible admitted students are invited to participate in Campus Visit Days in February (prior to the fall semester of your intended matriculation). These organized visits opportunities will allow you to gather a great deal of first-hand information which we hope will help you in making a final decision about whether to attend KU.
The second option is making arrangements to visit us on your own, outside of organized events. With early notification, we will do our best to work with you to provide information and schedule appointments with faculty when possible.

Contact Information

Please contact the CPE Graduate Program Coordinator, cpegrad@ku.edu (cpe@ku.edu) or (785) 864-2900, if you would like to schedule a campus visit, or have questions about the program or the application process.

M.S. Degree Requirements

M.S. in Chemical Engineering

Two degree options, Option A or Option B, are available for the M.S. degree in chemical engineering.

Option A requires a thesis, and students in Option A are considered for departmental research assistantships, teaching assistantships, and fellowships.

Option B does not require a thesis, but does require a written report on a 3-hour special project. Students in Option B are not eligible for departmental research assistantships and fellowships, but may be considered for teaching assistantships, although priority is given to students in Option A.

Once admitted, students may change from one option to the other only with the Graduate Standards Committee approval.

For an M.S. in chemical engineering, the undergraduate prerequisite courses are C&PE 511, C&PE 512, C&PE 524, and C&PE 525. Depending on a student’s academic background and proposed Plan of Study, additional undergraduate prerequisite courses may be required. Up to 3 credit hours of the undergraduate prerequisite courses (numbered 500 or above) may be counted toward the M.S. degree as elective hours.

The following tables represent typical plans of study that might be established by a student and their advisor. Rarely are exceptions in C&PE course work allowed.

Lawrence, KS 66045

**M.S. in Petroleum Engineering**
Two degree options, Option A or Option B, are available for the M.S. degree in petroleum engineering.

**Option A** requires a thesis, and students in Option A are considered for departmental research assistantships, teaching assistantships, and fellowships.

**Option B** does not require a thesis, but does require a written report on a 6-hour special project. Students in Option B are not eligible for departmental research assistantships and fellowships, but may be considered for teaching assistantships, although priority is given to students in Option A.

Once admitted, students may change from one option to the other only with the Graduate Standards Committee approval.
For an M.S. in petroleum engineering, the undergraduate prerequisite courses are C&PE 527, C&PE 618, C&PE 625, and GEOL 535, or equivalent.

Depending on a student’s academic background and proposed Plan of Study, additional undergraduate prerequisite courses may be required. Up to 3 credit hours of undergraduate prerequisite courses (numbered 500 or above) may be counted toward the M.S. degree as elective hours.

The following tables represent typical plans of study that might be established by a student and his or her advisor.

**M.S. in Petroleum Engineering: Option A**

**Doctor of Philosophy in Chemical and Petroleum Engineering**

**Chemical and Petroleum Engineering**

Chemical engineering has grown out of a combination of chemistry and engineering associated with industrial processes. Today, it comprises knowledge used in processes that change the physical state or composition of materials. Chemical engineers hold key roles in the design, development, production, and purification of materials considered essential to human life and well-being, such as food products, fuels and lubricants, pharmaceuticals, fertilizers, synthetic fibers, microelectronic components, and plastics. Chemical engineers are involved in reducing the use of energy to make products in a safe and sustainable way and minimizing environmental impacts. Areas of study in the Chemical Engineering Department include (but are not limited to):

Petroleum engineering is concerned with the drilling, recovery, production, and distribution of petroleum and natural gas. Petroleum engineers use knowledge of fluid and rock properties in subsurface environments to produce oil and gas safely and economically. At the University of Kansas, the focus is on reservoir engineering and improving production from oil and gas reservoirs. Reservoir engineers use geological detection with computerized mathematical analysis to produce raw materials. New areas of research are focused on unconventional reservoirs and Net Carbon Zero geoenergy using AI and data mining for intelligent and sustainable petroleum engineering. Areas of study in the Petroleum Engineering Department include (but are not limited to):

- Data Mining and Artificial Intelligence Supported Reservoir Engineering, Hydraulic fracturing and acidizing of unconventional reservoirs, Characterization and simulation of tight oil and gas reservoirs, Oilfield nanoparticles, CO₂ enhanced oil recovery and CO₂ storage, and Phase behavior of reservoir fluids.

**Ph.D. Admission Requirements**

To qualify for study in any of the graduate programs in the Department of Chemical & Petroleum Engineering, a student generally must have earned an accredited bachelor’s degree and/or master’s degree in chemical or petroleum engineering. However, a student with good preparation in another engineering discipline or a related field, such as chemistry, physics, geology, or other engineering disciplines may qualify by taking the appropriate prerequisite undergraduate courses. These courses are determined on a case-by-case basis by the Department’s Graduate Admissions Committee/Director.

**Application Deadlines**

- Fall Priority Deadline: January 5; final deadline March 1
- Spring Priority Deadline: October 1

All application materials must be submitted by the final deadlines, March 1 (Fall semester admission) and October 1 (Spring semester admission). All admitted students are considered for any funding opportunities for which they qualify. See our Graduate Admissions (https://cpe.ku.edu/graduate-admissions/) page or the Graduate Studies website (http://www.ku.edu/) for the application procedure and fees.

**Application Materials**

- Application (https://gradapply.ku.edu/apply/) (online only)
- Statement of Purpose
- Resume or Curriculum Vitae
- Official transcript (http://graduate.ku.edu/transcripts/)
- Three letters of recommendation
• TOEFL, PTE, or IELTS-Academic scores (non-native English speakers only)

The following documents are required only after a student has been admitted:

• Financial Statement (International students only if no department funding offer)
• One (1) Official Transcript sent directly from the applicant’s university to the University of Kansas

*TOEFL Scores

• Institution Code – 6871
• Program Code – 64

IELTS Scores

• Email an electronic copy to cpegrad@ku.edu.

*As of October 2020, GRE scores are no longer required as part of the application process.

Students admitted with baccalaureate degrees in chemical or petroleum engineering enroll in the graduate core courses listed in our Graduate Program Manual (https://cpe.ku.edu/degrees/). Students with degrees in other branches of engineering or in mathematics, chemistry, physics, or other sciences must take undergraduate courses to provide the necessary background for the graduate level courses and are admitted provisionally. See graduate prerequisite courses listed in the M.S. Degree Requirements section. Students who have already completed a M.S. degree will have the total number of hours reduced on a case-by-case basis, with the approval of the Graduate Standards Committee, and based on individual background and course history. No credits will transfer in at the Doctoral level; however, the 60 total credit hour requirement can be reduced to as low as 45 credit hours.

All graduate applications must be submitted online (http://www.graduate.ku.edu/).

Regular Status

For admission to regular status, the student must have an undergraduate grade point average of at least B (3.0 on a 4.0 scale). For students whose undergraduate GPA is below 3.0, admission on probational status will be considered on a case-by-case basis. Graduate Record Examination (GRE) scores are required.

Foreign Student English Proficiency

To find the most up-to-date information about the University’s English Proficiency Requirements, visit the Graduate Studies Webpage (https://gradapply.ku.edu/english-requirements/).

Visit Us

Graduate program staff can assist prospective students in determining the fit between the student and the program. Staff can facilitate a campus visit. If you would like to schedule a visit, there are two main options:

The first, and most preferred, entails simply applying for admission to the program. All prospective students are welcome to attend our Open House in mid-October or mid March. Eligible admitted students may be invited to participate in Campus Visit Days in February or March (prior to the fall semester of your intended matriculation). These organized visitation opportunities will allow you to gather a great deal of first-hand information which we hope will help you in making a final decision about whether to attend KU.

The second option is making arrangements to visit us on your own, outside of organized events. With early notification, we will do our best to work with you to provide information and schedule appointments with faculty when possible.

Contact Information

Please contact the CPE Graduate Program Coordinator, cpegrad@ku.edu (cpe@ku.edu) or (785) 864-2900, if you would like to schedule a campus visit, or have questions about the program or the application process.

Ph.D. Degree Requirements

One of the goals of the department is to develop quality Ph.D. researchers who are well prepared for vocational and personal success. This policy sets forth a balanced program to develop and evaluate students in an efficient and fair manner. Equal consideration is given to the academic and the research ability, as both areas are required for success in industry or academia.

The Ph.D. graduate program typically consists of the completion of 60 credit hours beyond the B.S. degree or 45 credit hours beyond the M.S. degree. For more details about the courses and general timeline, see our Graduate Program Manual (http://cpe. engr.ku.edu/sites/cpe. engr.ku.edu/files/docs/CPE%20Graduate%20Program%20Manual.pdf).

An advisory committee of 5 or more members is formed for each Ph.D. aspirant: at least 3 tenure / tenure track faculty from the department and 1 member from outside the department at KU are required. The student’s research advisor normally serves as the committee chair. See the Graduate Catalog for doctoral committee composition requirements. The committee works with the aspirant to develop a plan of study and monitors the progress of the student throughout the remainder of the Ph.D. program.

A plan of study must be approved by the student’s advisor, the examining advisory committee, and the departmental Graduate Studies director by the end of the first semester. Before scheduling the comprehensive examination, the aspirant must satisfy residency, basic research skills, and the responsible scholarship requirements.

The research skill requirement provides the aspirant with a research skill distinct from, but strongly supportive of, the dissertation research. Work done to fulfill this requirement should involve study in an area complementary to the dissertation research and should enhance the student’s ability to carry out the research.

Preliminary Examination of Research - B.S. to Ph.D.

The Preliminary Examination of Research is administered to students requesting admission to the Ph.D. program without earning the M.S. degree. Successful completion of the preliminary examination admits the student into the Ph.D. program with aspirant status. Students taking this examination must have completed the graduate core courses at KU with
the required GPA. The examination determines the student's aptitudes for: (a) Independent, original, critical thinking; (b) Planning and organizing a research program; (c) Use of previous work and background literature to demonstrate understanding of the planned research within the scope of the larger project and ability to conduct that research; (d) Application of fundamental theory (e.g., equations) to the proposed work and; (e) Effective communication of technical work. The preliminary examination consists of a written report (5 pages maximum), oral presentation (15 minutes maximum), and questions by the examining committee (25 minutes maximum). The written and oral portions are prepared by the student only, with no review or editing by the research advisor or any other person. The written report is submitted to the committee one week before the oral examination. Questions are directed toward determining the 5 aptitudes listed above. A rubric for the oral and written portions will be provided to the student beforehand.

**Comprehensive Examination**

The Ph.D. aspirant takes the comprehensive examination after the completion of a majority of the course work for the Ph.D. and all department, school, and general requirements prerequisite to this examination, including residency, research skills, and responsible scholarship requirements. To prepare the aspirant for the comprehensive examination, the advisory committee may require enrollment in C&PE 902, Preparation for the Ph.D. Comprehensive Examination. The examination consists of 2 parts: a written proposal for research and an oral examination based on, but not limited to, the research proposal.

For the research proposal, the student is assigned a topic of current interest to the chemical and/or petroleum engineering profession. This assignment is made by an examining committee of at least 5 persons, at least 3 must be tenure / tenure track faculty from within the department including the advisor and at least 1 person from outside the department at KU. The aspirant identifies a research problem in the assigned topic area and prepares a written proposal for research on this problem. Normally, the written proposal must be prepared over a specified time period of 30 consecutive days. Except in unusual circumstances, the problem must be distinctly different from the dissertation problem.

The examining committee evaluates the research proposal upon completion. If the committee judges it satisfactory, the oral examination part of the comprehensive examination is held. The oral examination is based on the research proposal but may also cover areas peripheral to the proposal.

A student must pass both parts of the examination. Failure of either part constitutes an unsatisfactory grade on the entire examination. An aspirant who receives a grade of unsatisfactory may repeat the examination upon the recommendation of the examining committee, but the exam may not be taken more than twice. The examination may not be repeated until at least 90 days have elapsed since the unsuccessful attempt. On receipt of a grade of Honors or Satisfactory on the comprehensive examination, the aspirant is admitted to candidacy for the degree of Doctor of Philosophy.

**Ph.D. Dissertation and Final Oral Examination**

The doctoral dissertation, based on independent research conducted by the candidate, constitutes the final phase of the doctoral work and must be completed within the prescribed time constraints. Upon acceptance of the dissertation by the advisory committee, the candidate defends the dissertation in a final oral examination. The examining committee consists of at least 5 persons, including the advisory committee members and at least 1 person from outside the department.

**MS to PhD Program**

If a student obtains their MS degree in Chemical or Petroleum Engineering from the University of Kansas and plans to continue on into the doctoral program, then the GPA from the core courses will be used as the basis for entering the PhD program. If the student obtained their MS degree in Chemical or Petroleum Engineering (or very closely related fields) from another university, then the student's MS course work is evaluated by:

The Graduate Standards Committee (GSC) will determine if 1 to 5 (4 PE) of their MS core courses will count toward the requirements to become a PhD aspirant. A minimum of 45 credits must be completed at KU for Ph.D. degree completion.

**Course Requirements:**

- **Core Courses:** Minimum of 12 credit hours for Petroleum Engineering and 15 credit hours for Chemical Engineering (or equivalent as approved by GSC)
- **Elective Courses (15 hours):** 3 CPE Courses; 2 courses from outside CPE (7XX or greater)
- **Graduate Seminar:** Every semester while in residence
- **Research:** 30-34 hours
  - PhD Aspirants: Average GPA of 3.2 (5 course core) or 3.25 (4 course core) in core courses. A student below the required GPA will need to decide with the Advisor to 1) retake courses until GPA is obtained; 2) be dismissed from graduate program.
  - 3.25 Overall GPA
  - Only one C may be obtained. If more than one C is obtained, the student will be placed on departmental probation
- **Preliminary Examination:** See Policy and Rubric on departmental website.

**BS to PhD Program (Fast track PhD)**

**Course Requirements:** Minimum of 60 total credit hours

- **Core Courses:** See list of Graduate Core Courses in the MS Degree section
- **Elective Courses (15 hours):** 3 CPE Courses; 2 from outside CPE (7XX or greater)
- **Graduate Seminar:** C&PE 800 Every semester while in residence
- **Research:** 30-34 hours
  - PhD Aspirants: average GPA of 3.2 (5 course core) or 3.25 (4 course core) in core courses from KU MS degree. A student below the required GPA will need to decide with Advisor to 1) retake courses until GPA is obtained; 2) obtain the MS degree while pursuing the PhD program.
  - 3.25 Overall GPA required in all courses
  - Only one C may be permitted
- **Preliminary Examination:** See Policy and Rubric on departmental website.
Graduate Certificate in Petroleum Management

Graduate Certificate Overview

The engineering petroleum management certificate program is offered to concurrently enrolled graduate students in the School of Business MBA Petroleum Management Program. Completion of the program awards a certificate for academic accomplishment in the Petroleum Management area.

Admissions Requirements

Applicants must have been admitted to the School of Business MBA Petroleum Management Program before they are considered for admission to the Engineering Petroleum Certificate program. Enrollment is concurrent.

Certificate Requirements

Total Engineering Required Credit Hours: (15)

Courses:

C&PE 511 – Momentum Transfer (fall semester) (3)
    or AE 345 Fluid Mechanics (summer semester)
    or ME 510 Fluid Mechanics (spring semester)
C&PE 522 – Economic Appraisal of Chemical and Petroleum Projects (2)
C&PE 624 – Plant and Environmental Safety (3)
    EMGT 850 or Engineering Elective
C&PE 765 – Corrosion Engineering (3)
C&PE 804/BUS 825 – Petroleum Management Seminar (1)
    with Summer Industry Tour
C&PE 825 Final Thesis (3)

Department of Civil, Environmental, and Architectural Engineering

Civil, Environmental, and Architectural Engineering

Civil engineering (CE) is the oldest engineering program at KU. The first graduating class in 1873 included a civil engineer. Civil engineers design roads, water systems, bridges, dams, and other structures, providing nearly all the infrastructure needed by modern society. Civil engineers were the first engineers to address environmental issues and are the lead engineering discipline in treating water supplies to protect public health. In recognition of the significant issues concerning the environment, the department name was changed in 1992 to civil and environmental engineering.

Architectural engineering (ARCE) combines studies in architecture with engineering science and design courses in structures, illumination, power, mechanical, energy, and construction to prepare students for building design projects of all kinds. KU’s B.S. degree program in architectural engineering was established in 1912. The first female graduate of the School of Engineering was an architectural engineering major. Architectural engineering merged with civil and environmental engineering in 2001 to form the Department of Civil, Environmental, and Architectural Engineering (CEAE).

Mission

CEAE’s mission is to provide students with an outstanding engineering education and be a leader in research and service. This mission is supported by the following three goals:

1. Prepare students for productive engineering careers
2. Maintain and grow strong research programs
3. Serve the profession

Undergraduate Programs

Civil, environmental, and architectural engineering offers undergraduate degree programs in both civil engineering and architectural engineering. The Bachelor of Science programs in civil engineering and architectural engineering are accredited by the Engineering Accreditation Commission of ABET, http://www.abet.org. The B.S. in civil engineering is a 4-year, 132-hour degree. The B.S. in architectural engineering is a 4-year, 132-hour program.

Students in civil engineering can identify either civil or environmental engineering as their concentration. Students in architectural engineering can specialize in one of four areas of emphasis: mechanical/energy systems, lighting/electrical systems, building structures, or construction, or a hybrid such as pre-architecture, sustainable buildings, acoustics, or fire protection.

Both degree programs require a student to take the Fundamentals of Engineering (FE) examination, which is part of the process toward registration as a Professional Engineer (P.E.), to graduate. To help students complete their degrees efficiently and to aid with professional development, all undergraduates in CEAE have individual faculty members as their academic advisors.

Graduate Programs

The department offers graduate programs leading to the following degrees and certificates:

- Master of Science in Architectural Engineering
- Master of Science in Civil Engineering
- Master of Science in Environmental & Water Resources Engineering
- Master of Science in Environmental & Water Resources Science
- Master of Civil Engineering
- Master of Construction Management
- Doctor of Philosophy in Civil Engineering
- Doctor of Philosophy in Environmental & Water Resources Engineering
- Doctor of Philosophy in Environmental & Water Resources Science
- Graduate Certificate in Construction Management
- Graduate Certificate in Structural Analysis
- Graduate Certificate in Structural Design
- Graduate Certificate in Structural Forensics
- Graduate Certificate in Water Resources
An ABET-accredited baccalaureate degree in engineering, or the equivalent from abroad, is required for admission to the graduate degree programs in civil, environmental and architectural engineering. The graduate degree programs in environmental & water resources science and construction management are intended primarily for students with baccalaureate degrees in fields other than engineering.

Graduate students in the civil engineering degree programs can specialize in structural engineering, environmental engineering, water resources engineering, geotechnical engineering, transportation engineering, construction, or engineering mechanics. Students may be co-enrolled in a degree and certificate seeking program, and courses taken as a certificate seeking student may be counted towards a graduate degree.

Students in the Master of Science (M.S.) degree in architectural engineering program can specialize in mechanical/energy systems, lighting/electrical systems, building structures, or construction, or a hybrid such as sustainable buildings, acoustics, or fire protection. M.S. ARCE students often have bachelor degrees from other engineering disciplines.

The M.S. degree programs in civil and architectural engineering include a Design Option, which can be completed in 2 semesters of full-time study. Students in the Design Option take 4 regular academic courses each semester and work together as a consulting group on the design of a major engineering project. The Design Option is open to students in all areas of interest. Students in the Design Option must start in the fall semester and complete 15 credit hours, including the design project, in the fall and spring semesters.

The Master of Civil Engineering degree provides a coursework-only option for working professionals who do not need the research component of the M.S. degrees. The M.C.E. degree may be completed by taking courses offered during evening hours.

The interdisciplinary Master of Science degree in environmental & water resources science is intended primarily for students with baccalaureate degrees in fields other than engineering.

The Master of Construction Management is a professional non-thesis degree for part-time or full-time students. Graduate courses in construction management (CMGT) are taught in the evening.

The department’s doctoral degrees are the Doctor of Philosophy degrees in civil engineering, environmental & water resources engineering, and environmental & water resources science. Most doctoral students hold M.S. degrees, but direct admission to a doctoral program is possible for especially well-qualified engineering B.S. holders.

Courses

ARCE 101. Introduction to Architectural Engineering. 2 Credits. An introduction to the study of and careers in architectural engineering. Topics include problem solving and study skills, the building design and construction process, design documents, and professional practice issues such as licensing requirements and ethics.

ARCE 217. Computer-Assisted Building Design. 3 Credits. Introduction to computer-aided design (CAD) tools. The course covers 2D drafting and 3D modeling using Autodesk's AutoCAD® and building information modeling (BIM) software Revit®. Includes architectural and structural design; mechanical, electrical, and plumbing (MEP) design; and modeling using the Family Editor in Revit. Prerequisite: Must be eligible for MATH 125 or MATH 145, or consent of instructor.

ARCE 315. Electric Circuits and Machines. 3 Credits. Introduction to DC and AC electrical circuit analysis techniques, AC power calculations, transformers, three-phase systems, magnetic circuits, and DC and AC machines with a focus on applications. Not open to electrical or computer engineering majors. (Same as EECS 315.) Prerequisite: A course in differential equations and eight hours of physics.

ARCE 350. Building Materials Science. 3 Credits. An introduction to the structural, thermal, electrical, and optical properties of building materials. Manufacturing, testing, integration, and specification of materials with emphasis on commercial, institutional, and industrial buildings. Prerequisite: PHSX 212 and CHEM 150 or CHEM 149, or consent of instructor.

ARCE 351. Building Materials Science, Honors. 3 Credits. An introduction to the structural, thermal, electrical, and optical properties of building materials. Manufacturing, testing, integration, and specification of materials with emphasis on commercial, institutional, and industrial buildings with added honors-enhancement activities. The activities include one or more of the following: extra meetings outside the classroom, written work, projects, and presentations. Prerequisite: PHSX 212 and CHEM 150 or CHEM 149, or consent of instructor.

ARCE 390. Special Problems. 1-3 Credits. Special problems in architectural engineering. The study of a particular problem involving individual research and report. Prerequisite: Students must submit, in writing, a proposal including a statement of the problem the student wishes to pursue, the methodology the student plans to use in the program, and objectives of the special problems. The student must also have a signed agreement with the faculty member proposed as instructor for the course. Consent of the instructor.

ARCE 620. Architectural Acoustics. 3 Credits. An introduction to the physics of sound. Objective and subjective evaluation and control of sound as applied to architectural spaces. Room shaping, mechanical and electrical system noise and vibration control, and electro-acoustic sound reinforcement. Prerequisite: PHSX 212, PHSX 236, and ARCE 661 or equivalent, or consent of instructor.

ARCE 621. Electro-Acoustical Systems. 3 Credits. A study of electro-acoustic sound reinforcement and reproduction systems for buildings. Prerequisite: PHSX 212, PHSX 236, and ARCE 315 or equivalent, or consent of instructor.

ARCE 629. Problems in Architectural Acoustics. 1.5 Credits. Capstone architectural engineering design course that includes the analysis, design, and integration of a building's acoustical system. Building codes, standards, performance, and sustainability are addressed. Prerequisite: CMGT 457, ARCE 640, and senior standing, or consent of instructor. Corequisite: CMGT 500.

ARCE 640. Power Systems Engineering I. 3 Credits. This course introduces the design of commercial and industrial power systems. Emphasis is placed on the proper selection, specification, and installation of materials and equipment that comprise commercial and industrial power systems. This course covers the application of materials and equipment in accordance with industry standards, independent laboratory testing, and the National Electrical Code. Prerequisite: ARCE 315 or EECS 315 or consent of instructor.

ARCE 641. Power Systems Engineering II. 3 Credits. A continuation of ARCE 640 that integrates system components into functional, safe, and reliable power distribution systems for commercial, industrial, and institutional (CII) facilities. Service entrance design, distribution system layout and reliability, emergency and standby power system design, medium-voltage distribution systems, symmetrical fault...
analysis, and special equipment and occupancies. (Same as EECS 441.) Prerequisite: ARCE 640 or EECS 212 and Upper-Level EECS Eligibility.

**ARCE 642. Power System Protection. 3 Credits.**
This course introduces techniques and methods used to analyze and predict the performance of commercial and industrial power systems and equipment under balanced and unbalanced fault conditions. Emphasis is placed on the selection, application, and coordination of protective devices to detect and clear power system faults in a safe and reliable manner. Prerequisite: ARCE 640 or EECS 212 or consent of instructor.

**ARCE 645. Electric Energy Production and Storage. 3 Credits.**
An introduction to the design of utility scale and small scale (distributed generation) electric energy production and storage systems. This course addresses the technical, operational, economic, and environmental characteristics associated with both traditional and nontraditional electric energy production systems along with associated grid integration, energy delivery, and regulatory issues. Traditional energy production systems covered include fossil fuel, hydroelectric, and nuclear power plants. Non-traditional energy productions systems covered include fuel cells, photovoltaics (PV), concentrated solar power (CSP), wind, geothermal, and other emerging technologies. (Same as EECS 545.) Prerequisite: ARCE 640, or EECS 212 and Upper-Level EECS Eligibility.

**ARCE 647. Power System Analysis I. 3 Credits.**
Introduction to the analysis of commercial, industrial, and utility power systems. Emphasis is placed on modeling system components which include transmission and distribution lines, transformers, induction machines, and synchronous machines and the development of a power system model for analysis from these components. System modeling will be applied to short-circuit studies and used to analyze symmetrical faults, to develop sequence networks using symmetrical components, and analyze unsymmetrical faults. (Same as EECS 547.) Prerequisite: ARCE 640, or EECS 212 and Upper-Level EECS Eligibility.

**ARCE 648. Power System Analysis II. 3 Credits.**
Continuation of ARCE 647 or EECS 547 that uses power system modeling developed in ARCE 647 or EECS 547 to analyze power system load flow, operation and economic dispatch, stability, and transient response. The impact of alternative energy sources, energy storage, DC transmission and interties, and other emerging technologies on power system operation and reliability will be addressed throughout the course. (Same as EECS 548.) Prerequisite: ARCE 640 or EECS 547 or consent of instructor.

**ARCE 650. Illumination Engineering. 3 Credits.**
Students are introduced to lighting fundamentals, measurement, and technology and to their application in the analysis and design of architectural lighting systems. Prerequisite: PHSX 212 or consent of instructor.

**ARCE 660. Building Thermal Science. 3 Credits.**
The fundamentals of moist air processes, air and moisture exchange, and building heat transfer. Determination of heating and cooling loads under steady-state and transient conditions. Prerequisite: ME 212. Corequisite: CE 330 or ME 510 or AE 345 or C&PE 511; or consent of instructor.

**ARCE 661. HVAC&R Systems Design. 3 Credits.**
Analysis and design of heating, ventilating, air-conditioning, and refrigeration equipment and systems. Prerequisite: ARCE 660 or ARCE 670 or consent of the instructor.

**ARCE 662. Water Systems Design. 3 Credits.**
The analysis and design of hydronic systems for buildings including piping, plumbing, pumping, and the water-side of heating, ventilating, and air-conditioning (HVAC). Prerequisite: ME 510, AE 345, CE 330, or C&PE 511, or consent of the instructor.

**ARCE 663. Energy Management. 3 Credits.**
Energy usage in commercial buildings and industry, energy auditing methodology, utility analysis, management measures, and economic evaluation are covered. Includes fieldwork. Prerequisite: Corequisite: ARCE 660 or ARCE 670, or consent of instructor.

**ARCE 664. Fire Protection Engineering. 3 Credits.**
An introduction to human response, fire science, combustion calculations, compartment fires, piping and sprinkler design, and smoke management. Analytical methods, experimental data, codes, case-studies, and videos are presented in this engineering design course. Prerequisite: ME 212 or C&PE 221, and ME 510, AE 345, CE 330, or C&PE 511, or consent of instructor.

**ARCE 665. Solar Energy Systems Design. 3 Credits.**
A quantitative and qualitative study of active, passive, wind, and photovoltaic energy conversion systems for buildings. Solar radiation and system performance prediction. Prerequisite: ME 212 or C&PE 221, or consent of instructor.

**ARCE 670. Building Thermal Science, Honors. 3 Credits.**
The fundamentals of moist air processes, air and moisture exchange, and building heat transfer. Determination of heating and cooling loads under steady-state and transient conditions with added honors-enhancement activities. The activities include one or more of the following: extra meetings outside the classroom, written work, projects, and presentations. Prerequisite: ME 312. Corequisite: CE 330 or ME 510 or AE 345 or C&PE 511; or consent of instructor.

**ARCE 671. HVAC&R Systems Design, Honors. 3 Credits.**
Analysis and design of heating, ventilating, air-conditioning, and refrigeration equipment and systems. The discussion section and its assignments are required. Not open for those with credit for ARCE 661. Prerequisite: ARCE 660, ARCE 670, or consent of the instructor.

**ARCE 675. Sound and Vibration Control. 3 Credits.**
An introduction to the physics and measurement of sound, wave phenomena, acoustics, and methods of noise and excessive vibration control for various applications. Prerequisite: PHSX 212 and MATH 220 or MATH 221 or MATH 320; or consent of instructor.

**ARCE 690. Special Problems. 1-3 Credits.**
The study of a particular problem in architectural engineering involving individual research and presentation. Prerequisite: Student must submit, in writing, a proposal including a statement of the problem the student wishes to pursue, the methodology the student plans to use in the program, and objectives of the special problems. The student must also have a signed agreement with the faculty member proposed as instructor for the course. Consent of instructor.

**ARCE 691. Honors Research. 3 Credits.**
Research a particular architectural engineering problem. Research will involve defining the problem, developing a research methodology, applying the research methodology and gathering data, analyzing and interpreting the data, and presenting the results of the research. The student must have a faculty sponsor and submit a proposal in writing stating the objective of the research, the planned research method that will be used, and the method of reporting the results. Prerequisite: Participation in the University Honors Program, consent of instructor, and approval of the chair are required.

**ARCE 698. Comprehensive Design Project. 3 Credits.**
Capstone architectural engineering design course that includes the analysis, design, and integration of a building's structural, mechanical,
electrical, and lighting systems. Building codes, standards, performance, and sustainability are addressed, and BIM software utilized. Prerequisite: CMGT 457 or CMGT 500, or ARCE 620, or ARCE 640 and ARCE 650, or ARCE 660, or CE 562 or CE 563.

**ARCE 700. Directed Readings in Architectural Engineering. 1-3 Credits.**
Individual study of special topics and problems. May be repeated for credit. Prerequisite: Student must submit, in writing, a proposal including a statement of the problem the student wishes to pursue and a bibliography of the articles and books required to complete the project. The student must also have a signed agreement with the faculty member proposed as instructor for the course. Consent of instructor.

**ARCE 750. Daylighting. 3 Credits.**
This course will cover daylighting design concepts, solar position, daylight availability, sky luminance distribution models, daylight delivery methods, integration of daylighting and electric lighting controls, physical modeling, and computer analysis techniques. Prerequisite: PHSX 212, or ARCH 531, or consent of instructor

**ARCE 751. Advanced Lighting Design. 3 Credits.**
Advanced analysis, design, and modeling of luminous environments. It covers impact of lighting on human perception and interaction with space, human factors in lighting, camera-aided light measurement technologies, advanced computer-aided lighting simulations, effective and efficient integration of natural and artificial lighting, modeling and analysis of light sources and spaces, simulation of lighting systems, and design of lighting control systems. Prerequisite: ARCE 217 and ARCE 650 or consent of instructor

**ARCE 752. Lighting Measurement and Design. 3 Credits.**
This course will cover conventional lighting and solid-state lighting measurement, daylighting measurement, camera-aided lighting measurement technologies and applications, and design and development of custom luminaries in an LED workshop and innovative daylighting devices. Prerequisite: ARCE 650, or consent of instructor

**ARCE 760. Automatic Controls for Building Mechanical Systems. 3 Credits.**
An introduction to controls for building mechanical systems. Discussions of the theory, design, and equipment used for control systems. The benefits of pneumatic, electrical, and electronic (DDC) controls will be examined. Prerequisite: ARCE 660 or ARCE 670; or consent of instructor.

**ARCE 764. Advanced Thermal Analysis of Buildings. 3 Credits.**
Manual and computational methods for determining steady-state and transient thermal loads in buildings. Advanced analysis of energy consumption given choices in building materials and mechanical systems. Prerequisite: ARCE 217 and ARCE 660 or ARCE 670; or consent of instructor.

**ARCE 895. Master’s Project. 1-3 Credits.**
Directed study and reporting of a specialized topic of interest to the architectural engineering profession. Prerequisite: Consent of instructor.

**ARCE 899. Master’s Thesis. 1-6 Credits.**
Directed research and reporting of a specialized topic of interest to the architectural engineering profession. Prerequisite: Consent of instructor.

**Courses**

**CE 191. Introduction to Civil Engineering. 2 Credits.**
A discussion of engineering logic through examination of current concepts in engineering education, practice and professional development. Not open to juniors and seniors.

**CE 201. Statics. 2 Credits.**
The principles of statics, with particular attention to engineering applications. Prerequisite: EPHX 210 or PHSX 210 or PHSX 211 or PHSX 201, and MATH 125 or MATH 145.

**CE 240. Geomatics. 3 Credits.**
This course introduces engineering applications of surveying and geographic information systems (GIS) using surveying instruments and ArcGIS. The focus of this course is on practical application of geomatics to civil engineering problems. Two lectures periods and one lab period per week. Prerequisite: MATH 125 or MATH 145, ARCE 217; or consent of instructor.

**CE 250. Dynamics. 3 Credits.**
The principles of kinematics and kinetics, with particular attention to engineering applications. Prerequisite: CE 201 or ME 201 or ME 211, and MATH 126 or MATH 146.

**CE 260. Statics and Dynamics. 5 Credits.**
A combination of statics and dynamics covered in CE 201 and CE 250. This course must be taken as a five-hour unit. Prerequisite: EPHX 210 or PHSX 210 or PHSX 211 or PHSX 201, and MATH 126 or MATH 146.

**CE 310. Strength of Materials. 4 Credits.**
Principles of stress and deformation in solid objects. Prerequisite: CE 201 or ME 201 or ME 211 or CE 260 or CE 301. Corequisite: MATH 220 or MATH 221; or consent of instructor.

**CE 312. Strength of Materials, Honors. 4 Credits.**
Principles of stress and strain in solid objects with added honors-enhancement activities. The activities include one or more of the following: extra meetings outside the classroom, written work, projects, and presentations. Prerequisite: CE 201 or ME 201 or ME 211 or CE 260 or CE 301. Corequisite: MATH 220 or MATH 221; or consent of instructor.

**CE 330. Fluid Mechanics. 3 Credits.**
This course covers the fundamentals of fluid mechanics and includes the topics fluid properties, hydrostatics, applications of conservation of mass, energy and momentum equations, pipe flow, dimensional analysis and open channel flow. Prerequisite: ENGL 101, ENGL 102, CE 300 or CE 301 or CE 250 or CE 260.

**CE 331. Fluid Mechanics Lab. 1 Credits.**
This is an experimental course that consists of several laboratory experiments intended to illustrate the concepts presented in CE 330, Fluid Mechanics. Prerequisite: ENGL 101, ENGL 102, CE 250 or CE 260 or CE 300 or CE 301. Corequisite: CE 330.

**CE 412. Structural Engineering Materials. 3 Credits.**
Study of the engineering properties of structural materials and their control with emphasis on timber, concrete, and steel. Two one-hour lectures and one three-hour laboratory. Prerequisite: CE 310 or CE 312 and ENGL 102 or ENGL 105; or consent of instructor.

**CE 413. Structural Engineering Materials, Honors. 3 Credits.**
Study of the engineering properties of structural materials and their control with emphasis on timber, concrete, and steel. Two one-hour lectures and one three-hour laboratory. Prerequisite: CE 310 or CE 312 and ENGL 102 or ENGL 105. Open only to students admitted to the University Honors Program or by consent of instructor.

**CE 455. Hydrology. 3 Credits.**
An introduction to the fundamentals of hydrologic analysis. Subjects covered include collection and initial reduction of hydrologic data; rainfall-runoff relationships, hydrograph development; hydrologic routing, well equations and their application and hydrologic frequency analysis. Prerequisite: ENGL 101, ENGL 102 or ENGL 105. Co or pre-requisite: CE 330.

**CE 461. Structural Analysis. 4 Credits.**
Three one-hour lectures and one two-hour laboratory. Analysis of statically determinate and indeterminate beams, frames, and trusses using classical methods and introducing computer-based methods. Prerequisite: CE 310 or CE 312.

CE 477. Introduction to Environmental Engineering and Science. 3 Credits. Application of fundamental scientific principles to the protection of atmospheric, aquatic, and terrestrial environments through the use of pollution abatement processes, with consideration also given to economic, social, political, and legal aspects of pollution control. Prerequisite: ENGL 102 or ENGL 105, MATH 101 or MATH 104, and CHEM 135 or CHEM 175 or CHEM 195 or CHEM 149 or CHEM 150.

CE 479. Introduction to Environmental Engineering and Science, Honors. 3 Credits. Application of fundamental scientific principles to the protection of atmospheric, aquatic, and terrestrial environments through the use of pollution abatement processes, with consideration also given to economic, social, political, and legal aspects of pollution control. Open only to students admitted to the University Honors Program or by consent of instructor. Prerequisite: ENGL 102 or ENGL 105, MATH 101 or MATH 104, and CHEM 135 or CHEM 175 or CHEM 195 or CHEM 150 or CHEM 149.

CE 480. Introduction to Transportation Engineering. 3 Credits. Students are provided with a solid introduction to the principles of highway engineering and traffic analysis. This course will present a large number of practical problems, and in sufficient depth, such that the student will be capable of solving real highway-related problems. Prerequisite: CE 240.

CE 484. Materials for Transportation Facilities. 3 Credits. Principles involved in the testing, behavior, and selection of materials for use in the transportation field. Emphasis is on bituminous materials, aggregate, and soil stabilization. Prerequisite: CE 310 or CE 312.

CE 485. Materials for Transportation Facilities, Honors. 3 Credits. Principles involved in the testing, behavior, and selection of materials for use in the transportation field. Emphasis is on bituminous materials, aggregate, and soil stabilization with added honors-enhancement activities. The activities include one or more of the following: extra meetings outside the classroom, written work, projects, presentations, and lab activities. Prerequisite: CE 310 or consent of instructor.

CE 487. Soil Mechanics. 4 Credits. Three lecture periods and one laboratory period. Fundamental theories of soil mechanics and their applications in engineering. Prerequisite: CE 310 or CE 312, corequisite or prerequisite CE 330.

CE 490. Special Problems. 1-5 Credits. An advanced study related to a special problem in the field of civil engineering or allied fields, for upper-division undergraduate students.

CE 495. Special Topics: _____ 1-3 Credits. A course or colloquium to present topics of special interest. Prerequisite: Varies by topic.

CE 501. Engineering Ethics. 3 Credits. An examination of the ethical and social implications of being a professional engineer. Through the use of case studies, issues such as professional responsibility to clients, employers, and the public will be evaluated in light of professional codes of ethics. Prerequisite: Junior or Senior standing.

CE 525. Applied Probability and Statistics. 3 Credits. Course topics include data description, measures of central tendency and dispersion, sampling and sampling designs, quality control, persistence, periodicity, sampling distributions, hypothesis testing, ANOVA, correlation, linear regression, multiple correlation, and multiple regression. Applications and real world problems are stressed. This course is offered at the 500 and 700 level with additional assignments at the 700 level. May not be taken for credit by students with credit in CE 725. Prerequisite: MATH 125 or MATH 145 or MATH 115 and MATH 116.

CE 535. Engineering Applications of GIS. 3 Credits. This course introduces engineering applications of geographic information system (GIS) using ArcGIS. The focus of this course is on practical application of GIS to civil engineering problems. Prerequisite: Junior or Senior standing, or consent of instructor.

CE 550. Life Cycle Assessment. 3 Credits. Life cycle assessment (LCA) is a tool used across engineering fields to determine the life cycle, cradle-to-grave environmental impacts of a product or process. LCA practice helps develop a systems-thinking perspective and a deeper understanding of sustainability. Students will evaluate LCA methods and design appropriate LCA frameworks. Prerequisite: CE 477 or CE 479 or C&PE 211.

CE 552. Water Resources Engineering Design. 4 Credits. Three one-hour lectures and one three-hour laboratory. Study of water resources structures and systems with design emphasis on the hydraulic features: dams, drainage, river engineering, pipelines, channels and hydraulic machinery. Prerequisite: CE 330 and CE 455.

CE 555. Open Channel Flow. 3 Credits. Study of uniform and non-uniform steady flow of water in open channels, including backwater curves, the hydraulic jump, and the delivery of canals. Prerequisite: CE 330 or equivalent.

CE 562. Design of Steel Structures. 3 Credits. Two one-hour lectures and one three-hour laboratory. Fundamentals of structural design with steel. Prerequisite: CE 461.

CE 563. Design of Reinforced Concrete Structures. 3 Credits. Two one-hour lectures and one three-hour laboratory. Fundamentals of structural design with reinforced concrete. Prerequisite: CE 461; CE 412 or CE 413 or CE 484; or consent of the instructor.

CE 570. Concepts of Environmental Chemistry. 3 Credits. The fundamentals of aquatic chemistry, with emphasis on application to water purification and wastewater treatment. Prerequisite: Undergraduate standing, CE 477 or CE 479, and MATH 115 or MATH 125 or MATH 145.

CE 571. Environmental Engineering Laboratory. 3 Credits. A laboratory course introducing standard practices for measurement, analysis, and reporting of environmental data. Emphasis is placed on learning common analytical techniques used in environmental engineering and science. Prerequisite: Undergraduate standing, CE 477 or CE 479 or equivalent, and MATH 115 or MATH 125 or MATH 145.

CE 573. Biological Principles of Environmental Engineering. 3 Credits. A basic study of the microorganisms of importance in environmental engineering. Emphasis is placed on the microbiology of dilute nutrient solutions. Microbial physiology, microbial ecology, and biochemistry will be discussed as they pertain to environmental engineering and science. Both biodegradation and public health aspects are included. Prerequisite: Undergraduate standing, CE 477 or CE 479 or equivalent, and MATH 115 or MATH 125 or MATH 145.

CE 574. Design of Air Pollution Control Systems. 3 Credits. This course emphasizes understanding of air pollution problems and their solution through engineering design and science. Topics covered include: types of air pollutants; monitoring of air pollutants; transport of air pollutants in the atmosphere; and control of air pollution emissions.
from both stationary and mobile sources. Prerequisite: CE 330, CE 477 or CE 479, MATH 126 or MATH 146, PHSX 212; or consent of instructor.

CE 576. Municipal Water Supply and Wastewater Treatment. 4 Credits.
The principles of public water supply design, including source selection, collection, purification, and distribution; for municipal wastewater, collection, treatment, and disposal. Prerequisite: CE 330 or C&PE 511, CE 477 or CE 479.

CE 577. Industrial Water and Wastes. 3 Credits.
A review of the methods of industrial water treatment and the fundamentals of industrial water pollution control. Topics include: water budgets, cooling tower and boiler treatment, corrosion control, government regulations, wastewater characterization, waste minimization, pilot plants, pretreatment, final treatment, and site selection. Prerequisite: Undergraduate standing, and CE 477 or CE 479 or equivalent.

CE 582. Highway Engineering. 3 Credits.
A comprehensive study of the planning, design, construction, operations, and maintenance of highway systems with emphasis on the design aspects of a highway. Prerequisite: CE 455 and CE 480.

CE 588. Foundation Engineering. 3 Credits.
A study of the interaction of the characteristics of soil or rocks and structures. The estimation of settlement and bearing capacity of foundation elements. Principles governing the choice and design of footings, rafts, piers, and piles. Prerequisite: CE 487.

CE 677. Graduate Fundamentals of Environmental Engineering. 3 Credits.
Application of fundamental scientific principles to the protection of atmospheric, aquatic, and terrestrial environments through the use of pollution abatement processes, with consideration also given to economic, social, political, and legal aspects of pollution control. May not be taken for credit by students with credit in CE 477. Prerequisite: ENGL 102 or ENGL 105, MATH 101 or MATH 104, and CHEM 135 or CHEM 175 or CHEM 150.

CE 684. Materials for Transportation Facilities. 3 Credits.
Principles involved in the testing, behavior, and selection of materials for use in the transportation field. Emphasis is on bituminous materials, aggregate, and soil stabilization. Readings. Prerequisite: CE 412 or CE 413. Prerequisite: CE 310 or CE 312 or equivalent, and one three-hour laboratory. Not open for credit to students with credit in CE 542. Prerequisite: Graduate standing or permission of the instructor.

CE 701. Engineering Ethics. 3 Credits.
An examination of the ethical and social implications of being a professional engineer and doing engineering research. Through the use of case studies, issues such as professional responsibility to clients, employers, and the public will be evaluated in light of professional codes of ethics. May not be taken for credit by students with credit in CE 501. Prerequisite: Graduate standing.

CE 704. Dynamics and Vibrations. 3 Credits.
Problems in engineering dynamics and vibrations. Topics include applications of generalized forces and coordinates, Lagrange equations, and a study of the performance of single and multiple degree of freedom in vibrational systems. (Same as AE 704.) Prerequisite: AE 508.

CE 710. Structural Mechanics. 3 Credits.
Basic concepts in the analysis of stress and strain and the behavior of materials. Topics include elementary theory and problems in elasticity, theories of failure of materials including fracture mechanics and introduction to plasticity.

CE 711. Probabilistic Design and Reliability. 3 Credits.
Learn to evaluate statistical data and develop engineering design criteria for natural and man-made random phenomena. Develop and be able to use material or system fragility curves. Analyze complex systems or alternate system probabilities using Monte Carlo Simulation. Determine system reliability for statistically evaluated hazard probabilities. Techniques are applied to realistic design problems in Civil Engineering. Prerequisite: Graduate standing or permission of the instructor.

CE 712. Structural Engineering Materials. 3 Credits.
Study of the engineering properties of structural materials and their control with emphasis on timber, concrete, and steel. Two one-hour lectures and one three-hour laboratory. Not open for credit to students with credit in CE 412 or CE 413. Prerequisite: CE 310 or CE 312 or equivalent, and ENGL 102 or ENGL 105 or equivalent, or consent of instructor.

CE 713. Cold-formed Steel and Aluminum Design. 3 Credits.
Learn the principles of designing thin cold-formed and extruded materials. Focus is on cold-formed-steel with basic application to aluminum and concepts of curtainwall design. Load bearing and non-load bearing applications. Determine properties and strengths of columns and beams composed of arbitrary formed shapes. Learn to apply Direct Design. Seismic and wind design of cold formed steel structures. Prerequisite: CE 562.

CE 714. Professional Practice. 3 Credits.
This course is the business of engineering. Topics include: case studies of design and construction litigation, proposals and contracts, managing risk and liability, principles of management and leadership, developing professional relationships, developing a quality culture, project and design accounting, errors and omissions, insurance, organizational structures, globalization, total quality management, and communications. Class participation is required. Prerequisite: Graduate standing or permission of the instructor.

CE 715. Corrosion Engineering. 3 Credits.
Electrochemical basis of corrosion. Estimating probability and rate of corrosion. Identifying different conditions likely to cause specific types of corrosion. Corrosion mitigation techniques. Prerequisite: CHEM 135, CHEM 150 or equivalent.

CE 721. Experimental Stress Analysis. 3 Credits.
Introduction to experimental stress-analysis techniques. Theory and application of mechanical strain gages, electrical strain gages, photoelastic techniques, and brittle coatings.

CE 725. Applied Probability and Statistics. 3 Credits.
Course topics include data description, measures of central tendency and dispersion, sampling and sampling designs, quality control, persistence, periodicity, sampling distributions, hypothesis testing, ANOVA, correlation, linear regression, multiple correlation, and multiple regression. Applications and real world problems are stressed. This course is offered at the 500 and 700 level with additional assignments at the 700 level. May not be taken for credit by students with credit in CE 525. Prerequisite: MATH 125 or MATH 145 or MATH 115 and MATH 116.

CE 730. Intermediate Fluid Mechanics. 3 Credits.
Fall semester. Principles of steady and unsteady flows, theories of potential, viscous, and turbulent flows, and applications in water resources engineering. Prerequisite: CE 330 and MATH 320.

CE 731. Applied Groundwater Modeling. 3 Credits.
This course focuses on how to construct simple to complex computer models of groundwater systems and systems in which water flows between groundwater and surface water bodies such as springs, streams and lakes. We consider water flow, transport of solutes, and density effects (from saltwater or brines). We consider the conjunctive use of groundwater and surface water (demand-driven, supply-limited problems), and managed aquifer recharge (MAR). We consider three
aspects of model development: (1) how to compare the computer models we construct to the systems modelers intend them to represent, (2) how accurate the models are likely to be and how uncertainty can be quantified, and (3) how useful the models are in practice. (Same as GEOL 758.) Prerequisite: GEOL 751 or CE 752, or approved by the professor.

CE 735. Engineering Applications of GIS. 3 Credits.
This course introduces engineering applications of geographic information system (GIS) using ArcGIS. The focus of this course is on practical application of GIS to civil engineering problems.

CE 736. Environmental Monitoring and Field Methods. 3 Credits.
A lecture-laboratory-field sampling course to familiarize students with environmental monitoring techniques and open source data availability. Dimensions of environmental monitoring will be considered for air, soil, and water measurements. The major emphasis will be on surface water monitoring techniques and their principles, utility, and limitations. Prerequisite: CE 330 or consent of instructor.

CE 749. Solid and Hazardous Wastes. 3 Credits.
Fundamental issues associated with solid and hazardous wastes are presented. Topics include government regulations, waste characteristics and quantities, the transport and attenuation of wastes in the environment, risk assessment, and handling, treatment and disposal techniques. Special emphasis is placed on hazardous waste remediation strategies in terrestrial systems. Prerequisite: Graduate standing in the Environmental Science and Engineering program, or consent of instructor.

CE 751. Physical Hydrology. 3 Credits.
In this course students will develop a land surface model based on the underlying physics and mechanisms of radiative transfer, precipitation, snow processes, evapotranspiration, infiltration and runoff generation. The course will also cover numerical and uncertainty issues associated with hydrologic modeling and its application to real world problems. Prerequisite: CE 455 or equivalent.

CE 752. Physical Hydrogeology. 3 Credits.
Study of fluid flow in subsurface hydrologic systems. Investigation of the ground water environment including porosity, and hydraulic conductivity and their relationship to typical geologic materials. Examination of Darcy's law and the continuity equation leading to the general flow equations. Discussion of typical hydraulic testing methods to estimate aquifer parameters in various situations and apply these to water resource problems. Study of the basic mechanisms that determine the behavior of typical regional flow systems. (Same as GEOL 751.)

CE 753. Chemical and Microbial Hydrogeology. 3 Credits.
Lecture and discussion of chemical and microbiological controls on groundwater chemistry. Topics include thermodynamic and microbiological controls on water-rock reactions; kinetics; and microbiological, chemical and isotopic tools for interpreting water chemistry with respect to chemical weathering and shallow diagenesis. Origins of water chemistry, changes along groundwater flow paths, and an introduction to contaminant biogeochemistry will be discussed through the processes of speciation, solubility, sorption, ion exchange, oxidation-reduction, elemental and isotopic partitioning, microbial metabolic processes and microbial ecology. An overview of the basics of environmental microbiology, including cell structure and function, microbial metabolism and respiration, microbial genetics and kinetics of microbial growth will be covered. (Same as GEOL 753.) Prerequisite: One year of chemistry, one year of calculus, one year of biology, an introductory course in hydrogeology, or consent of the instructors.

CE 754. Contaminant Transport. 3 Credits.
A study of the transport of conservative and non-conservative pollutants in subsurface waters. Case studies are used to illustrate and develop a conceptual understanding of such processes as diffusion, advection, dispersion, retardation, chemical reactions, and biodegradation. Computer models are developed and used to quantify these processes. (Same as GEOL 754.) Prerequisite: Introductory Hydrogeology or consent of instructor.

CE 755. Open Channel Flow. 3 Credits.
A study of uniform and non-uniform steady flow of water in open channels, including backwater curves, the hydraulic jump, and the delivery of canals. Prerequisite: CE 330.

CE 756. Wetlands Hydrology and Introduction to Management. 3 Credits.
A study of the basic structure and functions of wetlands; the physical, chemical, and biological processes involved; and an introduction to the management of wetlands. Also a brief introduction to the legal aspects of wetlands, the Section 404 permitting processes, and mitigation requirements. Prerequisite: Senior or graduate standing in engineering or a science area, or consent of instructor.

CE 757. Pipe-Flow Systems. 3 Credits.
Hydraulic analysis and design of pipelines, pipe networks, and pumping systems. Analysis and control of hydraulic transients. Engineering of water distribution systems. Prerequisite: CE 330 or equivalent.

CE 759. Water Quality Modeling. 3 Credits.
Analytical and numerical modeling of transport and transformation processes in the aquatic environment. Mass balance principles in multidimensional transport phenomena including advection, turbulent diffusion, and dispersion. Prerequisite: CE 330, MATH 127 or MATH 147, and MATH 220 or MATH 221 or equivalent.

CE 760. Stochastic Hydrology. 3 Credits.
This methods-based course includes probability models, parameter estimation, ensemble forecasting and verification, time series analysis, multivariate distributions, principal component analysis along with other stochastic methods imperative to hydrologic analysis and prediction. The application of these methods will be explored through examples in hydrology related to rainfall, streamflow, groundwater and land-atmosphere interactions. Prerequisite: CE 455, MATH 290 or MATH 291 or equivalent.

CE 761. Matrix Analysis of Framed Structures. 3 Credits.
Analysis of 2-D and 3-D frame and truss structures by the direct stiffness method. Computer techniques required to implement the analysis procedure.

CE 762. Plastic Analysis and Design of Structures. 3 Credits.
Investigate the inelastic behavior of materials and cross sections. Study plastic analysis methods and identify the fundamental assumption and theorems to study structures up to collapse. Design ductile structures for extreme loads using plastic design methods. Two lectures one hour and fifteen minute lectures per week. Prerequisite: CE 562 or consent of instructor.

CE 763. Design of Prestressed Concrete Structures. 3 Credits.
The theory and design of prestressed concrete structures based on service load and strength criteria. Prerequisite: CE 563.

CE 764. Advanced Design of Reinforced Concrete Structures. 3 Credits.
The theory and design of reinforced concrete members and structures with emphasis on frames and slabs. Introduction to bridge design and earthquake design. Prerequisite: CE 563.

CE 765. Advanced Steel Design - Building Structures. 3 Credits.

CE 766. Advanced Design of Reinforced Concrete Structures. 3 Credits.
The theory and design of reinforced concrete members and structures with emphasis on frames and slabs. Introduction to bridge design and earthquake design. Prerequisite: CE 563.
The theory and design of standard steel framed structures (primarily buildings). Design philosophies, stability, composite design, structural behavior, preliminary design, and connections. Prerequisite: CE 562 or equivalent.

CE 766. Advanced Steel Design - Bridge Structures. 3 Credits.
Introduction to simple plastic design principles. Analysis and design of steel bridges including composite and noncomposite plate girders, curved girders, box girders, and other specialized bridge types. Fatigue and connection design considered. Prerequisite: CE 562 or equivalent.

CE 767. Introduction to Fracture Mechanics. 3 Credits.
Theories and modes of structural failure as related to structural design. Application of fracture mechanics to failure analysis, fracture control plans, fatigue crack growth, and stress-corrosion crack growth. Prerequisite: CE 310 or CE 312 plus a structural or mechanical design course.

CE 768. Design of Timber Structures. 3 Credits.
Provide an introduction to behavior, analysis and design of timber components and systems. Prerequisite: CE 461.

CE 769. Design of Masonry Structures. 3 Credits.
Provide an introduction to behavior, analysis and design of masonry components and systems. Prerequisite: CE 461.

CE 770. Concepts of Environmental Chemistry. 3 Credits.
The fundamentals of aquatic chemistry, with emphasis on application to water purification and wastewater treatment. May not be taken for credit by students with credit in CE 570. Prerequisite: CE 477 or CE 479 or equivalent, calculus, and five hours of chemistry.

CE 771. Environmental Engineering Laboratory. 3 Credits.
A laboratory course introducing standard practices for measurement, analysis, and reporting of environmental data. Emphasis is placed on learning common analytical techniques used in environmental engineering and science. May not be taken for credit by students with credit in CE 571. Prerequisite: CE 477 or CE 479 or equivalent, calculus, and five hours of chemistry.

CE 772. Physical Principles of Environmental Engineering Processes. 3 Credits.
Physical principles of suspensions, kinetics, fluid flow, filtration, and gas transfer are applied to various environmental physical processes. Prerequisite: CE 477 or CE 479 or equivalent, calculus, and four hours of physics.

CE 773. Biological Principles of Environmental Engineering. 3 Credits.
A basic study of the microorganisms of importance in environmental engineering. Emphasis is placed on the microbiology of dilute nutrient solutions. Microbial physiology, microbial ecology, and biochemistry will be discussed as they pertain to environmental engineering and science. Both biodegradation and public health aspects are included. May not be taken for credit by students with credit in CE 573. Prerequisite: CE 477 or CE 479 or equivalent, calculus, and five hours of chemistry.

CE 774. Chemical Principles of Environmental Engineering Processes. 3 Credits.
Chemical principles of stoichiometry, thermodynamics, and kinetics are applied to various chemical processes having application in the field of environmental engineering and science, including adsorption, ion exchange, coagulation, oxidation, and precipitation. Prerequisite: CE 477 or CE 479 or equivalent, calculus, and credit or registration in CE 570 or CE 770.

CE 775. Stormwater Treatment Systems Design. 3 Credits.
This course will address the design of stormwater treatment systems to provide hydrological control and water quality improvement. Specific topics include common stormwater pollutants, contaminant loading during storm events, design of structural BMPs (detention basins, traps, filters, and vegetated control systems) and low impact development practices. Prerequisite: CE 477 or CE 479, either CE 465 or CE 475 or consent of instructor.

CE 776. Water Reuse. 3 Credits.
This course addresses past and current water reclamation and reuse practices; health and environmental concerns associated with water reuse; technologies and systems for water treatment, reclamation, and reuse; water reuse applications, including agricultural reuse, direct and indirect potable reuse, landscape irrigation, industrial uses, urban non-irrigation applications, environmental and recreational uses, and groundwater recharge; and planning and implementation of water reuse systems. Prerequisite: CE 477 or CE 479 or equivalent.

CE 777. Industrial Water and Wastes. 3 Credits.
A review of the methods of industrial water treatment and the fundamentals of industrial wastewater pollution control. Topics include: water budgets, cooling tower and boiler treatment, corrosion control, government regulations, wastewater characterization, waste minimization, pilot plants, pretreatment, final treatment, and site selection. May not be taken for credit by students with credit in CE 577. Prerequisite: CE 477 or CE 479 or equivalent.

CE 778. Air Quality. 3 Credits.
The course is intended to provide a working knowledge of pollutant sources, effects, meteorological factors, measurements, modeling approaches, legislation and controls associated with air quality problems. Students work on problems drawn from typical industrial situations, and use models to address specific air pollution scenarios. Prerequisite: CE 477 or CE 479 or equivalent, and MATH 115 or MATH 125 or MATH 145.

CE 781. Traffic Engineering Characteristics. 3 Credits.
A study of fundamental traits and behavior patterns of the road user and his or her vehicle in traffic. The major content involves techniques for obtaining data, analyzing data and interpreting data on traffic speed, volume, streamflow, parking and accidents. Capacity analyses using the most up to date procedures for major traffic facilities such as undivided highways, city streets, freeways, interchanges and intersections are also discussed at length. Prerequisite: CE 582 or equivalent.

CE 783. Railroad Engineering. 3 Credits.
A comprehensive study of the railroad industry, including the development of the railway system, an overview of the railroad industry, basic track work, right-of-way and roadway concerns, drainage, track design, railroad structures, electrification, and rail passenger service. A final design project is required. Prerequisite: CE 240; CE 582 or equivalent.

CE 786. Highway Safety. 3 Credits.
Several topics dealing with highway safety are presented and discussed. Typical topics are railroad/highway crossings, accident reconstruction, distractions to the drivers, speed and crashes, elderly drivers, traffic control devices, roadside design, access management, traffic calming devices, and crash rates.

CE 787. Advanced Soil Mechanics. 3 Credits.
A comprehensive study of soil behavior. Topics include stress-strain behavior for soils under a variety of loading conditions, critical state soil mechanics theory, consolidation prediction, modeling subsurface water flow, and other topics. Prerequisite: CE 487 or equivalent.

CE 788. Geotechnical Engineering Testing. 3 Credits.
Three lectures. Field testing techniques, sampling methods, and laboratory testing procedures used to determine soil properties for engineering projects. Prerequisite: CE 487.

CE 790. Traffic Simulation Modeling and Analysis. 3 Credits.
This course introduces popular tools for modeling, analyzing and optimizing various transportation elements. Students will learn to formulate and apply basic principles of simulation modeling; use simulation and optimization techniques for improving traffic operations of a signalized intersection, an urban street network, and a freeway facility; and apply processes for developing simulation applications. Prerequisite: CE 781 or equivalent, or consent of instructor.

CE 797. Environmental Engineering and Science in Developing Countries. 3 Credits.
This course begins with a focus on basic sanitation, including control of infectious diseases, water supply and treatment, and proper disposal of excreta, wastewater, and solid wastes. The course then delves into other environmental topics such as sustainability, wastewater reuse, project planning and implementation, air pollution, deforestation, hazardous waste disposal, and the roles of various governmental and non-governmental organizations in addressing environmental issues. The course topics are addressed by a combination of lectures, guest lectures, and student presentations, with each student choosing a presentation topic of personal or professional interest that is relevant to the course. Prerequisite: CE 477 or CE 479 or permission of instructor.

CE 801. Energy Methods. 3 Credits.
The methods of analysis by energy methods of mechanics problems. Includes variational energy principles, calculus of variations, stationary energy and complementary energy principles, and the principle of virtual work. Applications. Prerequisite: CE 310 or CE 312 and MATH 320.

CE 804. Advanced Structural Dynamics. 3 Credits.
Advanced topics in structural dynamics, including experimental modal analysis, digital signal processing, data acquisition and analysis, random vibration concepts, system identification, structural health monitoring and damage detection, and introduction to smart structures technology (e.g. smart sensing, estimation, and control). This course provides practical laboratory experience through state-of-the-art commercial testing equipment and software. Prerequisite: CE 704 or consent of instructor.

CE 810. Theory of Elastic Stability. 3 Credits.
Buckling of columns in the elastic or hyperelastic region. Lateral and torsional buckling of straight and curved members. Buckling of plates and shells.

CE 815. Viscoelasticity of Solids. 3 Credits.
This course provides the basics of mechanical and mathematical modeling and characterization of linear viscoelastic materials. Topics include different viscoelastic models, experimental methods for characterization of viscoelastic materials, design methods for viscoelastic members, and introduction to temperature effects and nonlinear viscoelastic response of materials. Prerequisite: CE 310 or CE 312 or equivalent.

CE 848. Pavement Materials Characterization. 3 Credits.
Laboratory and field test methods for determining engineering properties of bituminous pavements. Asphalt mix design methods and the relationship between mix design and pavement structural design and performance. Prerequisite: CE 484 or consent of instructor.

CE 850. Life Cycle Assessment. 3 Credits.
Life cycle assessment (LCA) is a tool used across engineering fields to determine the life cycle, cradle-to-grave environmental impacts of a product or process. LCA practice helps develop a systems-thinking perspective and a deeper understanding of sustainability. Students will evaluate LCA methods and design appropriate LCA frameworks. Prerequisite: CE 477 or CE 479 or C&PE 211 or equivalent.

CE 855. Free Surface Flow II. 3 Credits.
The course addresses computer modeling of open channel flow using HEC-RAS (Hydraulic Engineering Center - River Analysis System). 1D, 2D and mixed 1D-2D HEC-RAS models will be developed for steady and unsteady flow conditions. ArcGIS will be used to develop HEC-RAS geometric input files and to process model results. Other 2D programs will also be introduced. Topics addressed are flood delineation, bridge hydraulics, bridge scour, sediment transport and stable channel design. Some knowledge of ArcGIS is desirable. Prerequisite: CE 330 or equivalent.

CE 857. Sediment Transport. 3 Credits.
A study of the transport of sediment in alluvial channels. Specific topics include properties of sediment, mechanics of bed forms, particle entrainment, scour analysis, prediction of suspended load and bed load, design of stable channels and diversion works, and sedimentation of reservoirs. Prerequisite: CE 755 or consent of instructor.

CE 858. Urban Hydrology and Stormwater Management. 3 Credits.
Hydrology of urban watersheds; floodplain management; hydlogic modeling; storm drainage; stormwater detention; water quality improvement; geomorphology of urban streams; stream corridor management and stream restoration. Prerequisite: CE 751.

CE 859. Erosion and Sedimentation. 3 Credits.
A study of sediment erosion, transport, and deposition at the watershed scale with particular application to water quality degradation and reservoir infilling. Prerequisite: Graduate standing.

CE 861. Finite Element Methods for Solid Mechanics. 3 Credits.
Stress analysis of 2-D and 3-D solids, plates, and shells by the finite element method. Element formulations and behavior with emphasis on the isoparametric concept. Computer modeling and interpretation of results. Introduction to material and geometric nonlinear analysis of solids. Prerequisite: CE 761 or equivalent.

CE 862. Behavior of Reinforced Concrete Members. 3 Credits.
This mechanics course covers in detail the constitutive behavior of reinforced concrete members subjected to various types of loading and presents the basis for modeling the response of reinforced concrete structures in the nonlinear range of response. Topics covered include: stress-strain behavior of concrete under multi axial states of stress; moment-curvature analysis; advanced analysis of r/c members subjected to shear (variable angel truss models, modified compression field theory, strut-and-tie models); behavior of r/c members subjected to cyclic loading; modeling and effects of slip at the interface between reinforcing steel and concrete. Suggested prerequisite CE 764 or equivalent. Prerequisite: CE 563.

CE 864. Seismic Performance of Structures. 3 Credits.
This course builds on topics from structural dynamics to introduce principles of structural performance during earthquake events. Emphasis is placed on estimating the response of building structures as represented by simple and complex models. Topics covered include strong ground motion, response of simple systems to ground motion, nonlinear response of building systems, and performance-based earthquake engineering. Prerequisite: CE 704.

CE 874. Air Pollution Control. 3 Credits.
The design of control devices for the abatement of air pollutants, both gaseous and particulate, emitted from stationary sources. This includes the basic theory of control device operation and economic factors
associated with each type of control device design. Prerequisite: CE 772 and CE 778 or equivalent.

CE 876. Wastewater Treatment Plant Design. 3 Credits.
Application of physical, chemical, and biological principles to the design of wastewater treatment systems for domestic and other wastewaters. Special emphasis is placed on biological treatment processes. Prerequisite: CE 576 or equivalent, or CE 573 or CE 773 or equivalent.

CE 877. Water Treatment Plant Design. 3 Credits.
Application of physical, chemical, and biological principles to the design of water treatment plants and processes for domestic water supply from surface and ground water sources. Prerequisite: CE 774, or concurrent enrollment.

CE 878. Air Quality Modeling. 3 Credits.
Fundamental physical and mathematical principles applied to air quality modeling; considered are factors that influence the choice and application of air quality models, as well as the interpretation of model output data. Practical applications are stressed using standard models. Prerequisite: CE 778 or equivalent and MATH 125 or MATH 145 or MATH 526 or CE 625.

CE 879. Environmental Research Seminar. 1 Credits.
Discussion of current topics in environmental engineering and science and related fields by staff, students, and visiting lecturers. May be taken only once for credit.

CE 881. Traffic Engineering Operations. 3 Credits.
A study of theory and practical applications of a number of traffic operational and management tools to achieve the convenient, safe and efficient movement of people and goods in urban street networks. The major content involves signalized intersection capacity, design and operation; signalized intersection coordination; and modern roundabout design. Prerequisite: CE 582 or equivalent.

CE 882. Geometric Design of Traffic Facilities. 3 Credits.
A study of basic principles in the design of freeways, urban street systems, parking terminal and other traffic facilities with emphasis on capacity, safety, level of service, and dynamic design concept. Prerequisite: CE 781 or equivalent.

CE 884. Principles of Pavement Design. 3 Credits.
A study of the scientific principles of pavement design as applied to airfield and highway pavements, considering loading conditions, stress distribution, and the properties of the various pavement components, for both rigid and flexible pavements. Prerequisite: CE 487 or equivalent.

CE 885. Advanced Foundation Engineering. 3 Credits.
A study in the design, construction, and behavior of footings and rafts, piles and drilled shafts founded on soils and rocks. Prerequisite: CE 588 or equivalent.

CE 887. Earth Structures. 3 Credits.
Current theory and practice relating to the design of retaining walls, earth slopes, large embankments, and landslide mitigation. Application of geotextiles to the design of earth retaining structures and slope stabilization. Prerequisite: CE 588 or consent of instructor.

CE 888. Ground Improvement. 3 Credits.
Basic descriptions, classification, principles, advantages, and limitations of ground improvement techniques. Design, construction, and quality assurance/control of ground improvement techniques. Prerequisite: CE 588 or equivalent.

CE 889. Designing with Geosynthetics. 3 Credits.
Basic description and properties of geosynthetics including geotextiles, geogrids, geomembranes, geonets, geocomposites, and geosynthetic clay liners. Geosynthetic functions and mechanisms including separation, filtration, drainage, reinforcement, and containment. Design with geosynthetics for roadways, embankments/slopes, earth retaining structures, and landfills. Prerequisite: CE 588 or equivalent.

CE 890. Master's Project. 1-4 Credits.
Directed study and reporting of a specialized topic of interest in civil engineering or an allied field. Prerequisite: Consent of instructor.

CE 891. Advanced Special Problems. 1-3 Credits.
A directed study of a particular complex problem in an area of civil engineering or allied field. Prerequisite: Varies by topic, or with consent of instructor.

CE 892. Structural Engineering and Mechanics Seminar. 1 Credits.
Presentation and discussion of current research and design in structural engineering and engineering mechanics.

CE 895. Advanced Special Topics: ______. 1-3 Credits.
A graduate course or colloquium in a topic of civil engineering or an allied field. Prerequisite: Varies by topic, or with consent of instructor.

CE 899. Master's Thesis. 1-10 Credits.
Directed research and reporting of a specialize topic of interest in civil engineering or an allied field. Prerequisite: Consent of instructor.

CE 912. Theory of Plasticity. 3 Credits.

CE 991. Research. 1-15 Credits.
An investigation of a special problem directly related to civil engineering.

CE 999. Ph.D. Dissertation. 1-15 Credits.
Restricted to Ph.D. candidates. Before candidacy, aspirants performing their research should enroll in CE 991. Prerequisite: Consent of instructor.

Courses

CMGT 457. Construction Project Management. 3 Credits.
An introduction to the management of construction projects with an emphasis on engineering economics. This course addresses time value of money, cash flow and interest, financial analysis of alternatives, and taxes and depreciation. Also included are projects management fundamentals, project scheduling, and project controls. Prerequisite: MATH 126 or MATH 146 or consent of the instructor.

CMGT 500. Construction Engineering. 3 Credits.
An introduction to the construction industry, construction project management, and construction operations. Topics include project participant roles and responsibilities; project delivery systems; procurement of construction services; sustainable construction; contracts, bonds, and insurance; equipment selection and use; constructability and value engineering; estimating and bidding; planning and scheduling; operations management; safety; and project commissioning and closeout. Prerequisite: Junior or Senior standing in the School of Engineering, or consent of the instructor.

CMGT 700. Construction Project Management. 3 Credits.
An introduction to the management of construction projects. This course addresses project delivery systems, project organization, estimating and bidding, planning and scheduling, legal and safety issues, among other topics. Prerequisite: Graduate standing or consent of instructor. Not open to those with credit in CMGT 500.

CMGT 701. Construction Planning and Scheduling. 3 Credits.
An introduction to the planning and scheduling of projects, for both construction and design. Emphasis is placed on the critical path method including network development, production of time schedules, time-cost considerations, and the efficient utilization of resources. Manual and computer techniques are covered. Prerequisite: Graduate standing or consent of instructor.

CMGT 702. Construction Equipment and Methods. 3 Credits.
This course introduces the student to the multitude of construction equipment employed in construction. The underlying technology and engineering principles are reviewed. Principles of equipment selection, equipment utilization, and equipment economic analysis are covered. Prerequisite: Graduate standing or consent of instructor.

CMGT 703. Construction Quality, Productivity, and Safety. 3 Credits.
Operations analysis for work improvement in construction using process charts, crew balancing, time-lapse photography, and planning techniques. Regulations, accident prevention, and safety management are covered. Prerequisite: Graduate standing or consent of instructor.

CMGT 704. Construction Estimating and Bidding. 3 Credits.
A study of the quantity survey, cost estimating, scheduling and project controls; construction operations; and methods of building construction. Prerequisite: Graduate standing or consent of instructor.

CMGT 705. Construction Contracts, Bonds, and Insurance. 3 Credits.
Legal doctrines relating to owners, design professionals, and contractors. Sources of law, forms of association, and agency. Contract formation, rights and duties, interpretation, performance problems, disputes, and claims. Surety bonds and insurance. Prerequisite: Graduate standing or consent of instructor.

CMGT 706. Construction Alternative Project Delivery Methods. 3 Credits.
Learn the types of alternative project delivery methods that are increasingly used in the design and construction industry, including Design-Build (DB), Construction Manager at Risk (CMAR or CM/GC), Integrated Project Delivery (IPD), Public-Private-Partnerships (P3), and more. Within these methods, the course focuses on the industry’s expanding scope of preconstruction services and increasing integration between design and construction professionals. Prerequisite: Graduate standing or consent of instructor.

CMGT 707. Engineering Risk and Decision Analysis. 3 Credits.
The course investigates the fundamental principles and techniques of risk and decision analysis. It applies these principles in project-level decisions in which risk or uncertainty play a central role. The course examines various risk and decision tools including Monte Carlo analyses, influence diagrams, and other types of multi-criteria decision analyses. In addition to teaching the skills and techniques, the course will introduce students to new ideas and concepts regarding decision and risk analysis. Prerequisite: CMGT 500 or CMGT 700, CE 625 or MATH 526, or consent of instructor.

CMGT 711. Construction Safety. 3 Credits.
This course’s primary purpose is to help students understand construction safety theories and practices. Methods used to improve construction safety are introduced. A class project is used to help students explore and identify opportunities to improve construction safety. Prerequisite: Graduate standing or consent of instructor.

CMGT 712. Construction Safety Solution Development. 3 Credits.
This course aims to help students develop solutions to improve construction safety. Solution development focuses on improving safety issues faced in the construction industry, including but not limited to software, hardware, processes, methods, and concepts. Prerequisite: Graduate standing or consent of instructor.

CMGT 713. Request for Proposals in Design and Construction. 3 Credits.
The design & construction industry is shifting away from low bid toward qualifications-based procurement methods. The course examines the most common Request for Proposal processes used by owners to select design & construction teams in a variety of delivery methods. The course will also introduce students to practical strategies to compete in these RFP scenarios. Prerequisite: Graduate standing or consent of instructor.

CMGT 801. Directed Readings in Construction Management. 1-3 Credits.
Graduate-level directed readings on a topic in construction management mutually agreed on by the student and instructor. Intended to build on one or more of the core course topics: project management; planning and scheduling; equipment and methods; quality; productivity and safety; estimating and bidding; contracts, bonds, and insurance. CMGT 801 may be repeated for credit to a maximum of three hours in the degree program. Mutually agreed course deliverable(s) required. Prerequisite: Approval of the course topic and deliverable(s) by the instructor, CMGT 500 or CMGT 700, CMGT 701, CMGT 702, CMGT 703, CMGT 704, and CMGT 705, or consent of instructor.

CMGT 802. Special Problems in Construction Management. 1-3 Credits.
Graduate-level investigation requiring research of a topic in construction management mutually agreed on by the student and instructor. Intended to build on one or more of the core course topics: project management; planning and scheduling; equipment and methods; quality; productivity and safety; estimating and bidding; contracts, bonds, and insurance. CMGT 802 may be repeated for credit to a maximum of three hours in the degree program. Mutually agreed course deliverable such as a paper summarizing the results of the investigation required. Prerequisite: Approval of the course topic and deliverable by the instructor, CMGT 500 or CMGT 700, CMGT 701, CMGT 702, CMGT 703, CMGT 704, and CMGT 705, or consent of instructor.

CMGT 805. Construction Accounting and Finance. 3 Credits.
Project level cost control concepts and structure, time and cost integration, data collection and reporting, equipment cost, job overhead cost, and cost control. Integrating construction project level cost with construction company financial accounting and financial management. Prerequisite: CMGT 702 and CMGT 704 or consent of instructor.

CMGT 895. Construction Management Project. 1-3 Credits.
Graduate-level investigation and report on a construction management topic mutually agreed on by the student and project advisor. This is the capstone course in the Master of Construction Management (MCM) degree program. Successful completion of this project requires acceptance of the written report and oral presentation to the student’s graduate committee. Prerequisite: Approval of project topic by project advisor, CMGT 500 or CMGT 700, CMGT 701, CMGT 702, CMGT 703, CMGT 704, CMGT 705, and nine elective credit hours, or consent of instructor.

Bachelor of Science in Architectural Engineering

B.S. in Architectural Engineering Program

Students in the B.S. in architectural engineering (ARCE) program are admitted by and must fulfill the graduation requirements of the School of
Engineering. The program is administered by the School of Engineering's Department of Civil, Environmental, and Architectural Engineering (CEAE).

In KU's ARCE program students learn to analyze and design the engineered systems that make buildings perform their intended functions. At KU the ARCE areas of emphasis are

1. Structural design and analysis,
2. Building mechanical and energy systems,
3. Illumination and power systems,
4. Construction management, and
5. A hybrid such as sustainability, acoustics, or fire protection.

To use this knowledge, the graduate must have a good foundation in engineering science and design as these relate to building engineered systems and construction, as well as an appreciation for architectural design and history.

B.S. ARCE Mission Statement

Graduates who pursue a career in Architectural Engineering will be successfully engaged in professional engineering practice or graduate study in the analysis, design, construction, and operation of building engineered systems.

Accreditation

The Bachelor of Science in Architectural Engineering is accredited by the Engineering Accreditation Commission of ABET, http://www.abet.org.

Careers

Professional Registration and Licensing

Architectural engineers are involved in building projects that directly affect the production, comfort, health and safety of the public. Graduates are strongly encouraged to become registered professional engineers as soon as possible after graduation. In Kansas, and many other states with similar registration laws, this involves completing an ABET-accredited B.S. degree in architectural engineering, passing the Fundamentals of Engineering (FE) and Professional Engineering (PE) examinations, and obtaining four years of satisfactory engineering experience under the supervision of a professional engineer. Students in architectural engineering must take the FE examination before graduation. Architectural engineering graduates can also practice as architects after completing an NAAB-accredited professional undergraduate or graduate architecture degree program and becoming registered architects. Students with this interest should consider the available tracks leading to a Master of Architecture degree in addition to their B.S. in architectural engineering.

Professional Opportunities

Architectural engineering focuses on building engineered systems analysis and design, including structural, mechanical and energy systems, illumination, power, and construction methods applied to buildings. Increasingly, architectural engineers are interested in specializations such as energy efficient buildings, acoustics, and fire protection. Architectural engineers center their attention on the performance, safety, sustainability, cost-effectiveness, and construction of these systems. They typically work for engineering consulting firms, construction companies, or government agencies.

Undergraduate Admission to the School of Engineering

Admission to the KU School of Engineering (and its degree programs) is selective. Students may be admitted to an engineering or computer science degree program (https://engr.ku.edu/2021-curriculum-guide-links/) as freshmen (first year) students, but all admissions, for both in-state and out-of-state students, are selective. Applications are judged on several factors, such as high school record, scores on national tests, academic record at college or university level, and trend of grades and more. High school transcripts are required.

Minimum Academic Standards for Admission to the School of Engineering

To be considered for admission to the School of Engineering, beginning first-year students must meet or exceed the following minimum standards:

- Must be admissible (https://admissions.ku.edu/major-specific-requirements/) to the University of Kansas by assured admissions or individual review, AND
- Have a 3.0+ high school GPA, AND
- Demonstrate mathematics preparedness by:
  - Achieving a mathematics ACT score of 22+ (or math SAT score of 540+), or
  - Achieving a ‘B’ or better in ‘college algebra’ or a more advanced mathematics course, or
  - Achieving a ‘C’ or better in a high school calculus course; or
  - Earning credit via IB or AP credit for the above-mentioned courses in accordance with KU placement credit requirements; or
  - Achieving at minimum a qualifying score for MATH 104 on the ALEKS mathematics placement exam.

Minimum Academic Standards for Direct Admission into Degree Program for incoming Freshmen

Students with a 26+ Math ACT (600+ Math SAT) or meet eligibility requirements for MATH 125 (Calculus I) (p. 1622) may be admitted directly into their chosen major, with the exception of those seeking admission into the Electrical Engineering, Computer Science, Computer Engineering, and Interdisciplinary Computing (EECS) majors. For EECS program admission, students must:

- Be admissible (https://admissions.ku.edu/major-specific-requirements/) to the University of Kansas by assured admissions or individual review, AND
- Have a 3.0+ high school GPA, AND
- Demonstrate mathematics preparedness by:
  - Achieving a mathematics ACT score of 28+ (or math SAT score of 660+), or
  - Achieving a ‘C’ or better in a high school calculus course; or
  - Earning credit via IB or AP credit for the above-mentioned course in accordance with KU placement credit requirements; or
  - Achieving at minimum a qualifying score for MATH 125 on the ALEKS mathematics placement exam.
Exploring Engineering

Students not admitted directly to the School of Engineering or their major but who are admissible to the university may be admitted to the College of Liberal Arts and Sciences as an Undecided student. They can later re-apply to the School of Engineering during the semester they are completing the admission requirements for transfer students.

Transfer Admission Standards

Applications from all transfer students, whether from other institutions or from other academic schools at the University of Kansas, are evaluated on a case-by-case basis. Transfer students must be admissible (http://admissions.ku.edu/apply/requirements/ustransfer/) to KU AND have a cumulative college transferable grade-point average of 2.5+ to be considered. In addition, students must have grades of "C" or better in those courses in math (must include MATH 125 Calculus I or equivalent), science, and engineering applicable to the engineering degree.

Current KU Students admitted to other academic units may apply to the School of Engineering by completing a Change of School form (https://inowformsprivate.ku.edu/imagenowforms/fs/?form=OUR%20Change%20of%20School%20Form).

Already Applied to KU, But Not Engineering?

Don't worry. It's not too late to change your mind if you've already applied to KU and selected a major outside the School of Engineering. If you think one of the 12 engineering or computer science majors is a better fit for your talents, you can still change your requested major — preferably before May 1 — and be considered for admission to the School of Engineering and all the benefits that go with it.

To update your application, visit Undergraduate Admissions (http://admissions.ku.edu/update-your-application/) and click on "Change application term, major, mailing address, and/or email address."

Please contact a member of our recruitment team (studyengineering@ku.edu), 785-864-3881, if you have any difficulty.

Bachelor of Science in Architectural Engineering Degree Requirements

A total of 128 credit hours is required for the degree. Substitutions may be made only by submitting a petition to the academic advisor for the department's and school's consideration. The student’s design experience is developed throughout all four years of the undergraduate curriculum, beginning with the introductory course and continuing with required architectural, structural, illumination, power, HVAC, and construction management courses. Each student also takes an elective course in his or her selected emphasis; a list of elective courses is available on the CEAE website (http://www.ceae.ensr.ku.edu). In the fourth year, an ARCE capstone design course is required; it integrates the overall design experience for the student.

Students who want to earn a professional Master of Architecture degree in addition to the B.S. in architectural engineering should apply for the “Track III Professional” program via the School of Architecture and Design and discuss it each year with their ARCE advisor so that electives can be chosen carefully.

Bachelor of Science in Civil Engineering

B.S. in Civil Engineering Program

Civil engineering (CE), the oldest and broadest of the divisions of engineering, implements a range of public and private projects for improving society’s physical infrastructure and the environment. The civil engineer integrates scientific principles with engineering experience to plan, design, and construct networks of highways and railroads, airports, bridges and dams, environmental pollution control systems, industrial structures, water purification and distribution systems, and urban transportation systems that maintain, protect, and enhance the quality of life. Civil engineers are trained to consider the social effects as well as the physical and environmental factors that constrain the planning, design, construction, and operation of their projects. Environmental engineering, a technical specialization with its origins in civil engineering, is a growing discipline dedicated to the protection of the environment.

The undergraduate program gives students the theoretical background, instruction in engineering application of scientific principles, and professional attitude to serve the public. It typically leads to entry-level positions or to graduate work in technical specialties (e.g., environmental, geotechnical, structural, and transportation), business administration, or other professions.
Courses that address the behavior and design of steel and reinforced concrete structures, environmental pollution, control systems, water resources systems, foundations, and surface transportation systems are integrated into the curriculum, culminating in a series of senior-level professional design courses. These simulate the design processes used in the major areas of civil engineering and prepare students for entry-level positions. Most faculty members are licensed professional engineers. KU graduates have successful records in professional practice, research in academic institutions, government and private laboratories, and in managing firms and corporations of all sizes.

**B.S. CE Mission Statement**

Graduates who pursue a career in Civil Engineering will be successfully engaged in professional engineering practice or graduate study in the analysis, design, construction, and operation of public and private infrastructure systems.

**Accreditation**

The Bachelor of Science in Civil Engineering is accredited by the Engineering Accreditation Commission of ABET, http://www.abet.org.

**Combined Civil Engineering and Business Program**

A student who wants to combine engineering with business may enroll in a program leading to a B.S. degree in both fields. Full-time enrollment enables the student to earn the two degrees in 5 years. During the first 2 years, the student enrolls in the School of Engineering. After that, the student enrolls simultaneously in the schools of Engineering (http://www.engr.ku.edu/) and Business (https://business.ku.edu/).

**Careers**

**Professional Registration and Licensing**

Engineers are involved in projects that directly affect the health and safety of the public. Graduates are strongly encouraged to become registered Professional Engineers. This involves completing a B.S. degree in civil engineering, passing the Fundamentals of Engineering (FE) and Professional Engineering (PE) examinations, and obtaining four years of satisfactory engineering experience under the supervision of a professional engineer. Students in civil engineering must take the FE examination before graduation.

**Professional Opportunities**

Civil engineers plan, design, construct, and oversee public and private infrastructure systems as well as maintain essential structures such as bridges, buildings, tunnels, roads, and water supply and sewage systems. Civil engineers typically work for major industrial and commercial centers, construction industry, state departments of transportation, manufacturing companies, oil or electrical companies, aerospace industries, or consulting firms.

**Undergraduate Admission to the School of Engineering**

Admission to the KU School of Engineering (and its degree programs) is selective. Students may be admitted to an engineering or computer science degree program (https://engr.ku.edu/2021-curriculum-guide-links/) as freshmen (first year) students, but all admissions, for both in-state and out-of-state students, are selective. Applications are judged on several factors, such as high school record, scores on national tests, academic record at college or university level, and trend of grades and more. High school transcripts are required.

**Minimum Academic Standards for Admission to the School of Engineering**

To be considered for admission to the School of Engineering, beginning first-year students must meet or exceed the following minimum standards:

- Must be admissible (https://admissions.ku.edu/major-specific-requirements/) to the University of Kansas by assured admissions or individual review, AND
- Have a 3.0+ high school GPA, AND
- Demonstrate mathematics preparedness by:
  - Obtaining a mathematics ACT score of 22+ (or math SAT score of 540+), or
  - Achieving a ‘B’ or better in ‘college algebra’ or a more advanced mathematics course, or
  - Achieving a ‘C’ or better in a high school calculus course; or
  - Earning credit via IB or AP credit for the above-mentioned courses in accordance with KU placement credit requirements; or
  - Achieving at minimum a qualifying score for MATH 104 on the ALEKS mathematics placement exam.

**Minimum Academic Standards for Direct Admission into Degree Program for incoming Freshmen**

Students with a 26+ Math ACT (600+ Math SAT) or meet eligibility requirements for MATH 125 (Calculus I) (p. 1622) may be admitted directly into their chosen major, with the exception of those seeking admission into the Electrical Engineering, Computer Science, Computer Engineering, and Interdisciplinary Computing (EECS) majors. For EECS program admission, students must:

- Be admissible (https://admissions.ku.edu/major-specific-requirements/) to the University of Kansas by assured admissions or individual review, AND
- Have a 3.0+ high school GPA, AND
- Demonstrate mathematics preparedness by:
  - Obtaining a mathematics ACT score of 28+ (or math SAT score of 660+), or
  - Achieving a ‘C’ or better in a high school calculus course; or
  - Earning credit via IB or AP credit for the above-mentioned course in accordance with KU placement credit requirements; or
  - Achieving at minimum a qualifying score for MATH 125 on the ALEKS mathematics placement exam.

Students who are not admissible to their desired major are admitted to the School of Engineering as undecided engineering undergraduate students.

**Exploring Engineering**

Students not admitted directly to the School of Engineering or their major but who are admissible to the university may be admitted to the College of Liberal Arts and Sciences as an Undecided student. They can later
re-apply to the School of Engineering during the semester they are completing the admission requirements for transfer students.

**Transfer Admission Standards**

Applications from all transfer students, whether from other institutions or from other academic schools at the University of Kansas, are evaluated on a case-by-case basis. Transfer students must be admissible (http://admissions.ku.edu/apply/requirements/ustransfer/) to KU AND have a cumulative college transferable grade-point average of 2.5+ to be considered. In addition, students must have grades of “C” or better in those courses in math (must include MATH 125 Calculus I or equivalent), science, and engineering applicable to the engineering degree.

Current KU Students admitted to other academic units may apply to the School of Engineering by completing a Change of School form (https://inowformsprivate.ku.edu/imagenowforms/fs/?form=OUR%20Change%20of%20School%20Form).

**Already Applied to KU, But Not Engineering?**

Don’t worry. It’s not too late to change your mind if you’ve already applied to KU and selected a major outside the School of Engineering. If you think one of the 12 engineering or computer science majors is a better fit for your talents, you can still change your requested major — preferably before May 1 — and be considered for admission to the School of Engineering and all the benefits that go with it.

To update your application, visit Undergraduate Admissions (http://admissions.ku.edu/update-your-application/) and click on “Change application term, major, mailing address, and/or email address.”

Please contact a member of our recruitment team (studyengineering@ku.edu), 785-864-3881, if you have any difficulty.

Science elective (minimum of 3 hours). Select one of the following: 3

- General Civil Engineering students select from:
  - GEOL 101: The Way The Earth Works
  - GEOL 105: History of the Earth
  - GEOL 351: Environmental Geology

- Approved physics or chemistry elective
- Environmental Engineering students select from:
  - ATMO 105: Introductory Meteorology
  - ATMO 521: Micrometeorology
  - BIOL 100: Principles of Biology
  - BIOL 400: Fundamentals of Microbiology
  - BIOL 414: Principles of Ecology
  - BIOL 661: Ecology of Rivers and Lakes
  - CHEM 530: Physical Chemistry I
  - EVRN 148: Scientific Principles of Environmental Studies
  - GEOG 358: Introduction to Geographic Information Systems
  - GEOG 521: Microclimatography
  - GEOL 101: The Way The Earth Works
  - GEOL 302: Oceanography
  - GEOL 351: Environmental Geology

**KU Core Component**

Economics electives, Select one of the following: 3-4

- ECON 104: Introductory Economics (KU Core GE 3S)

**Basic Engineering Sciences**

Select one of the following: 5

- CE 201: Statics
- & CE 250: and Dynamics
- CE 260: Statics and Dynamics
- CE 310: Strength of Materials
- CE 330: Fluid Mechanics
- CE 331: Fluid Mechanics Lab
- CMGT 457: Construction Project Management
- ARCE 217: Computer-Assisted Building Design

**Computer Programming Elective**

EECS 138: Introduction to Computing: _____ (C++, Fortran, or Matlab) * 3

- or EECS 137: Visual Basic for Engineers

**Engineering Science (select one of the following)** 3

- ARCE 315: Electric Circuits and Machines
- or EECS 316: Circuits, Electronics and Instrumentation
- ME 212: Basic Engineering Thermodynamics
- ARCE 350: Building Materials Science
- or ME 306: Science of Materials
- CE 571: Environmental Engineering Laboratory

*EECS 137 is preferred; EECS 138 Web option is not allowed.

**Undergraduate Concentrations**

Students may identify broad concentrations in either general civil engineering or environmental engineering. Within these, students may choose elective courses to permit additional exposure to selected areas of civil or environmental engineering such as transportation, structural, geotechnical, environmental, and water resources engineering. In environmental engineering, electives may be selected to focus on water quality and treatment, bioremediation, solid and hazardous wastes, air quality, and air pollution control.

**Civil and Environmental Engineering Sciences and Introduction to Design**

#### Civil Engineering Design Elective

Select one of the following: 3 hours

- CMGT 500 Construction Engineering
- CE 582 Highway Engineering
- CE 588 Foundation Engineering

### Environmental Engineering Principles Elective

Select one of the following: 3 hours

- CE 570 Concepts of Environmental Chemistry
- CE 573 Biological Principles of Environmental Engineering

#### Environmental Design Elective

Select one of the following: 3 hours

- CE 550 Life Cycle Assessment

### Electives in Selected Areas of Emphasis

A student who completes the minimum requirements in each of the four areas of the curriculum will have earned 126-127 hours in the general civil concentration and 127-128 hours in the environmental concentration (depending on the ECON choice). Both concentrations require a total of 128 hours for graduation. The remaining hours may be any courses that qualify for inclusion in one or more of the four curricular areas in accordance to the restrictions outlined below.

The content of an elective course must differ substantially from the content of any course taken to fulfill a degree requirement.

### Introductory Courses

- CE 191 Introduction to Civil Engineering | 2
- ENGL 362 Foundations of Technical Writing | 3

### Mathematics and Basic Sciences

Students may take elective courses designated as natural sciences and mathematics (N). Elective courses in mathematics must require MATH 126 as a prerequisite. Physics courses numbered below 211 and chemistry courses numbered below 130 are not accepted as general electives.

### General Education Courses

Students may take elective courses designated as humanities (H) and social sciences (S). The humanities and social sciences courses are identified in the online timetable and in the Undergraduate Catalog with the letters H for humanities and S for social science courses. Western Civilization courses count as general electives. English courses taken as general electives must have ENGL 102 as a prerequisite. Any communication studies course (COMS) may be taken as a general elective.

### Architectural Engineering Courses

Any course number above 300 is acceptable.

### Architecture Courses

Up to five credit-hours of building technology and site planning courses numbered 250 or above may be used.

### Business Courses

Any course offered by the KU School of Business is acceptable. Business courses offered at other colleges or universities will be accepted only if the courses are substantially equivalent to business courses taught at KU.
Urban Planning Courses

Any course offered by the KU Department of Urban Planning is acceptable.

Graduate Courses in Civil and Environmental Engineering

A student who wishes to study a particular civil engineering area in greater depth can take courses at the 600 or 700 level. The 700-level courses are primarily for graduate students but are open to seniors who have completed the prerequisites. The 700-level courses are not recommended for students with low grade point averages. A student not wishing to specialize can attain a broader background in civil engineering design by taking additional courses beyond the minimum requirements in area IV.

Engineering Courses

Any course offered by the various departments of the School of Engineering is acceptable except AE 241 Private Flight Course and AE 242 Private Flight Aeronautics

Honors Courses

Courses with the honors program designation (HNRS) will be accepted as general electives.

ROTC Courses

Students completing the ROTC program may count a maximum of 6 hours of ROTC courses as general electives. A maximum of six hours of ROTC courses in social sciences or humanities may be counted in excess of the 24 hrs required in the general education area. Up to six hours of ROTC courses may be counted as general electives if related to the physical sciences or engineering, and up to 3 credit hours may be used as electives in engineering technology and design.

Master of Science in Architectural Engineering

Civil, Environmental, and Architectural Engineering

Civil engineering is the oldest engineering program at KU. The first graduating class in 1873 included a civil engineer. Civil engineers design roads, water systems, bridges, dams, and other structures, providing nearly all the infrastructure needed by modern society.

Civil engineers were the first engineers to address environmental issues and are the lead engineering discipline in treating water supplies to protect public health. In recognition of the significant issues concerning the environment, the department name was changed in 1992 to civil and environmental engineering.

Architectural engineering combines study in architecture with engineering science and design courses in electrical, mechanical, construction, and structures to prepare students for building design projects of all kinds. Architectural engineering dates to 1913 at KU, and the first female graduate of the School of Engineering was an architectural engineering major. Architectural engineering merged with civil and environmental engineering in 2001 to form the the Department of Civil, Environmental, and Architectural Engineering (CEAE).

Mission

CEAE’s mission is to provide students with an outstanding engineering education and be a leader in research and service. This mission is supported by the following 3 goals:

1. Prepare students for productive engineering careers.
2. Maintain and grow strong research programs.
3. Serve the profession.

Graduate Admission

The department admits for all semesters. Students may pursue degrees full or part time. An ABET-accredited baccalaureate degree in engineering is required for admission to the Ph.D. degree programs in civil engineering and environmental & water resources engineering; a baccalaureate degree in a closely related field is required for admission to the Ph.D. program in environmental & water resources science. Applicants are expected to have undergraduate grade-point averages of 3.0 or higher on a 4.0 scale for admission. Graduate Record Examination (GRE) scores are required and are used in the evaluation process, but minimum scores for admission have not been established. The GRE engineering and other subject examinations are not required. The Test of English as a Foreign Language is required for international applicants. Applicants should take the GRE and TOEFL examinations as early as possible to expedite the admission process.

Graduate applications should be submitted online (http://www.graduate.ku.edu/).

APPLICATION DEADLINES

Fall Admission: December 1 (priority deadline). Applications received past the priority deadline are considered on the basis of rolling review, until two business days before the start of classes.

Spring Admission: September 1 (priority deadline). Applications received past the priority deadline are considered on the basis of rolling review, until two business days before the start of classes.

Summer Admission: December 1

The priority deadlines are for full consideration for fellowships, scholarships and research/teaching assistantships. Applications submitted after these deadlines will be considered for funding on a case-by-case basis.

MINIMUM ENGLISH PROFICIENCY REQUIREMENTS

Visit the full English Proficiency Requirements for Admission to Graduate study at: http://policy.ku.edu/graduate-studies/english-proficiency-international-students (http://policy.ku.edu/graduate-studies/english-proficiency-international-students/).

International students and students who indicated English as a second language are required to show proof of English proficiency for admission purposes and must check-in at the Applied English Center (https://aec.ku.edu/) (AEC) upon arrival on campus for orientation. This process serves to confirm each student’s level of English proficiency and determine whether English courses will be included as a requirement of the student’s academic program. Note: Students who demonstrate English proficiency at the waiver level are not required to check in at the
AEC (see eligibility requirements on the Graduate Studies website (https://graduate.ku.edu/english-proficiency-requirements/)).

APPLICATION FEES
Domestic: $65
International: $85

VISITING US
The graduate program staff is happy to work with all prospective students in determining the fit between the student and the program. We feel that visiting our campus in Lawrence is a very important step. In order to facilitate your visit to KU, there are two main options:

The first, and most preferred, option entails simply applying for admission to the program. All prospective students are welcome to attend our Graduate Open House in mid-October or mid-March. Eligible admitted students may be invited to participate in Campus Visit Days in February (prior to the fall semester of your intended matriculation). These organized visitation opportunities will allow you to gather a great deal of first-hand information which we hope will help you in making a final decision about whether to attend KU.

The second option is making arrangements to visit us on your own, outside of organized events. With early notification, we will do our best to work with you to provide information and schedule appointments with faculty when possible. Please contact us if you feel that this is the best option for you.

CONTACT INFORMATION
Please contact the CEAE Graduate Program Coordinator at gradcae@ku.edu or (785) 864-3826, to schedule a visit or with questions about the application process.

The University of Kansas
Department of Civil, Environmental, and Architectural Engineering
Graduate Administrative Assistant
Learned Hall
1530 W. 15th St., Room 2150
Lawrence, KS 66045

Architectural Engineering
Candidates for the Master of Science degrees have 3 options. Option A requires 30 credit hours including a thesis of 6 hours (6 to 10 hours for the environmental degrees) and a final oral examination including defense of the thesis. Option B requires 30 hours including a 3- or 4-hour special problem investigation in the specialization and a final oral examination. It does not require a thesis. Option C requires 30 credit hours of coursework. It does not require a thesis, special problem investigation, or final oral examination.

The M.S. degree in architectural engineering is intentionally flexible in its course requirements because graduate study in architectural engineering requires specialization in one of many areas of professional practice. Each student works with his or her committee to select appropriate graduate courses that support the research project and the student’s career goals. Students can pursue specializations in, for example, building mechanical, energy, electrical, lighting, or structural systems, or construction engineering. Emerging or hybrid specializations such as sustainability, acoustics, or fire protection are also encouraged.

Courses for any of the M.S. degrees must be listed on a Plan of Study and approved by the student’s major professor, graduate committee, and the department director of graduate studies. All graduate students must have an approved Plan of Study by the beginning of their second semester of study. No more than 9 hours of courses from other departments or more than 6 hours of courses numbered below 700 (of which only 3 hours may be within the department) may be applied toward any of the M.S. degrees without approval of the departmental graduate studies committee. No more than 4 hours of special-problem credit may be applied toward any of the master’s degrees without approval of the department’s graduate advisor.

1. The first, and most preferred, option entails simply applying for admission to the program. All prospective students are welcome to attend our Graduate Open House in mid-October or mid-March. Eligible admitted students may be invited to participate in Campus Visit Days in February (prior to the fall semester of your intended matriculation). These organized visitation opportunities will allow you to gather a great deal of first-hand information which we hope will help you in making a final decision about whether to attend KU.

2. The second option is making arrangements to visit us on your own, outside of organized events. With early notification, we will do our best to work with you to provide information and schedule appointments with faculty when possible. Please contact us if you feel that this is the best option for you.

CONTACT INFORMATION

Environmental & Water Resources Science
Candidates for the Master of Science degrees have 3 options. Option A requires 30 credit hours including a thesis of 6 to 10 hours and a final oral examination including defense of the thesis. Option B requires 30 hours including a 3- or 4-hour special problem investigation in the specialization and a final oral examination. Option B does not require a thesis. Option C requires 30 credit hours of coursework. It does not require a thesis, special problem investigation, or final oral examination.

All graduate students must have an approved Plan of Study (https://gradplan.engr.ku.edu/accounts/login/?next=/) on file by the beginning of their second semester of study that indicates the degree program track they intend to complete. Suggested program tracks are available from the program faculty. At the end of the second semester, students will submit a plan of study that needs to be approved by a graduate committee. Any exemptions or substitutions to this plan of study must be approved by the student’s advisor and the department director of graduate studies. Students may not take individual courses for credit if they have completed an equivalent course previously at the undergraduate level. Graduate courses offered by the CEAE department are identified by the prefixes CE, ARCE, and CMGT and are numbered 700 and above. No more than 3 hours of credit may be applied towards the degree from CEAE courses numbered at the 500 or 600 level. Additional courses numbered at the 500 or 600 level that are not included in the track’s breadth options may not be applied toward the degree without approval of the department director of graduate studies. No more than 4 hours of special-problem credit may be applied toward the degree without approval of the department director of graduate studies.

Master of Civil Engineering
Civil, Environmental, and Architectural Engineering

Civil engineering is the oldest engineering program at KU. The first graduating class in 1873 included a civil engineer. Civil engineers design roads, water systems, bridges, dams, and other structures, providing nearly all the infrastructure needed by modern society.

Civil engineers were the first engineers to address environmental issues and are the lead engineering discipline in treating water supplies to protect public health. In recognition of the significant issues concerning the environment, the department name was changed in 1992 to civil and environmental engineering.

Architectural engineering combines study in architecture with engineering science and design courses in electrical, mechanical, construction, and structures to prepare students for building design projects of all kinds. Architectural engineering dates to 1913 at KU, and the first female graduate of the School of Engineering was an architectural engineering major. Architectural engineering merged with civil and environmental engineering in 2001 to form the the Department of Civil, Environmental, and Architectural Engineering (CEAE).

Mission
CEAE’s mission is to provide students with an outstanding engineering education and be a leader in research and service. This mission is supported by the following 3 goals:

1. Prepare students for productive engineering careers.
2. Maintain and grow strong research programs.
3. Serve the profession.

Graduate Admission
The department admits for all semesters. Students may pursue degrees full or part time. An ABET-accredited baccalaureate degree in engineering is required. Applicants are expected to have undergraduate grade-point averages of 3.0 or higher on a 4.0 scale for admission.

For full-time graduate study, Graduate Record Examination (GRE) scores are required and are used in the evaluation process, but minimum scores for admission have not been established. The GRE engineering and other subject examinations are not required. The Test of English as a Foreign Language is required for international applicants. Applicants should take the GRE and TOEFL examinations as early as possible to expedite the admission process.

Graduate applications should be submitted online (http://www.graduate.ku.edu/).
APPLICATION DEADLINES

Fall Admission: Applications received are considered on the basis of rolling review, until two business days before the start of classes.

Spring Admission: Applications received are considered on the basis of rolling review, until two business days before the start of classes.

Summer Admission: Applications received are considered on the basis of rolling review, until two business days before the start of classes.

MINIMUM ENGLISH PROFICIENCY REQUIREMENTS

Visit the full English Proficiency Requirements for Admission to Graduate study at: http://policy.ku.edu/graduate-studies/english-proficiency-international-students (http://policy.ku.edu/graduate-studies/english-proficiency-international-students/).

International students and students who indicated English as a second language are required to show proof of English proficiency for admission purposes and must check-in at the Applied English Center (https://aec.ku.edu/) (AEC) upon arrival on campus for orientation. This process serves to confirm each student’s level of English proficiency and determine whether English courses will be included as a requirement of the student’s academic program. Note: Students who demonstrate English proficiency at the waiver level are not required to check in at the AEC (see eligibility requirements on the Graduate Studies website (https://graduate.ku.edu/english-proficiency-requirements/)).

APPLICATION FEES

Domestic: $65

International: $85

VISITING US

The graduate program staff is happy to work with all prospective students in determining the fit between the student and the program. We feel that visiting our campus in Lawrence is a very important step. In order to facilitate your visit to KU, there are two main options:

The first, and most preferred, option entails simply applying for admission to the program. All prospective students are welcome to attend our Graduate Open House in mid-October or mid-March. Eligible admitted students may be invited to participate in Campus Visit Days in February (prior to the fall semester of your intended matriculation). These organized visitation opportunities will allow you to gather a great deal of first-hand information which we hope will help you in making a final decision about whether to attend KU.

The second option is making arrangements to visit us on your own, outside of organized events. With early notification, we will do our best to work with you to provide information and schedule appointments with faculty when possible. Please contact us if you feel that this is the best option for you.

M.C.E. Degree Requirements

The Master of Civil Engineering degree requires 30 semester hours of graduate courses, with a minimum of 9 hours of graduate-level courses in one of the following areas:

* Construction engineering and management

* Engineering mechanics

* Environmental engineering

* Geotechnical engineering

* Structural engineering

* Transportation engineering

* Water resources engineering

In addition, a minimum of 6 hours of graduate-level work is required in any of the other above departmental areas. Graduate courses offered by the CEAE Department are identified by the prefixes ARCE, CE, and CMGT and are numbered 700 and above. No more than 9 hours of courses from other departments and no more than 6 hours of courses numbered below 700 (of which only 3 hours may be within the department) may be applied toward the M.C.E. degree without approval of the departmental graduate studies committee. No more than 4 hours of special problem credit may be applied toward the M.C.E. degree without approval of the department's graduate advisor.

Courses to be applied toward the M.C.E. degree must be listed on a Plan of Study form approved by the student's graduate advisor, the student's graduate committee, and departmental graduate advisor. All graduate students must have an approved Plan of Study (https://gradplan.engr.ku.edu/accounts/login/?next=/) on file by the beginning of their second semester of study.

The University of Kansas
Department of Civil, Environmental, and Architectural Engineering
Graduate Administrative Assistant
Ph.D. Degree Requirements

Candidates for the Ph.D degree must satisfy the University’s general requirements for the degree. A Plan of Study must be approved by the student’s major professor, examining committee, and departmental graduate studies committee.

An aspirant for the Ph.D. degree must pass a qualifying examination. The department normally gives this examination upon completion of the aspirant’s M.S. work or at a comparable level for non-M.S. students.

Before being admitted to the comprehensive examination, the aspirant must satisfy the research skill, residency, and responsible scholarship requirements for the degree. The research skill requirement provides the aspirant with a research skill distinct from, but strongly supportive of, the dissertation research. One research skill is required. Possible research skills include foreign language, computer science, mathematics, statistics, specific laboratory skills, and specific skills in the physical or biological sciences. The foreign language skill can be obtained by taking a 2-course sequence in the selected language or demonstrated by passing an examination. The selected research skill must be listed on the Plan of Study form. A separate statement attached to the Plan of Study must list the work to be completed to obtain the research skill. The responsible scholarship requirement serves to ensure that students are trained in responsible research practices and is fulfilled by attending a Responsible Scholarship Training Seminar offered each fall semester.

All graduate students must have an approved Plan of Study (https://gradplan.engr.ku.edu/accounts/login/?next=/) on file by the beginning of their second semester of study.

Graduate Certificate in Construction Management

Graduate Certificate Overview

The objective of the certificate program is to allow students to broaden and deepen their knowledge in the area of Construction Engineering and Management, while learning the most up-to-date theory and techniques used in practice.

The certificate program offers an opportunity for engineering and science practitioners to enhance their skills in Construction Engineering and Management without having to apply for and complete a Master’s degree.

The program consists of four courses (12 credit hours).
Admissions Requirements

A bachelor’s degree in engineering with a GPA of 3.0 or better is required for admission to this graduate certificate program.

Applicants with baccalaureate degrees in engineering are expected to have undergraduate grade-point average of 3.0 or higher on a 4.0 scale for regular admission to a master’s program. An undergraduate grade-point average of 3.3 or higher is expected for applicants with baccalaureate degrees in other fields.

Four (4) courses from the selected list are required to complete the certificate.

The completion requirements of the graduate certificate in Construction Engineering and Management include: (a) the minimum grade for any course to be applied toward the certificate is a grade of B; and (b) no credits may be transferred from another institution for this certificate.

Graduate Certificate in Structural Analysis

Graduate Certificate Overview

The objective of the Structural Analysis certificate program is to allow students to focus on the analytical evaluation of structural systems and components. This provides students with the opportunity to both broaden and deepen knowledge in this area of structural engineering by learning the most up-to-date theory and techniques used in practice. The Structural Analysis Graduate Certificate has a basis in computational structural analysis techniques, with optional courses applying to various materials, structures, and applications. It offers an opportunity for industrial practitioners to enhance their structural analysis skills without necessarily having to apply for and complete a Master’s degree. The program consists of four courses (12 credit hours).

Admissions Requirements

A bachelor’s degree in engineering with a GPA of 3.0 or better is required for admission to this graduate certificate program.

Graduate courses taken for this certificate may be eligible to transfer for credit towards a graduate degree program.

Applicants must meet all admissions requirements for certificate-seeking graduate admission as defined by the University’s policy on Admission to Graduate Study (https://policy.ku.edu/graduate-studies/admission-to-graduate-study/).

Four (4) courses are required to complete the certificate, two of which are mandatory. Students select the remaining two courses from the list of additional accepted courses.

Mandatory Courses:

1. CE 761 Matrix Analysis of Framed Structures
2. CE 861 Finite Element Methods for Solid Mechanics

Additional Courses Satisfying Certificate Requirements:

1. CE 704 Dynamics and Vibrations
2. CE 710 Structural Mechanics
3. CE 800 Theory of Elasticity
4. CE 801 Energy Methods
5. CE 810 Theory of Elastic Stability
6. CE 864 Seismic Performance of Structures
7. CE 869 Plates and Shells

The completion requirements of the graduate certificate in Structural Design include: (a) the minimum grade for any course to be applied toward the certificate is a grade of B; and (b) no credits may be transferred from another institution for this certificate.

Graduate Certificate in Structural Design

Graduate Certificate Overview

The objective of the Structural Design certificate program is to allow students to focus on the design of structural components and systems. This provides students with the opportunity to both broaden and deepen knowledge in this area of structural engineering by learning the most up-to-code-based theory and design practices. The Structural Design Graduate Certificate has a basis in steel and concrete building design, with optional courses applying to various materials, structures, and applications. It offers an opportunity for industrial practitioners to enhance their structural design skills without necessarily having to apply for and complete a Master’s degree. The program consists of four courses (12 credit hours).

Admissions Requirements

A bachelor’s degree in engineering with a GPA of 3.0 or better is required for admission to this graduate certificate program.

Graduate courses taken for this certificate may be eligible to transfer for credit towards a graduate degree program.

Applicants must meet all admissions requirements for certificate-seeking graduate admission as defined by the University’s policy on Admission to Graduate Study (https://policy.ku.edu/graduate-studies/admission-to-graduate-study/).

Four (4) courses are required to complete the certificate, two of which are mandatory. Students select the remaining two courses from the list of additional accepted courses.

Mandatory Courses:
1. CE 764 Advanced Design of Reinforced Concrete Structures
2. CE 765 Advanced Steel Design- Building Structures

Additional Courses Satisfying Certificate Requirements:
1. CE 763 Design of Prestressed Concrete Structures
2. CE 766 Advanced Steel Design- Bridge Structures
3. CE 768 Design of Timber Structures
4. CE 769 Design of Masonry Structures
5. CE 865 Structural Design for Dynamic Loads

The completion requirements of the graduate certificate in Structural Forensics include: (a) the minimum grade for any course to be applied toward the certificate is a grade of B; and (b) no credits may be transferred from another institution for this certificate.

Graduate Certificate in Structural Forensics

Graduate Certificate Overview

The objective of the certificate program is to allow students to focus on the forensic analysis of structural components and systems. This provides students with the opportunity to both broaden and deepen knowledge in this area of structural engineering by learning to identify, mitigate, and prevent common shortcomings and degradation that can threaten the integrity and serviceability of structures. The Structural Forensics Graduate Certificate has a basis in materials analysis with optional courses applying to experimental analysis and structural health monitoring.

The certificate program offers an opportunity for engineers to enhance their ability to identify and correct engineering failures without necessarily having to apply for and complete a Master’s degree. The program consists of four courses (12 credit hours).

Admissions Requirements

A bachelor’s degree in engineering with a GPA of 3.0 or better is required for admission to this graduate certificate program.

Graduate courses taken for this certificate may be eligible to transfer for credit towards a graduate degree program.

Applicants must meet all admissions requirements for certificate-seeking graduate admission as defined by the University’s policy on Admission to Graduate Study (http://policy.ku.edu/graduate-studies/admission-to-graduate-study/).

A bachelor’s degree in engineering with a GPA of 3.0 or better and completion of MATH 126 or equivalent is required for admission to this graduate certificate program.

Graduate courses taken for this certificate may be eligible to transfer for credit towards a graduate degree program.

Applicants must meet all admissions requirements for certificate-seeking graduate admission as defined by the University’s policy on Admission to Graduate Study.

Four (4) courses from the selected list are required to complete the certificate.

Courses Satisfying Certificate Requirements:
1. CE 712 Structural Engineering Materials
2. CE 715 Corrosion Engineering
3. CE 721 Experimental Stress Analysis
4. CE 767 Introduction to Fracture Mechanics
5. CE 895 Experimental Structural Dynamics

Proposed course offering

CE 712, 715, 767, and CE 895 are offered every year. CE 721 is offered on a rotating basis. In any one year period a minimum of four courses are offered to satisfy the requirements of the certificate.

The completion requirements of the graduate certificate in Structural Forensics include: 1) the minimum grade for any course to be applied toward the certificate is a grade of B; and 2) no credits may be transferred from another institution for this certificate.

Graduate Certificate in Water Resources

Graduate Certificate Overview

The objective of the certificate program is to allow students to broaden and deepen their knowledge in this area of Water Resources, while learning the most up-to-date theory and techniques used in practice.

The certificate program offers an opportunity for engineering and science practitioners to enhance their skills in Water Resources without having to apply for and complete a Master’s degree. The program consists of four courses (12 credit hours).

Admissions Requirements

A bachelor’s degree in engineering with a GPA of 3.0 or better is required for admission to this graduate certificate program.

Graduate courses taken for this certificate may be eligible to transfer for credit towards a graduate degree program.

Applicants must meet all admissions requirements for certificate-seeking graduate admission as defined by the University’s policy on Admission to Graduate Study (http://policy.ku.edu/graduate-studies/admission-to-graduate-study/).

A bachelor’s degree in engineering with a GPA of 3.0 or better and completion of MATH 126 or equivalent is required for admission to this graduate certificate program.

Graduate courses taken for this certificate may be eligible to transfer for credit towards a graduate degree program.

Applicants must meet all admissions requirements for certificate-seeking graduate admission as defined by the University’s policy on Admission to Graduate Study.

Four (4) courses from the selected list are required to complete the certificate.

Courses Satisfying Certificate Requirements:
1. CE 730 Intermediate Fluid Mechanics
2. CE 736 Environmental Monitoring and Field Methods
3. CE 751 Physical Hydrology
4. CE 752 Physical Hydrogeology
5. CE 753 Chemical and Microbial Hydrogeology
6. CE 754 Contaminant Transport
7. CE 755 Open Channel Flow
8. CE 756 Wetlands Hydrology and Introduction to Management
9. CE 757 Pipe-Flow Systems
10. CE 759 Water Quality Modeling
11. CE 760 Stochastic Hydrology
12. CE 775 Stormwater Treatment Systems Design
13. CE 776 Water Reuse
14. CE 855 Free Surface Flow II
15. CE 857 Sediment Transport
16. CE 859 Erosion and Sedimentation

The completion requirements of the graduate certificate in Water Resources include: 1) the minimum grade for any course to be applied toward the certificate is a grade of B; and 2) no credits may be transferred from another institution for this certificate.

Department of Electrical Engineering and Computer Science

Electrical Engineering and Computer Science

The technological advances that have made our society what it is today are due largely to the efforts of electrical engineers, computer engineers, and computer scientists. Among these advances are radio, television, telephones, wireless and mobile communications, personal computers, workstations, mainframe computers, aircraft avionics, satellite electronics, automobile electronics, office machinery, medical electronic equipment, video games, electric power generation and distribution systems, telecommunications, computer networks (including the Internet), personal entertainment products, radar, defense electronics, artificial intelligence, and a variety of computer software.

Vision and Mission

The vision of the EECS department is to provide a stimulating and challenging intellectual environment.

- To have classes populated by outstanding students.
- To be world class in an increasing number of selected areas of research.
- To have faculty members with high visibility among their peers.

The mission of the EECS department is

- To educate the next generation of electrical engineers, computer engineers, and computer scientists.
- To discover, apply, and disseminate knowledge.
- To be an asset to the community and to society.

Undergraduate Programs

The department offers 4 Bachelor of Science (B.S.) degrees:

- Electrical Engineering.
- Computer Engineering.
- Computer Science, and
- Interdisciplinary Computing

Each features a firm grounding in mathematics, basic science, computer and engineering science, and advanced studies in the theory and design of various systems as well as hands-on experience. Degree programs in electrical engineering, computer engineering and computer science are accredited. The Bachelor of Science degree program is accredited by the Computing Accreditation Commission of ABET, http://www.abet.org.

Our Bachelor of Science degree programs in computer engineering and electrical engineering are accredited by the Engineering Accreditation Commission of ABET, http://www.abet.org (http://www.abet.org/).

Graduate Programs

The department offers Ph.D. degrees in electrical engineering and computer science; and M.S. degrees in electrical engineering, computer engineering, computer science, and information technology. The M.S. degree in information technology can be completed at the KU Edwards Campus (http://edwards campus.ku.edu/) in the Kansas City area. The department also offers graduate certificates in data science, RF systems engineering, and software engineering and management. Students who complete courses as a certificate seeking student may be able to transfer those credits towards a graduate degree program in engineering.

The department has graduate focus areas in applied electromagnetics, communications systems, computer systems design, computing in the biosciences, information assurance and management, intelligent informatics, internet engineering and management, languages and semantics, network engineering, network systems, radar systems and remote sensing, RF systems engineering, security and assurance, signal processing, software engineering and management and theory of computing. Class lists and teaching schedules are available in the graduate office or on the department's website (http://www.eecs.ku.edu/). Other areas of study can be constructed, in conjunction with a faculty advisor, to fit individual student needs.

Courses

EECS 101. New Student Seminar. 1 Credits. A seminar intended to help connect freshmen and transfer EECS students to the EECS department, their chosen profession, and each other. Topics include overviews of the various disciplines, curricula and advising, ethics and professionalism, student organizations and extracurricular activities, senior projects, and career planning. Graded on a satisfactory/unsatisfactory basis. Prerequisite: Corequisite: MATH 104.

EECS 137. Visual Basic for Engineers. 3 Credits. Introduction of computer-based problem solving techniques for engineering practice with emphasis on good programming practices and the integration of appropriate computational and related tools. Solutions are computed using Visual Basic, specifically VBA within Excel. Elementary numerical and statistical methods are applied to the solution of sets of linear and nonlinear algebraic equations, linear regression, and root finding. Microsoft Office is used with the computational tools to provide integrated report generation capability. Two lectures and a weekly laboratory instruction. Prerequisite: MATH 104.

EECS 138. Introduction to Computing: ______. 3 Credits. NM Algorithm development, basic computer organization, syntax and semantics of a high-level programming language, including testing and debugging. Concept of structure in data and programs, arrays, top-down design, subroutines and library programs. Abstract data types. System concepts such as compilation and files. Nature and scope of computer science. Not open to electrical engineering, computer engineering, computer science, and interdisciplinary computing majors. Prerequisite: MATH 101 or MATH 104, or meeting the requirements to enroll in MATH 115 or MATH 125 or MATH 145.

EECS 140. Introduction to Digital Logic Design. 4 Credits.
An introductory course in digital logic circuits covering number representation, digital codes, Boolean algebra, combinatorial logic design, sequential logic design, and programmable logic devices. Grade of C (not C-) required to progress. Prerequisite: Corequisite: MATH 104.

EECS 141. Introduction to Digital Logic: Honors. 4 Credits.
An introductory course in digital logic circuits covering number representation, digital codes, Boolean algebra, combinatorial logic design, sequential logic design, and programmable logic devices. This course is intended for highly motivated students and includes honors-level assignments. Grade of C (not C-) required to progress. Prerequisite: Corequisite: MATH 104, plus either acceptance into the KU Honors Program or consent of instructor.

EECS 168. Programming I. 4 Credits.
Problem solving using a high level programming language and object oriented software design. Fundamental stages of software development are discussed: problem specification, program design, implementation, testing, and documentation. Introduction to programming using an object oriented language: using classes, defining classes, and extending classes. Introduction to algorithms and data structures useful for problem solving: arrays, lists, files, searching, and sorting. Student will be responsible for designing, implementing, testing, and documenting independent programming projects. Professional ethics are defined and discussed in particular with respect to computer rights and responsibilities. Grade of C (not C-) required to progress. Prerequisite: Corequisite: MATH 104.

EECS 169. Programming I: Honors. 4 Credits.
Problem solving using a high level programming language and object oriented software design. Fundamental stages of software development are discussed: problem specification, program design, implementation, testing, and documentation. Introduction to programming using an object oriented language: using classes, defining classes, and extending classes. Introduction to algorithms and data structures useful for problem solving: arrays, lists, files, searching, and sorting. Students will be responsible for designing, implementing, testing, and documenting independent programming projects. Professional ethics are defined and discussed in particular with respect to computer rights and responsibilities. This course is intended for highly motivated students and includes honors-level assignments. Grade of C (not C-) required to progress. Prerequisite: Corequisite: MATH 104, plus either acceptance into the KU Honors Program or consent of instructor.

EECS 202. Circuits I. 4 Credits.
Analysis of linear electrical circuits: Kirchoff's laws; source, resistor, capacitor and inductor models; nodal and mesh analysis; network theorems; transient analysis; Laplace transform analysis; steady-state sinusoidal analysis. The lab provides training and practice in the use of computational tools (e.g., Matlab), computer-aided circuit analysis (e.g., Pspice), and laboratory skills. Prerequisite: Corequisite: MATH 220 and MATH 290.

EECS 210. Discrete Structures. 4 Credits.
An introduction to the mathematical foundations and techniques of computer science. Throughout, there is an emphasis on general reasoning, problem solving, and technical communication. Topics include basic proof techniques and logic, induction, recurrences, relations, number theory, basic algorithm design and analysis, and applications. Grade of C (not C-) required to progress. Prerequisite: EECS 140 or EECS 141, EECS 168 or EECS 169 (or equivalent) and MATH 122 or MATH 126 or MATH 146.

EECS 212. Circuits II. 4 Credits.
Continued study of electrical circuits: Steady-state power analysis, three-phase circuits, transformers, frequency response, and two-port network analysis. Grade of C (not C-) required to progress. Prerequisite: EECS 211 or EECS 202.

EECS 220. Electromagnetics I. 4 Credits.
Vector analysis. Electrostatic and magnetostatic fields in a vacuum and material media. Electromagnetic fields and Maxwell's equations for time-varying sources. The relationship between field and circuit theory. Simple applications of Maxwell's equations. Grade of C (not C-) required to progress. Prerequisite: MATH 220, MATH 290, PHSX 210 or PHSX 211, and EECS 202.

EECS 221. Electromagnetics I. 3 Credits.
Electrostatic and magnetostatic fields in a vacuum and material media. Electromagnetic fields and Maxwell's equations for time-varying sources. The relationship between field and circuit theory. Simple applications of Maxwell's equations. Grade of C (not C-) required to progress. Prerequisite: MATH 127, MATH 220, EECS 211 or EECS 202, and either PHSX 210 or PHSX 211.

EECS 268. Programming II. 4 Credits.
This course continues developing problem solving techniques by focusing on the imperative and object-oriented styles using Abstract Data Types. Basic data structures such as queues, stacks, trees, and graphs will be covered. Recursion. Basic notions of algorithmic efficiency and performance analysis in the context of sorting algorithms. Basic Object-Oriented techniques. An associated laboratory will develop projects reinforcing the lecture material. Three class periods and one laboratory period per week. Grade of C (not C-) required to progress. Prerequisite: EECS 168 or EECS 169.

EECS 312. Electronic Circuits I. 3 Credits.
Introduction to diodes, BJTs and MOSFETs, and their use in electronic circuits, especially digital circuits. Prerequisite: Upper-level eligibility. Corequisite: EECS 212.

EECS 315. Electric Circuits and Machines. 3 Credits.
Introduction to DC and AC electrical circuit analysis techniques, AC power calculations, transformers, three-phase systems, magnetic circuits, and DC and AC machines with a focus on applications. Not open to electrical or computer engineering majors. (Same as ARCE 315.) Prerequisite: A course in differential equations and eight hours of physics.

EECS 316. Circuits, Electronics and Instrumentation. 3 Credits.
Introduction to DC and AC electrical circuit analysis, operational amplifiers, semiconductors, digital circuits and systems, and electronic instrumentation and measurements with a focus on applications. Not open to electrical or computer engineering majors. Students may not receive credit for both EECS 316 and EECS 317. Prerequisite: A course in differential equations and eight hours of physics.

EECS 317. Electronics and Instrumentation. 2 Credits.
Introduction to operational amplifiers, semiconductors, digital circuits and systems, and electronic instrumentation and measurements with a focus on applications. Not open to electrical or computer engineering majors. Students may not receive credit for both EECS 316 and EECS 317. Prerequisite: EECS 315.

EECS 318. Circuits and Electronics Lab. 1 Credits.
Laboratory exercises intended to complement EECS 316 and EECS 317. Experiments include DC circuits, analog electronics, and digital electronics. Not open to electrical or computer engineering majors. Prerequisite: Corequisite: EECS 316 or EECS 317.

EECS 330. Data Structures and Algorithms. 4 Credits.
A first course in abstract data structures and algorithmic design making use of these structures. Topics include asymptotic analysis, trees, dictionaries, heaps, disjoint set structures; divide and conquer, greedy,
and dynamic programming algorithms. Prerequisite: EECS 210, EECS 268, and upper-level EECS eligibility.

**EECS 348. Software Engineering I. 4 Credits.**
This course is an introduction to software development fundamentals and software engineering. It incorporates a thorough introduction to a compiled programming language. A baseline knowledge of tools and utilities is covered including the shell, common programs, version control, IDEs, editors, and build tools. Topics include: software development principles (e.g., design patterns, modularity, loose coupling), extending larger codebases, developing larger codebases, continuous integration, continuous deployment, debugging, unit testing, test-driven development, and databases. Grade of C (not C-) required to progress. Prerequisite: EECS 268.

**EECS 360. Signal and System Analysis. 4 Credits.**
Fourier signal analysis (series and transform); linear system analysis (continuous and discrete); Z-transforms; analog and digital filter analysis. Analysis and design of continuous and discrete time systems using MATLAB. Prerequisite: Upper level of EECS Eligibility, and EECS 212.

**EECS 361. Signal and System Analysis. 3 Credits.**
Fourier signal analysis (series and transform); linear system analysis (continuous and discrete); z-transforms, analog and digital filter analysis; analysis and design of continuous and discrete time system using MATLAB. Prerequisite: EECS 212 and EECS Upper Level Eligibility.

**EECS 368. Programming Language Paradigms. 3 Credits.**
The course is a survey of programming languages: their attributes, uses, advantages, and disadvantages. Topics include scopes, parameter passing, storage management, control flow, exception handling, encapsulation and modularization mechanism, reusability through genericity and inheritance, and type systems. In particular, several different languages will be studied which exemplify different language philosophies (e.g., procedural, functional, object-oriented, logic, scripting). Prerequisite: EECS 268 and upper-level EECS eligibility.

**EECS 369. Projects. 1-5 Credits.**
An electrical engineering, computer engineering, or computer science project pursued under the student's initiative, culminating in a comprehensive report, with special emphasis on orderly preparation and effective composition. Prerequisite: Upper-level EECS eligibility and consent of instructor.

**EECS 412. Electronic Circuits II. 4 Credits.**
Discrete and integrated amplifier analysis and design. Introduction to feedback amplifier analysis and design. Introduction to feedback amplifiers. Prerequisite: EECS 312 and upper-level EECS eligibility.

**EECS 420. Electromagnetics II. 4 Credits.**
This course applies electromagnetic analysis to high frequency devices and systems where wave propagation effects cannot be neglected. Topics covered include transmission lines, space waves, waveguides, radiation, and antennas. Laboratory experiments include transmission line, waveguide, and antenna measurements and characterizations. 3 hours lecture, 1 hour laboratory. Prerequisite: EECS 220 and upper-level EECS eligibility.

**EECS 441. Power Systems Engineering II. 3 Credits.**
A continuation of ARCE 640 that integrates system components into functional, safe, and reliable power distribution systems for commercial, industrial, and institutional (CII) facilities. Service entrance design, distribution system layout and reliability, emergency and standby power system design, medium-voltage distribution systems, symmetrical fault analysis, and special equipment and occupancies. (Same as ARCE 641.) Prerequisite: ARCE 640 or EECS 212 and Upper-Level EECS Eligibility.

**EECS 443. Digital Systems Design. 4 Credits.**
The design of digital systems from a hardware point of view. The implementation of functional and control units using programmable logic devices. Introduction to VHDL and its use in modeling and designing digital systems. Prerequisite: EECS 388.

**EECS 444. Control Systems. 3 Credits.**
An introduction to the modeling, analysis, and design of linear control systems. Topics include mathematical models, feedback concepts, state-space methods, time response, system stability in the time and transform domains, design using PID control and series compensation, and digital controller implementation. Prerequisite: EECS 212 and EECS 360.

**EECS 447. Introduction to Database Systems. 3 Credits.**
Introduction to the concept of databases and their operations. Basic concepts, database architectures, storage structures and indexing, data structures: hierarchical, network, and relational database organizations. Database design and normalization: ER model, candidates keys, functional dependencies, normal forms, decomposition. Emphasis on relational databases, relational algebra, and SQL. Introduction to views, transactions, and database access control. Introduction to database security, big data, NoSQL, CAP theorem, key-value stores. Prerequisite: Upper-level EECS eligibility or departmental consent.

**EECS 448. Software Engineering II. 4 Credits.**
This course is an introduction to software engineering, and it covers the systematic development of software products. It outlines the scope of software engineering, including life-cycle models, software process, teams, tools, testing, planning, and estimating. It concentrates on requirements, analysis, design, implementation, and maintenance of software products. The laboratory covers CASE tools, configuration control tools, UML diagrams, integrated development environments, and project specific components. Prerequisite: EECS 268 and upper-level EECS eligibility.

**EECS 455. Cyber Defense Practice. 1 Credits.**
The course introduces cyber defense methods and skills through hands-on practice. Each section will focus on aspects of securing operating systems, securing network access, and securing file systems. To earn three (3) credits, a student must complete three (3) sections. Prerequisite: EECS 268. Corequisite: EECS 388.

**EECS 461. Probability and Statistics. 3 Credits.**
Introduction to probability and statistics with applications. Reliability of systems. Discrete and continuous random variables. Expectations, functions of random variables, and linear regression. Sampling distributions, confidence intervals, and hypothesis testing. Joint, marginal, and conditional distribution and densities. Prerequisite: MATH 127 or MATH 147, and MATH 290 or MATH 291, and upper-level EECS eligibility.

**EECS 465. Cyber Defense. 3 Credits.**
An introduction to critical knowledge and skills needed to administer and defend computer networks and systems. This course focuses on hands-on activities, learning cybersecurity defensive techniques, and
understanding well know techniques used by adversaries. Prerequisite: EECS 268. Corequisite: EECS 388.

EECS 468. Programming Paradigms. 3 Credits. This course is a survey of programming languages: their attributes, uses, advantages, and disadvantages. Topics include the evolution of programming languages; programming language processing (i.e., compilation, interpretation, and mixed approaches); imperative, functional, and declarative languages; parameter passing and evaluation order; iteration, recursion, and continuation; and the basics of cloud programming (i.e., web services, client/server, synchronous vs. asynchronous programming, building reliable systems, and programming at scale). Prerequisite: EECS 268 and upper-level EECS eligibility.

EECS 470. Electronic Devices and Properties of Materials. 3 Credits. An introduction to crystal structures, and metal, insulator, and semiconductor properties. Topics covered include the thermal, electric, dielectric, and optical properties of these materials. A significant portion of this course is devoted to the properties of semiconductors and semiconductor devices. Prerequisite: PHSX 313 and upper-level EECS eligibility.

EECS 498. Honors Research. 1-2 Credits. Arranged to allow students to satisfy the independent research requirement for graduation with departmental honors. Prerequisite: Consent of instructor and upper-level EECS eligibility.

EECS 501. Senior Design Laboratory I. 3 Credits. A lecture/laboratory course involving the design and implementation of prototypes of electrical and computer type products and systems. The project specifications require consideration of ethics, economics, manufacturing, and safety. Intended for students graduating the following calendar year. EECS 501 should be immediately followed by EECS 502 in the following semester. Prerequisite: EECS 221, EECS 360, and EECS 412.

EECS 502. Senior Design Laboratory II. 3 Credits. A lecture/laboratory course involving the design and implementation of prototypes of electrical and computer type products and systems. The project specifications require consideration of ethics, economics, manufacturing, and safety. Must be taken in semester immediately following completion of EECS 501. Prerequisite: EECS 501.

EECS 510. Introduction to the Theory of Computing. 3 Credits. N Finite state automata and regular expressions. Context-free grammars and pushdown automata. Turing machines. Models of computable functions and undecidable problems. The course emphasis is on the theory of computability, especially on showing limits of computation. (Same as MATH 510.) Prerequisite: EECS 210 and upper-level EECS eligibility.

EECS 512. Electronic Circuits III. 3 Credits. Feedback amplifier circuit analysis, power amplifiers, analog IC op-amp techniques and analysis, filter approximation and realization, oscillators, wave generators and shapers. Prerequisite: EECS 412.

EECS 541. Computer Systems Design Laboratory I. 3 Credits. A two semester lecture/laboratory course involving the specification, design, implementation, analysis, and documentation of a significant hardware and software computer system. Laboratory work involves software, hardware, and hardware/software trade-offs. Project requirements include consideration of ethics, economics, manufacturing, safety, and health aspects of product development. Intended for students graduating the following calendar year. EECS 541 should be immediately followed by EECS 542 in the following semester. Prerequisite: EECS 443 and EECS 348.

EECS 542. Computer Systems Design Laboratory II. 3 Credits. A two semester lecture/laboratory course involving the specification, design, implementation, analysis, and documentation of a significant hardware and software computer system. Laboratory work involves software, hardware, and hardware/software trade-offs. Project requirements include consideration of ethics, economics, manufacturing, safety, and health aspects of product development. Must be taken in semester immediately following completion of EECS 541. Prerequisite: EECS 541.

EECS 545. Electric Energy Production and Storage. 3 Credits. An introduction to the design of utility scale and small scale (distributed generation) electric energy production and storage systems. This course addresses the technical, operational, economic, and environmental characteristics associated with both traditional and nontraditional electric energy production systems along with associated grid integration, energy delivery, and regulatory issues. Traditional energy production systems covered include fossil fuel, hydroelectric, and nuclear power plants. Non-traditional energy productions systems covered include fuel cells, photovoltaics (PV), concentrated solar power (CSP), wind, geothermal, and other emerging technologies. (Same as ARCE 645.) Prerequisite: ARCE 640, or EECS 212 and Upper-Level EECS Eligibility.

EECS 547. Power System Analysis I. 3 Credits. Introduction to the analysis of commercial, industrial, and utility power systems. Emphasis is placed on modeling system components which include transmission and distribution lines, transformers, induction machines, and synchronous machines and the development of a power system model for analysis from these components. System modeling will be applied to short-circuit studies and used to analyze symmetrical faults, to develop sequence networks using symmetrical components, and analyze unsymmetrical faults. (Same as ARCE 647.) Prerequisite: ARCE 640, or EECS 212 and Upper-Level EECS Eligibility.

EECS 548. Power System Analysis II. 3 Credits. Continuation of ARCE 647 or EECS 547 that uses power system modeling developed in ARCE 647 or EECS 547 to analyze power system load flow, operation and economic dispatch, stability, and transient response. The impact of alternative energy sources, energy storage, DC transmission and interties, and other emerging technologies on power system operation and reliability will be addressed throughout the course. (Same as ARCE 648.) Prerequisite: ARCE 647 or EECS 547 or consent of instructor.

EECS 560. Data Structures. 4 Credits. Data abstraction and abstract data types. Topics include the design and implementation of dictionary, priority queues, concatenated queue, disjoint set structures, graphs, and other advanced data structures based on balanced and unbalanced tree structures. Special emphasis will be placed on the implementations of these structures and their performance tradeoffs. Both asymptotic complexity analysis and experimental profiling techniques will be introduced. Labs will be used to provide students with hands-on experience in the implementations of various abstract data types and to perform experimental performance analysis. Prerequisite: EECS 210. Corequisite: EECS 448.

EECS 562. Introduction to Communication Systems. 4 Credits. A first course in communications, including lectures and integrated laboratory experiments. After a review of spectral analysis and signal transmission, analog and digital communications are studied. Topics include: sampling, pulse amplitude modulation, and pulse code modulation; analog and digital amplitude, frequency, and phase modulation; frequency and time division multiplexing; and noise
performance of analog modulation techniques. Prerequisite: EECS 212 and EECS 360 or EECS 361.

EECS 563. Introduction to Communication Networks. 3 Credits.
An introduction to the principles used in communication networks is given in this course. Topics include a discussion of the uses of communications networks, network traffic, network impairments, standards, layered reference models for organizing network functions. Local Area Network technology and protocols are discussed. Link, network, transport layer protocols, and security are introduced. TCP/IP networks are stressed. VoIP is used as an example throughout the course. Basic concepts of network performance evaluation are studied; both analytical and simulation techniques are considered. Prerequisite: EECS 168 and MATH 526 or EECS 461.

EECS 565. Introduction to Information and Computer Security. 3 Credits.
An introduction to the fundamentals of cryptography and information and computer security. Introduces the basic concepts, theories, and protocols in computer security. Discusses how to apply such knowledge to analyze, design and manage secure systems in the real world. Topic covered: the basics of cryptography, software security, operating system security, database security, network security, privacy and anonymity, social engineering, digital forensics, etc. Corequisite: EECS 678 and Prerequisite: Upper-Level EECS Eligibility.

EECS 569. Computer Forensics. 3 Credits.
This course covers both the theoretical and practical aspects of computer forensics. The course introduces the basic concepts, methodologies, and techniques to recover, preserve, and examine digital evidence on or transmitted by digital devices. Topics include: crime investigation and digital evidence, file system forensics, application analysis, network evidence acquisition and analysis, mobile device forensics, etc. Prerequisite: EECS 565.

EECS 581. Software Engineering II. 3 Credits.
This lecture/laboratory course covers the systematic development of software products. Topics include: scope of software engineering, life-cycle models, software process, teams, ethics, tools, testing, planning, and estimating. It concentrates on requirements, analysis, design, implementation, and maintenance of software products. Prerequisite: EECS 348, EECS 330, EECS 468, and upper-level EECS eligibility. Corequisite: EECS 565.

EECS 582. Computer Science and Interdisciplinary Computing Capstone. 3 Credits.
Team-oriented lecture/laboratory course involving the specification, design, implementation, testing, and documentation of a significant software project over the full course of the semester. The course includes the consideration of project management, economics, and technical writing. Prerequisite: EECS 581 and upper-level EECS eligibility.

EECS 592. Cybersecurity Design. 3 Credits.
Team-oriented lecture and laboratory course involving the specification, design, implementation, testing, and documentation of a significant cybersecurity project over the full course of the semester. The course includes the consideration of project management, economics, and technical writing. Prerequisite: EECS 581.

EECS 611. Electromagnetic Compatibility. 3 Credits.
A study of unwanted generation and reception of radio-frequency radiation from analog and digital electronic systems and how these emissions/receptions can be reduced. Topics covered include sources of radiation, grounding, shielding, crosstalk, electrostatic discharge, and practical design and layout schemes for reducing unwanted radiation and reception. Also covered are the major governmental electromagnetic compatibility (EMC) regulations and standards that apply to commercial electronic devices and systems. Prerequisite: EECS 220 and EECS 312.

EECS 622. Microwave and Radio Transmission Systems. 3 Credits.
Introduction to radio transmission systems. Topics include radio transmitter and receiver design, radiowave propagation phenomenology, antenna performance and basic design, and signal detection in the presence of noise. Students will design radio systems to meet specified performance measure. Prerequisite: Corequisite: EECS 420 and MATH 526 or EECS 461.

EECS 628. Fiber Optic Communication Systems. 3 Credits.
Description and analysis of the key components in optical communication systems. Topics covered include quantum sources, fiber cable propagation and dispersion characteristics, receiver characteristics, and system gain considerations. Prerequisite: EECS 220 and PHSX 313 or equivalent and upper-level EECS eligibility.

EECS 630. Advanced Data Structures and Algorithms. 3 Credits.
A second course in abstract data structures and algorithmic design making use of these structures. Emphasis will be on understanding the high-level theoretical intuitions and principles, as well as a concrete understanding of implementation and applications. Topics include advanced treatment of trees, heaps, disjoint set structures, network flow, greedy algorithms, divide and conquer, dynamic programming, and complexity theory. Prerequisite: Upper-level EECS eligibility, EECS 330 and either EECS 461 or MATH 526.

EECS 638. Fundamentals of Expert Systems. 3 Credits.
Basic information about expert systems: architecture of an expert system, building expert systems, uncertainty in expert systems, taxonomy of expert systems. Knowledge representation: first order logic, production systems, semantic nets, frames. Uncertainty in expert systems, one-valued approaches: probability theory, systems using Bayes’ rule, and systems using certainty theory; two-valued approaches: systems using Dempster-Shafer theory and system INFERNO; set-valued approaches: systems using fuzzy set theory and systems using rough set theory. Prerequisite: EECS 560 or consent of instructor.

EECS 639. Introduction to Scientific Computing. 3 Credits.
A basic introduction to scientific computing and numerical analysis. Topics include linear equation solving, least squares, nonlinear equation-solving, optimization, interpolation, numerical integration and differentiation, ordinary differential equations, and the fast Fourier transform (FFT). Vectorization, efficiency, reliability, and stability of numerical algorithms will be stressed. Applications of algorithms to real-world problems, such as image processing, medicine, electronic circuits, flight trajectories, and molecular modeling, will be emphasized. Students cannot receive credit for both EECS 639 and EECS 781 or MATH 781. Prerequisite: MATH 127, MATH 290, and EECS 168 or equivalent.

EECS 643. Computer Architecture. 3 Credits.
The structure and design of computing systems. Examination and analysis of computing systems. Examination and analysis of instruction set architectures, pipelined control and arithmetic units, vector processors, memory hierarchies, and performance evaluation. Prerequisite: EECS 443.

EECS 644. Introduction to Digital Signal Processing. 3 Credits.
Discrete time signal and systems theory, sampling theorem, z-transforms, digital filter design, discrete Fourier transform, FFT, and hardware considerations. Prerequisite: EECS 360 or EECS 361.

EECS 645. Computer Architecture. 3 Credits.
The structure, design, analysis, and evaluation of computer processors and systems. The design of instruction sets. Principles and techniques
of parallelism at the data transfer (memory hierarchy), data processing (pipelines), and concurrent instruction execution. Prerequisite: EECS 388.

EECS 647. Introduction to Database Systems. 3 Credits.
Introduction to the concept of databases and their operations. Basic concepts, database architectures, storage structures and indexing, data structures: hierarchical, network, and relational database organizations. Emphasis on relational databases and retrieval languages SQL, OBE, and ones based on relational algebra and relational calculus; brief description of predicate calculus. Theory of databases, normal forms, normalization, candidates keys, decomposition, functional dependencies, multi-valued dependencies. Introduction to the design of a simple database structure and a data retrieval language. Student cannot receive credit for both EECS 647 and EECS 746. Prerequisite: EECS 448.

EECS 649. Introduction to Artificial Intelligence. 3 Credits.
General concepts, search procedures, two-person games, predicate calculus and automated theorem proving, nonmonotonic logic, probabilistic reasoning, rule based systems, semantic networks, frames, dynamic memory, planning, machine learning, natural language understanding, neural networks. Prerequisite: Corequisite: EECS 368.

EECS 658. Introduction to Machine Learning. 3 Credits.
This course provides an introduction to the basic methods of machine learning and how to apply them to solve software engineering problems. Topics covered are: supervised learning, unsupervised learning, and reinforcement learning methods; feature selection techniques; structuring machine learning solutions; and evaluation metrics. Prerequisite: EECS 348 and upper-level EECS eligibility.

EECS 660. Fundamentals of Computer Algorithms. 3 Credits.
Basic concepts and techniques in the design and analysis of computer algorithms. Models of computations. Simple lower bound theory and optimality of algorithms. Computationally hard problems and the theory of NP-Completeness. Introduction to parallel algorithms. Prerequisite: EECS 560 and either EECS 461 or MATH 526.

EECS 662. Programming Languages. 3 Credits.
Formal definition of programming languages including specification of syntax and semantics. Simple statements including precedence, infix, prefix, and postfix notation. Global properties of algorithmic languages including scope of declaration, storage allocation, grouping of statements, binding time of constituents, subroutines, coroutines, and tasks. Run-time representation of program and data structures. Prerequisite: EECS 368 and EECS 560.

EECS 664. Introduction to Digital Communication Systems. 3 Credits.
An introduction to building digital communication systems in discrete time, including lectures and integrated laboratory exercises. Topics covered include signal spaces, base-band modulation, bandpass modulation, phase-locked loops, carrier phase recovery, symbol timing recovery, and basic performance analysis. Prerequisite: EECS 360 and EECS 461 or MATH 526.

EECS 665. Compiler Construction. 4 Credits.
Compilation of programming language constructs. Organization of a compiler including symbol tables, lexical analysis, syntax analysis, intermediate and object code generation, error diagnostics, code optimization techniques and run-time structures in a block-structured language such as C or Rust. Programming assignments include construction of various modules of a compiler. Prerequisite: EECS 348, EECS 468, EECS 510, and upper-level eligibility.

EECS 666. Introduction to Network Security. 3 Credits.
This course covers fundamental cryptographic algorithms, security designs, protocols, attacks, and controls in computer networks. Topics include security designs and analysis of network protocols such as TCP/IP, BGP, and DNS; network vulnerabilities and attacks such as spoofing, MITM, DDoS, and botnets; network security controls such as cryptography primitives, authentication, key management, firewall and intrusion detection; privacy and anonymity such as spams, web tracking, and Internet censorship. Prerequisite: EECS 563 and EECS 565 or instructor's consent.

EECS 670. Introduction to Semiconductor Processing. 3 Credits.
An overview of various processes to fabricate semiconductor devices and integrated circuits. Topics covered include crystal growth, oxidation, solid-state diffusion, ion implantation, photolithography, chemical vapor deposition, epitaxial growth, metalization, and plasma etching of thin films. (Same as C&PE 655.) Prerequisite: Senior standing in C&PE or EECS, or consent of instructor.

EECS 672. Introduction to Computer Graphics. 3 Credits.
Foundations of 2D and 3D computer graphics. Structured graphics application programming. Basic 2D and 3D graphics algorithms (modeling and viewing transformations, clipping, projects, visible line/surface determination, basic empirical lighting, and shading models), and aliasing. Prerequisite: EECS 348 and upper-level EECS eligibility.

EECS 675. Multicore and GPU Programming. 3 Credits.
This course covers concepts of single-machine multi-threaded programming; multicore programming across a network of machines; and general-purpose computing on GPUs. Typically, more than half of the course focuses on GPUs, including relevant architectural aspects required in order to achieve optimal performance on GPUs. Projects use C++ thread-related tools, OpenMPI, CUDA, and OpenCL. Prerequisite: EECS 348 and upper-level EECS eligibility.

EECS 677. Advanced Software Security Evaluation. 3 Credits.
Heuristic and formal analysis of software systems with an emphasis on integrity and secrecy. Students in the course will learn to assess the quality, vulnerabilities, and behavior of software. Topics include bug finding, anomaly detection, dynamic analysis, static analysis, dataflow analysis, fuzzing, linting, software supply chain auditing, and security best practices. Prerequisite: EECS 348 and upper-level EECS eligibility, or instructor's consent.

EECS 678. Introduction to Operating Systems. 4 Credits.
The objective of this course is to provide the students with the concepts necessary to enable them to: a) identify the abstract services common to all operating system, b) define the basic system components that support the operating system's machine independent abstractions on particular target architectures, c) consider how the design and implementation of different systems components interact and constrain one another, not merely how one or two important parts work in isolation, and d) understand the means by which fundamental problems in operating systems can be analyzed and addressed. Programming assignments address topics including process creation, inter-process communication, system call implementation, process scheduling and virtual memory. Laboratory exercises primarily focus on use of tools and concepts required for the programming assignments but include a small number of independent topics. Prerequisite: EECS 388, EECS 348, and upper-level EECS eligibility.

EECS 683. Introduction to Hardware Security and Trust. 3 Credits.
This course will investigate various security and trust issues related to integrated circuits and systems during their design and manufacturing process, as well as during field operation. A wide range of threats including piracy, reverse engineering, hardware Trojan insertion, side-channel attack, and various invasive non-invasive attacks will be introduced. Potential hardware and software-based countermeasures
to detect and prevent these attacks will be studied. Implementation of
design-time solutions like physically unclonable functions (PUFs),
true random number generator (TRNG), security monitors, hardware
obfuscation, and many others will be covered. Prerequisite: EECS 388
and upper-level EECS eligibility.

EECS 685. Introduction to IoT Security. 3 Credits.
This course covers the concept of Internet of Things (IoT) including its
components, architectures, and enabling technologies and introduces full-
stack of security and privacy issues in IoT and its applications including
hardware, software, network, and data. The goal is to expose students to
new developments in cybersecurity for IoT as well as familiarize them with
tools and techniques for IoT security design and analysis. Students will
gain hands-on experiences on implementing security techniques for IoT
through mini projects. Prerequisite: EECS 565 or instructor’s consent.

EECS 687. Mobile Security. 3 Credits.
Security and privacy issues through the lens of mobile computing. Topics
include an overview of the mobile computing ecosystem, including
smartphones and autonomous devices such as unmanned aerial systems;
core security and privacy principles applied to mobile devices; an
exploration of domain-relevant academic literature; exploration of attacks
and defenses in mobile security. The course will expose students to new
developments in cybersecurity for mobile security and security tools and
techniques in the domain. Prerequisite: EECS 678 or instructor’s consent.

EECS 690. Special Topics: _____, 1-3 Credits.
Arranged as needed to present appropriate material to groups of
students. May be repeated for additional credit. Prerequisite: Varies by
topic, plus Upper-level EECS eligibility and consent of instructor.

EECS 692. Directed Reading. 1-3 Credits.
Reading under the supervision of an instructor on a topic chosen by the
student with the advice of the instructor. May be repeated for additional
credit. Consent of the department required for enrollment. Prerequisite:
Upper-level EECS eligibility and consent of instructor.

EECS 695. Software Reverse Engineering. 3 Credits.
This hands-on course explains the basics of binary software, including
binary generation, layout, structure, and execution. It will explain the
basics of binary reverse engineering (RE), including binary analysis,
disassembly, and instrumentation. The course teaches relevant tools and
frameworks for RE. Students practice RE concepts using code problems.
Topics include: Linux command-line tools, binary build process, high-level
language constructs in assembly, the ELF format, static and run-time tools
for RE, advanced RE frameworks, binary rewriting, anti-reversing, etc.
Prerequisite: EECS 388 or instructor’s consent.

EECS 700. Special Topics: _____, 1-5 Credits.
Courses on special topics of current interest in electrical engineering,
computer engineering, or computer science, given as the need arises.
May be repeated for additional credit. Prerequisite: Varies by topic.

EECS 711. Security Management and Audit. 3 Credits.
Administration and management of security of information systems and
networks, intrusion detection systems, vulnerability analysis, anomaly
detection, computer forensics, auditing and data management, risk
management, contingency planning and incident handling, security
planning, e-business and commerce security, privacy, traceability and
cyber-evidence, human factors and usability issues, policy, legal issues
in computer security. Prerequisite: Graduate standing in EECS, or
permission of the instructor.

EECS 713. High-Speed Digital Circuit Design. 3 Credits.
Basic concepts and techniques in the design and analysis of high-
frequency digital and analog circuits. Topics include: transmission
lines, ground and power planes, layer stacking, substrate materials,
terminations, vias, component issues, clock distribution, cross-talk,
filtering and decoupling, shielding, signal launching. Prerequisite:
EECS 312 and senior or graduate standing. EECS 420 recommended.

EECS 718. Graph Algorithms. 3 Credits.
This course introduces students to computational graph theory and
various graph algorithms and their complexities. Algorithms and
applications covered will include those related to graph searching,
connectivity and distance in graphs, graph isomorphism, spanning trees,
shortest paths, matching, flows in network, independent and dominating
sets, coloring and covering, and Traveling Salesman and Postman
problems. Prerequisite: EECS 330 or graduate standing with consent of
instructor.

EECS 721. Antennas. 3 Credits.
Gain, Pattern, and Impedance concepts for antennas. Linear, loop,
helical, and aperture antennas (arrays, reflectors, and lenses). Cylindrical
and biconical antenna theory. Prerequisite: EECS 360 and EECS 420, or
EECS 720, or permission of the instructor.

EECS 723. Microwave Engineering. 3 Credits.
Survey of microwave systems, techniques, and hardware. Guided-
wave theory, microwave network theory, active and passive microwave
components. Prerequisite: EECS 420.

EECS 725. Introduction to Radar Systems. 3 Credits.
Basic radar principles and applications. Radar range equation. Pulsed
and CW modes of operation for detection, ranging, and extracting
Doppler information. Prerequisite: EECS 360, EECS 420, EECS 461 or
MATH 526. EECS 622 recommended.

EECS 727. Photonics. 3 Credits.
The course presents the theory and the design principles of photonic
systems. Topics include: Light propagation, interference, and diffraction,
permittivity models and effective media, electromagnetic propagation in
complex media, dispersion engineering, and fundamentals of nonlinear
optics. Prerequisite: EECS 420 or equivalent.

EECS 728. Fiber-optic Measurement and Sensors. 3 Credits.
The course will focus on fundamental theory and various methods and
applications of fiber-optic measurements and sensors. Topics include:
optical power and loss measurements, optical spectrum analysis,
wavelength measurements, polarization measurements, dispersion
measurements, PMD measurements, optical amplifier characterization,
OTDR, optical components characterization and industrial applications of
fiber-optic sensors. Prerequisite: EECS 628 or equivalent.

EECS 730. Introduction to Bioinformatics. 3 Credits.
This course provides an introduction to bioinformatics. It covers
computational tools and databases widely used in bioinformatics. The
underlying algorithms of existing tools will be discussed. Topics include:
molecular biology databases, sequence alignment, gene expression data
analysis, protein structure and function, protein analysis, and proteomics.
Prerequisite: Data Structures class equivalent to EECS 330, and
Introduction to Biology equivalent to BIOL 150, or consent of instructor.

EECS 739. Parallel Scientific Computing. 3 Credits.
This course is concerned with the application of parallel processing to
real-world problems in engineering and the sciences. State-of-the-art
serial and parallel numerical computing algorithms are studied along
with contemporary applications. The course takes an algorithmic design,
analysis, and implementation approach and covers an introduction to
scientific and parallel computing, parallel computing platforms, design
principles of parallel algorithms, analytical modeling of parallel algorithms,
MPI programming, direct and iterative linear solvers, numerical PDEs
and meshes, numerical optimization, GPU computing, and applications of
parallel scientific computing. Prerequisite: MATH 126, MATH 290,
experience programming in C, C++, or Fortran; EECS 639 (or equivalent.)
Highly recommended: MATH 127.

EECS 740. Digital Image Processing. 3 Credits.
This course gives a hands-on introduction to the fundamentals and applications of digital image processing. Topics include: image formation and camera calibration, image transforms, image filtering in spatial and frequency domains, image enhancement, image restoration and reconstruction, image segmentation, feature detection, segmentation, and the latest developments and applications in image processing. Prerequisite: MATH 290 and MATH 526, or consent from the instructor.

EECS 742. Static Analysis. 3 Credits.
This course presents an introduction to techniques for statically analyzing programs. Converge includes theoretical analysis, definition and implementation of data flow analysis, control flow analysis, abstract interpretation, and type and effects systems. The course presents both the underlying definitions and pragmatic implementation of these systems. Prerequisite: EECS 665 or EECS 662 or equivalent.

EECS 743. Advanced Computer Architecture. 3 Credits.
Topics of this course will be divided into three main categories: (a) theory of parallelism, (b) hardware technologies, and (c) parallel and scalable architectures. For example, principles of performance and scalability, processors and memory hierarchy, linear/nonlinear pipelining and superscalar techniques, and scalable multiprocessors and dataflow architectures will be among the topics to be covered. The course will also focus on emerging and heterogeneous architectures and their performance potential and programming models. For example, reconfigurable computing (RC), quantum computing (QC), and neuromorphic computing (NC) will be covered in some details. This would be achieved through practical experiments, and homework projects using realistic workloads on some state-of-the-art high-performance reconfigurable and quantum computers. Finally, students will select published related research work for discussions and oral presentations. Prerequisite: EECS 643 or EECS 645, or equivalent. A good understanding of C/C++ and having basic Unix/Linux skills is required.

EECS 744. Digital Signal Processing Implementation in Programmable Logic Devices. 3 Credits.
Implementation of communication and radar DSP algorithms in programmable logic devices focusing on design methodology, resource utilization, and timing closure. Specific topics include number formats, numerical operators, waveform generation, mixed-signal converters (ADCs & DACs), digital filters, multi-rate designs, DFTs, software defined radios, and embedded processors. Course structure will consist of a combination of class lectures and hardware design projects. Prerequisite: An introductory course in DSP such as EECS 644; and digital system design using HDL such as EECS 443 or equivalent.

EECS 745. Implementation of Networks. 3 Credits.
EECS 745 is a laboratory-focused implementation of networks. Topics include direct link networks (encoding, framing, error detection, reliable transmission, SONET, FDDI, network adapters, Ethernet, 802.11 wireless networks); packet and cell switching (ATM, switching hardware, bridges and extended LANs); internetworking (Internet concepts, IPv6, multicast, naming/DNS); end-to-end protocols (UDP, TCP, APIs and sockets, RPCs, performance); end-to-end data (presentation formatting, data compression, security); congestion control (queueing disciplines, TCP congestion control and congestion avoidance); high-speed networking (issues, services, experiences); voice over IP (peer-to-peer calling, call managers, call signalling, PBX and call attendant functionality). Prerequisite: EECS 563 or EECS 780.

EECS 750. Advanced Operating Systems. 3 Credits.
In this course, we will study advanced topics in operating systems for modern hardware platforms. The topics include: multicores CPU scheduling, cache and DRAM management, flash-based storage systems and I/O management, power/energy management, and cloud systems. We will discuss classical and recent papers in each of these topics. We will also study advanced resource management capabilities in recent Linux kernels. The course will consist of lectures, student presentations, and a term project. Prerequisite: EECS 678.

EECS 752. Modern Computer Organization and Design. 3 Credits.
The main objective of this course is to discuss various computer architectures at an abstract level. A large number of machines, memory structures, and interconnections will be discussed. We will learn about state-of-the-art computer systems as they are designed today, including processors, memories, interconnects, and multiprocessors. The focus of the course is not on research but on actual, commercial, existing machines. The students taking the course will be ready to conduct research in the area of computer architecture or work on projects related to designing chip architecture for components of a computer system. More importantly, the students will gain experience in using architectural simulators and analytical models to design and evaluate future computer architectures. Prerequisite: EECS 645 or EECS 643 or instructor’s consent.

EECS 753. Embedded and Real Time Computer Systems. 3 Credits.
This course will cover existing and proposed techniques and issues in embedded and real time computer systems. Topics will include new paradigms, enabling technologies, and challenges resulting from emerging application domains. Prerequisite: EECS 645 and EECS 678.

EECS 755. Software Modeling and Analysis. 3 Credits.
Modern techniques for modeling and analyzing software systems. Course coverage concentrates on pragmatic, formal modeling techniques that support predictive analysis. Topics include formal modeling, static analysis, and formal analysis using model checking and theorem proving systems. Prerequisite: EECS 368 or equivalent.

EECS 759. Estimation and Control of Unmanned Autonomous Systems. 3 Credits.
An introduction to the modeling, estimation, and control of unmanned autonomous systems. Topics include motion description, navigation sensors, complementary filters, Kalman filters, attitude estimation, position estimation, altitude keeping controller, etc. The successful completion of this course will prepare students for advanced studies in robotics & controls. (Same as AE 759.) Prerequisite: MATH 627, AE 551 or AE 552 or EECS 444, or by consent of instructor.

EECS 762. Programming Language Foundation I. 3 Credits.
This course presents a basic introduction to the semantics of programming languages. The presentation begins with basic lambda calculus and mechanisms for evaluating lambda calculus terms. Types are introduced in the form of simply typed lambda calculus and techniques for type inference and defining type systems are presented. Finally, techniques for using lambda calculus to define, evaluate and type check common programming language constructs are presented. Prerequisite: EECS 662 or equivalent.

EECS 764. Analysis of Algorithms. 3 Credits.
Models of computations and performance measures; asymptotic analysis of algorithms; basic design paradigms including divide-and-conquer, dynamic programming, backtracking, branch-and-bound, greedy method and heuristics; design and analysis of approximation algorithms; lower bound theory; polynomial transformation and the theory of NP-Completeness; additional topics may be selected from arithmetic
complexity, graph algorithms, string matching, and other combinatorial problems. Prerequisite: EECS 630 or equivalent.

EECS 765. Introduction to Cryptography and Computer Security. 3 Credits.
Comprehensive coverage to the fundamentals of cryptography and computer and communication security. This course serves as the first graduate level security course, which introduces the core concepts, theories, algorithms and protocols in computer and communication security, and also prepares students for advanced security courses. This course first covers the mathematical foundation of cryptography and its applications in computer security. The course also covers a wide range of topics: information and database security, software and computer systems security, network security, Internet and web security. Prerequisite: EECS 678 and EECS 563 or EECS 780, or the instructor's approval.

EECS 767. Information Retrieval. 3 Credits.
This class introduces algorithms and applications for retrieving information from large document repositories, including the Web. Topics span from classic information retrieval methods for text documents and databases, to recent developments in Web search, including: text algorithms, indexing, probabilistic modeling, performance evaluation, web structures, link analysis, multimedia information retrieval, social network analysis. Prerequisite: EECS 447 or permission of instructor.

EECS 768. Virtual Machines. 3 Credits.
Understand the fundamental principles and advanced implementation aspects of key virtual machine concepts. Topics include principles of virtualization, binary translation, process and system level virtual machines, JIT compilation and optimizations in managed environments, garbage collection, virtual machine implementation issues, and virtual machine security. Includes in-depth coverage of the latest developments and research issues in the field of virtual machines. Prerequisite: EECS 685 and either EECS 643 or EECS 645 or consent of instructor.

EECS 769. Information Theory. 3 Credits.
Information theory is the science of operations on data such as compression, storage, and communication. It is one of the few scientific fields fortunate enough to have an identifiable beginning - Claude Shannon's 1948 paper. The main topics of mutual information, entropy, and relative entropy are essential for students, researchers, and practitioners in such diverse fields as communications, data compression, statistical signal processing, neuroscience, and machine learning. The topics covered in this course include mathematical definitions and properties of information, mutual information, source coding theorem, lossless compression of data, optimal lossless coding, noisy communication channels, channel coding theorem, the source channel separation theorem, multiple access channels, broadcast channels, Gaussian noise, time-varying channels, and network information theory. Prerequisite: EECS 481 or MATH 526 or an equivalent undergraduate probability course.

EECS 773. Advanced Graphics. 3 Credits.
Advanced topics in graphics and graphics systems. Topics at the state of the art are typically selected from: photorealistic rendering; physically-based lighting models; ray tracing; radiosity; physically-based modeling and rendering; animation; general texture mapping techniques; point-based graphics; collaborative techniques; and others. Prerequisite: EECS 672 or permission of instructor.

EECS 774. Geometric Modeling. 3 Credits.
Introduction to the representation, manipulation, and analysis of geometric models of objects. Implicit and parametric representations of curves and surfaces with an emphasis on parametric freeform curves and surfaces such as Bezier and Nonuniform Rational B-Splines (NURBS). Curve and surface design and rendering techniques. Introduction to solid modeling: representations and base algorithms. Projects in C/C++ using OpenGL. Prerequisite: EECS 672 or permission of instructor.

EECS 775. Visualization. 3 Credits.
Data representations, algorithms, and rendering techniques typically used in Visualization applications. The emphasis is on Scientific Visualization and generally includes topics such as contouring and volumetric rendering for scalar fields, glyph and stream (integral methods) for vector fields, and time animations. Multidimensional, multivariate (MDMV) visualization techniques; scattered data interpolation; perceptual issues. Prerequisite: General knowledge of 3D graphics programming or instructor's permission.

EECS 776. Functional Programming and Domain Specific Languages. 3 Credits.
An introduction to functional programming. Topics include learning how to program in Haskell: IO and purity in software engineering; functional data structures and algorithms; monads and applicative functors; parsing combinators; Domain Specific Languages (DSLs) and DSL construction; advanced type systems; making assurance arguments; testing and debugging. Prerequisite: EECS 368 or equivalent or consent of instructor.

EECS 780. Communication Networks. 3 Credits.
Comprehensive in-depth coverage to communication networks with emphasis on the Internet and the PSTN (wired and wireless, and IoT-Internet of Things). Extensive coverage of protocols and algorithms will be presented at all levels, including: social networking, overlay networks, client/server and peer-to-peer applications; session control; transport protocols, the end-to-end arguments and end-to-end congestion control; network architecture, forwarding, routing, signaling, addressing, and traffic management, programmable and software-defined networks (SDN); quality of service, queuing and multimedia applications; LAN architecture, link protocols, access networks and MAC algorithms; physical media characteristics and coding; network security and information assurance; network management. Prerequisite: EECS 563 or equivalent or permission of instructor.

EECS 781. Numerical Analysis I. 3 Credits.
Finite and divided differences. Interpolation, numerical differentiation, and integration. Gaussian quadrature. Numerical integration of ordinary differential equations. Curve fitting. (Same as MATH 781.) Prerequisite: MATH 320 and knowledge of a programming language.

EECS 782. Numerical Analysis II. 3 Credits.
Direct and interactive methods for solving systems of linear equations. Numerical solution of partial differential equations. Numerical determination of eigenvectors and eigenvalues. Solution of nonlinear equations. (Same as MATH 782.) Prerequisite: EECS 781 or MATH 781.

EECS 784. Science of Communication Networks. 3 Credits.
Comprehensive introduction to the fundamental science that is the basis for the architecture, design, engineering, and analysis of computer networks. Topics covered will include foundations on: Structure of networks: graph theory, complex systems analysis, centrality, spectral analysis, network flows, and network topology; Identification of network entities: naming, addressing, indirection, translation, and location; Operation of protocols and information transfer: automata, control theory, Petri nets, layering and cross-layering, protocol data units; Policy and tussle; game theory, decision theory; Resilience; dependability (reliability, availability, and maintainability), performability, fault tolerance, and survivability. Open-source tools will be used for network modelling and analysis. Prerequisite: EECS upper-level eligibility, graduate standing, or permission of the instructor.

EECS 786. Digital Very-Large-Scale-Integration. 3 Credits.
This course covers the basic concepts of Integrated Circuit (IC) design, various methods of designing VLSI circuits, and techniques to analyze and optimize performance metrics, such as: speed, area, power and signal integrity. Clocking, interconnect and scaling issues of IC will also be discussed. The topic will cover device, interconnect and circuit level implementation issues of both logic and memory circuits. It will also briefly introduce the high performance issues, fabrication technologies and system level implementation approaches of IC to establish bridges to the advanced courses. Prerequisite: EECS 312.

EECS 788. Analog Integrated Circuit Design. 3 Credits.
This course covers the analysis and design of analog and mixed signal integrated circuits, with an emphasis on design principles for realizing state-of-the-art analog circuits. Modern circuit design is a "mixed signal" endeavor thanks to the availability of sophisticated process technologies that allow bipolar and CMOS (Complementary Metal Oxide Semiconductor), power and signal, passive and active components on the same die. It is then up to the circuit designer's creativity and inclination to assemble these components into the analog and/or logic building blocks. The course will provide the critical concepts by giving physical and intuitive explanations in addition to the quantitative analysis of important analog building block circuits. First-order hand calculations and extensive computer simulations are utilized for performance evaluation and circuit design. Prerequisite: EECS 412.

EECS 800. Special Topics: _____. 1-5 Credits.
Advanced courses on special topics of current interest in electrical engineering, computer engineering, or computer science, given as the need arises. May be repeated for additional credit. Prerequisite: Varies by topic.

EECS 801. Directed Graduate Readings. 1-3 Credits.
Graduate level directed readings on a topic in electrical engineering, computer engineering, or computer science, mutually agreed-on by the student and instructor. May be repeated for credit on another topic. Prerequisite: Consent of instructor.

EECS 802. Electrical Engineering and Computer Science Colloquium and Seminar on Professional Issues. 1 Credits.
A colloquium/seminar series in which presentation are provided on a broad variety of scholarly and professional topics. Topics related to the issues of responsible scholarship in the fields of computing and electrical engineering will be discussed. Student are also required to attend a series of colloquia and submit written reports. Course will be graded Satisfactory/Fail and is required for all EECS graduate students. Prerequisite: Graduate standing in the EECS Department.

EECS 812. Software Requirements Engineering. 3 Credits.
Objectives, processes, and activities of requirements engineering and requirements management; characteristics of good requirements; types of requirements; managing changing requirements; languages, notations, and methodologies; formal and semi-formal methods of presenting and validating the requirements; requirements standards; traceability issues. Prerequisite: EECS 810.

EECS 820. Advanced Electromagnetics. 3 Credits.
A theorem-based approach to solving Maxwell's equations for modeling electromagnetic problems encountered in microwave systems, antennas, scattering. Topics include waves, source modeling, Schelkunoff equivalence principle, scattered filed formulations, electromagnetic induction, reciprocity principles, Babinet's principle, and construction of solutions in various coordinate systems. Prerequisite: EECS 420.

EECS 823. Microwave Remote Sensing. 3 Credits.
Description and analysis of basic microwave remote sensing systems including radars and radiometers as well as the scattering and emission properties of natural targets. Topics covered include plane wave propagation, antennas, radiometers, atmospheric effects, radars, calibrated systems, and remote sensing applications. Prerequisite: EECS 420 and EECS 622.

EECS 828. Advanced Fiber-Optic Communications. 3 Credits.
An advanced course in fiber-optic communications. The course will focus on various important aspects and applications of modern fiber-optic communications, ranging from photonic devices to systems and networks. Topics include: advanced semiconductor laser devices, external optical modulators, optical amplifiers, optical fiber nonlinearities and their impact in WDM and TDM optical systems, polarization effect in fiber-optic systems, optical receivers and high-speed optical system performance evaluation, optical solution systems, lightweight analog video transmission, SONET & ATM optical networking, and advanced multi-access lightweight networks. Prerequisite: EECS 628 or equivalent.

EECS 830. Advanced Artificial Intelligence. 3 Credits.
A detailed examination of computer programs and techniques that manifest intelligent behavior, with examples drawn from current literature. The nature of intelligence and intelligent behavior. Development of, improvement to, extension of, and generalization from artificially intelligent systems, such as theorem-provers, pattern recognizers, language analyzers, problem-solvers, question answerers, decision-makers, planners, and learners. Prerequisite: Graduate standing in the EECS department or Cognitive Science or permission of the instructor.

EECS 831. Introduction to Systems Biology. 3 Credits.
This course provides an introduction to systems biology. It covers computational analysis of biological systems with a focus on computational tools and databases. Topics include: basic cell biology, cancer gene annotation, micro RNA identification, Single Nucleotide Polymorphism (SNP) analysis, genetic marker identification, protein-DNA interaction, computational Neurology, vaccine design, cancer drug development, and computational development biology. Prerequisite: Introduction to Bioinformatics equivalent to EECS 730, or consent of instructor.

EECS 835. Advanced Data Science. 3 Credits.
This course covers topics in data collection, data transmission, and data analysis, in support of discoveries and innovations based on massive amounts of data. EECS 731 surveys current topics in data science. It provides a comprehensive review of theory, algorithms, and tools that are used in data science and prepares students to take in-depth following up courses in EECS. EECS 731 is a project-oriented course. It offers hands-on experience for students to integrate knowledge from a wide-range of topics in data science without dwelling on any particular subfield of data science. Prerequisite: EECS 268 or experience with object oriented programming and large programs. MATH 290 or experience with linear algebra. EECS 461 or MATH 526 or experience with probability and statistics. Or consent from the instructor.

EECS 836. Machine Learning. 3 Credits.
"Machine learning is the study of computer algorithms that improve automatically through experience" (Tom Mitchell). This course introduces basic concepts and algorithms in machine learning. A variety of topics such as Bayesian decision theory, dimensionality reduction, clustering, neural networks, hidden Markov models, combining multiple learners, reinforcement learning, Bayesian learning etc. will be covered. Prerequisite: Graduate standing in CS or CoE or consent of instructor.

EECS 837. Data Mining. 3 Credits.
EECS 838. Applications of Machine Learning in Bioinformatics. 3 Credits.
This course is introduction to the application of machine learning methods in bioinformatics. Major subjects include: biological sequence analysis, microarray interpretation, protein interaction analysis, and biological network analysis. Common biological and biomedical data types and related databases will also be introduced. Students will be asked to present some selected research papers. Prerequisite: EECS 730 and EECS 738.

EECS 839. Mining Special Data. 3 Credits.
Problems associated with mining incomplete and numerical data. The MLEM2 algorithm for rule induction directly from incomplete and numerical data. Association analysis and the Apriori algorithm. KNN and other statistical methods. Mining financial data sets. Problems associated with imbalanced data sets and temporal data. Mining medical and biological data sets. Induction of rule generations. Validation of data mining: sensitivity, specificity, and ROC analysis. Prerequisite: Graduate standing in CS or CoE or consent of instructor.

EECS 841. Computer Vision. 3 Credits.
This course gives a hands-on introduction to the fundamentals and applications of computer vision. Topics include: Image processing fundamentals, feature detection and matching, projective geometry and transformation, camera geometry and calibration, two-view geometry and stereo vision, structure from motion, parameter estimation and optimization, and the latest developments and applications in computer vision. Prerequisite: EECS 730 and EECS 738.

EECS 843. Principles of Digital Communication Systems. 3 Credits.
A study of communication systems using noisy channels. Principal topics are: information and channel capacity, baseband data transmission, digital carrier modulation, error control coding, and digital transmission of analog signals. The course includes a laboratory/computer aided design component integrated into the study of digital communication systems. Prerequisite: EECS 562. Corequisite: EECS 861.

EECS 863. Network Analysis, Simulation, and Measurements. 3 Credits.
Prediction of communication network performance using analysis, simulation, and measurement. Topics include: an introduction to queueing theory, application of theory to prediction of communication network and protocol performance, and analysis of scheduling mechanisms. Modeling communication networks using analytic and simulation approaches, model verification and validation through analysis and measurement, and deriving statistically significant results. Analysis, simulation, and measurement tools will be discussed. Prerequisite: EECS 461 or MATH 526, and EECS 563 or EECS 780.

EECS 865. Wireless Communication Systems. 3 Credits.
The theory and practice of the engineering of wireless telecommunication systems. Topics include cellular principles, mobile radio propagation (including indoor and outdoor channels), radio link calculations, fading (including Rayleigh, Rician, and other models), packet radio, equalization, diversity, error correction coding, spread spectrum, multiple access techniques (including time, frequency, and code), and wireless networking. Current topics of interest will be covered. Prerequisite: EECS 861.

EECS 866. Network Security. 3 Credits.
This course provides in-depth coverage on the concepts, principles, and mechanisms in network security and secure distributed systems. The topics that will be covered include: network security primitives, risks and vulnerabilities, authentication, key management, network attacks and defense, secure communication protocols, intrusion detection, exploit defenses, traffic monitoring and analysis, and privacy mechanisms. Prerequisite: EECS 765 and EECS 563 or EECS 780, or the instructor’s approval.

EECS 868. Mathematical Optimization with Applications. 3 Credits.
A mathematical study of the minimization of functions. The course provides an introduction to the mathematical theory, implementation, and application of a variety of optimization techniques, with an emphasis on real-world applications. Optimization problem formulation. Unconstrained and constrained minimization, including conditions for optimality. Specific techniques for solving linear and nonlinear programming problems. Convergence of algorithms. Prerequisite: MATH 590 or EECS 639, or the consent of the instructor.

EECS 869. Error Control Coding. 3 Credits.
A study of communication channels and the coding problem. An introduction to finite fields and linear block codes such as cyclic, Hamming, Golay, BCH, and Reed-Solomon. Convolutional codes and the Viberbi algorithm are also covered. Other topics include trellis coded modulation, iterative (turbo) codes, LDPC codes. Prerequisite: EECS 562 or equivalent.

EECS 881. High-Performance Networking. 3 Credits.
Comprehensive coverage of the discipline of high-bandwidth low-latency networks and communication, including high bandwidth-delay products, with an emphasis on principles, architecture, protocols, and system design. Topics include high-performance network architecture, control, and signaling; high-speed wired, optical, and wireless links; fast packet, IP, and optical switching; IP lookup, classification, and scheduling; network processors, end system design and protocol optimization,
network interfaces; storage networks; data-center networks, end-to-end protocols, mechanisms, and optimizations; high-bandwidth low-latency applications and cloud computing. Principles will be illustrated with many leading-edge and emerging protocols and architectures. Prerequisite: EECS 563 or EECS 780, or permission of the instructor.

**EECS 882. Mobile Wireless Networking. 3 Credits.**
Comprehensive coverage of the disciplines of mobile and wireless networking, with an emphasis on architecture and protocols. Topics include cellular telephony, MAC algorithms, wireless PANs, LANs, MANs, and WANS; wireless and mobile Internet; mobile ad hoc networking; mobility management, sensor networks; satellite networks; and ubiquitous computing. Prerequisite: EECS 563 or EECS 780, or permission of the instructor.

**EECS 888. Internet Routing Architectures. 3 Credits.**
A detailed study of routing in IP networks. Topics include evolution of the Internet architecture, IP services and network characteristics, an overview of routing protocols, the details of common interior routing protocols and interdomain routing protocols, and the relationship between routing protocols and the implementation of policy. Issues will be illustrated through laboratories based on common routing platforms. Prerequisite: EECS 745.

**EECS 891. Graduate Problems. 1-5 Credits.**
Directed studies of advanced phases of electrical engineering, computer engineering, computer science or information technology not covered in regular graduate courses, including advanced laboratory work, special research, or library reading. Graded on a satisfactory progress/limited progress/no progress basis. Prerequisite: Consent of instructor.

**EECS 899. Master's Thesis or Report. 1-6 Credits.**
Graded on a satisfactory progress/limited progress/no progress basis.

**EECS 900. Seminar. 0.5-3 Credits.**
Group discussions of selected topics and reports on the progress of original investigations. Prerequisite: Consent of instructor.

**EECS 940. Theoretic Foundation of Data Science. 3 Credits.**
A review of statistical and mathematical principles that are utilized in data mining and machine learning research. Covered topics include asymptotic analysis of parameter estimation, sufficient statistics, model selection, information geometry, function approximation and Hilbert spaces. Prerequisite: EECS 738, EECS 837, EECS 844 or equivalent.

**EECS 965. Detection and Estimation Theory. 3 Credits.**
Detection of signals in the presence of noise and estimation of signal parameters. Narrowband signals, multiple observations, signal detectability and sequential detection. Theoretical structure and performance of the receiver. Prerequisite: EECS 861.

**EECS 983. Resilient and Survivable Networking. 3 Credits.**
Graduate research seminar that provides an overview of the emerging field of resilient, survivable, disruption-tolerant, and challenged networks. These networks aim to remain operational and provide an acceptable level of service in the face of a number of challenges including: natural faults of network components; failures due to misconfiguration or operational errors; attacks against the network hardware, software, or protocol infrastructure; large-scale natural disasters; unpredictably long delay paths either due to length (e.g. satellite and interplanetary) or as a result of episodic connectivity; weak and episodic connectivity and asymmetry of wireless channels; high-mobility of nodes and subnetworks; unusual traffic load (e.g. flash crowds). Multi-level solutions that span all protocol layers, planes, and parts of the network will be systematically and systematically covered. In addition to lectures, students read and present summaries of research papers and execute a project. Prerequisite: EECS 780; previous experience in simulation desirable.

**EECS 998. Post-Master's Research. 1-6 Credits.**
Graded on a satisfactory progress/limited progress/no progress basis.

**EECS 999. Doctoral Dissertation. 1-12 Credits.**
Graded on a satisfactory progress/limited progress/no progress basis.

### Bachelor of Science in Electrical Engineering

#### Educational Objectives

Graduates who have earned the bachelor’s degree in electrical engineering, within a few years following graduation, will have demonstrated technical proficiency, collaborative activities, and professional development.

#### Technical Proficiency

Graduates will have achieved success and visibility in their chosen careers as shown by technical accomplishments in industry, government, entrepreneurial activities, or academia.

#### Collaborative Activities

Graduates will have exercised shared responsibilities through activities such as contributions to multiperson or multidisciplinary technical projects, participation in professional society/organization functions, or performing collaborative research. In all such cases, graduates will have contributed to documentation of the collaborative activities.

#### Professional Development

Graduates will have demonstrated continual updating to extend their expertise and adapt to a changing environment through graduate studies; short courses, conferences, and seminars; or professional self-study. In addition, graduates will have demonstrated evidence of increasing technical and/or managerial impact.

#### Careers

#### Professional Opportunities

Electrical engineers may work in circuit design, electronic devices, electrical and optical communications, control and automation, electromagnetics, instrumentation, energy and power, or signal processing. Electrical engineers may work in telecommunications, consumer electronics, or public utility companies; government agencies; and defense-related or consulting firms.

### Undergraduate Admission to the School of Engineering

Admission to the KU School of Engineering (and its degree programs) is selective. Students may be admitted to an engineering or computer science degree program (https://engr.ku.edu/2021-curriculum-guide-links/) as freshmen (first year) students, but all admissions, for both in-state and out-of-state students, are selective. Applications are judged on several factors, such as high school record, scores on national tests, academic record at college or university level, and trend of grades and more. High school transcripts are required.
Minimum Academic Standards for Admission to the School of Engineering

To be considered for admission to the School of Engineering, beginning first-year students must meet or exceed the following minimum standards:

- Must be admissible (https://admissions.ku.edu/major-specific-requirements/) to the University of Kansas by assured admissions or individual review, AND
- Have a 3.0+ high school GPA, AND
- Demonstrate mathematics preparedness by:
  - Obtaining a mathematics ACT score of 22+ (or math SAT score of 540+), or
  - Achieving a ‘B’ or better in ‘college algebra’ or a more advanced mathematics course, or
  - Achieving a ‘C’ or better in a high school calculus course; or
  - Earning credit via IB or AP credit for the above-mentioned courses in accordance with KU placement credit requirements; or
  - Achieving at minimum a qualifying score for MATH 104 on the ALEKS mathematics placement exam.

Minimum Academic Standards for Direct Admission into Degree Program for incoming Freshmen

Students with a 26+ Math ACT (600+ Math SAT) or meet eligibility requirements for MATH 125 (Calculus I) (p. 1622) may be admitted directly into their chosen major, with the exception of those seeking admission into the Electrical Engineering, Computer Science, Computer Engineering, and Interdisciplinary Computing (EECS) majors. For EECS program admission, students must:

- Be admissible (https://admissions.ku.edu/major-specific-requirements/) to the University of Kansas by assured admissions or individual review, AND
- Have a 3.0+ high school GPA, AND
- Demonstrate mathematics preparedness by:
  - Obtaining a mathematics ACT score of 28+ (or math SAT score of 660+), or
  - Achieving a ‘C’ or better in a high school calculus course; or
  - Earning credit via IB or AP credit for the above-mentioned course in accordance with KU placement credit requirements; or
  - Achieving at minimum a qualifying score for MATH 125 on the ALEKS mathematics placement exam.

Transfer Admission Standards

Applications from all transfer students, whether from other institutions or from other academic schools at the University of Kansas, are evaluated on a case-by-case basis. Transfer students must be admissible (http://admissions.ku.edu/apply/requirements/ustransfer/) to KU AND have a cumulative college transferable grade-point average of 2.5+ to be considered. In addition, students must have grades of "C" or better in those courses in math (must include MATH 125 Calculus I or equivalent), science, and engineering applicable to the engineering degree.

Current KU Students admitted to other academic units may apply to the School of Engineering by completing a Change of School form (https://inowformsprivate.ku.edu/imagenowforms/fs/?form=OUR%20Change%20of%20School%20Form).

Already Applied to KU, But Not Engineering?

Don't worry. It's not too late to change your mind if you've already applied to KU and selected a major outside the School of Engineering. If you think one of the 12 engineering or computer science majors is a better fit for your talents, you can still change your requested major — preferably before May 1 — and be considered for admission to the School of Engineering and all the benefits that go with it.

To update your application, visit Undergraduate Admissions (http://admissions.ku.edu/update-your-application/) and click on “Change application term, major, mailing address, and/or email address.”

Please contact a member of our recruitment team (studyengineering@ku.edu), 785-864-3881, if you have any difficulty.

Application Deadlines For New Freshman and Transfer Applicants

<table>

Exploring Engineering

Students not admitted directly to the School of Engineering or their major but who are admissible to the university may be admitted to the College of Liberal Arts and Sciences as an Undecided student. They can later re-apply to the School of Engineering during the semester they are completing the admission requirements for transfer students.
Bachelor of Science in Electrical Engineering Degree Requirements

The KU Core

This is the university-wide curriculum that all incoming undergraduate students will complete as part of their degree requirements. It comprises three general education goals and three advanced education goals. Associated with each goal is one or more learning outcomes:

- GE 1.1, Goal 1/Outcome 1, Critical Thinking;
- GE 1.2, Goal 1/Outcome 2, Quantitative Literacy;
- GE 2.1, Goal 2/Outcome 1, Written Communication (2 units);
- GE 2.2, Goal 2/Outcome 2, Oral Communication;
- GE 3H, Goal 3/Outcome 1, Arts & Humanities;
- GE 3N Goal 3/Outcome 2, Natural Sciences;
- GE 3S Goal 3/Outcome 3, Social Sciences;
- AE 4.1, Goal 4/Outcome 1, Diversity;
- AE 4.2 Goal 4/Outcome 2, Culture;
- AE 5.1/5.2, Goal 5/Outcome 1/2, Social Responsibility & Ethics (course and/or practice);
- AE 6.1/6.2, Goal 6/Outcome 1/2, Integration & Creativity.

Details of the KU Core can be found at kucore.ku.edu. Some required courses in the EECS curricula satisfy a KU Core goal and/or outcome. For these courses, the goal/outcome code is given in parentheses after the course on the pages below. Where required courses do NOT specifically satisfy KU Core goals (Goals 2, 3, and 4) students must choose from a list of several means to satisfy the required goals.

A total of 128 credit hours is required for the B.S. degree in electrical engineering, as follows:

Mathematics

- MATH 125 Calculus I (KU Core GE 1.2) | 4 |
- MATH 126 Calculus II                 | 4 |
- MATH 127 Calculus III                | 4 |
- MATH 220 Applied Differential Equations | 3 |
- MATH 290 Elementary Linear Algebra   | 2 |
- EECS 461 Probability and Statistics  | 3 |

Basic Science

- CHEM 130 General Chemistry I          | 5 |
- or CHEM 150 Chemistry for Engineers   | 5 |
- PHSX 210 General Physics I for Engineers | 3 |
- PHSX 216 General Physics I Laboratory (Part of KU Core AE 5.1) | 1 |
- EECS 220 Electromagnetics I           | 4 |
- PHSX 313 General Physics III (KU Core GE 3N) | 3 |
- PHSX 316 Intermediate Physics Laboratory I | 1 |

Professional Electives

- 2 courses from the following list of approved technical, scientific, and professional courses: | 6 |
  - EECS: Any course except EECS 137, EECS 138, EECS 315, EECS 316, EECS 317, EECS 318, EECS 498 and 692. Only 1 of EECS 643 or EECS 645 may be used.
  - Engineering: IT 320, IT 330, IT 416, IT 430, IT 450 and any course from any other engineering department numbered 200 or above, except AE 211, ENGR 300, ENGR 490, ENGR 504, ME 208, and ME 228.
  - Natural science: Any course designated GE3N, except PHSX 111, PHSX 112, PHSX 114, PHSX 115, PHSX 212, PHSX 236, and CHEM 110.
  - Mathematics: Any MATH course numbered 500 or above, except MATH 526 and MATH 701.
  - Business: Any course 200 and above from the School of Business that applies towards a Business major, minor, or certificate, except for Statistics and Computing courses.
  - ROTC Courses: Up to 6 hours of ROTC may be petitioned to count toward the professional elective requirement.
  - Foreign Language: Any foreign language course may be petitioned to count as a Professional Elective or additional Humanities or Science hours.

Communications

- Satisfy KU Core GE 2.1 | 6 |
- Satisfy KU Core GE 2.2 | 3 |

Arts/Humanities/Social Science

Economics elective: | 3 |
  - Select one of the following:
  - ECON 142 Principles of Microeconomics (KU Core GE 3S, preferred)
  - ECON 144 Principles of Macroeconomics (KU Core GE 3S)
Satisfy KU Core GE 3H Arts & Humanities 1 3
Satisfy KU Core AE 4.1 and AE 4.2 1 6

1 Means of satisfying KU Core Goals are chosen from a variety of options (see kucore.ku.edu (http://kucore.ku.edu/)). Hours listed are assuming the goals are satisfied with course work.

Course Prerequisites and Corequisites

Students must pass (at the appropriate grade level) all prerequisite courses for a given course before taking the subsequent course. If Course A is a Corequisite for Course B, Course A must be taken in the same semester as Course B or be completed prior to taking Course B.

Upper Level Eligibility

In addition to prerequisites and co-requisites, EECS undergraduates are required to earn Upper Level Course Eligibility by attaining grades of C or better (C- does not qualify) in each of the following 15 courses:

GE 21 (both)
PHSX 210 & 216
MATH 125, 126, 127, 220, 290
EECS 101, 140, 168, 202, 212, 221
CHEM 130 or 150
ECON 142 or 144 (KU Core GE 3S)
KU Core GE 2.1 (first) 1
PHSX 216 (Part of KU Core GE 1.2)
KU Core GE 2.2 1

If students earn less than a C in any of the above listed courses, they must repeat the course at the next available opportunity and must not take a course for which that course is a prerequisite. It is the students’ responsibility to contact their advisors before beginning the new semester regarding any required repetitions and the associated enrollment adjustments (drops and adds).

To enroll in any upper level EECS course beyond the ULE list, students must have fulfilled the Upper Level Eligibility Requirements detailed above. Exceptions: EECS 312, EECS 330, EECS 361, and EECS 388 may be taken in the same semester as students are completing their upper level eligibility. Students may also petition for a Partial Waiver of Upper Level Eligibility Requirements by completing the appropriate petition, found in the EECS office or at www.eecs.ku.edu (http://www.eecs.ku.edu).

Double Major

If students wish to double-major (earn two degrees), they must fulfill all the requirements for the degrees in question. They must also consult the Engineering Dean’s office and the department and/or school of the second major to find out if there are any additional requirements. If they wish to obtain two degrees offered by the EECS department, the following rule applies: a course that is required for one EECS degree program may not be used to satisfy a Senior Elective or General Elective requirement of another EECS degree program.

1 Means of satisfying KU Core Goals are chosen from a variety of options (see kucore.ku.edu (http://kucore.ku.edu/)). Hours listed are assuming the goals are satisfied with course work.

Departmental Honors

An undergraduate student may graduate with departmental honors in electrical engineering, computer engineering, computer science, or interdisciplinary computing by graduating with a minimum grade-point average requirement while maintaining full-time status. In addition,
students must enroll in EECS 498 Honors Research for their last 2 semesters and must complete an independent research project paper and oral presentation to a panel of 3 judges. See the EECS Undergraduate Handbook for full details.

**Bachelor of Science in Computer Engineering**

**B.S. in Computer Engineering Program**

**Educational Objectives**

Graduates who have earned the bachelor’s degree in computer engineering, within a few years following graduation, will have demonstrated technical proficiency, collaborative activities, and professional development.

**Technical Proficiency**

Graduates will have achieved success and visibility in their chosen careers as shown by technical accomplishments in industry, government, entrepreneurial activities, or academia.

**Collaborative Activities**

Graduates will have exercised shared responsibilities through activities such as contributions to multiperson or multidisciplinary technical projects, participation in professional society/organization functions, or performing collaborative research. In all such cases, graduates will have contributed to documentation of the collaborative activities.

**Professional Development**

Graduates will have demonstrated continual updating to extend their expertise and adapt to a changing environment through graduate studies; short courses, conferences, and seminars; or professional self-study. In addition, graduates will have demonstrated evidence of increasing technical and/or managerial impact.

**Careers**

**Professional Opportunities**

Computer engineers may work in computer elements and architectures, very large-scale integrated circuits for data processing and storage, embedded and real-time computer systems, or computer networking. Computer engineers may work in the computer industry, telecommunications, government and defense, software companies or consulting firms.

**Undergraduate Admission to the School of Engineering**

Admission to the KU School of Engineering (and its degree programs) is selective. Students may be admitted to an engineering or computer science degree program (https://engr.ku.edu/2021-curriculum-guide-links/) as freshmen (first year) students, but all admissions, for both in-state and out-of-state students, are selective. Applications are judged on several factors, such as high school record, scores on national tests, academic record at college or university level, and trend of grades and more. High school transcripts are required.

**Minimum Academic Standards for Admission to the School of Engineering**

To be considered for admission to the School of Engineering, beginning first-year students must meet or exceed the following minimum standards:

- Must be admissible (https://admissions.ku.edu/major-specific-requirements/) to the University of Kansas by assured admissions or individual review, AND
- Have a 3.0+ high school GPA, AND
- Demonstrate mathematics preparedness by:
  - Obtaining a mathematics ACT score of 22+ (or math SAT score of 540+), or
  - Achieving a ‘B’ or better in ‘college algebra’ or a more advanced mathematics course, or
  - Achieving a ‘C’ or better in a high school calculus course; or
  - Earning credit via IB or AP credit for the above-mentioned courses in accordance with KU placement credit requirements; or
  - Achieving at minimum a qualifying score for MATH 104 on the ALEKS mathematics placement exam.

**Minimum Academic Standards for Direct Admission into Degree Program for incoming Freshmen**

Students with a 26+ Math ACT (600+ Math SAT) or meet eligibility requirements for MATH 125 (Calculus I) (p. 1622) may be admitted directly into their chosen major, with the exception of those seeking admission into the Electrical Engineering, Computer Science, Computer Engineering, and Interdisciplinary Computing (EECS) majors. For EECS program admission, students must:

- Be admissible (https://admissions.ku.edu/major-specific-requirements/) to the University of Kansas by assured admissions or individual review, AND
- Have a 3.0+ high school GPA, AND
- Demonstrate mathematics preparedness by:
  - Obtaining a mathematics ACT score of 28+ (or math SAT score of 660+), or
  - Achieving a ‘C’ or better in a high school calculus course; or
  - Earning credit via IB or AP credit for the above-mentioned course in accordance with KU placement credit requirements; or
  - Achieving at minimum a qualifying score for MATH 125 on the ALEKS mathematics placement exam.

**Exploring Engineering**

Students not admitted directly to the School of Engineering or their major but who are admissible to the university may be admitted to the College of Liberal Arts and Sciences as an Undecided student. They can later re-apply to the School of Engineering during the semester they are completing the admission requirements for transfer students.
Transfer Admission Standards

Applications from all transfer students, whether from other institutions or from other academic schools at the University of Kansas, are evaluated on a case-by-case basis. Transfer students must be admissible to KU AND have a cumulative college transferable grade-point average of 2.5+ to be considered. In addition, students must have grades of "C" or better in those courses in math (must include MATH 125 Calculus I or equivalent), science, and engineering applicable to the engineering degree.

Current KU Students admitted to other academic units may apply to the School of Engineering by completing a Change of School form (https://inowformsprivate.ku.edu/imagenowforms/fs/?form=OUR%20Change%20of%20School%20Form).

Already Applied to KU, But Not Engineering?

Don’t worry. It’s not too late to change your mind if you’ve already applied to KU and selected a major outside the School of Engineering. If you think one of the 12 engineering or computer science majors is a better fit for your talents, you can still change your requested major — preferably before May 1 — and be considered for admission to the School of Engineering and all the benefits that go with it.

To update your application, visit Undergraduate Admissions (http://admissions.ku.edu/update-your-application/) and click on “Change application term, major, mailing address, and/or email address.”

Please contact a member of our recruitment team (studyengineering@ku.edu), 785-864-3881, if you have any difficulty.

Bachelor of Science in Computer Engineering Degree Requirements

The KU Core

This is the university-wide curriculum that all incoming undergraduate students will complete as part of their degree requirements. It comprises three general education goals and three advanced education goals. Associated with each goal is one or more learning outcomes:

- GE 1.1, Goal 1/Outcome 1, Critical Thinking;
- GE 1.2, Goal 1/Outcome 2, Quantitative Literacy;
- GE 2.1, Goal 2/Outcome 1, Written Communication (2 units);
- GE 2.2, Goal 2/Outcome 2, Oral Communication;
- GE 3H, Goal 3/Outcome 1, Arts & Humanities;
- GE 3N Goal 3/Outcome 2, Natural Sciences;
- GE 3S Goal 3 /Outcome 3, Social Sciences;
- AE 4.1, Goal 4/Outcome 1, Diversity;
- AE 4.2 Goal 4/Outcome 2, Culture;
- AE 5.1/5.2, Goal 5/Outcome 1/2, Social Responsibility & Ethics (course and/or practice);
- AE 6.1/6.2, Goal 6/Outcome 1/2, Integration & Creativity.

Details of the KU Core can be found at kucore.ku.edu (http://kucore.ku.edu/). Some required courses in the EECS curricula satisfy a KU Core goal and/or outcome. For these courses, the goal/outcome code is given in parentheses after the course on the pages below. Where required courses do NOT specifically satisfy KU Core goals (Goals 2, 3, and 4) students must choose from a list of several means to satisfy the required goals.

A total of 127 credit hours\(^1\) is required for the B.S. degree in computer engineering, as follows:

<tr>
<td>EECS 312, EECS 330, EECS 361, and EECS 388 may be taken in the same semester as students are completing their upper level eligibility. Students may also petition for a Partial Waiver of Upper Level Eligibility Requirements by completing the appropriate petition, found in the EECS office or at <a href="http://www.eecs.ku.edu">www.eecs.ku.edu</a>.</td>
<td>To enroll in any upper level EECS course beyond the ULE list, students must have fulfilled the Upper Level Eligibility Requirements detailed above. Exceptions: EECS 312, EECS 330, EECS 361, and EECS 388 may be taken in the same semester as students are completing their upper level eligibility. Students may also petition for a Partial Waiver of Upper Level Eligibility Requirements by completing the appropriate petition, found in the EECS office or at <a href="http://www.eecs.ku.edu">www.eecs.ku.edu</a>.</td>
<td>3</td>
</tr>
</tbody>
</table>

**Course Prerequisites and Corequisites**

Students must pass (at the appropriate grade level) all prerequisite courses for a given course before taking the subsequent course. If Course A is a Corequisite for Course B, Course A must be taken in the same semester as Course B or be completed prior to taking Course B.

**Upper Level Eligibility**

In addition to prerequisites and corequisites, EECS undergraduates are required to earn Upper Level Course Eligibility by attaining grades of C or better (C- does not qualify) in each of the following 17 courses:

- KU Core GE 2.1 (both)
- EPHX 210 & PHSX 216
- MATH 125, 126, 127, 220, 290
- EECS 101, 140, 168, 210, 202, 212, 220, 268

If students earn less than a C in any of the above listed courses, they must repeat the course at the next available opportunity and must not take a course for which that course is a prerequisite. It is the students’ responsibility to contact their advisors before beginning the new semester regarding any required repetitions and the associated enrollment adjustments (drops and adds).

To enroll in any upper level EECS course beyond the ULE list, students must have fulfilled the Upper Level Eligibility Requirements detailed above. Exceptions: EECS 312, EECS 330, EECS 361, and EECS 388 may be taken in the same semester as students are completing their upper level eligibility. Students may also petition for a Partial Waiver of Upper Level Eligibility Requirements by completing the appropriate petition, found in the EECS office or at www.eecs.ku.edu.

**Double Major**

If students wish to double-major (earn two degrees), they must fulfill all the requirements for the degrees in question. They must also consult the Engineering Dean’s office and the department and/or school of the second major to find out if there are any additional requirements. If they wish to obtain two degrees offered by the EECS department, the following rule applies: a course that is required for one EECS degree program may not be used to satisfy a Senior Elective or General Elective requirement of another EECS degree program.

Total Hours 127

1 Means of satisfying KU Core Goals are chosen from a variety of options (see kucore.ku.edu). Hours listed are assuming the goals are satisfied with course work.

Departmental Honors

An undergraduate student may graduate with departmental honors in electrical engineering, computer engineering, computer science, or interdisciplinary computing by graduating with a minimum grade-point average requirement while maintaining full-time status. In addition, students must enroll in EECS 498 Honors Research for their last 2 semesters and must complete an independent research project paper and oral presentation to a panel of 3 judges. See the EECS Undergraduate Handbook for full details.

Bachelor of Science in Computer Science

B.S. in Computer Science Program

Educational Objectives

Graduates who have earned the bachelor’s degree in computer science, within a few years following graduation, will have demonstrated technical proficiency, collaborative activities, and professional development.

Technical Proficiency

Graduates will have achieved success and visibility in their chosen careers as shown by technical accomplishments in industry, government, entrepreneurial activities, or academia.

Collaborative Activities

Graduates will have exercised shared responsibilities through activities such as contributions to multiperson or multidisciplinary technical projects, participation in professional society/organization functions, or performing collaborative research. In all such cases, graduates will have contributed to documentation of the collaborative activities.

Professional Development

Graduates will have demonstrated continual updating to extend their expertise and adapt to a changing environment through graduate studies; short courses, conferences, and seminars; or professional self-study. In addition, graduates will have demonstrated evidence of increasing technical and/or managerial impact.

Careers

Professional Opportunities

Computer scientists may pursue the design, analysis, and implementation of computer algorithms; study the theory of programming methods and languages; or design and develop software systems. They also may work in artificial intelligence, database systems, parallel and distributed computation, human-computer interaction, computer graphics, operating systems, or computer systems analysis and administration. Computer scientists may work for software companies, government and defense, telecommunications, or consulting firms.

Undergraduate Admission to the School of Engineering

Admission to the KU School of Engineering (and its degree programs) is selective. Students may be admitted to an engineering or computer science degree program (https://engr.ku.edu/2021-curriculum-guide-links) as freshmen (first year) students, but all admissions, for both in-state and out-of-state students, are selective. Applications are judged on several factors, such as high school record, scores on national tests, academic record at college or university level, and trend of grades and more. High school transcripts are required.
Minimum Academic Standards for Admission to the School of Engineering

To be considered for admission to the School of Engineering, beginning first-year students must meet or exceed the following minimum standards:

- Must be admissible (https://admissions.ku.edu/major-specific-requirements/) to the University of Kansas by assured admissions or individual review, AND
- Have a 3.0+ high school GPA, AND
- Demonstrate mathematics preparedness by:
  - Obtaining a mathematics ACT score of 22+ (or math SAT score of 540+), or
  - Achieving a ‘B’ or better in ‘college algebra’ or a more advanced mathematics course, or
  - Achieving a ‘C’ or better in a high school calculus course; or
  - Earning credit via IB or AP credit for the above-mentioned courses in accordance with KU placement credit requirements; or
  - Achieving at minimum a qualifying score for MATH 104 on the ALEKS mathematics placement exam.

Minimum Academic Standards for Direct Admission into Degree Program for incoming Freshmen

Students with a 26+ Math ACT (600+ Math SAT) or meet eligibility requirements for MATH 125 (Calculus I) (p. 1622) may be admitted directly into their chosen major, with the exception of those seeking admission into the Electrical Engineering, Computer Science, Computer Engineering, and Interdisciplinary Computing (EECS) majors. For EECS program admission, students must:

- Be admissible (https://admissions.ku.edu/major-specific-requirements/) to the University of Kansas by assured admissions or individual review, AND
- Have a 3.0+ high school GPA, AND
- Demonstrate mathematics preparedness by:
  - Obtaining a mathematics ACT score of 28+ (or math SAT score of 660+), or
  - Achieving a ‘C’ or better in a high school calculus course; or
  - Earning credit via IB or AP credit for the above-mentioned course in accordance with KU placement credit requirements; or
  - Achieving at minimum a qualifying score for MATH 125 on the ALEKS mathematics placement exam.

Transfer Admission Standards

Applications from all transfer students, whether from other institutions or from other academic schools at the University of Kansas, are evaluated on a case-by-case basis. Transfer students must be admissible (http://admissions.ku.edu/apply/requirements/ustransfer/) to KU AND have a cumulative college transferable grade-point average of 2.5+ to be considered. In addition, students must have grades of "C" or better in those courses in math (must include MATH 125 Calculus I or equivalent), science, and engineering applicable to the engineering degree.

Current KU Students admitted to other academic units may apply to the School of Engineering by completing a Change of School form (https://inowformsprivate.ku.edu/imagenowforms/fs/?form=OUR%20Change%20of%20School%20Form).

Already Applied to KU, But Not Engineering?

Don’t worry. It’s not too late to change your mind if you’ve already applied to KU and selected a major outside the School of Engineering. If you think one of the 12 engineering or computer science majors is a better fit for your talents, you can still change your requested major — preferably before May 1 — and be considered for admission to the School of Engineering and all the benefits that go with it.

To update your application, visit Undergraduate Admissions (http://admissions.ku.edu/update-your-application/) and click on “Change application term, major, mailing address, and/or email address.”

Please contact a member of our recruitment team (studyengineering@ku.edu), 785-864-3881, if you have any difficulty.

Application Deadlines For New Freshman and Transfer Applicants

<table>
<thead>
<tr>
<th>Date</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>September 15</td>
<td>Priority deadline for current KU students to apply for spring admission to Engineering.</td>
</tr>
<tr>
<td>November 1</td>
<td>Final deadline for scholarship consideration for incoming freshmen planning to enter in fall or summer semesters.</td>
</tr>
<tr>
<td>December 1</td>
<td>Final deadline to apply for the Self Engineering Leadership Fellows Program for incoming freshmen</td>
</tr>
<tr>
<td>February 1</td>
<td>Final deadline for scholarship consideration for transfer students planning to enter in fall or summer semesters. Applications available for the Engineering Learning Community</td>
</tr>
</tbody>
</table>

Students who are not admissible to their desired major are admitted to the School of Engineering as undecided engineering undergraduate students.

Exploring Engineering

Students not admitted directly to the School of Engineering or their major but who are admissible to the university may be admitted to the College of Liberal Arts and Sciences as an Undecided student. They can later re-apply to the School of Engineering during the semester they are completing the admission requirements for transfer students.
Bachelor of Science in Computer Science

Degree Requirements

The KU Core

This is the university-wide curriculum that all incoming undergraduate students will complete as part of their degree requirements. It comprises three general education goals and three advanced education goals. Associated with each goal are one or more learning outcomes:

- GE 1.1, Goal 1/Outcome 1, Critical Thinking;
- GE 1.2, Goal 1/Outcome 2, Quantitative Literacy;
- GE 2.1, Goal 2/Outcome 1, Written Communication (2 units);
- GE 2.2, Goal 2/Outcome 2, Oral Communication;
- GE 3H, Goal 3/Outcome 1, Arts & Humanities;
- GE 3N Goal 3/Outcome 2, Natural Sciences;
- GE 3S Goal 3/Outcome 3, Social Sciences;
- AE 4.1, Goal 4/Outcome 1, Diversity;
- AE 4.2 Goal 4/Outcome 2, Culture;
- AE 5.1/5.2, Goal 5/Outcome 1/2, Social Responsibility & Ethics (course and/or practice);
- AE 6.1/6.2, Goal 6/Outcome 1/2, Integration & Creativity.

Details of the KU Core can be found at kucore.ku.edu. Some required courses in the EECS curricula satisfy a KU Core goal and/or outcome. For these courses, the goal/outcome code is given in parentheses after the course on the pages below. Where required courses do NOT specifically satisfy KU Core goals (Goals 2, 3, and 4) students must choose from a list of several means to satisfy the required goals.

A total of 126 credit hours is required for the B.S. degree in computer science (CS), as follows:

<table>
<thead>
<tr>

</tr>
</tbody>
</table>

For CS majors, 7 CS electives must be chosen from the following courses. Under unusual circumstances, other courses can be considered but only with an accompanying petition.

2 or more CS electives must be from the list:

- EECS 455 Cyber Defense Practice
- EECS 465 Cyber Defense
- EECS 630 Advanced Data Structures and Algorithms
- EECS 658 Introduction to Machine Learning
- EECS 665 Compiler Construction

Additional CS elective options:

- EECS 638 Fundamentals of Expert Systems
- EECS 639 Introduction to Scientific Computing
- EECS 672 Introduction to Computer Graphics
- EECS 675 Multicore and GPU Programming
- EECS 690 Special Topics: ______

Additionally, any EECS 700 or above course may be taken as a CS elective.

Basic Science

- PHSX 210 General Physics I for Engineers (KU Core GE 1.1) 3
- PHSX 216 General Physics I Laboratory (Part of KU Core AE 5.1) 1

Professional Elective

To be taken from the following list of approved technical, scientific, and professional courses:

EECS: Any course except EECS 137, EECS 138, EECS 315, EECS 316, EECS 317, EECS 318, EECS 498, EECS 643, and EECS 692.

Engineering: IT 320, IT 330, IT 416, IT 430, IT 450 and any course from any other engineering department numbered 200 or above, except AE 211, ENGR 300, ENGR 490, ENGR 504, ME 208, ME 228, and any computing courses.

Natural science: Any course designated GE3N, except PHSX 111, PHSX 112, PHSX 114, PHSX 115, and CHEM 110 if CHEM 130 or CHEM 150 has already been taken or will be taken.

Mathematics: Any MATH course numbered 500 or above, except MATH 701.

Business: Any course from the School of Business that can apply towards a Business major, minor, or certificate except for statistics and computing.

Technical Writing: ENGR 504 or ENGL 362.
ROTC Courses: Up to 6 hours of ROTC may be petitioned to count toward the professional elective requirement.

Foreign language: Any foreign language course may be petitioned to count as a Professional Elective or additional Humanities or Social Science hours.

Communications
- Satisfy KU Core GE 2.1\(^1\) 6
- Satisfy KU Core GE 2.2\(^1\) 3

Arts/Humanities/Social Science
- Satisfy KU Core GE 3H\(^1\) 3
- Satisfy KU Core GE 3S\(^1\) 3
- Satisfy KU Core AE 4.1 and AE 4.2 6

\(^1\) Means of satisfying KU Core Goals are chosen from a variety of options (see kucore.ku.edu (http://kucore.ku.edu/)). Hours listed are assuming the goals are satisfied with course work.

Course Prerequisites and Corequisites

Students must pass (at the appropriate grade level) all prerequisite courses for a given course before taking the subsequent course. If Course A is a Corequisite for Course B, Course A must be taken in the same semester as Course B or be completed prior to taking Course B.

Upper Level Eligibility

In addition to prerequisites and co-requisites, EECS undergraduates are required to earn Upper Level Course Eligibility (ULE) by attaining grades of C or better (C- does not qualify) in each of the following 14 courses:

- GE21 (both)
- EPHX 210 & PHSX 216
- MATH 125, 126, 127, 290
- EECS 101, 140, 168, 210, 268, 348

If students earn less than a C in any of the above listed courses, they must repeat the course at the next available opportunity and must not take a course for which that course is a prerequisite. It is the students’ responsibility to contact their advisors before beginning the new semester regarding any required repetitions and the associated enrollment adjustments (drops and adds).

To enroll in any upper-level EECS course beyond the ULE list, students must have fulfilled the Upper Level Eligibility Requirements detailed above. Exceptions: EECS 312, EECS 330, EECS 361, and EECS 388 may be taken in the same semester as students are completing their upper level eligibility. Students may also petition for a Partial Waiver of Upper Level Eligibility Requirements by completing the appropriate petition, found in the EECS office or at www.eecs.ku.edu (http://www.eecs.ku.edu).

Double Major

If students wish to double-major (earn two degrees), they must fulfill all the requirements for the degrees in question. They must also consult the Engineering Dean’s office and the department and/or school of the second major to find out if there are any additional requirements. If they wish to obtain two degrees offered by the EECS department, the following rule applies: a course that is required for one EECS degree program may not be used to satisfy a Senior Elective or General Elective requirement of another EECS degree program.

Total Hours 126

\(^1\) Means of satisfying KU Core Goals are chosen from a variety of options (see kucore.ku.edu (http://kucore.ku.edu/)). Hours listed are assuming the goals are satisfied with course work.
Departmental Honors
An undergraduate student may graduate with departmental honors in electrical engineering, computer engineering, computer science, or interdisciplinary computing by graduating with a minimum grade-point average requirement while maintaining full-time status. In addition, students must enroll in EECS 498 Honors Research for their last 2 semesters and must complete an independent research project paper and oral presentation to a panel of 3 judges. See the EECS Undergraduate Handbook for full details.

Bachelor of Science in Interdisciplinary Computing
B.S. in Interdisciplinary Computing Program

Educational Objectives
Graduates who have earned the bachelor’s degree in interdisciplinary computing, within a few years following graduation, will have demonstrated technical proficiency, collaborative activities, and professional development.

Technical Proficiency
Graduates will have achieved success and visibility in their chosen careers as shown by technical accomplishments in industry, government, entrepreneurial activities, or academia.

Collaborative Activities
Graduates will have exercised shared responsibilities through activities such as contributions to multiperson or multidisciplinary technical projects, participation in professional society/organization functions, or performing collaborative research. In all such cases, graduates will have contributed to documentation of the collaborative activities.

Professional Development
Graduates will have demonstrated continual updating to extend their expertise and adapt to a changing environment through graduate studies; short courses, conferences, and seminars; or professional self-study. In addition, graduates will have demonstrated evidence of increasing technical and/or managerial impact.

Undergraduate Admission to the School of Engineering
Admission to the KU School of Engineering (and its degree programs) is selective. Students may be admitted to an engineering or computer science degree program (https://engr.ku.edu/2021-curriculum-guide-links/) as freshmen (first year) students, but all admissions, for both in-state and out-of-state students, are selective. Applications are judged on several factors, such as high school record, scores on national tests, academic record at college or university level, and trend of grades and more. High school transcripts are required.

Minimum Academic Standards for Admission to the School of Engineering
To be considered for admission to the School of Engineering, beginning first-year students must meet or exceed the following minimum standards:

- Must be admissible (https://admissions.ku.edu/major-specific-requirements/) to the University of Kansas by assured admissions or individual review, AND
- Have a 3.0+ high school GPA, AND
- Demonstrate mathematics preparedness by:
  - Obtaining a mathematics ACT score of 22+ (or math SAT score of 540+), or
  - Achieving a ‘B’ or better in ‘college algebra’ or a more advanced mathematics course, or
  - Achieving a ‘C’ or better in a high school calculus course; or
  - Earning credit via IB or AP credit for the above-mentioned courses in accordance with KU placement credit requirements; or
  - Achieving at minimum a qualifying score for MATH 104 on the ALEKS mathematics placement exam.

Minimum Academic Standards for Direct Admission into Degree Program for incoming Freshmen
Students with a 26+ Math ACT (600+ Math SAT) or meet eligibility requirements for MATH 125 (Calculus I) (p. 1622) may be admitted directly into their chosen major, with the exception of those seeking admission into the Electrical Engineering, Computer Science, Computer Engineering, and Interdisciplinary Computing (EECS) majors. For EECS program admission, students must:

- Be admissible (https://admissions.ku.edu/major-specific-requirements/) to the University of Kansas by assured admissions or individual review, AND
- Have a 3.0+ high school GPA, AND
- Demonstrate mathematics preparedness by:
  - Obtaining a mathematics ACT score of 28+ (or math SAT score of 660+), or
  - Achieving a ‘C’ or better in a high school calculus course; or
  - Earning credit via IB or AP credit for the above-mentioned course in accordance with KU placement credit requirements; or
  - Achieving at minimum a qualifying score for MATH 125 on the ALEKS mathematics placement exam.

Students who are not admissible to their desired major are admitted to the School of Engineering as undecided engineering undergraduate students.

Exploring Engineering
Students not admitted directly to the School of Engineering or their major but who are admissible to the university may be admitted to the College of Liberal Arts and Sciences as an Undecided student. They can later re-apply to the School of Engineering during the semester they are completing the admission requirements for transfer students.

Transfer Admission Standards
Applications from all transfer students, whether from other institutions or from other academic schools at the University of Kansas, are evaluated on a case-by-case basis. Transfer students must be admissible (http://admissions.ku.edu/apply/requirements/ustransfer/) to KU AND have a cumulative college transferable grade-point average of 2.5+ to be
considered. In addition, students must have grades of "C" or better in those courses in math (must include MATH 125 Calculus I or equivalent), science, and engineering applicable to the engineering degree.

Current KU Students admitted to other academic units may apply to the School of Engineering by completing a Change of School form (https://inowformsprivate.ku.edu/imagenowforms/fs/?form=OUR%20Change%20of%20School%20Form).

Already Applied to KU, But Not Engineering?

Don't worry. It's not too late to change your mind if you've already applied to KU and selected a major outside the School of Engineering. If you think one of the 12 engineering or computer science majors is a better fit for your talents, you can still change your requested major — preferably before May 1 — and be considered for admission to the School of Engineering and all the benefits that go with it.

To update your application, visit Undergraduate Admissions (http://admissions.ku.edu/update-your-application/) and click on "Change application term, major, mailing address, and/or email address."

Please contact a member of our recruitment team (studyengineering@ku.edu), 785-864-3881, if you have any difficulty.

Bachelor of Science in Interdisciplinary Computing Degree Requirements

Through the recently approved interdisciplinary computing major, students receive an enriched computer science experience, with a focus in one of 6 fields:

1. Astronomy
2. Biology
3. Chemistry
4. Economics
5. Geography
6. Journalism, or
7. Physics

The KU Core

This is the university-wide curriculum that all incoming undergraduate students will complete as part of their degree requirements. It comprises three general education goals and three advanced education goals. Associated with each goal is one or more learning outcomes:

- GE 1.1, Goal 1/Outcome 1, Critical Thinking;
- GE 1.2, Goal 1/Outcome 2, Quantitative Literacy;
- GE 2.1, Goal 2/Outcome 1, Written Communication (2 units);
- GE 2.2, Goal 2/Outcome 2, Oral Communication;
- GE 3H, Goal 3/Outcome 1, Arts & Humanities;
- GE 3N Goal 3/Outcome 2, Natural Sciences;
- GE 3S Goal 3 /Outcome 3, Social Sciences;
- AE 4.1, Goal 4/Outcome 1, Diversity;
- AE 4.2 Goal 4/Outcome 2, Culture;
- AE 5.1/5.2, Goal 5/Outcome 1/2, Social Responsibility & Ethics (course and/or practice);
- AE 6.1/6.2, Goal 6/Outcome 1/2, Integration & Creativity.

Details of the KU Core can be found at kucore.ku.edu (http://kucore.ku.edu/). Some required courses in the EECS curricula satisfy a KU Core goal and/or outcome. For these courses, the goal/outcome code is given in parentheses after the course on the pages below. Where required courses do NOT specifically satisfy KU Core goals (Goals 2, 3, and 4) students must choose from a list of several means to satisfy the required goals.

A minimum of 122 to 130 credit hours \(^1\) is required for the B.S. degree in interdisciplinary computing, as follows:

<table>
<thead>
<tr>
<th>Code</th>
<th>Title</th>
<th>Hours</th>
</tr>

</tbody>
</table>

### Economics Concentration

In addition to the core courses above, students in the economics concentration take the following courses:

<table>
<thead>
<tr>
<th>Code</th>
<th>Title</th>
<th>Hours</th>
</tr>
</thead>
<tbody>
<tr>
<td>ECON 142</td>
<td>Principles of Microeconomics (KU Core GE 3S)</td>
<td>3</td>
</tr>
<tr>
<td>ECON 144</td>
<td>Principles of Macroeconomics</td>
<td>3</td>
</tr>
<tr>
<td>ECON 520</td>
<td>Microeconomics</td>
<td>3</td>
</tr>
<tr>
<td>ECON 522</td>
<td>Macroeconomics</td>
<td>3</td>
</tr>
<tr>
<td>ECON 526</td>
<td>Introduction to Econometrics</td>
<td>3</td>
</tr>
</tbody>
</table>

Satisfy Economics 500 and above elective requirement 6
Satisfy Economics 600 and above elective requirement 6
Satisfy KU Core GE 1.1 3
Satisfy KU Core GE 3N 3
Satisfy KU Core AE 5.1 3

### Geography Concentration

In addition to the core courses above, students in the geography concentration take the following courses:

<table>
<thead>
<tr>
<th>Code</th>
<th>Title</th>
<th>Hours</th>
</tr>
</thead>
<tbody>
<tr>
<td>PHSX 210</td>
<td>General Physics I for Engineers (KU Core GE 1.1)</td>
<td>3</td>
</tr>
<tr>
<td>PHSX 216</td>
<td>General Physics I Laboratory (Part of KU Core AE 5.1)</td>
<td>1</td>
</tr>
</tbody>
</table>

Geography basics (300 level and above courses in categories defined in the Undergraduate Study in Geography and Atmospheric Science Handbook as: Physical Studies, Geographic Information Science, Human Studies, Regional Studies, and Atmospheric Science.) 6

Select 6 credits of the following Geography electives: 6

<table>
<thead>
<tr>
<th>Code</th>
<th>Title</th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>GEOG 311</td>
<td>Introductory Cartography and Geovisualization (KU Core GE 3N)</td>
<td>4</td>
</tr>
<tr>

<td>Introduction to Geographic Information Systems</td>
<td>4</td>
</tr>
<tr>
<td>GEOG 526</td>
<td>Remote Sensing of Environment I</td>
<td>4</td>
</tr>
<tr>
<td>GEOG 558</td>
<td>Spatial Data Analysis</td>
<td>4</td>
</tr>
</tbody>
</table>

### Journalism Concentration (21)

In addition to the core courses above, students in the journalism concentration take the following courses:

<table>
<thead>
<tr>
<th>Code</th>
<th>Title</th>
<th>Hours</th>
</tr>
</thead>
<tbody>
<tr>
<td>JMC 101</td>
<td>Media and Society</td>
<td>3</td>
</tr>
<tr>
<td>JMC 104</td>
<td>Words at Work: Writing Essentials</td>
<td>3</td>
</tr>
<tr>
<td>JMC 300</td>
<td>Visual Storytelling</td>
<td>2</td>
</tr>
</tbody>
</table>

Select one of the following Tech Tool courses: JMC 211, JMC 212, JMC 213, JMC 214, JMC 215 1

JMC 302  Information Exploration 3
JMC 304  Media Writing for Audiences 3
JMC 309  Data Storytelling 3
JMC 408  Media Law and Ethics 3

Arts/Humanities/Social Science 3

### Journalism Concentration-Emphasis 1: News/Information (12)

In addition to the core courses and journalism basics courses above, students in the news/information emphasis of the journalism concentration take the following courses:

<table>
<thead>
<tr>
<th>Code</th>
<th>Title</th>
<th>Hours</th>
</tr>
</thead>
<tbody>
<tr>
<td>JMC 415</td>
<td>Multimedia Reporting</td>
<td>3</td>
</tr>
<tr>
<td>JMC 419</td>
<td>Multimedia Editing</td>
<td>3</td>
</tr>
</tbody>
</table>

Select two of the following Journalism electives:

<table>
<thead>
<tr>
<th>Code</th>
<th>Title</th>
<th>Hours</th>
</tr>
</thead>
<tbody>
<tr>
<td>JMC 410</td>
<td>Media Photography</td>
<td>3</td>
</tr>
<tr>
<td>JMC 503</td>
<td>History of Journalism and Mass Communication</td>
<td>3</td>
</tr>
<tr>
<td>JMC 540</td>
<td>Sports, Media and Society</td>
<td>3</td>
</tr>
<tr>
<td>JMC 551</td>
<td>Advanced Multimedia Reporting</td>
<td>3</td>
</tr>
<tr>
<td>JMC 552</td>
<td>Broadcast Reporting</td>
<td>3</td>
</tr>
<tr>
<td>JMC 553</td>
<td>Advanced Editing and Production</td>
<td>3</td>
</tr>
<tr>
<td>JMC 621</td>
<td>Data Reporting and Visualization-Advanced Media</td>
<td>3</td>
</tr>
</tbody>
</table>

### Journalism Concentration-Emphasis 2: Strategic Communication (12)

In addition to the core courses and journalism basics courses above, students in the strategic communication emphasis of the journalism concentration take the following courses:

<table>
<thead>
<tr>
<th>Code</th>
<th>Title</th>
<th>Hours</th>
</tr>
</thead>
<tbody>
<tr>
<td>JMC 320</td>
<td>Introduction to Digital Marketing Communications, Advertising and Public Relations</td>
<td>3</td>
</tr>
</tbody>
</table>

Select three of the following Journalism electives:

<table>
<thead>
<tr>
<th>Code</th>
<th>Title</th>
<th>Hours</th>
</tr>
</thead>
<tbody>
<tr>
<td>JMC 420</td>
<td>Advanced Digital Marketing Communications, Advertising and Public Relations</td>
<td>3</td>
</tr>
<tr>
<td>JMC 460</td>
<td>Research Methods in Digital Marketing Communications, Advertising and Public Relations</td>
<td>3</td>
</tr>
<tr>
<td>JMC 560</td>
<td>Message Development in Digital Marketing Communications, Advertising and Public Relations</td>
<td>3</td>
</tr>
<tr>
<td>JMC 611</td>
<td>Sales Strategies</td>
<td>3</td>
</tr>
<tr>
<td>JMC 613</td>
<td>Global Communications</td>
<td>3</td>
</tr>
<tr>
<td>JMC 616</td>
<td>Financial Basics for Communicators</td>
<td>3</td>
</tr>
</tbody>
</table>

### Physics Concentration

In addition to the core courses above, students in the physics concentration take the following courses:
Course Prerequisites and Corequisites

Students must pass (at the appropriate grade level) all prerequisite courses for a given course before taking the subsequent course. If Course A is a Corequisite for Course B, Course A must be taken in the same semester as Course B or be completed prior to taking Course B.

Upper Level Eligibility

In addition to prerequisites and co-requisites, EECS undergraduates are required to earn Upper Level Course Eligibility by attaining grades of C or better (C- does not qualify) in each of the following courses:

- IC ASTR: (16 courses) GE 2.1 (both); PHSX 210, 216, 212 & 236; MATH 125, 126, 127, 220, 290; EECS 101, 140, 168, 210, 268, 348
- IC BIOL: (16 courses) GE 2.1 (both); MATH 125, 126, 127, 290; EECS 101, 140, 168, 210, 268, 348; CHEM 130, 135; BIOL 150, 152, and 154
- IC CHEM: (18 courses) GE 2.1 (both); PHSX 210 & 216, 212 & 236; MATH 125, 126, 127, 220, 290; EECS 101, 140, 168, 210, 268, 348; CHEM 130, 135
- IC ECON: (13 courses) GE2.1 (both); Math 125, 126, 127, 290; EECS 101, 140, 168, 210, 268, 348; ECON 142 and 144
- IC GEOG: (13 courses) GE 2.1 (both); PHSX 210 & 216; MATH 125, 126, 127, 290; EECS 101, 140, 168, 210, 268, 348
- IC JOUR: (11 courses) GE 2.1, JMC 150, MATH 125, 126, 127, 290; EECS 101, 140, 168, 210, 268, 348
- IC PHSX: (16 courses) GE 2.1 (both); PHSX 210 & 216, 212 & 236; MATH 125, 126, 127, 220, 290; EECS 101, 140, 168, 210, 268, 348

If students earn less than a C in any of the above listed courses, they must repeat the course at the next available opportunity and must not take a course for which that course is a prerequisite. It is the students’ responsibility to contact their advisors before beginning the new semester regarding any required repetitions and the associated enrollment adjustments (drops and adds).

To enroll in any upper level EECS course beyond the ULE list, students must have fulfilled the Upper Level Eligibility Requirements detailed above. Exceptions: EECS 312, EECS 330, EECS 361, and EECS 388 may be taken in the same semester as students are completing their upper level eligibility. Students may also petition for a Partial Waiver of Upper Level Eligibility Requirements by completing the appropriate petition, found in the EECS office or at www.eecs.ku.edu (http://www.eecs.ku.edu).

Double Major

If students wish to double-major (earn two degrees), they must fulfill all the requirements for the degrees in question. They must also consult the Engineering Dean’s office and the department and/or school of the second major to find out if there are any additional requirements. If they wish to obtain two degrees offered by the EECS department, the following rule applies: a course that is required for one EECS degree program may not be used to satisfy a Senior Elective or General Elective requirement of another EECS degree program.

Undergraduate Certificate in Cybersecurity

The Undergraduate Certificate in Cybersecurity is a 12-credit undergraduate-level certificate designed to provide fundamental knowledge of information security concepts, cryptography, information and network security and computer systems security, as well as real-world practice with hand-on experiences in cyber defense. The purpose of this undergraduate certificate is to offer a credential that covers both the theoretical and practical aspects of cybersecurity to students who are currently pursuing baccalaureate work in KU EECS department.

The entrance requirements for students entering the undergraduate certificate of cybersecurity program include:

- Upper-level eligibility in KU EECS AND
- Overall GPA of 2.8 or better AND
- Three letters of reference.

The proposed Undergraduate Certificate in Cybersecurity requires the completion of three core courses and one elective course at a total of 12 credit hours.

The mission of the EECS department is to provide a stimulating and challenging intellectual environment.

The vision of the EECS department is to provide a stimulating and motivating environment that enables passionate students and faculty to pursue research that transforms society.

To educate the next generation of electrical engineers, computer engineers, and computer scientists.

To be an asset to the community and to society.

To discover, apply, and disseminate knowledge.

To have faculty members with high visibility among their peers.

Graduate Admission to the Department of Electrical Engineering and Computer Science

Applicants for the Master’s of Engineering in EECS (ME in EECS) degree program typically possess a degree in Computer Science, Computer Engineering, or Electrical Engineering. However, a student with good preparation in a related field may qualify by taking appropriate additional undergraduate courses. Such courses normally do not count toward the graduate degree. A list of specific prerequisite courses (https://eecs.ku.edu/deficiency-courses/) for the ME in EECS degree is available in the graduate office or on the department's website.

Applicants must demonstrate evidence of aptitude for graduate work, as shown by suitable performance in undergraduate and any graduate course work, by aptitude test scores on the Graduate Record Examination, and by academic letters of reference.

Unless the applicant's native language is English or the applicant has received a baccalaureate degree or higher from an accredited U.S. institution of higher education, he or she must meet the department's standard for the Test of English as a Foreign Language (TOEFL), which is higher than the general KU requirement. Applicants for graduate teaching assistantships must earn satisfactory scores on the Test of Spoken English.

Application Information & Deadlines

Fall Priority Deadline: December 15

Spring Priority Deadline: September 30

Applications accepted after the priority deadlines listed above may not be considered for fellowships and assistantships. All application materials must be submitted by March 1 (Fall semester admission) and October 1 (Spring semester admission). Visit the Graduate Studies website (http://www.graduate.ku.edu/) for the application procedure and fees.

International students and students who indicated English as a second language, are required to show proof of English proficiency for admission purposes and may need to check-in at the Applied English Center (https://aec.ku.edu/) (AEC) upon arrival on campus for orientation. This process serves to confirm each student's level of English proficiency and determine whether English courses will be included as a requirement of the student's academic program. Note: Students who demonstrate English proficiency at the waiver level or who have earned a degree from one of the specified English-speaking countries listed in the policy (http://policy.ku.edu/graduate-studies/english-proficiency-international-students/) are not required to check in at the AEC (see eligibility requirements on the Graduate Studies website (https://graduate.ku.edu/english-proficiency-requirements/)).

Application Materials

• Online Application (https://graduate.ku.edu/ku-graduate-application/)
• GRE scores (school code 6871)
• Statement of objectives and resume
• Official transcript
• Letters of recommendation
• TOEFL scores (international students)
• Financial statement (international students only)

Submit all supporting documents and your graduate application online (http://www.graduate.ku.edu/).

Visiting Us

The graduate program staff is happy to work with all prospective students in determining the fit between the student and the program. In order to determine this, we feel that visiting our campus in Lawrence is a very important step. In order to facilitate your visit to KU, there are two main options:

The first, and most preferred, option entails simply applying for admission to the program. All prospective students are welcome to attend our Graduate Open House in mid-October or mid-March. Eligible admitted students may be invited to participate in Campus Visit Days in February (prior to the fall semester of your intended matriculation). These organized campus visit opportunities will allow you to gather a great deal of first-hand information which we hope will help you in making a final decision about whether to attend KU.

The second option is making arrangements to visit us on your own, outside of organized events. With early notification, we will do our best to work with you to provide information and schedule appointments with faculty when possible. Please contact us if you feel that this is the best option for you.

Students will complete a Plan of Study (https://gradplan.engr.ku.edu/accounts/login/?next=) during their first semester that outlines a comprehensive plan to complete their degree. Every student should select a faculty advisor in the first semester and work together to develop a formal Plan of Study that includes courses that are consistent with the student’s academic background and goals. Every Plan of Study will consist of 30 hours of coursework and 1 credit hour of EECS 802 Electrical Engineering and Computer Science Colloquium and Seminar on Professional Issues, which is to be completed during the first semester of the program.

All plans must include:

• EECS 802
• Minimum of 7 EECS courses numbered 700 or higher, excluding Directed Graduate Reading (EECS 801), Graduate Problems (EECS 891), Master’s Thesis (EECS 899) and Post-Master’s Research (EECS 998).
• Maximum of 2 courses numbered between 500-699 may be counted toward the hours required for the degree.
• 4 courses from the “Foundational” course list
• 5 courses from the “Elective” course list

Courses numbered below 500 will not count toward the degree.

M.Eng. plans of study will follow the “predefined course lists” (similar to those used by our current M.S. degree programs). The program will have one predefined course list for each focus area: Computer Science (EECS 802), Computer Engineering (https://eecs.ku.edu/computer-engineering-course-list/), or Electrical Engineering (https://eecs.ku.edu/electrical-engineering-course-list/). A M.Eng. Plan of Study not following a predefined course list will be required to have the EECS graduate committee assess the submitted plan of study, goals and justification.

The degree requirements for the M.Eng. in EECS program mirror those for our (coursework-only) M.S. degree programs.

Some more specifics of the degree requirement include:

(a) Every student can select or is assigned a faculty advisor in their first semester. The student will work with their faculty advisor to develop a formal plan of study that includes courses that are consistent with the student’s academic background and identified degree and goals.

(b) Every plan of study will consist of 30 coursework credits and 1 credit of EECS 802.

(c) M.Eng. plans of study that follow the “predefined course lists” (similar to those used by our current M.S. degree programs) will be automatically approved by the EECS graduate committee. A predefined plan of study includes: (i) 4 courses from the “Foundational” course list, (ii) 5 courses from the “Elective” course list, (iii) one open elective course related to the student’s professional goals, (iv) at least one semester of EECS Colloquium (EECS 802), (v) a maximum of 2 courses numbered between 500-699 may be counted toward the hours required for the degree. The program will have one predefined course list for each focus area (Computer Science, Computer Engineering, or Electrical Engineering). The predefined course lists for each our focus areas are listed below.

(d) M.Eng. plans of study not following a predefined course list will be required to have the EECS graduate committee assess the submitted plan of study, goals and justification.

(e) Every M.Eng. in EECS plan of study must adhere to the following rules: (i) a total of 30 hours of coursework, (ii) minimum of 7 EECS courses numbered 700 or higher, (iii) maximum of 9 hours outside the department, (iv) include at least one semester of EECS Colloquium (EECS 802), (v) maximum of 2 courses numbered between 500-699.

Predefined course lists:

The predefined course list for each focus area (Computer Science, Computer Engineering, or Electrical Engineering) are divided into the foundational and elective set of classes. The predefined course list for M.Eng. students with a “Computer Science (CS)” focus is:

Master of Science in Electrical Engineering

Electrical Engineering and Computer Science

The technological advances that have made our society what it is today are due largely to the efforts of electrical engineers, computer engineers, and computer scientists. Among these advances are radio, television, telephones, wireless and mobile communications, personal computers, workstations, mainframe computers, aircraft avionics, satellite electronics, automobile electronics, office machinery, medical electronic equipment, video games, electric power generation and distribution systems, telecommunications, computer networks (including the Internet), personal entertainment products, radar, defense electronics, artificial intelligence, and a variety of computer software.

Vision and Mission

The vision of the EECS department is to provide a stimulating and challenging intellectual environment.

- To have classes populated by outstanding students.
- To be world class in an increasing number of selected areas of research.
- To have faculty members with high visibility among their peers.

The mission of the EECS department is

- To educate the next generation of electrical engineers, computer engineers, and computer scientists.
- To discover, apply, and disseminate knowledge.
- To be an asset to the community and to society.

Graduate Admission to the Department of Electrical Engineering and Computer Science

Applicants for the Master of Science degree in Electrical Engineering (MS EE) typically possess a degree in Electrical Engineering or Computer Engineering. However, a student with good preparation in a related field may qualify by taking appropriate additional undergraduate courses.

Such courses normally do not count toward the graduate degree. A list of specific prerequisite courses for the MS in Electrical Engineering degree is available in the graduate office or on the department's website.

Applicants must demonstrate evidence of aptitude for graduate work, as shown by suitable performance in undergraduate and any graduate course work, by aptitude test scores on the Graduate Record Examination, and by academic letters of reference.

Unless the applicant’s native language is English or the applicant has received a baccalaureate degree or higher from an accredited U.S. institution of higher education, he or she must meet the department’s standard for the Test of English as a Foreign Language (TOEFL), which is higher than the general KU requirement. Applicants for graduate teaching assistantships must earn satisfactory scores on the Test of Spoken English.

Application Information & Deadlines

Fall Priority Deadline: December 15

Spring Priority Deadline: September 30

Applications accepted after the priority deadlines listed above will no longer be considered for fellowships and assistantships. All application materials must be submitted by March 1 (Fall semester admission) and October 1 (Spring semester admission). Visit the Graduate Studies website (http://www.graduate.ku.edu/) for the application procedure and fees.

International students and students who indicated English as a second language, are required to show proof of English proficiency for admission purposes and may need to check-in at the Applied English Center (https://aec.ku.edu/) (AEC) upon arrival on campus for orientation. This process serves to confirm each student’s level of English proficiency and determine whether English courses will be included as a requirement of the student’s academic program. Note: Students who demonstrate English proficiency at the waiver level or who have earned a degree from one of the specified English-speaking countries listed in the policy (http://policy.ku.edu/graduate-studies/english-proficiency-international-students/) are not required to check-in at the AEC (see eligibility requirements on the Graduate Studies website (https://graduate.ku.edu/english-proficiency-requirements/)).

Application Materials

- Online Application (https://graduate.ku.edu/ku-graduate-application/)
- GRE scores (school code 6871)
- Statement of objectives and resume
- Official transcript
- Letters of recommendation
- TOEFL scores (international students)
- Financial statement (international students only)

Submit all supporting documents and your graduate application online (http://www.graduate.ku.edu/).

Visiting Us

The graduate program staff is happy to work with all prospective students in determining the fit between the student and the program. In order to determine this, we feel that visiting our campus in Lawrence is a very important step. In order to facilitate your visit to KU, there are two main options:

EECS 780 Communication Networks 3
EECS 781 Numerical Analysis I 3
EECS 782 Numerical Analysis II 3
EECS 784 Science of Communication Networks 3
EECS 788 Analog Integrated Circuit Design 3
EECS 823 Microwave Remote Sensing 3
EECS 828 Advanced Fiber-Optic Communications 3
EECS 844 Adaptive Signal Processing 3
EECS 865 Wireless Communication Systems 3
EECS 868 Mathematical Optimization with Applications 3
EECS 869 Error Control Coding 3
EECS 881 High-Performance Networking 3
EECS 882 Mobile Wireless Networking 3
EECS 888 Internet Routing Architectures 3
EECS 965 Detection and Estimation Theory 3
The first, and most preferred, option entails simply applying for admission to the program. All prospective students are welcomed to attend our Graduate Open House in mid-October or mid-March. Eligible admitted students may be invited to participate in Campus Visit Days in February (prior to the fall semester of your intended matriculation). These organized campus visit opportunities will allow you to gather a great deal of first-hand information which we hope will help you in making a final decision about whether to attend KU.

The second option is making arrangements to visit us on your own, outside of organized events. With early notification, we will do our best to work with you to provide information and schedule appointments with faculty when possible. Please contact us if you feel that this is the best option for you.

Contact Information
Please contact the EECS Graduate Program Coordinator at eecs_graduate@ku.edu or (785) 864-4487, to schedule a visit or with questions about the application process.

The University of Kansas
Department of Electrical Engineering and Computer Science
Graduate Office
Eaton Hall
1520 W. 15th Street, Suite 2001E
Lawrence, KS 66045

M.S. Degree Requirements

The Master of Science (MS) program in Electrical Engineering (EE) offers three options: thesis, project, and coursework only. All three options generally require 31 credit hours to complete the degree, which includes 1 credit hour of EECS 802 (https://catalog.ku.edu/search/?P=EECS%20802) Electrical Engineering and Computer Science Colloquium and Seminar on Professional Issues, to be completed during the first semester of the program.

• A master’s thesis should address an open problem in EE. In addition to EECS 802 (https://catalog.ku.edu/search/?P=EECS%20802), the thesis option requires: a minimum of 8 approved graduate courses, 6 hours of Master’s Thesis (EECS 899 https://catalog.ku.edu/search/?P=EECS%20899), and an oral defense of the thesis in the final semester. After evaluating current literature related to the problem of interest, students must design, build, and evaluate hardware or software systems or system models to prove or disprove their research hypothesis. Completing a thesis typically takes two semesters and produces results that could be published as a paper in conference proceedings or a professional journal.

• The project option requires the execution and completion of a substantial project. In addition to EECS 802 (https://catalog.ku.edu/search/?P=EECS%20802), the project option requires: a minimum of 9 approved graduate courses, 3 hours of Graduate Problems (EECS 891 https://catalog.ku.edu/search/?P=EECS%20891), and an oral defense of the project report in the final semester. A project is a creative endeavor such as designing and implementing hardware/software systems or the integration of existing knowledge.

• The coursework only option requires: EECS 802 (https://catalog.ku.edu/search/?P=EECS%20802) and a minimum of 10 approved graduate courses.

EE students are encouraged to choose a project or thesis topic early in their Graduate career, and identify a faculty advisor who is interested in supervising their work. The student should select a set of courses from the specified list of Electrical Engineering courses. A current list of the courses and their requirements is available on the EECS website (https://eecs.ku.edu/electrical-engineering-course-list/).

Students will be required to complete a Plan of Study (https://gradplan.engr.ku.edu/accounts/login/?next=/) during their first semester that outlines a comprehensive plan to complete their degree. The Plan of Study lists all coursework, and designates the thesis, project, or coursework only option, and must be consistent with the identified degree goals. All plans must include:

• EECS 802
• Minimum of 5 EECS courses numbered 700 or higher, excluding Directed Graduate Reading (EECS 801), Graduate Problems (EECS 891), Master’s Thesis (EECS 899) and Post-Master’s Research (EECS 998).
• Maximum of 2 courses numbered between 500-699 may be counted toward the hours required for the degree.

Courses numbered below 500 will not count toward the degree.

For the MS thesis and MS project options, the general oral examination must be taken in the last semester. It is conducted by an examining committee consisting of the student’s advisor and at least 2 other Graduate Faculty members of the department selected by the student and advisor. The committee determines if the written thesis or project report, oral presentation of research, and general knowledge of the discipline meet the department’s standards.

Master of Science in Computer Engineering

Electrical Engineering and Computer Science

The technological advances that have made our society what it is today are due largely to the efforts of electrical engineers, computer engineers, and computer scientists. Among these advances are radio, television, telephones, wireless and mobile communications, personal computers, workstations, mainframe computers, aircraft avionics, satellite electronics, automobile electronics, office machinery, medical electronic equipment, video games, electric power generation and distribution systems, telecommunications, computer networks (including the Internet), personal entertainment products, radar, defense electronics, artificial intelligence, and a variety of computer software.

Vision and Mission

The vision of the EECS department is to provide a stimulating and challenging intellectual environment.

• To have classes populated by outstanding students.
• To be world class in an increasing number of selected areas of research.
• To have faculty members with high visibility among their peers.

The mission of the EECS department is
• To educate the next generation of electrical engineers, computer engineers, and computer scientists.
• To discover, apply, and disseminate knowledge.
• To be an asset to the community and to society.

Graduate Admission

Applicants for the Master of Science degree in Computer Engineering (MS CoE) typically have a degree in Computer Engineering or Electrical Engineering. However, a student with good preparation in a related field may qualify by taking appropriate additional undergraduate courses. Such courses normally do not count toward the graduate degree. A list of specific prerequisite courses for the MS in Computer Engineering degree is available in the graduate office or on the department’s website.

Applicants must demonstrate evidence of aptitude for graduate work, as shown by suitable performance in undergraduate and any graduate course work, by aptitude test scores on the Graduate Record Examination, and by academic letters of reference.

Unless the applicant’s native language is English or the applicant has received a baccalaureate degree or higher from an accredited U.S. institution of higher education, he or she must meet the department’s standard for the Test of English as a Foreign Language (TOEFL), which is higher than the general KU requirement. Applicants for graduate teaching assistantships must earn satisfactory scores on the Test of Spoken English.

Application Information & Deadlines

Fall Priority Deadline: December 15

Spring Priority Deadline: September 30

Applications accepted after the priority deadlines listed above will no longer be considered for fellowships and assistantships. All application materials must be submitted by March 1 for Fall semester and October 1 for Spring semester to be considered for admission. See the Graduate Studies website (http://www.graduate.ku.edu/) for the application procedure and fees.

International students and students who indicated English as a second language, are required to show proof of English proficiency for admission purposes and must check-in at the Applied English Center (https://aec.ku.edu/) (AEC) upon arrival on campus for orientation. This process serves to confirm each student’s level of English proficiency and determine whether English courses will be included as a requirement of the student’s academic program. Note: Students who demonstrate English proficiency at the waiver level or who have earned a degree from one of the specified English-speaking countries listed in the policy (http://policy.ku.edu/graduate-studies/english-proficiency-international-students/) are not required to check in at the AEC (see eligibility requirements on the Graduate Studies website (https://graduate.ku.edu/english-proficiency-requirements/)).

Application Materials

• Online Application (https://graduate.ku.edu/ku-graduate-application/)
• GRE scores (school code 6871)
• Statement of Objectives and resume
• Official transcript
• Letters of recommendation
• TOEFL scores (international students)
• Financial statement (international students only)

Submit all supporting documents and your graduate application online (http://www.graduate.ku.edu/).

Visiting Us

The graduate program staff is happy to work with all prospective students in determining the fit between the student and the program. We feel that visiting our campus in Lawrence is a very important step. In order to facilitate your visit to KU, there are two main options:

The first, and most preferred, option entails simply applying for admission to the program. All prospective students are welcome to attend our Graduate Open House in mid-October or mid-March. Eligible admitted students may be invited to participate in Campus Visit Days in February (prior to the fall semester of your intended matriculation). These organized campus visit opportunities will allow you to gather a great deal of first-hand information which we hope will help you in making a final decision about whether to attend KU.

The second option is making arrangements to visit us on your own, outside of organized events. With early notification, we will do our best to work with you to provide information and schedule appointments with faculty when possible. Please contact us if you feel that this is the best option for you.

Contact Information

Please contact the EECS Graduate Program Coordinator at eecs_graduate@ku.edu or (785) 864-4487, to schedule a visit or with questions about the application process.

The University of Kansas
Department of Electrical Engineering and Computer Science
Graduate Office
Eaton Hall
1520 W. 15th Street, Suite 2001E
Lawrence, KS 66045

M.S. Degree Requirements

The Master of Science (MS) program in Computer Engineering (CoE) offers three options: thesis, project, and coursework only. All three options generally require 31 credit hours to complete the degree, which includes 1 credit hour of EECS 802 Electrical Engineering and Computer Science Colloquium and Seminar on Professional Issues, to be completed during the first semester of the program.

• A master’s thesis should address an open problem in CoE. In addition to EECS 802, the thesis option requires: a minimum of 8 approved graduate courses, 6 hours of Master’s Thesis (EECS 899), and an oral defense of the thesis in the final semester. After evaluating current literature related to the problem of interest, students must design, build, and evaluate hardware or software systems or system models to prove or disprove their research hypothesis. Completing a thesis typically takes two semesters and produces results that could be published as a paper in conference proceedings or a professional journal.

• The project option requires the execution and completion of a substantial project. In addition to EECS 802, the project option requires: a minimum of 9 approved graduate courses, 3 hours of Graduate Problems (EECS 891, and an oral defense of the project
report in the final semester. A project is a creative endeavor such as designing and implementing hardware/software systems or the integration of existing knowledge.

- The coursework only option requires: EECS 802 and a minimum of 10 approved graduate courses.

CoE students are encouraged to choose a project or thesis topic early in their Graduate career, and identify a faculty advisor who is interested in supervising their work. The student should select a set of courses from the specified list of Computer Engineering courses. A current list of the courses and their requirements is available on the EECS website (https://eecs.ku.edu/computer-engineering-course-list/).

Students will be required to complete a Plan of Study (https://gradplan.engr.ku.edu/accounts/login/?next=/) during their first semester that outlines a comprehensive plan to complete their degree. The Plan of Study lists all coursework, and designates the thesis, project, or coursework only option, and must be consistent with the identified degree and goals. All plans must include:

- EECS 802
- Minimum of 5 EECS courses numbered 700 or higher, excluding Directed Graduate Reading (EECS 801), Graduate Problems (EECS 891), Master’s Thesis (EECS 899) and Post-Master’s Research (EECS 998).
- Maximum of 2 courses numbered between 500-699 may be counted toward the hours required for the degree.

Courses numbered below 500 will not count toward the degree.

For the MS thesis and MS project options, the general oral examination must be taken in the last semester. It is conducted by an examining committee consisting of the student's advisor and at least 2 other Graduate Faculty members of the department selected by the student and advisor. The committee determines if the written thesis or project report, oral presentation of research, and general knowledge of the discipline meet the department’s standards.

**Ph.D. Degree Requirements**

Requirements for EECS doctoral degree program in Computer Science.

- First semester select a major advisor and a doctoral committee
- Submit plan of study to be approved by committee
- Qualifying examination
- Annual Ph.D. Activity Report (PHAR)
- Comprehensive examination
- Dissertation
- Final oral examination
During the first semester of the program, Doctoral students must take at least one semester of EECS 802 (https://catalog.ku.edu/search/?P=EECS%20802) Electrical Engineering and Computer Science Colloquium and Seminar on Professional Issues, they must have an approved Plan of Study (https://gradplan.engr.ku.edu/accounts/login/?next=/) on file.

In the first semester, the student must select a major advisor and a committee. The student’s committee consists of a minimum of 5 graduate faculty members and is chaired by the major advisor. The advisor and at least 2 other members of the committee must be tenured or tenure-track members of the graduate faculty in EECS, and 1 committee member must be the Graduate Studies Representative, a regular KU graduate faculty member outside of the EECS department (for more information, see the policy here (https://policy.ku.edu/graduate-studies/graduate-studies-representative-on-doctoral-exam-committees/)). The role of this member as the Graduate Studies representative is designed to assure the appropriate standard of fairness, professionalism, judgment, and skill are applied throughout the examination process for the benefit of the institution and in the best interest of the student. As an independent participant observer, this member should have no personal or professional duality/conflict of interest with other members of the committee or the student that would prevent him or her from the unbiased fulfillment of these responsibilities. This committee guides the student’s selection of courses, participates in the comprehensive and final examinations, and helps the student select a topic for research leading to the dissertation. Should the student’s interests change, the committee membership may be changed accordingly, with the approval of the department’s graduate studies committee.

Course Requirements:

Students admitted to the program with their M.S. degree must complete:
- EECS Colloquium (EECS 802), recommend taking it your first semester
- Minimum of 18 credit hours of approved course work
- Minimum of 15 credit hours of course work must be EECS numbered 700 or higher, excluding Directed Graduate Reading (EECS 801), Graduate Problems (EECS 891), Master's Thesis (EECS 899), and Post-Master's Research (EECS 998).
- Minimum of 18 semester credit hours of doctoral dissertation (EECS 999)
- EECS 999 hours can only be counted toward degree after passing the Comprehensive Examination

Students admitted to the program without their M.S. degree must complete:
- EECS Colloquium (EECS 802), recommend taking it your first semester
- Minimum of 42 credit hours of approved course work
- Minimum of 30 credit hours of course work must be EECS numbered 700 or higher, excluding Directed Graduate Reading (EECS 801), Graduate Problems (EECS 891), Master's Thesis (EECS 899), and Post-Master's Research (EECS 998).
- EECS 999 hours can only be counted toward degree after passing the Comprehensive Examination

Each doctoral student must pass a doctoral qualifying examination, which also meets the research skills requirement. This is an assessment of the student’s ability to conduct PhD-level scholarship based on classroom performance, written research and an oral examination to be given by a committee of tenured tenure track graduate faculty members.

Each doctoral student must take the doctoral comprehensive examination after passing the qualifying examination, completing the research skills and responsible scholarship requirements, and completing at least ¾ of the coursework requirement beyond the M.S. The student must complete the comprehensive examination before detailed work on the Ph.D. dissertation begins. Before the examination, the student must submit in writing to the committee a detailed proposal for a possible Ph.D. dissertation. In the comprehensive examination, the student is examined upon the proposal and on knowledge and insight in the specialization, and a dissertation committee is formed.

Following completion of the Ph.D. dissertation, the candidate must defend the dissertation in an oral final examination. The examining committee is once again constituted as in the comprehensive oral examination.

For more information on the degree, you can refer to our website: https://eecs.ku.edu/phd-programs (https://eecs.ku.edu/phd-programs/).

Doctor of Philosophy in Electrical Engineering

Ph.D. Degree Requirements

Requirements for EECS doctoral degree program in Electrical Engineering.

- First semester select a major advisor and a doctoral committee
- Submit plan of study to be approved by committee
- Qualifying examination
- Annual Ph.D. Activity Report (PHAR)
- Comprehensive examination
- Dissertation
- Final oral examination

During the first semester of the program, Doctoral students must take at least one semester of EECS 802 Electrical Engineering and Computer Science Colloquium and Seminar on Professional Issues, they must have an approved Plan of Study (https://gradplan.engr.ku.edu/accounts/login/?next=/) on file.

In the first semester, the student must select a major advisor and a committee. The student’s committee consists of a minimum of 5 graduate faculty members and is chaired by the major advisor. The advisor and at least 2 other members of the committee must be tenured or tenure-track members of the graduate faculty in EECS, and 1 committee member must be the Graduate Studies Representative, a regular KU graduate faculty member outside of the EECS department (for more information, see the policy here (https://policy.ku.edu/graduate-studies/graduate-studies-representative-on-doctoral-exam-committees/)). The role of this member as the Graduate Studies representative is designed to assure the appropriate standard of fairness, professionalism, judgment, and skill are applied throughout the examination process for the benefit of the institution and in the best interest of the student. As an independent participant observer, this member should have no personal or professional duality/conflict of interest with other members of the committee or the student that would prevent him or her from the unbiased fulfillment of these responsibilities. This committee guides the student’s selection of courses, participates in the comprehensive and final examinations, and helps the student select a topic for research leading to the dissertation.
Should the student's interests change, the committee membership may be changed accordingly, with the approval of the department's graduate studies committee.

Course Requirements:

Students admitted to the program with their M.S. degree must complete:

- EECS Colloquium (EECS 802), recommend taking it your first semester
- Minimum of 18 credit hours of approved course work
- Minimum of 15 credit hours of course work must be EECS numbered 700 or higher, excluding Directed Graduate Reading (EECS 801), Graduate Problems (EECS 891), Master's Thesis (EECS 899), and Post-Master's Research (EECS 998).
- Minimum of 18 semester credit hours of doctoral dissertation (EECS 999)
- EECS 999 hours can only be counted toward degree after passing the Comprehensive Examination

Students admitted to the program without their M.S. degree must complete:

- EECS Colloquium (EECS 802), recommend taking it your first semester
- Minimum of 42 credit hours of approved course work
- Minimum of 30 credit hours of course work must be EECS numbered 700 or higher, excluding Directed Graduate Reading (EECS 801), Graduate Problems (EECS 891), Master's Thesis (EECS 899), and Post-Master's Research (EECS 998).
- EECS 999 hours can only be counted toward degree after passing the Comprehensive Examination

Each doctoral student must pass a doctoral qualifying examination, which also meets the research skills requirement. This is an assessment of the student's ability to conduct PhD-level scholarship based on classroom performance, written research and an oral examination to be given by a committee of tenured/tenure track graduate faculty members.

Each doctoral student must take the doctoral comprehensive examination after passing the qualifying examination, completing the research skills and responsible scholarship requirements, and completing at least ¾ of the coursework requirement beyond the M.S. The student must complete the comprehensive examination before detailed work on the Ph.D. dissertation begins. Before the examination, the student must submit in writing to the committee a detailed proposal for a possible Ph.D. dissertation. In the comprehensive examination, the student is examined upon the proposal and on knowledge and insight in the specialization, and a dissertation committee is formed.

Following completion of the Ph.D. dissertation, the candidate must defend the dissertation in an oral final examination. The examining committee is once again constituted as in the comprehensive oral examination.

For more information on the degree, you can refer to our website: https://eecs.ku.edu/phd-programs (https://eecs.ku.edu/phd-programs/).

Graduate Certificate in Data Science

The Graduate Certificate in Data Science (DS) requires 4 graduate-level courses and is designed to offer the state-of-the-art Data Science training to a wide range of students who are currently pursuing graduate training in a discipline that is outside EECS or those that are seeking post-baccalaureate training to enhance their skill in Data Science, examples include Masters and Ph.D. students working on computational physics, computational chemistry, quantitative genetics, geoinformatics, or environmental modeling.

Requirements for EECS students entering the program are courses in (a) EECS 268: programming II or experience with object oriented programming and large programs, and (b) MATH 290: linear algebra or equivalent, and (c) MATH 526 or EECS 461: applied mathematical statistics or equivalent; or consent from the instructor.

The target students of this graduate certificate, outside the EECS students, are Lawrence campus graduate students doing research directly related to data science. Examples include Masters and Ph.D. students working on computational physics, computational chemistry, quantitative genetics, geoinformatics, or environmental modeling. The program highly considers those who have strong quantitative training (math and statistics), have some programming experience and prior exposure of large programs through research.

Applicants must complete an application to Graduate Studies (http://graduate.ku.edu/ku-graduate-application/) for admission into the certificate program and submit an application fee along with the following materials:

- Copy of Official Transcripts
- Statement of Purpose
- Resume
- Three Letters of Recommendation

*Unless the applicant’s native language is English or the applicant has received a baccalaureate degree or higher from an accredited U.S. institution of higher education, he or she must meet the department’s standard for the Test of English as a Foreign Language (TOEFL).

The Graduate Certificate in Data Science requires the completion of one core course and three elective courses (from the specified list) at a total for four courses with a minimum of 11 credit hours. All students must take EECS 731 in their first semester in the program.

The completion requirements of the graduate certificate in data science include: (a) students must have a GPA of 3.0 or better on the required courses; (b) The minimum grade for any course to be applied toward
Elective (choose one)

### Graduate Certificate in RF Systems Engineering

The objective of the RF Systems Engineering graduate certificate program will be for students to understand the applications of signal processing for filtering, estimating, and detecting signals in a high-interference environment; the design and operation of microwave systems, including receiver and transmitter architecture, as well as antenna performance and function; the theory and application of transmitting digital information via electromagnetic propagation; understand the function of microwave components and transmission line theory; understand the propagation of both bounded and unbounded electromagnetic waves. The certificate program offers an opportunity for industrial practitioners to enhance RF Systems. The objective of the certificate program will be for students to understand the applications of signal processing for filtering, estimating, and detecting signals in a high-interference environment; the design and operation of microwave systems, including receiver and transmitter architecture, as well as antenna performance and function; the theory and application of transmitting digital information via electromagnetic propagation; understand the function of microwave components and transmission line theory; understand the propagation of both bounded and unbounded electromagnetic waves. The certificate program offers an opportunity for industrial practitioners to enhance RF Systems Engineering skills without having to apply for and complete a Master’s of Electrical Engineering degree.

Admission requirements:

- BS degree in electrical engineering from an ABET accredited program with a GPA of 3.0 or higher.
- Three letters of reference.
- Applicants must complete an application to Graduate Studies (http://graduate.ku.edu/ku-graduate-application/) for admission into the certificate program and submit an application fee along with the following materials:
  - Copy of Official Transcripts;
  - Statement of Purpose;
  - Resume;
  - Three Letters of Recommendation.

*Unless the applicant’s native language is English or the applicant has received a baccalaureate degree or higher from an accredited U.S. institution of higher education, he or she must meet the department’s standard for the Test of English as a Foreign Language (TOEFL).

To complete the program and obtain the certificate, four (4) of the following courses should be completed:

**Elective (choose one)**

The completion requirements of the graduate certificate in RF systems engineering include: (a) students must have a GPA of 3.0 or better on the required courses; (b) the minimum grade for any course to be applied toward the certificate is a grade of C; and (c) no credits may be transferred from another institution for this certificate.

Note: The completion of the graduate certificate program does not lead to automatic admission to the MSEE program. However, for students who are able to gain admission to the MSEE program within five years of earning the certificate, all certificate course work completed with a grade B or higher will be recognized through a combination of the following methods. For students admitted to the MSEE program before completion of the certificate, all certificate course work may also be applied to the degree-granting program. For students admitted to the MSEE program after completing the certificate, departments will use a combination of transfer credit and degree requirement waivers to recognize the 12 hours earned through the certificate program. At the discretion of the degree-granting program and the Graduate Division, up to nine (9) credit hours may be transferred to the degree program. For the purposes of the MSEE program, completion of the graduate certificate in RF Systems Engineering within five years, with a grade of B or better, shall also be recognized as exceptional preparation which warrants the waiver of course work completed during the certificate program and not transferred. Please see the M.A. & M.S. Degrees and Graduate Credit policies for more information.

### Engineering Physics Undergraduate Program

#### Engineering Physics Undergraduate Program

The engineering physics program is designed for undergraduates with an interest in both science and engineering. The program is focused on those students who wish to work in areas of rapid technological change, where a good background in the underlying science is an important ingredient to a successful career. The curriculum includes classical and modern physics, mathematics, and their applications to one or more areas of engineering, thus allowing students to learn the physical science and engineering principles underlying modern technology. Four design concentrations are offered:

- Aerospace Systems: Aircraft track OR Spacecraft track
- Chemical Systems
- Digital Electronic Systems
- Electromechanical Control Systems

Each option incorporates a significant design component and provides a strong base in one or more engineering disciplines. The Bachelor of Science degree in Engineering Physics is accredited by the Engineering Accreditation Commission of ABET, http://www.abet.org.

For programs in physics, see Physics and Astronomy (p. 1681) in the College of Liberal Arts and Sciences section of the online catalog.
Educational Objectives
Engineering physics graduates will be capable of

- Completing or successfully progressing toward completion of an advanced degree in graduate or professional school,
- Using their analytical, problem-solving, and communications skills to conduct research or contribute to technology development projects, individually or as a team member,
- Using their background knowledge in physics and engineering fundamentals as a foundation for developing new knowledge and experience in their chosen disciplines.

Careers
Professional Opportunities
The broad training and technical breadth of the engineering physics degree program provide students a unique flexibility in their future careers. They have the science background to pursue pure research opportunities, the engineering and design experience to solve practical problems in industry or a variety of other settings, and the understanding to act as a communication link between highly diversified divisions of an organization. Engineering physics graduates typically work in aerospace and avionic industries, electronics industries, research and development laboratories, telecommunications, design and consulting firms, and government agencies, such as defense contractors. The degree program also prepares students to attend graduate or professional school in physics, engineering or related disciplines.

Courses
EPHX 210. General Physics I for Engineers. 3 Credits. NP N
This course is an introduction to classical mechanics and thermodynamics designed for students in the School of Engineering who have completed MATH 125 or MATH 145 with a grade of C or better. Students not admitted to the School of Engineering must receive permission from instructor. EPHX 210 and PHSX 211 cannot both be taken for credit. Prerequisite: MATH 125 or MATH 145 with a grade of C or better. Corequisite: MATH 126 or MATH 146; courses in high school physics and/or chemistry recommended.

EPHX 211. General Physics I. 4 Credits. NP N
Introduction to classical mechanics and thermodynamics. Designed for students in engineering and physical science majors. Prerequisite: MATH 116 or MATH 125 or MATH 145; corequisite MATH 126 or MATH 146; courses in high school physics and/or chemistry are recommended.

EPHX 212. General Physics II. 3 Credits. NP N
Study of electricity, magnetism, waves, and optics. Prerequisite: PHSX 201, PHSX 210, PHSX 211 or PHSX 213; MATH 126 or MATH 146. Corequisite in MATH 127 or MATH 147 is strongly encouraged.

EPHX 400. Topics in Engineering Physics: ______. 1-3 Credits.
A course on special topics in engineering physics, given as the need arises. Course may be repeated for different topics. Each section may have additional prerequisites to be determined by the instructor.

EPHX 501. Honors Research. 1-4 Credits. NP
This course is for students seeking Departmental Honors in Astronomy, Engineering Physics, or Physics to fulfill the undergraduate research requirement. At the completion of the required four hours of total enrollment, a written and oral report of the research is required. (Same as ASTR 501 and PHSX 501.) Prerequisite: Junior/Senior standing in Astronomy, Engineering Physics, or Physics, or permission of instructor.

EPHX 503. Undergraduate Research. 1-4 Credits. NP
This course is for students seeking to fulfill the undergraduate research requirement. Students are expected to participate in some area of ongoing research in the department, chosen with the help of their advisor. At the end of the term, students will present their results in a seminar to other students and faculty. (Same as ASTR 503 and PHSX 503.) Prerequisite: Junior/Senior standing in Astronomy, Engineering Physics, or Physics, or permission of instructor.

EPHX 518. Mathematical Physics. 3 Credits. NP
Applications of modern mathematical methods to problems in mechanics and modern physics. Techniques include application of partial differential equations and complex variables to classical field problems in continuous mechanics, unstable and chaotic systems, electromodynamics, hydrodynamics, and heat flow. Applications of elementary transformation theory and group theory, probability and statistics, and nonlinear analysis to selected problems in modern physics as well as to graphical representation of experimental data. (Same as PHSX 518.) Prerequisite: PHSX 313; MATH 220 or MATH 221 or MATH 320; or permission of instructor.

EPHX 521. Mechanics I. 3 Credits. NP
Newton's laws of motion. Motion of a particle in one, two, and three dimensions. Motion of a system of particles. Moving coordinate systems. (Same as PHSX 521.) Prerequisite: PHSX 213 or PHSX 211 and PHSX 216; MATH 127 or MATH 147; MATH 290 or MATH 291; and MATH 220, MATH 221 or MATH 320.

EPHX 531. Electricity and Magnetism. 3 Credits. NP
This course will explore the properties of electric and magnetic fields, including electrostatics, Gauss' Law, boundary value methods, electric fields in matter, electromagnetic induction, magnetic fields in matter, the properties of electric and magnetic dipoles, and of dielectric and magnetic materials. (Same as PHSX 531.) Prerequisite: PHSX 214, or PHSX 212 and PHSX 236, or PHSX 202; PHSX 521 or EPHX 521 or special permission; MATH 127 or MATH 147; MATH 290 or MATH 291; and MATH 220, MATH 221, or MATH 320.

EPHX 536. Electronic Circuit Measurement and Design. 4 Credits. NP LFE
A laboratory course that explores the properties of electric and magnetic fields, including electrostatics, Gauss' Law, boundary value methods, electric fields in matter, electromagnetic induction, magnetic fields in matter, the properties of electric and magnetic dipoles, and of dielectric and magnetic materials. (Same as PHSX 536.) Prerequisite: PHSX 214 or PHSX 212 and PHSX 236; MATH 127 or MATH 147; and MATH 290 or MATH 291. PHSX 313 and 316 recommended.

EPHX 600. Special Topics in Physics and Astrophysics: ______. 3 Credits. NP
Different topics will be covered as needed. This course will address topics in physics and astrophysics not covered in regularly offered courses. May be repeated if topic differs. (Same as PHSX 600.) Prerequisite: Permission of instructor.

EPHX 601. Design of Physical and Electronic Systems. 4 Credits. NP LFE
A laboratory course emphasizing the application of physical principles to the design of systems for research, monitoring, or control. Topics include the use of microcomputers as controllers, interfacing microcomputers with measurement devices, and use of approximations and/or computer simulation to optimize design parameters, linear control systems, and noise. (Same as PHSX 601.) Prerequisite: Twelve hours of junior-senior credit in physics or engineering, including one laboratory course.
EPHX 611. Introductory Quantum Mechanics. 3 Credits. N
An introduction to quantum mechanics, emphasizing a physical overview. Topics include the formalism of nonrelativistic quantum mechanics with emphasis on linear algebra, the 3-dimensional Schrodinger equation with applications to the hydrogen atom; harmonic oscillator; and time-independent perturbation theory. (Same as PHSX 611.) Prerequisite: PHSX 313, PHSX 521 or EPHX 521, and MATH 290 or MATH 291.

EPHX 615. Numerical and Computational Methods in Physics. 3 Credits. N
An introduction to the use of numerical methods in the solution of problems in physics for which simplifications allowing closed-form solutions are not applicable. Examples are drawn from mechanics, electricity, magnetism, thermodynamics, and optics. (Same as PHSX 615.) Prerequisite: PHSX 313, MATH 320 or equivalent, and EECS 138 or equivalent.

EPHX 616. Physical Measurements. 4 Credits. N LFE
A laboratory course emphasizing experimental techniques and data analysis, as well as scientific writing and presentation skills. Experiments will explore a range of classical and modern physics topics. Students will also practice ethical decision making using case studies appropriate for the discipline. (Same as PHSX 616.) Prerequisite: PHSX 313, PHSX 316 or EPHX 316, and PHSX 521 or EPHX 521. (PHSX 521 or EPHX 521 may be taken concurrently.)

EPHX 621. Mechanics II. 3 Credits. N
Continuation of PHSX 521. Lagrange's equations and generalized coordinates. Mechanics of continuous media. Tensor algebra and rotation of a rigid body. Special relativity and relativistic dynamics. (Same as PHSX 621.) Prerequisite: EPHX 521 or PHSX 521.

EPHX 631. Electromagnetic Theory. 3 Credits. N
Maxwell's equations, wave propagation, optics and waveguides, radiation, relativistic transformations of fields and sources, use of covariance and invariance in relativity. Normally a continuation of PHSX 531. (Same as PHSX 631.) Prerequisite: EPHX 531 or PHSX 531.

EPHX 641. Introduction to Nuclear Physics. 3 Credits. N
Experimental methods in nuclear physics, elementary concepts and simple considerations about nuclear forces, alpha and beta decay, gamma radiation, nuclear structure, and reaction systematics. (Same as PHSX 641.) Prerequisite: PHSX 313 and PHSX 611 or EPHX 611.

EPHX 655. Optics. 3 Credits. N
Geometric optics. Wave properties of light: interference, diffraction, coherence. Propagation of light through matter. Selected topics in modern optics, e.g., lasers, fibers. (Same as PHSX 655.) Prerequisite: PHSX 531 or EPHX 531 or PHSX 212 or PHSX 214 and special permission from instructor.

EPHX 661. Introduction to Elementary Particle Physics. 3 Credits. N
This course covers properties and interactions of quarks, leptons, and other elementary particles; symmetry principles and conservation laws; broken symmetry; gauge bosons; the fundamental interactions, grand unified theories of strong, electromagnetic, and weak interactions; the cosmological implications of elementary particle physics. (Same as PHSX 661.) Prerequisite: PHSX 611 or EPHX 611, and MATH 220, MATH 221, or MATH 320.

EPHX 671. Thermal Physics. 3 Credits. N
This course introduces thermodynamics from statistical considerations and presents the associated techniques for calculating the thermodynamic properties of systems. Highlighted applications of these techniques include the elementary kinetic theory of transport processes and statistical descriptions of both Fermi-Dirac and Bose-Einstein systems. (Same as PHSX 671.) Prerequisite: PHSX 611 or EPHX 611.

EPHX 681. Introduction to Solid State Physics. 3 Credits. N
This course is an introduction to the properties of crystals and amorphous solids, including lattice vibrations and thermal properties, with a particular emphasis on the behavior of electrons and holes in the energy bands of metals, semiconductors, superconductors, and insulators. (Same as PHSX 681.) Prerequisite: PHSX 313 and PHSX 611 or EPHX 611.

EPHX 691. Astrophysics I. 3 Credits. N
An introduction to radiation processes, thermal processes, and radiative transfer in stellar atmospheres and the interstellar medium. (Same as ASTR 691 and PHSX 691.) Prerequisite: PHSX 313 or consent of instructor.

EPHX 693. Gravitation and Cosmology. 3 Credits. N
An overview of topics relevant to gravitation and modern cosmology: special relativity, tensor notation, the equivalence principle, the Schwarzschild solution, black holes, and Friedmann models. Cosmic black body radiation, dark matter, and the formation of large-scale structure. The idea of quantum gravity and an introduction to the current literature in cosmology. (Same as PHSX 693.) Prerequisite: PHSX 313 and MATH 220, MATH 221, or MATH 320.

Bachelor of Science in Engineering Physics

Engineering Physics Undergraduate Program

The engineering physics program is designed for undergraduates with an interest in both science and engineering. The program is focused on those students who wish to work in areas of rapid technological change, where a good background in the underlying science is an important ingredient to a successful career. The curriculum includes classical and modern physics, mathematics, and their applications to one or more areas of engineering, thus allowing students to learn the physical science and engineering principles underlying modern technology. Four design concentrations are offered:

- Aerospace Systems: Aircraft track OR Spacecraft track
- Chemical Systems
- Digital Electronic Systems
- Electromechanical Control Systems

Each option incorporates a significant design component and provides a strong base in one or more engineering disciplines. The degree is accredited by the Engineering Accreditation Commission of ABET, http://www.abet.org.

For programs in physics, see Physics and Astronomy (p. 1681) in the College of Liberal Arts and Sciences section of the online catalog.

Educational Objectives

The program educational objectives are broad statements that describe what graduates are expected to attain within a few years after graduation. Engineering physics graduates will be capable of:

- Completing or successfully progressing toward completion of an advanced degree in graduate or professional school,
• Using their analytical, problem-solving, and communications skills to conduct research or contribute to technology development projects, individually or as a team member,
• Using their background knowledge in physics and engineering fundamentals as a foundation for developing new knowledge and experience in their chosen disciplines.

Careers

Professional Opportunities

The broad training and technical breadth of the engineering physics degree program provide students a unique flexibility in their future careers. They have the science background to pursue pure research opportunities, the engineering and design experience to solve practical problems in industry or a variety of other settings, and the understanding to act as a communication link between highly diversified divisions of an organization. Engineering physics graduates typically work in aerospace and avionic industries, electronics industries, research and development laboratories, telecommunications, design and consulting firms, and government agencies, such as defense contractors. The degree program also prepares students to attend graduate or professional school in physics, engineering or related disciplines.

The Bachelor of Science in Engineering Physics is a collaborative program between the Department of Physics and Astronomy (http://physics.ku.edu/) and the School of Engineering. As such, there are no specific additional requirements for admission beyond those listed below for the entire School of Engineering.

Undergraduate Admission to the School of Engineering

Admission to the KU School of Engineering (and its degree programs) is selective. Students may be admitted to an engineering or computer science degree program (https://engr.ku.edu/2021-curriculum-guide-links/) as freshmen (first year) students, but all admissions, for both in-state and out-of-state students, are selective. Applications are judged on several factors, such as high school record, scores on national tests, academic record at college or university level, and trend of grades and more. High school transcripts are required.

Minimum Academic Standards for Admission to the School of Engineering

To be considered for admission to the School of Engineering, beginning first-year students must meet the following minimum academic standards:

• Achieving at minimum a qualifying score for MATH 104 on the ALEKS mathematics placement exam.

Minimum Academic Standards for Direct Admission into Degree Program for incoming Freshmen

Students with a 26+ Math ACT (600+ Math SAT) or meet eligibility requirements for MATH 125 (Calculus I) (p. 1622) may be admitted directly into their chosen major, with the exception of those seeking admission into the Electrical Engineering, Computer Science, Computer Engineering, and Interdisciplinary Computing (EECS) majors. For EECS program admission, students must:

• Be admissible (https://admissions.ku.edu/major-specific-requirements/) to the University of Kansas by assured admissions or individual review, AND
• Have a 3.0+ high school GPA, AND
• Demonstrate mathematics preparedness by:
  • Obtaining a mathematics ACT score of 28+ (or math SAT score of 660+), or
  • Achieving a ‘C’ or better in a high school calculus course; or
  • Earning credit via IB or AP credit for the above-mentioned course in accordance with KU placement credit requirements; or
  • Achieving at minimum a qualifying score for MATH 125 on the ALEKS mathematics placement exam.

Students who are not admissible to their desired major are admitted to the School of Engineering as undecided engineering undergraduate students.

Exploring Engineering

Students not admitted directly to the School of Engineering or their major but who are admissible to the university may be admitted to the College of Liberal Arts and Sciences as an Undecided student. They can later re-apply to the School of Engineering during the semester they are completing the admission requirements for transfer students.

Transfer Admission Standards

Applications from all transfer students, whether from other institutions or from other academic schools at the University of Kansas, are evaluated on a case-by-case basis. Transfer students must be admissible (http://admissions.ku.edu/apply/requirements/ustransfer/) to KU AND have a cumulative college transferable grade-point average of 2.5+ to be considered. In addition, students must have grades of “C” or better in those courses in math (must include MATH 125 Calculus I or equivalent), science, and engineering applicable to the engineering degree.

Current KU Students admitted to other academic units may apply to the School of Engineering by completing a Change of School form (https://inowformsprivate.ku.edu/imagenowforms/fs/?form=OUR%20Change%20of%20School%20Form).

Already Applied to KU, But Not Engineering?

Don’t worry. It’s not too late to change your mind if you’ve already applied to KU and selected a major outside the School of Engineering. If you think one of the 12 engineering or computer science majors is a better fit for your talents, you can still change your requested major — preferably
before May 1 — and be considered for admission to the School of Engineering and all the benefits that go with it.

To update your application, visit Undergraduate Admissions (http://admissions.ku.edu/update-your-application/) and click on “Change application term, major, mailing address, and/or email address.”

Please contact a member of our recruitment team (studyengineering@ku.edu), 785-864-3881, if you have any difficulty.

### Application Deadlines For New Freshman and Transfer Applicants

**September 15**  
Priority deadline for current KU students to apply for spring admission to Engineering.

**November 1**  
Final deadline for scholarship consideration for incoming freshmen planning to enter in fall or summer semesters.

**December 1**  
Final deadline to apply for the Self Engineering Leadership Fellows Program for incoming freshmen.

**February 1**  
Final deadline for scholarship consideration for transfer students planning to enter in fall or summer semesters. Applications available for the Engineering Learning Community.

**February 15**  
Priority deadline for current KU students to apply for summer or fall admission to Engineering.

**May 1**  
Enrollment Deposit due.

### First- and Second-Year Preparation

Recommended enrollments for the first 2 years vary with the design concentration selected (see below). Consult a departmental advisor as early as possible. Courses common to all concentrations are

Spacecraft track students can petition for AE 765 (Orbital Mechanics), AE 766 (Spacecraft Attitude Dynamics and Controls), AE 767 (Spacecraft Environments), AE 768 (Orbit Determination), and/or AE 771 (Rocket Propulsion) to replace AE 550, AE 552, and/or AE 572. Please note that enrolling in these graduate level courses as an undergraduate requires special permission from the Department of Aerospace Engineering.

### Graduation Plans

A suggested graduation plan for each of the design concentrations is available on the Engineering Physics website (https://ephx.ku.edu/degrees/).

### Departmental Honors

Engineering physics undergraduates may graduate with departmental honors by achieving a minimum grade-point average of 3.5 in major courses taken in residence and at other institutions, by completing at least 1 credit hour of undergraduate research with a grade of B or better in EPHX 501 or EPHX 503, and the results presented in a manner specified by the Department. Please see your advisor (https://ephx.engr.ku.edu/advising/) for details.

### Department of Mechanical Engineering

#### Mechanical Engineering

The broad discipline of mechanical engineering enables students to have productive and rewarding careers, and to develop and improve new technologies in both traditional and emerging fields. Mechanical engineers apply fundamental principles to develop, design, manufacture, and test machines and other mechanical devices. Such devices include but are not limited to power-producing machines as well as power-consuming machines. Mechanical engineers are employed in diverse areas including but not limited to: the energy and power industries, the automotive and aerospace industries, and industrial manufacturing. Mechanical Engineering graduates also have careers in medicine and medical device development, patent law, engineering and corporate management, forensic engineering, and engineering sales.

The mission of the Mechanical Engineering Department is to provide our students with a high quality education, to generate and apply knowledge, and to serve both society and the engineering profession.

In support of our mission, upon graduation our undergraduate students will be:

1. technically skilled in the application of the principles of mechanical engineering, and will demonstrate the ability to work collaboratively and in teams;
2. successful in their chosen career paths, demonstrating the attitudes, abilities, and personal leadership to effectively adapt to our changing global society while maintaining and promoting the highest engineering, professional, and ethical standards; and
3. actively engaged in continuous learning and professional growth throughout their careers while productively contributing to their organizations and communities.

In support of our mission, upon graduation our graduate students will be:

1. capable of performing research at the highest possible level and contribute valuable advances to their chosen areas of specialization;
2. enthusiastic and have a strong desire to instruct young engineers in their chosen areas of specialization; and

1. Spacecraft track students can petition for AE 765 (Orbital Mechanics), AE 766 (Spacecraft Attitude Dynamics and Controls), AE 767 (Spacecraft Environments), AE 768 (Orbit Determination), and/or AE 771 (Rocket Propulsion) to replace AE 550, AE 552, and/or AE 572. Please note that enrolling in these graduate level courses as an undergraduate requires special permission from the Department of Aerospace Engineering.
3. qualified to work at the most prestigious research institutions and universities in the world.

Undergraduate Programs

The Department of Mechanical Engineering offers a 128-hour bachelor of science degree in mechanical engineering. The Bachelor of Science degree in mechanical engineering is accredited by the Engineering Accreditation Commission of ABET, http://www.abet.org. Students interested in biomedical engineering or applying to medical school after graduation may elect to complete a concentration in biomechanics (or follow a pre-medicine plan) or complete an Undergraduate Certificate in Bioengineering (see the Bioengineering program for requirements).

There is also a four and one-half year MBA bridge program in which students earn a B.S. in mechanical engineering as well as a MBA degree. Depending on the employer, mechanical engineering graduates might be expected to become licensed. Formal study in an accredited engineering program, such as at the University of Kansas, is the first step to becoming licensed in Kansas and other states. After completion of a majority of coursework, students are encouraged to take the Fundamentals of Engineering examination which is necessary to become a licensed Professional Engineer (P.E.).

The mechanical engineering curriculum builds on the basic foundation of mathematics and physical sciences, and focuses on engineering design and analysis in 2 primary areas:

1. Mechanical systems.
2. Thermal, fluids, and energy systems.

Engineering science, analysis, and design is integrated throughout the curriculum, culminating in a senior capstone design project where students complete a year-long, hands-on design and build experience in one of four areas:

- Formula SAE vehicle design,
- Industrial sponsored topics, and
- Research sponsored topics.

The industrial and/or research projects may include alternative energy topics (EcoHawks), biomechanics topics or general mechanical engineering topics.

Graduate Programs

The University of Kansas Department of Mechanical Engineering offers the Master of Science in Mechanical Engineering degree and the Doctor of Philosophy. Areas of study in Mechanical Engineering include:

1. Biomechanics and Biomaterials: biomechanics of human motion, biomaterials, orthopedic biomechanics and biomedical product design, transport phenomena, and drug delivery.
2. Computational Mechanics and Mathematics of Computations: computational mechanics, finite element analysis, finite element methods and software
3. Thermal-Fluid Systems and Heat Transfer: energy and thermal-power system design, heat transfer and computational fluid dynamics
4. Mechanical Design, Manufacturing, and Microprocessor Applications: computer-aided mechanical design, continuum mechanics, computer-integrated manufacturing, computational mechanics, finite element analysis, machine stress analysis, microcomputer applications, and automatic control systems

Graduate Admission

Please review the corresponding pages for admission to the MS or PhD programs:

- Master of Science (p. 530)
- Doctor of Philosophy (p. 532)

Graduate Financial Aid

All applicants are considered for scholarships, fellowships, and Graduate Teaching Assistant (GTA) positions upon submission of a complete application. It is suggested that applicants complete their applications by the priority deadlines (December 15 for Fall applicants; September 30 for Spring applicants) to ensure consideration before positions are filled. The department offers funding opportunities for first-year graduate students. Graduate Research Assistant (GRA) positions are dependent on faculty research (http://me.engr.ku.edu/faculty-research/) and applicants should contact individual faculty members regarding their research openings. Note: Graduate students who meet the prerequisite eligibility (https://selfgraduate.ku.edu/SGFEligibility/) and have completed an application by December 15 will be considered by our Admissions Committee for nomination for the Self Graduate Fellowship (https://selfgraduate.ku.edu/). Information regarding the benefits available to GTAs and GRAs can be found in the KU Policy Library (https://policy.ku.edu/graduate-studies/benefits-for-GRAs-GTAs-GAs/).

Courses

ME 101. Mechanical Engineering Freshman Seminar. 0-1 Credits.
This seminar is intended to provide the student with an overview of the mechanical engineering profession. Seminar topics will include an overview of the engineering profession, career opportunities within mechanical engineering, an introduction to the mechanical engineering department (faculty, research and student groups), and strategies to be successful at the university. Prerequisite: Fewer than 30 credit hours from the University of Kansas.

ME 201. Statics. 2 Credits.
The principles of statics, with particular attention to engineering applications. Prerequisite: PHSX 210 or PHSX 211.

ME 208. Introduction to Digital Computational Methods in Mechanical Engineering. 3 Credits.
Digital computing methods for solving mechanical engineering problems utilizing current programming languages and commercial software. Topics from the course are applied through open-ended team projects throughout the semester which also give students an introduction to mechanical engineering. One lecture and lab meets with ME 228, therefore ME 208 cannot be taken concurrently with ME 228, but should be taken in back-to-back semesters. Prerequisite: Corequisite: MATH 116 or MATH 125 or MATH 145.

ME 210. Introduction to Mechanics. 1 Credits.
An introduction to mechanics of materials including stress, strain, and axial loading. Prerequisite: ME 201 or CE 201.

ME 211. Statics and Introduction to Mechanics. 3 Credits.
The principles of statics, with particular attention to engineering applications and an introduction to mechanics of materials. This course is a combination of material covered in ME 201 and ME 210. Prerequisite: EPHX 210 or PHSX 210 or PHSX 211 or PHSX 213 or PHSX 201.
ME 212. Basic Engineering Thermodynamics. 3 Credits.
An introduction to the concepts of heat, work, the first and second laws of thermodynamics and equations of state. These concepts are applied to flow and nonflow systems including power and refrigeration cycles. Prerequisite: EPHX 210 or PHSX 210 or PHSX 211 or PHSX 201 and MATH 126 or MATH 146, with a grade of C- or higher.

ME 228. Computer Graphics. 3 Credits.
An introduction to solid modeling computer graphics used in mechanical design. Visualization skills and drawing practices are developed. Topics from the course are applied through open-ended team projects throughout the semester which also give students an introduction to mechanical engineering. One lecture and lab meets with ME 208, therefore ME 228 cannot be taken concurrently with ME 208, but should be taken in back-to-back semesters.

ME 306. Science of Materials. 3 Credits.
An introductory course on materials. Emphasis is placed on structure and the relation of structure to the behavior and properties of engineering materials. Prerequisite: CHEM 150 or CHEM 130 or CHEM 135 or CHEM 170 or CHEM 175 or CHEM 190 or CHEM 184 or CHEM 185 or consent of instructor.

ME 307. Engineering Materials Laboratory. 2 Credits.
Laboratory to supplement lecture on engineering materials properties and selection, manufacturing processes, and design for manufacturing. Prerequisite: CHEM 150 or CHEM 130 or CHEM 170 and ME 228. Corequisite: ME 306 and ME 311.

ME 309. Introduction to Mechanical Design. 1 Credits.
An introduction to mechanical design after completing a course in mechanics of materials. Topics include theories of failure and energy methods. ME 201, CE 310, and ME 309 together are equivalent to ME 211 and ME 311. Prerequisite: Permission of instructor.

ME 311. Mechanics of Materials. 3 Credits.
The principles of mechanics of materials with particular emphasis on mechanical systems including theories of failure. Prerequisite: ME 211 or ME 210 with a grade of C- or higher, and MATH 126 or MATH 146, with a grade of C- or higher.

ME 320. Dynamics. 3 Credits.
Kinematics and kinetics of particles and of rigid bodies as applied to mechanical engineering problems. Prerequisite: ME 201 or ME 211 or CE 201 or ME 210, with a grade of C- or higher, and MATH 220 or MATH 221 or MATH 320, and MATH 290 or MATH 291.

ME 321. Dynamics Simulations. 1 Credits.
Introduction to dynamics simulations on the computer. Prerequisite: Corequisite: ME 320.

ME 360. Mechanical Engineering Problems. 1-3 Credits.
An analytical or experimental study of problems or subjects of immediate interest to a student and faculty member and which is intended to develop student capability for independent research or application of engineering science and technology. After completion of the project, a report is required. Maximum credit is three hours. Not open to students who have taken ME 361. Prerequisite: Approval of an outline of the proposed project by the instructor and department chair.

ME 361. Undergraduate Honors Research. 1-3 Credits.
Investigation of a particular mechanical engineering problem. Research will involve defining the problem, developing a research methodology, applying the research methodology and gathering data, analyzing and interpreting the data, and presenting the results of the research. The student must have a faculty sponsor and submit a proposal in writing stating the objective of the research, the planned research method that will be used, and the method of reporting the results. Maximum credit is three hours. Not open to students who have taken ME 360. Prerequisite: Participation in the University Honors Program, consent of instructor, and approval of the chair required.

ME 390. Special Topics: _____. 1-5 Credits.
Courses on special topics of current interest in mechanical engineering, given as the need arises. Prerequisite: Approval of instructor.

ME 412. Thermal Systems. 3 Credits.
Application of the principles of thermodynamics to the analysis and design of thermal systems. Prerequisite: ME 212 or ME 312.

ME 420. Mechanisms. 3 Credits.
Design and analysis of mechanisms composed of linkages, cams, and gears. Mechanical vibration. Prerequisite: PHSX 211 and MATH 220.

ME 455. Mechanical Engineering Measurements and Experimentation. 4 Credits.
Lectures and laboratories on the basics of measurement, instrumentation, data acquisition, analysis, design and execution of experiments, and written and oral reports. Topics selected from heat transfer, fluid mechanics, thermodynamics, mechanics, strength of materials, and dynamics. Prerequisite: ME 208 or C&PE 121 or EECS 168 or EECS 138 or AE 211, ME 307, ME 320, and MATH 365 or MATH 526. Corequisite: EECS 318 and ME 612.

ME 501. Mechanical Engineering Design Process. 2 Credits.
The design process of a mechanical or thermal system. Establishment of specifications and consideration of realistic constraints such as safety, codes, economic factors, reliability, oral and written communications, and other factors as they impact the design process. Prerequisite: ME 228 and ME 311.

ME 508. Numerical Analysis of Mechanical Engineering Problems. 3 Credits.
Introduction to numerical methods for solution of mechanical engineering problems by use of digital computers. Prerequisite: ME 208 or equivalent, MATH 220 and MATH 290.

ME 510. Fluid Mechanics. 3 Credits.
An introduction to the mechanics of fluid flow. The principles of conservation of mass, momentum, and energy are developed in differential and integral form. Laws of dimensional analysis and similitude are presented as the basis for empirical correlations. Engineering applications include: calculation of hydrostatic forces on submerged objects, analysis of flow and pressure loss in piping systems, estimation of aerodynamic lift and drag, and performance characteristics of pumps and fans. Prerequisite: ME 211, ME 201, CE 301 or CE 201 or CE 260 with a grade of C- or higher, and MATH 127 or MATH 147 and ME 212 or ME 312, with a grade of C- or higher.

ME 590. Special Topics: _____. 1-5 Credits.
Courses on special topics of current interest in mechanical engineering, given as the need arises. Prerequisite: Approval of instructor.

ME 612. Heat Transfer. 3 Credits.
An applied study of conductive, convective, and radiative heat transfer mechanisms in solid and fluid systems. Engineering applications include solid conduction, free and forced convection in fluids, thermal radiation and heat exchangers, evaporators, and furnaces. Prerequisite: MATH 220 and ME 510 or C&PE 511.

ME 617. Research for Design Project Option B. 1 Credits.
Basic research in one targeted area of vehicle design, and competition rules, based on the student's plan for ME 627 and ME 642. Prerequisite: ME 501 and permission of instructor.

ME 627. Automotive Design. 3 Credits.
Basic concepts of automotive design and manufacture. Primary focus of course on vehicle design and performance. Design is subdivided into vehicle components of frame, suspension, front and rear axle, steering power train, front and rear wheel drive, and braking. Integration of these ideas into a vehicle design project with analysis of its performance culminates the course. Prerequisite: ME 617 and permission of instructor.

**ME 628. Mechanical Design. 3 Credits.**

Design of mechanical components and systems. Prerequisite: ME 311.

**ME 633. Basic Biomechanics. 3 Credits.**

Provides an overview of musculoskeletal anatomy. Biodynamics includes linear and angular dynamics of human movement, energy expenditure and power required to perform a given activity. Students will learn to determine joint forces and torques (in 2-D) from kinematic data for body segments and force plate data. The tissue mechanics section builds on mechanics of materials. Students will learn about tissue properties, appropriate constitutive models and determination of stresses and strains in tissues and structures under normal loading conditions. Prerequisite: ME 311 and ME 320 or equivalent.

**ME 636. Internal Combustion Engines. 3 Credits.**

Study and analysis of internal combustion engine physical phenomena, dynamic function, components, and system design. Emphasis on spark ignition and compression ignition engine analysis. Performance, current technology, thermodynamics, fluid-mechanics, combustion products and pollution, fuels and lubrication, and mechanical design. Prerequisite: ME 412.

**ME 637. Steam Power Plants. 3 Credits.**

A study of steam power plant equipment including thermodynamic analysis, design and performance of modern steam generators, prime movers, and auxiliaries. Prerequisite: ME 412 or permission of instructor.

**ME 639. Alternative Energy Systems. 3 Credits.**

This course is a survey of energy resources and the available technology for meeting current energy needs with alternative energy systems. An overview of the U.S. energy system and world-wide energy consumption is included to provide context. The primary course objective is to develop the students' ability to apply engineering fundamentals to the design and operation of alternative energy systems. The students will be introduced to databases and modeling methods used to represent alternative energy resources. Assignments will include: engineering problem analysis, group design projects, individual research papers, oral and written presentations. Prerequisite: ME 510, AE 345, or C&PE 511.

**ME 640. Design Project. 2 Credits.**

Planning for a capstone design project. Development of a formal project proposal is required. Must be used with two credit hours of ME 641 or ME 643 in the subsequent semester to complete the capstone design requirements. Prerequisite: ME 501 and ME 628.

**ME 641. Design Project Option A. 2 Credits.**

Design and development of a mechanical or thermal/fluid system. An individual or group report that includes designs, analysis/testing, drawings, and/or schematics is required. Establishment of specifications and consideration of realistic constraints such as safety, economic factors, design impact, aesthetics, and reliability are required. Prerequisite: ME 640. Corequisite: ME 455.

**ME 642. Design Project Option B. 3 Credits.**

Manufacturing and testing of a mechanical system designed and developed in ME 627 - Vehicle Design. A group report with individual assignments which details the manufacturing procedures and testing procedures and results is required. A completed, working project with a design file documenting all aspects of the project development must be submitted. Prerequisite: ME 627, ME 501 and ME 628. Corequisite: ME 455.

**ME 643. Design Project Option C. 2 Credits.**

Design and development of a mechanical system related to biomechanics that has been investigated in ME 633 - Basic Tissue Mechanics and Biodynamics. A report that includes designs, analysis/testing, drawings and/or schematics is required. Establishment of specifications and consideration of realistic constraints such as safety, ergonomics, economic factors, design impact, aesthetics, and reliability are required. Prerequisite: ME 633 and ME 640. Corequisite: ME 455.

**ME 644. Design Project Option D. 2-3 Credits.**

Design and development of a thermal or fluid system. A group report that includes design, analysis/testing, drawings, and/or schematics is required. Establishment of specifications and consideration of realistic constraints such as safety, economic factors, design impact, aesthetics, and reliability are required. Prerequisite: ME 412, ME 455, and ME 501. Corequisite: ME 628.

**ME 645. Design Project Option E. 2-3 Credits.**

Design and development of a mechanical, electrical or thermal/fluid system related to a sustainable approach to automobiles and energy infrastructure. This may include, but is not limited to alternative fuels, biomass, batteries and advanced vehicle powertrains along with solar/wind energy at various scales. An individual or group report that includes designs, analysis/testing, drawings and/or schematics is required. Establishment of specifications and consideration of realistic constraints such as safety, economic factors, design impact, aesthetics and reliability are required. Prerequisite: ME 501, ME 510, and ME 628. Corequisite: ME 412 and ME 455.

**ME 661. The Finite Element Method. 3 Credits.**

An introduction to the underlying theory of the finite element (FE) method and its application to linear solid and structural mechanics. FE formulations are derived for bars, beams, 2D formulations such as: plane stress, plane strain, and 3D solids. Basic issues are treated such as assembly and generation of FE equations, computation, post-processing, and interpretation of FE solutions (e.g. stresses and strains analysis). Prerequisite: ME 311 or ME 309, MATH 220 or MATH 221 or MATH 320, and MATH 290 or MATH 291.

**ME 662. System Dynamics and Control Systems. 3 Credits.**

An introduction to the modeling and analysis of analog linear systems and the design of control systems. Topics include mathematical models of mechanical, electrical, fluid and thermal systems, feedback concepts, transient response, frequency response and vibration, system stability, and design of feedback control systems including PID. Prerequisite: ME 320.

**ME 669. Design for Manufacturability. 3 Credits.**

Tools to incorporate manufacturing and life-cycle concerns into the design of products. Prerequisite: ME 501 or equivalent.

**ME 702. Mechanical Engineering Analysis. 3 Credits.**

A study of advanced methods for engineering analysis of practical problems utilizing fundamental principles from engineering disciplines. The emphasis is on the solution of these problems and the interpretation and generalization of the results. Prerequisite: A course in differential equations.

**ME 708. Microcomputer Applications in Mechanical Engineering. 3 Credits.**

Design and implementation of interfaces of microcomputers to mechanical equipment. Includes laboratory experiments presenting selected industrial applications. Emphasis on human factors, functional design parameters and microprocessor interfaces. Includes instruction concerning
specifications of practical hardware configurations and writing of programs necessary to accomplish mechanical systems applications. Prerequisite: Permission of instructor.

**ME 711. Bearings and Bearing Lubrication. 3 Credits.**
Theoretical aspects of lubrication, determination of pressure distribution in bearings from viscous flow theory, application of hydrodynamic and hydrostatic bearing theories to the design of bearings, high speed bearing design problems, properties of lubricants, methods of testing. Prerequisite: ME 510 and a course in differential equations.

**ME 712. Advanced Engineering Thermodynamics. 3 Credits.**
An advanced course in thermodynamics, mathematical in nature, with emphasis on a critical re-evaluation of the laws of thermodynamics, thermodynamics of one-dimensional gas flow, development of the classical thermodynamic relations and their application to engineering problems. Prerequisite: ME 212 with a grade of C- or higher.

**ME 716. Introduction to Surface and Interface Science. 3 Credits.**
Surface and Interface Science plays a crucial role in various industrial, environmental, and biomedical areas, as well as in emerging technologies. These include wetting, water purification, enhanced oil recovery and other petrochemical processes. Surface and Interface Science also provides an intriguing arena for the integration of fundamental concepts, theoretical methods, and experimental techniques from a variety of scientific disciplines including engineering, physics, chemistry, biology, and medicine. This course presents fundamental and applied aspects of this rapidly developing field. The first segment of the course is devoted to understanding interfacial phenomena by examining the roles of surface composition and surface texture. The second segment covers how this fundamental understanding can be used to design bio-inspired surfaces for various applications that involve self-cleaning mechanisms, anti-reflective coating, fog harvesting and de-icing. Prerequisite: ME 312 or physical chemistry or equivalent.

**ME 718. Fundamentals of Fuel Cells. 3 Credits.**
The principles of fuel cells, with focus on low temperature fuel cells using polymer electrolytes. Prerequisite: A course in engineering thermodynamics (e.g., ME 412), heat transfer (e.g., ME 612), and fluid Mechanics (e.g., ME 510.)

**ME 720. Advanced Dynamics of Machinery. 3 Credits.**
Dynamics of particles and of rigid bodies with advanced engineering applications; generalized coordinates; Hamilton's principles; Lagrange's equations; Hamilton-Jacobi theory. Prerequisite: ME 320 or equivalent.

**ME 722. Modeling Dynamics of Mechanical Systems. 3 Credits.**
Modeling, analysis and simulation of dynamic mechanical systems. Emphasis on the analysis of kinematics and dynamics of rigid mechanical multibody systems undergoing large overall motion using interactive computer simulation programs. Applications to the design and control of dynamic systems such as robots, machine tools, and artificial limbs. Prerequisite: ME 320 or CE 300.

**ME 733. Gas Dynamics. 3 Credits.**
A study of the thermodynamics and fluid dynamics of gaseous media. Emphasis is placed on the rigorous application of conservation laws to represent physical processes. Classical and statistical models for the thermodynamic and transport properties are examined. Applications include determination of gas properties, wave propagation, and high-speed flow. Prerequisite: ME 412 and ME 510 or equivalents.

**ME 736. Catalytic Exhaust Aftertreatment Modeling. 3 Credits.**
Fundamental concepts behind catalytic exhaust aftertreatment devices for automobiles including both monolithic catalysts and particulate filters. Studies of other catalytic devices intended for applications in the mechanical and chemical engineering fields. Topics covered are the development of governing equations based on conservation laws and their numerical solutions using finite difference methods. Studies will include a monolithic catalyst. Project assignments will be included. Prerequisite: ME 412 and ME 510 or permission of instructor.

**ME 750. Biomechanics of Human Motion. 3 Credits.**
Fundamental concepts of anatomy and physiology are introduced but the focus is on the biomechanics of human motion. Human body segment kinematics and joint kinematics are analyzed. An introduction to muscle mechanics is provided. Applications in balance and gait are covered. Prerequisite: Corequisite: ME 320 or equivalent.

**ME 751. Experimental Methods in Biomechanics. 3 Credits.**
This course will focus on methods of experimental measurement and computational modeling used in biomechanics. Instrumentation used to measure three-dimensional motion, ground reaction forces, center of pressure and EMG measures are considered. Methods used for inverse dynamics, direct dynamics and simulation are introduced. Prerequisite: ME 320 or equivalent.

**ME 752. Acoustics. 3 Credits.**
This course will teach the production, propagation, and effects of sound waves. Detailed topics include plane wave, spherical wave, and cylindrical wave propagation in free space and waveguides, wave reflection and transmission on an interface, piston radiation, wave scattering and diffraction. Prerequisite: ME 320 or permission of instructor.

**ME 753. Bone Biomechanics. 3 Credits.**
Provides an in-depth knowledge of bone as a living mechanical system. Topics include the microstructure, biology, mechanical properties, mechanical modeling, adaptation of bone to the mechanical environment, and its simulation. Students assignments include homework, a poster presentation, basic finite element analysis laboratory, and bone remodeling simulations. Prerequisite: ME 311 or equivalent.

**ME 754. Medical Imaging. 3 Credits.**
This course will focus on the fundamental physics of modern medical imaging technologies, which includes X-Ray, Computed Tomography, Magnetic Resonance Imaging, ultrasound imaging, optical imaging, and more. Recent trends in medical imaging technology development will also be introduced. Prerequisite: ME 508 or permission of instructor.

**ME 755. Computer Simulation in Biomechanics. 3 Credits.**
Provides an in-depth knowledge of 1) the process of developing a research question to be addressed with computer simulation, 2) various techniques for medical imaging to obtain model geometries (including hands-on experience with low-field MR imaging), 3) image segmentation techniques, 4) issues affecting geometric accuracy in model building, 5) the determination and specification of loading and/or kinematic boundary conditions, 6) the interpretation of model results in the context of the model limitations and the medical application. Knowledge and/or experience with finite elements is desirable, but not required. Prerequisite: ME 311 and ME 320 or equivalent.

**ME 756. Biofluid Dynamics. 3 Credits.**
An introduction to the fundamentals of biofluid dynamics, and the application of these principles to a variety of biological flows. Fluid flows in physiology, drug delivery, and biotechnology are investigated at a variety of scales, ranging from subcellular to organ groups. Topics include non-Newtonian constitutive equations, solution techniques, and principles of modeling and simulating. Prerequisite: ME 208 and ME 510 or equivalents.

**ME 757. Biomechanical Systems. 3 Credits.**
A course on the dynamics and motor control of human and animal motion. The course will focus on applying mechanical principles of dynamics, lumped parameter systems, and control theory to problems
in biomechanics. Topics include muscle mechanics and dynamics, reflex and voluntary control, proprioception, anatomy of the muscular and nervous systems, and system dynamics in locomotion and other movements. Prerequisite: ME 682 or permission of instructor.

ME 758. Physiological System Dynamics. 3 Credits.
This course covers the use of engineering systems modeling approaches to understand the function of physiological systems. Systems covered include the cardiovascular system, the respiratory system, the renal system, the gastrointestinal system, and the musculoskeletal system. Prerequisite: ME 510, ME 320, Physics 212 or permission of instructor.

ME 760. Biomedical Product Development. 3 Credits.
Introduction to methods of taking medical product inventions from conception to initial stage production. Students work in cross-functional teams to investigate development potential of inventions. Topics covered include product development processes, regulatory issues with the FDA, quality system requirements, SBIR/STTR funding pathways, biomaterials and biomachanics issues in medical product design, and ethical considerations. Prerequisite: Senior or graduate student standing in engineering, business, industrial design, or an applicable life science field and permission of instructor.

ME 765. Biomaterials. 3 Credits.
An introductory course on biomaterials science and consideration of biomaterials in the design of biomedical implants. Topics including ethical considerations in biomaterials research and the role of the FDA in medical device are also presented. Prerequisite: ME 306.

ME 767. Molecular Biomimetics. 3 Credits.
The lessons learned from biological materials are discussed toward developing novel biomimetic materials and systems using environmentally benign processing. Upon completing this course, students will be able to understand the essential features of biological sciences combined with nano- and molecular technologies for next generation bioinspired, biomimetic and bio-enabled materials and systems. Prerequisite: CHEM 130, CHEM 150 or equivalent; introductory course in Material Science (e.g., ME 306.)

ME 770. Conductive Heat Transfer. 3 Credits.
The formulation of steady- and unsteady-state conduction heat transfer problems and their solution by analytical and numerical methods. Prerequisite: ME 612 or equivalent.

ME 774. Radiative Heat Transfer. 3 Credits.
The formulation of steady and unsteady radiation heat transfer problems and their solution by analytical and numerical methods. Prerequisite: ME 612 or equivalent.

ME 788. Optimal Estimation. 3 Credits.
Covers the principles of optimal estimation theory, with particular focus on Kalman filtering and its engineering applications. Prerequisite: A course in elementary linear algebra (e.g., MATH 290), statistics (e.g., MATH 365, MATH 526, or DSCI 202), and system dynamics and control systems (e.g., ME 682.)

ME 789. Energy Storage Systems and Control. 3 Credits.
This course offers an introduction to the mechanisms, modeling, monitoring and control of energy storage systems with a primary focus on batteries but includes coverage of fuel cells and ultra-capacitors. A major theme is to offer students state-of-the-art knowledge of energy storage systems and aid them in developing the ability to apply estimation and control theory in order to address the problems arising in energy storage management. After completion of the course, a student is expected to: 1) understand the respective work mechanisms, advantages and disadvantages of batteries, fuel cells and ultra-capacitors, 2) understand the mathematical modeling methodologies for batteries, and 3) understand the key estimation/control methods and tools, and 4) build effective solutions for energy storage management problems leveraged with estimation/ control theory. Prerequisite: ME 682 or equivalent.

ME 790. Special Topics: ______. 1-5 Credits.
Advanced courses on special topics of current interest in mechanical engineering, given as the need arises. Prerequisite: Approval of instructor.

ME 797. Materials for Energy Applications. 3 Credits.
Focus on fundamentals of materials for energy applications. The main topics covered will be: 1) introduction to material science & engineering and electrochemical technologies, 2) microscopic view of solid materials, 3) mass transfer by migration and diffusion, 4) energy related materials and devices, 5) electrochemical engineering fundamentals, etc. Prerequisite: Basic Engineering Thermodynamics (e.g., ME 312) or equivalent.

ME 798. Manufacturing for Energy Applications. 3 Credits.
The focus of the course is on fundamentals of materials for energy applications. The main topics covered include: 1) introduction and overview of manufacturing, 2) material properties and engineering materials, 3) traditional and nontraditional manufacturing processes, 4) surface engineering and processing, and 5) energy-related materials and device fabrication. Prerequisite: ME 508 or equivalent and ME 797.

ME 801. Responsible Conduct of Research in Engineering. 1 Credits.
Lectures and discussion on ethical issues in the conduct of a scientific career, with emphasis on practical topics of special importance in bioengineering. Topics include the nature of ethics, the roles of the scientist as a reviewer, entrepreneur, employer and teacher, research ethics in the laboratory, social responsibility and research ethics regulation. (Same as BIOE 801.) Prerequisite: Permission of instructor.

ME 808. Advanced Microprocessor Applications. 3 Credits.
Advanced design and development of microprocessor based mechanical systems. Individual and team projects involving the development and integration of hardware and software into a “smart” system which includes the sensing, processing, and controlling functions are accomplished. Emphasis is on the use of the latest sensors and development tools. Prerequisite: Permission of instructor.

ME 810. Advanced Fluid Mechanics. 3 Credits.
Topics include kinematic and dynamic behavior of fluids, derivation of Navier-Stokes equations, flow classification, solutions of viscous and inviscid flows for simple geometries, potential flow theory and laminar and turbulent boundary layer theory. Prerequisite: ME 510 or equivalent.

ME 831. Convective Heat and Momentum Transfer. 3 Credits.
The formulation and solution of steady and unsteady convective heat, mass, and momentum transfer problems. Topics include boundary layers, duct flows, natural convection with and without phase change, development of analogies, transport properties, numerical methods. Prerequisite: ME 612 or equivalent.

ME 832. Computational Fluid Dynamics and Heat Transfer. 3 Credits.
The fundamentals of the finite-difference method are presented and applied to the formulation of numerical models for heat and momentum transfer. The accuracy, stability, and computational efficiency of different algorithms are analyzed. Computer programs are developed for classical benchmark problems. Prerequisite: ME 508, ME 510, and ME 612 or equivalents.

ME 833. Radiative Heat Transfer. 3 Credits.
The formulation of steady and unsteady radiation heat transfer problems and their solution by analytical and numerical methods. Prerequisite: ME 612 or equivalent.

ME 836. Hybrid and Electric Vehicles. 3 Credits.
Topics covered include history of electrified vehicles, vehicle modeling, battery chemistry, and electric motors. Review of fundamental electrical engineering concepts provided. Application of real world driving profiles through homework assignments. Laboratories will explore battery and motor fundamentals. Homework assignments will be included along with a semester project involving the design, construction, and testing of a scale electric vehicle. Prerequisite: ME 636 or permission of instructor.

ME 840. Continuum Mechanics I. 3 Credits.
Principles of Continuum Mechanics for solids, fluids, and gases. Frames of references, measures of motion, deformation, strains, stresses, their rates, objectivity and invariance. Conservation laws, constitutive equations, equations of state and thermodynamic principles for developing mathematical models of continuum matter. Theoretical solutions of model problems. Prerequisite: Background in Calculus and Differential Equations is recommended.

ME 841. Continuum Mechanics II. 3 Credits.
Fundamental principles of Continuum Plasticity, measures of plastic strains, stresses and constitutive equations for flow theory of plasticity. Internal variable theory of thermo-mechanical behaviors and endochronic theory of plasticity and viscoplasticity. Anistotropic plasticity and advanced topics. Continuum mechanics principles for viscoelastic solids with emphasis on constitutive equations. Development of complete mathematical models and solutions of selected model problems. Prerequisite: ME 840.

ME 854. Continuum Mechanics for Soft Tissues. 3 Credits.
An introductory course in the analysis of the mechanical behavior of materials modeled on the continuum assumption. The course will provide background on soft tissue properties and will focus on the tools necessary to model soft tissues, including the essential mathematics, stress principles, kinematics of deformation and motion, and viscoelasticity. Prerequisite: ME 311 or equivalent.

ME 860. Advanced Mechanical Engineering Problems. 1-3 Credits.
An analytical or experimental study of problems or subjects intended to develop a student's capability for independent research or application of engineering science and technology. For students also enrolled in thesis or dissertation hours, the topic should be demonstrably distinct from their research efforts. Maximum credit toward any degree is three hours unless approved in writing by the departmental chairperson. Prerequisite: Approval of instructor.

ME 861. Theory of the Finite Element Method. 3 Credits.
Finite element method for solid mechanics, heat transfer, fluid mechanics, and dynamics. Modeling techniques, software implementation, and solution of problems. Prerequisite: Background in Calculus and Differential Equations is recommended.

ME 862. Finite Element Method for Transient Analysis. 3 Credits.
Advanced treatment of dynamic and transient response for linear and nonlinear problems in solid mechanics. Formulation and solution of time dependent linear and nonlinear field problems using finite element techniques. Prerequisite: ME 861.

ME 864. Mesh Generation and Adaptivity for Finite Element Simulations in Engineering. 3 Credits.
The generation of Finite Element meshes in the analysis and simulation of engineering systems. Important topics are treated such as initial mesh generation and refinements (i.e. geometric modeling and mesh adaptivity or grading), choice of type of element, and assessment of solution accuracy (i.e. error estimation). Assignments include solving problems using FE software. Prerequisite: ME 661, ME 861, or equivalent.

ME 882. Advanced Control Systems. 3 Credits.
Advanced methods in the modeling, analysis and design of linear and nonlinear control systems. Topics include but not limited to digital controls methods, energy-based modeling, and state-space methods. Prerequisite: ME 682.

ME 890. Special Topics: ______. 1-5 Credits.
Advanced courses on special topics of current interest in mechanical engineering, given as the need arises. Prerequisite: Approval of instructor.

ME 899. Independent Investigation. 1-6 Credits.
An analytical or experimental investigation of an engineering problem requiring independent research. If the thesis option is selected six credit hours are required for the degree. If the project option is selected three credit hours are required for the degree. (See requirements for the Master of Science degree for additional details.) Graded on a satisfactory progress/limited progress/no progress basis.

ME 961. Finite Element Method for Nonlinear Problems in Solid Mechanics. 3 Credits.
Advanced treatment of finite element techniques for structural analysis including material and geometric non-linearity as well as large strain deformation. Prerequisite: ME 861 or equivalent.

ME 962. p-Approximation, Error Estimation, and Other Advanced Topics in the Finite Element Method. 3 Credits.
Advanced treatment of p-Approximation, error estimation, and other advanced topics in the finite element method. Prerequisite: ME 861 or equivalent.

ME 965. Mathematical Modeling and Computational Method in Multi-Scale Processes. 3 Credits.
An overview of classical averaging and homogenization methods, as well as current multi-scale modeling techniques for the analysis of the micro- and nano-mechanics of materials. Models and numerical techniques are introduced based on continuum as well as particle descriptions. Assignments include the simulation of micro- and nano-mechanics problems by using existing finite element software and molecular dynamics packages. Prerequisite: ME 861 and ME 840.

ME 990. Special Topics: ______. 1-5 Credits.
Advanced courses on special topics of current interest in mechanical engineering, given as the need arises. Prerequisite: Approval of instructor.

ME 999. Independent Investigation. 1-16 Credits.
An analytical or experimental investigation of an engineering problem requiring independent research. Twenty four hours as a minimum are awarded for the Ph.D. dissertation. An original contribution suitable for publication in a refereed journal is required of Ph.D. candidates. Graded on a satisfactory progress/limited progress/no progress basis.

Bachelor of Science in Mechanical Engineering

The 128-hour bachelor of science degree in mechanical engineering offered by the Department of Mechanical Engineering is accredited by the Engineering Accreditation Commission of ABET, http://www.abet.org. Students typically take four years to complete the program. The mechanical engineering curriculum builds on the basic foundation of mathematics and physical sciences learned in the first three semesters, and then focuses on engineering design and analysis in mechanical, thermal, fluids, and energy systems. First-year students are quickly
immerged in hands-on design/build team projects as part of the cornerstone mechanical engineering courses. Engineering science, analysis, and design are integrated throughout the curriculum, culminating in a senior capstone design project where students complete a year-long hands-on design and build experience in one of three areas:

- Formula SAE vehicle design,
- Industrial sponsored topics, and
- Research sponsored topics.

The industrial and/or research projects may include alternative energy topics (EcoHawks), biomechanics topics or general mechanical engineering topics.

Students interested in biomedical engineering or applying to medical school after graduation may elect to complete a concentration in biomechanics (or follow a pre-medicine plan) or complete an Undergraduate Certificate in Bioengineering (see the Bioengineering program for requirements). Students are encouraged to be active with the different engineering societies, including The American Society of Mechanical Engineers, The Society of Automotive Engineers, Engineers Without Borders, The Biomedical Engineering Society, The Society of Women Engineers, The National Society of Black Engineers, and The Society of Hispanic Engineers. KU also has active chapters of Tau Beta Pi, the national engineering society, and Pi Tau Sigma, the national mechanical engineering honor society. Study abroad is strongly encouraged and generally does not delay students’ graduation since they will be taking engineering classes abroad.

Professional Licensing

Formal study in an accredited engineering program is the principal means of becoming licensed to practice engineering in Kansas and other states. During the junior or senior year, students are strongly encouraged to take the national Fundamentals of Engineering examination. After 4 or more years of practice satisfactory to the State Board (licensing regulations vary among states), engineering graduates may take the examination to become registered professional engineers.

Job Search Assistance

The Engineering Career Center (http://ecc.ku.edu/) offers a comprehensive array of services to students seeking permanent employment and career-related summer or co-op employment. These include on-campus interviewing; 2 career fairs each year; individual advising and group workshops on résumés; interviewing, and job search strategies; online interviewing sign-up; online job postings from many employers not interviewing on campus; a library of employer and career literature; and an online résumé book searchable by employers.

The Engineering Career Center offers services to all engineering students. Students are encouraged to visit the Engineering Career Center early in their undergraduate or graduate studies. Many employers actively seek KU engineering and computer science students. Some prefer to hire students as early as the first-year level for internships. The Career Center is in 1410 LEEP2; additional information is available from 785-864-3891.

Undergraduate Regulations

The Mechanical Engineering program follows the undergraduate regulations of the university and school. The program has adopted a more limiting transfer policy regarding upper level mechanical engineering courses. The program also has required minimum grades in select classes for progression in the degree.

Transfer of Credit

In general, course number equivalents greater than KU Mechanical Engineering’s ME 399 cannot be transferred to count towards the 128 credit hour BS in mechanical engineering curriculum. For a non-KU course that might be related to a KU Mechanical Engineering course greater than ME 399 course:

1. The KU Mechanical Engineering program may consider a one-time petition for transfer.
2. To be considered for transfer, the petitioned course must have been taken from an ABET-EAC accredited program.
3. Study Abroad courses will be handled on a case-by-case basis.

Grades of C- or Better

While a D may be considered a passing grade in MATH 125, MATH 126, ME 211 (CE 201 and ME 210) and ME 212, it does not meet the mechanical engineering program's requirements for satisfying prerequisites for subsequent classes. The mechanical engineering program requires a C- or better in MATH 125 and MATH 126 for progression in the degree. The program requires a C- or better in ME 211 (or CE 201 and ME 210) for progression in the degree. Students earning a D-, D or D+ in ME 212 may progress in the degree providing they successfully complete ME 412 (counts as Technical Elective) in the next semester that it is offered.

Undergraduate Admission to the School of Engineering

Admission to the KU School of Engineering (and its degree programs) is selective. Students may be admitted to an engineering or computer science degree program (https://engr.ku.edu/2021-curriculum-guide-links/) as freshmen (first year) students, but all admissions, for both in-state and out-of-state students, are selective. Applications are judged on several factors, such as high school record, scores on national tests, academic record at college or university level, and trend of grades and more. High school transcripts are required.

Minimum Academic Standards for Admission to the School of Engineering

To be considered for admission to the School of Engineering, beginning first-year students must meet or exceed the following minimum standards:

- Must be admissible (https://admissions.ku.edu/major-specific-requirements/) to the University of Kansas by assured admissions or individual review, AND
- Have a 3.0+ high school GPA, AND
- Demonstrate mathematics preparedness by:
  - Obtaining a mathematics ACT score of 22+ (or math SAT score of 540+), or
  - Achieving a ‘B’ or better in ‘college algebra’ or a more advanced mathematics course, or
  - Achieving a ‘C’ or better in a high school calculus course; or
  - Earning credit via IB or AP credit for the above-mentioned courses in accordance with KU placement credit requirements; or
• Achieving at minimum a qualifying score for MATH 104 on the ALEKS mathematics placement exam.

Minimum Academic Standards for Direct Admission into Degree Program for incoming Freshmen

Students with a 26+ Math ACT (600+ Math SAT) or meet eligibility requirements for MATH 125 (Calculus I) (p. 1622) may be admitted directly into their chosen major, with the exception of those seeking admission into the Electrical Engineering, Computer Science, Computing Engineering, and Interdisciplinary Computing (EECS) majors. For EECS program admission, students must:

• Be admissible (https://admissions.ku.edu/major-specific-requirements/) to the University of Kansas by assured admissions or individual review, AND
• Have a 3.0+ high school GPA, AND
• Demonstrate mathematics preparedness by:
  • Obtaining a mathematics ACT score of 28+ (or math SAT score of 660+), or
  • Achieving a ‘C’ or better in a high school calculus course; or
  • Earning credit via IB or AP credit for the above-mentioned course in accordance with KU placement credit requirements; or
  • Achieving at minimum a qualifying score for MATH 125 on the ALEKS mathematics placement exam.

Students who are not admissible to their desired major are admitted to the School of Engineering as undecided engineering undergraduate students.

Exploring Engineering

Students not admitted directly to the School of Engineering or their major but who are admissible to the university may be admitted to the College of Liberal Arts and Sciences as an Undecided student. They can later re-apply to the School of Engineering during the semester they are completing the admission requirements for transfer students.

Transfer Admission Standards

Applications from all transfer students, whether from other institutions or from other academic schools at the University of Kansas, are evaluated on a case-by-case basis. Transfer students must be admissible (http://admissions.ku.edu/apply/requirements/ustransfer/) to KU AND have a cumulative college transferable grade-point average of 2.5+ to be considered. In addition, students must have grades of “C” or better in those courses in math (must include MATH 125 Calculus I or equivalent), science, and engineering applicable to the engineering degree.

Current KU Students admitted to other academic units may apply to the School of Engineering by completing a Change of School form (https://inowformsprivate.ku.edu/imagenowforms/fs/?form=OUR%20Change%20of%20School%20Form).

Already Applied to KU, But Not Engineering?

Don't worry. It's not too late to change your mind if you've already applied to KU and selected a major outside the School of Engineering. If you think one of the 12 engineering or computer science majors is a better fit for your talents, you can still change your requested major — preferably before May 1 — and be considered for admission to the School of Engineering and all the benefits that go with it.

To update your application, visit Undergraduate Admissions (http://admissions.ku.edu/update-your-application/) and click on “Change application term, major, mailing address, and/or email address.”

Please contact a member of our recruitment team (studyengineering@ku.edu), 785-864-3881, if you have any difficulty.

Total Hours 128

### Mathematics and Basic Sciences

#### Mathematics:

- **MATH 125** Calculus I (KU Core GE1.2) | 4
- **MATH 126** Calculus II | 4
- **MATH 127** Calculus III | 4
- **MATH 220** Applied Differential Equations | 3
- **MATH 290** Elementary Linear Algebra | 2
- **MATH 365** Elementary Statistics | 3
- **or MATH 526** Applied Mathematical Statistics I | 3
- **ME 508** Numerical Analysis of Mechanical Engineering Problems | 3

#### Basic Sciences:

- **CHEM 150** Chemistry for Engineers (KU Core GE3N) | 5
- **PHSX 210** General Physics I for Engineers (satisfies GE1.1) | 3

### Electives and KU Core Requirements

- Written Communication electives - KU Core GE1.1 | 6
- Oral Communication elective - KU Core GE2.2 | 3
- Arts and Humanities elective - KU Core GE3H | 3
- Economics elective (ECON 104, ECON 105, ECON 142, ECON 143, ECON 144, ECON 145) - KU Core GE3S | 3
- Human Diversity elective - KU Core AE4.1 | 3
- Global Culture/Awareness elective - KU Core AE4.2 | 3
- Ethics elective (CE 610) - KU Core AE5.1 | 3
- General Electives | 6

### Mechanical Engineering

#### Mechanics:

- **ME 211** Statics and Introduction to Mechanics | 3
- **ME 311** Mechanics of Materials | 3
- **ME 320** Dynamics | 3
- **ME 321** Dynamics Simulations | 1
- **ME 306** Science of Materials | 3
- **ME 307** Engineering Materials Laboratory | 2
- **ME 628** Mechanical Design | 3
- **ME 682** System Dynamics and Control Systems | 3

#### Thermal Fluids:

- **ME 212** Basic Engineering Thermodynamics | 3
- **ME 510** Fluid Mechanics | 3
- **ME 612** Heat Transfer | 3

#### Basic Engineering:

- **ME 208** Introduction to Digital Computational Methods in Mechanical Engineering | 3
- **ME 228** Computer Graphics | 3
- **EECS 316** Circuits, Electronics and Instrumentation | 3
- **EECS 318** Circuits and Electronics Lab | 1
- **ME 455** Mechanical Engineering Measurements and Experimentation | 4
- **ME 661** The Finite Element Method | 3

#### Capstone Design:

- **ME 501** Mechanical Engineering Design Process | 2
- Select one of the following (satisfies KU Core AE6.1) | 4
- **Option A**
  - ME 640 Design Project (Taken first semester)
  - ME 641 Design Project Option A (Taken second semester after successfully completing ME 640)
- **Option B**
  - ME 617 Research for Design Project Option B
  - ME 642 Design Project Option B (Taken after successfully completing ME 627. ME 627 counts as an Advanced Engineering Elective.)
- **Option C**
  - ME 640 Design Project (Taken first semester)
Approved General and Advanced Engineering Electives (15 hours)

A maximum of 6 credits of General Electives (and a minimum of 0 if 9 credits of Advanced Engineering Electives are taken) can be applied toward the B.S.M.E. degree and are meant to allow a student to broaden their education. These electives are taken throughout a student’s curriculum and include mathematics, basic science (ASTR, ATMO, BIOL, CHEM, EVRN, GEOG, GEOL, and PHSX,) and engineering courses beyond what is already required for the degree (without replicating content). Also included are any courses satisfying a KU Core requirement beyond what is already required for the degree (e.g. a second GE3H course). Any course from a foreign language department (in a non-native language) can satisfy the requirements. Up to 6 credit hours from courses in aerospace studies, military science, or naval science may be applied toward graduation as General Electives for the mechanical engineering degree. A student normally must complete the ROTC curriculum, whether or not it leads to a commission, to receive ROTC hours toward a bachelor’s degree in mechanical engineering. Courses in business, economics, music, design, visual art, and honors can also be used to satisfy the elective requirement. A complete list of currently approved General Electives can be found at the KUME office.

A minimum of 9 hours of Advanced Engineering Electives (and a maximum of 12) can be applied toward the B.S.M.E. degree and are designed to provide students with additional technical depth in the discipline. These electives are usually taken by seniors in the program and consist of advanced topics in the field of mechanical engineering. These courses tend to be all 500-, 600- and 700-level ME courses not explicitly named above. A complete list of current approved Advanced Engineering Electives can be obtained from the KUME office.

In a case where an experience has been used to satisfy a KU Core requirement without an accompanying credit-hour load, the student will be allowed to use any General Electives course to fulfill the number of credit hours required for graduation.

The Mechanical Engineering Department requires six credits of ENGL courses to satisfy the English requirement, with KU-allowed exemptions being possible.

Potential Core Credit Hour Waivers

For GE2.1, GE2.2, and AE4.2, it is possible to obtain ME Department waivers, as listed below; but the maximum total hours waived by the ME department is six.

1. If your KU transcript shows that the ENGL 101 and/or ENGL 102 requirements (GE2.1) have been waived (e.g., due to an ACT score) while giving zero hours of credit, the ME department accepts this waiver as a three or six credit hour reduction in the total hours required for graduation.

2. If your KU transcript shows that your Oral Communications Core has been waived while giving zero hours of credit, the ME Department accepts petitions for potentially waiving three credit hours. The KU transcript waiver must be the result of actual oral communications experience that was at least the equivalent of one semester of study. “Credit by exam” alone will not be acceptable.

3. If your KU transcript shows that your Global Culture/Awareness Core requirement (AE4.2) has been waived while giving zero hours of credit, the ME department accepts petitions for potentially waiving three credit hours. An example of an acceptable waiver request could be for a semester-long Study Abroad experience while immersed in the country’s culture. An unacceptable waiver request would be for a four to six week period spent abroad.

Chemistry

CHEM 130/135, CHEM 170/175, or Honors equivalent courses may be substituted for CHEM 150. Both courses in the Chemistry sequence must be taken to fulfill the Chemistry requirement. The additional credit hours can count as General Electives.

Biomechanics Concentration

Students interested in a career in biomechanics can obtain a concentration in the area which will be noted on the student’s BSME transcript. To obtain the concentration students must complete the following four courses:

1. One of the following BIOL courses (all of which count as General Electives): 150/151, 152/153, 240, or 246.

2. ME 633 Basic Tissue Mechanics and Biodynamics (which counts as an Advanced Engineering Elective).

3. A Biomechanics Capstone Design Project (ME 643).

4. A Biomechanics Advanced Engineering Elective (ME 750, 751, 753, 755, 756, 757, 758, 760, 765, or 767)

Master of Science in Mechanical Engineering

Master of Science (M.S.) Degree

The Department of Mechanical Engineering offers both a thesis option and a non-thesis (project) option leading to the M.S. degree. Areas of study in Mechanical Engineering include:

1. Biomechanics and Biomaterials: biomechanics of human motion, biomaterials, orthopedic biomechanics and biomedical product design, transport phenomena, and drug delivery

2. Computational Mechanics and Mathematics of Computations: computational mechanics, finite element analysis, finite element methods and software

3. Thermal-Fluid Systems and Heat Transfer: energy and thermal-power system design, heat transfer and computational fluid dynamics

4. Mechanical Design, Manufacturing, and Microprocessor Applications: computer-aided mechanical design, continuum mechanics, computer-integrated manufacturing, computational mechanics, finite element analysis, machine stress analysis, microcomputer applications, and automatic control systems

Mission

The broad discipline of mechanical engineering enables students to have productive and rewarding careers, and to develop and improve new technologies in both traditional and emerging fields. Mechanical
engineers apply fundamental principles to develop, design, manufacture, and test machines and other mechanical devices. Such devices include, but are not limited to power-producing machines, as well as power-consuming machines. Mechanical engineers are employed in diverse areas including, but not limited to the energy and power industries, the automotive and aerospace industries, and industrial manufacturing. Mechanical Engineering graduates also have careers in medicine and medical device development, patent law, engineering and corporate management, forensic engineering, and engineering sales.

**The mission of the Mechanical Engineering Department is to provide our students with a high-quality education, to generate and apply knowledge, and to serve both society and the engineering profession.**

Graduates holding the M.S. degree in Mechanical Engineering will be able to:

1. Conduct original research in mechanical engineering (for the Master of Science with thesis option), or complete a substantial project related to mechanical engineering (for the Master of Science with project option).
2. Demonstrate the ability to learn new concepts and build new skills relevant to the discipline of mechanical engineering.
3. Effectively communicate advanced mechanical engineering concepts, both in writing and orally.
4. Qualified to work at the most prestigious research institutions and universities in the world.

**Admission Requirements**

To qualify for graduate study in any of the graduate programs in the Department of Mechanical Engineering, a student generally must have earned a baccalaureate degree from an accredited mechanical engineering program. However, a student with good preparation in some other engineering discipline or a related program, such as physics, may qualify by taking appropriate undergraduate courses specified by the Mechanical Engineering Department Graduate Admissions Committee.

**Minimum English Proficiency Requirements**

These guidelines are subject to change by official action of the appropriate Graduate School governance bodies. Visit the full English Proficiency Requirements for Admission to Graduate study at: http://policy.ku.edu/graduate-studies/english-proficiency-international-students.

**GTA and GRA Eligibility**

Graduate teaching and research assistant eligibility requirements are distinct from admission requirements. Additional information on eligibility for graduate teaching assistants and graduate research assistants may be found in the GTA, GRA, and GA Appointments: General Guidelines and Eligibility (http://policy.ku.edu/graduate-studies/GRA-GTA-GA-guidelines-eligibility/).

**Contact Information**

Please contact the Mechanical Engineering Graduate Program Coordinator at kume@ku.edu or +1 (785) 864-3181, to schedule a visit or with questions about the application process.

The University of Kansas
Mechanical Engineering Graduate Program
3138 Learned Hall
1530 W. 15th Street
Lawrence, KS 66045

**Master of Science (M.S.) Degree Requirements**

The Department of Mechanical Engineering offers both a thesis and a non-thesis option leading to the M.S. degree. Both options require a minimum of 30 credit hours of graduate work. The thesis option must include a thesis for six hours of credit (ME 899) and 24 credit hours of coursework. The non-thesis option must include three-credit hours of independent investigation (ME 860 or ME 899) and 27 credit hours of coursework.

A maximum of 6 hours of mechanical engineering courses numbered between 500 and 699 may be included in the program. Other courses outside of mechanical engineering (besides mathematics) between 500 and 699 require approval by the Graduate Director prior to enrolling. Courses either required or used for the B.S. degree may not be used to fulfill M.S. degree requirements.

**Major**

The major will be selected from the energy and thermal-fluids category, the mechanical design category, the computational mechanics category or the biomechanics category. At least half of the graduate level coursework must be taught by graduate faculty employed full-time by the Department of Mechanical Engineering.

**Plan of Study**

The M.S. degree student selects an adviser in the first semester of graduate study. The student and the student’s advisory committee determine a program of study during the first semester of enrollment. The program of study must include (1) a minimum of 12 credit hours in a major selected from Mechanical Engineering courses (excluding credit for mathematics and the independent investigation or thesis) and (2) no fewer than three credit hours dealing with advanced mathematics. The complete plan of study must be approved by the Advisory Committee and the Graduate Director before the beginning of the second semester of graduate enrollment and filed electronically with the Department and the Graduate Division of the School of Engineering. The online Plan of Study can be found at https://gradplan.engr.ku.edu/accounts/login/.

**Thesis Option**

A thesis-option student is expected to do original work that would be the basis of a paper suitable for publication in a refereed journal. After the final oral examination has been passed, and after any changes required by the examination committee have been made in the thesis, the thesis should be submitted electronically in PDF Format to ProQuest/UMI on or before the date specified by the Graduate Studies Office (see http://graduate.ku.edu/graduation (http://graduate.ku.edu/graduation/) for deadlines). Supplementary materials may be added in formats other than PDF.
The student is responsible for submitting any bound copies that may be required by the department and/or advisor. Recommended binding services for personal or departmental copies may be found at http://www.graduate.ku.edu/submitting (http://www.graduate.ku.edu/submitting/). Formatting requirements for the thesis are presented here: http://graduate.ku.edu/etd-formatting-and-working-multimedia-files (http://graduate.ku.edu/etd-formatting-and-working-multimedia-files/).

Non-Thesis Option
A non-thesis option student must do an analytical or experimental study acceptable to the advisory committee. An oral presentation of the results of the independent investigation before Mechanical Engineering graduate students and faculty is required. A typed unbound project report must also be provided to the advisory committee.

Final Examination
Each Masters’ degree candidate must pass a final examination that may be oral, or both written and oral, as determined by the advisory committee. The examination must be publicized at least one week before the date of the examination. The examination will cover the field of Mechanical Engineering for both the thesis and non-thesis options and emphasize the thesis for the thesis option.

The thesis presentation portion of the examination shall be open. The written portion of the examination, if required, will be composed and evaluated by the examination committee. The examination committee, which is normally the advisory committee, must consist of at least three members of the Graduate Faculty and at least two must be Mechanical Engineering Faculty.

For every scheduled examination, the department will report a grade of honors, satisfactory, or unsatisfactory as decided upon by the committee.

The request to schedule the examination must be submitted to the Mechanical Engineering Department at least two weeks prior to the examination date. Unbound or electronic thesis copies are to be submitted to the examination committee two weeks before the examination.

Note: Masters Candidates must be enrolled for at least one credit hour during the semester in which the Masters’ final examination is taken, or the semester prior if meeting the early graduation deadline in a given semester.

Only two attempts to pass the Masters’ examination are allowed. If the examination is not passed in two attempts, the student will be terminated from the program and will not receive the degree.

Program Time Constraints
Normal expectations are that most master’s degrees (excluding some professional terminal degrees) should be completed in two years of full-time study. However, master’s degree students are allowed seven years for completion of all degree requirements.

In cases in which compelling reasons or circumstances recommend a one-year extension, the Graduate Division, on recommendation of the department/committee, has authority to grant the extension. In cases where more than eight years are requested, the appropriate appeals body of the school considers petitions for further extensions and, where evidence of continuous progress, currency of knowledge, and other reasons are compelling, may grant them.

Credit by Transfer
At the discretion of the major department and the Graduate Division, up to nine (9) hours of graduate credit taken at a regionally-accredited graduate school may be transferred and applied to a KU master’s degree plan if the credits were taken prior to the final semester of enrollment at KU. Only work graded B (3.0 on a 4.0 scale) or higher may be transferred. KU does not accept transfer credit for courses that have been graded B- or below. KU also does not accept transfer for institutes, workshops, or for life work experience. Credit will not transfer for courses that were previously counted toward the completion of an undergraduate or graduate degree. A minimum of 15 credits toward a master’s degree must be earned in KU coursework. As described in the M.A. & M.S. Degrees policy, a 30-hour master’s degree may be reduced to as few as 24 hours for students who are “exceptionally well-prepared.” If coursework is transferred to KU, the same coursework cannot also be utilized to establish a student as “exceptionally well-prepared.” Graduate credit from another institution may not be transferred to a KU graduate certificate program. The department/program and Graduate Division retain the discretion to deny a student’s request to have transfer credit and/or non-degree seeking credit count toward a degree or certificate.

Doctor of Philosophy in Mechanical Engineering
Doctor of Philosophy (Ph.D.) Degree
The Department of Mechanical Engineering offers a dissertation option for a Doctor of Philosophy degree. Areas of study in Mechanical Engineering include:

1. Biomechanics and Biomaterials: biomechanics of human motion, biomaterials, orthopedic biomechanics and biomedical product design, transport phenomena, and drug delivery.
2. Computational Mechanics and Mathematics of Computations: computational mechanics, finite element analysis, finite element methods and software
3. Thermal-Fluid Systems and Heat Transfer: energy and thermal-power system design, heat transfer and computational fluid dynamics
4. Mechanical Design, Manufacturing, and Microprocessor Applications: computer-aided mechanical design, continuum mechanics, computer-integrated manufacturing, computational mechanics, finite element analysis, machine stress analysis, microcomputer applications, and automatic control systems

Mission
The broad discipline of mechanical engineering enables students to have productive and rewarding careers, and to develop and improve new technologies in both traditional and emerging fields. Mechanical engineers apply fundamental principles to develop, design, manufacture, and test machines and other mechanical devices. Such devices include, but are not limited to power-producing machines, as well as power-consuming machines. Mechanical engineers are employed in diverse areas, including but not limited to the energy and power industries, the automotive and aerospace industries, and industrial manufacturing. Mechanical Engineering graduates also have careers in medicine and medical device development, patent law, engineering and corporate management, forensic engineering, and engineering sales.
The mission of the Mechanical Engineering Department is to provide our students with a high-quality education, to generate and apply knowledge, and to serve both society and the engineering profession.

Graduates holding the Ph.D. degree in Mechanical Engineering will be able to:

1. Conduct independent, publishable, impactful research on a topic or topics related to mechanical engineering.
2. Demonstrate the ability to learn new concepts and build new skills relevant to the discipline of mechanical engineering.
3. Demonstrate expertise in at least one area of mechanical engineering.
4. Effectively communicate advanced mechanical engineering concepts, both in writing and orally, at a professional level.

Admission Requirements

To qualify for graduate study in any of the graduate programs in the Department of Mechanical Engineering, a student generally must have earned a baccalaureate degree from an accredited mechanical engineering program. However, a student with good preparation in some other engineering discipline or a related program, such as physics, may qualify by taking appropriate undergraduate courses specified by the Mechanical Engineering Department Graduate Admissions Committee.

Minimum English Proficiency Requirements

These guidelines are subject to change by official action of the appropriate Graduate School governance bodies. Visit the full English Proficiency Requirements for Admission to Graduate Study policy (http://policy.ku.edu/graduate-studies/english-proficiency-international-students/).

GTA and GRA Eligibility

Graduate teaching and research assistant eligibility requirements are distinct from admission requirements. Additional information on eligibility for graduate teaching assistants and graduate research assistants may be found in the GTA, GRA, and GA Appointments: General Guidelines and Eligibility (https://policy.ku.edu/graduate-studies/GRA-GTA-GA-guidelines-eligibility/).

Contact Information

Please contact the Mechanical Engineering Graduate Program Coordinator at kume@ku.edu or +1 (785) 864-3181, to schedule a visit or with questions about the application process.

The University of Kansas
Mechanical Engineering Graduate Program
3138 Learned Hall
1530 W. 15th Street
Lawrence, KS 66045

Doctor of Philosophy (Ph.D.) Degree

A minimum of 72 credit hours of graduate credit beyond the bachelor’s degree is required for a Ph.D. For students with a 30-credit Master’s degree in Mechanical Engineering, a minimum of an additional 18 credits of graduate course work and 24 credit hours of dissertation are required. If a Master’s degree is not sought, 42 credit hours of graduate course work beyond the bachelor’s degree and 30 credit hours of dissertation credit are required. A minimum of 9 credit hours of the 18 (or 21 of the 42) must be mechanical engineering courses numbered 700-900 (excluding ME 702, ME 801, ME 899, ME 901, and ME 999). A minimum of 9 credit hours of advanced mathematics beyond the bachelor’s degree is required.

Doctoral Qualifying Examination

For a student with a Master’s degree, a qualifying examination will normally be taken in the first semester of participation in the doctoral program on regular status. It should not be taken later than the end of the second semester. For a direct admit with a bachelor’s degree, a qualifying examination will typically be taken after completion of 30 hours of graduate course work.

The Qualifying Examination Committee consists of three or more members of the graduate faculty within the area of emphasis and are normally expected to be members of the Research and Graduate Studies Committee of the Department of Mechanical Engineering. A grade of pass or fail will be assigned and be kept in the departmental records.

Three evaluation criteria for the Qualifying Examination were established by the faculty on August 19, 2019.

Criterion #1: The student must demonstrate an understanding in a core set of fundamental undergraduate mechanical engineering knowledge.

Criterion #2: The student must demonstrate an understanding in a subset of core advanced mechanical engineering knowledge.

Criterion #3: The student must demonstrate the ability to communicate effectively through writing, oral presentation, and open questioning.

The faculty from the four areas of study in Mechanical Engineering, as defined by the Graduate Student Handbook, are responsible for developing separate methods to evaluate the criteria. The areas of study are: Biomechanics and Biomaterials; Computational Mechanics and Mathematics of Computations; Thermal-Fluid Systems and Heat Transfer; and Mechanical Design, Manufacturing, and Microprocessor Applications. The methods for the four areas to assess the three criteria area listed below.

Criterion #1

This criterion will be assessed and satisfied with the current policies for entrance to the KUME graduate program. This includes the current requirements for satisfying deficiencies in the undergraduate mechanical engineering curriculum. At the time of the Ph.D. qualifying exam, the student must have satisfied and completed all requirements and conditions specified by the Department of Mechanical Engineering and the SOE to address deficiencies.

Criterion #2

A) The student will identify three 3-credit mechanical engineering technical elective courses (excluding courses required for the KU BSME degree, ME 702, ME 801, ME 860, ME 899, and ME 999) and one 3-credit mathematics course from the approved list in the KUME Graduate Handbook (or approved prior by the Graduate Director). The chosen ME courses should reflect three specific subjects in the focus area of study. Equivalent graduate courses that are completed at other institutions may be used to satisfy the requirements. All courses must meet the approval of the student’s advisor and the Qualifying Examination Committee including a review by the Graduate Director.
B) OR, DEPENDING ON ADVISOR PREFERENCE, the student will be required to demonstrate an understanding of three specific ME subjects and mathematics by passing written exams in each of these four subjects. The series of written exams will be scheduled during one week each fall and/or spring semester. Each exam will be graded separately on an A to F basis and count similarly to a 3-credit course towards this assessment. Scheduling and generation of the exams is the responsibility of the student’s major advisor with other faculty assistance.

In order to pass this criterion, the student must achieve at least a cumulative 3.7 GPA over all four courses or exams. A conditional pass may be awarded for a 3.5 GPA or greater (up to 3.7 GPA) with the student required to address said deficiency in the lowest graded course by either (depending on advisor preference): (1) completing extra coursework in that subject while achieving an A grade, or (2) re-taking the exam in that subject area and passing with an A grade. The student must address this deficiency before taking the Ph.D. comprehensive exam.

**Criterion #3**

The student will give an oral presentation that will last 20 minutes or less, and including questions from the Qualifying Examination Committee, the overall presentation will last 60 minutes or less. The material for the presentation will be a summary of one to three pertinent and related papers (with no conflict of interest) to the student’s Ph.D. topic area given to the student one week prior to the oral presentation date. These paper(s) will be approved by the advisor and the Qualifying Examination Committee.

Two days before the oral presentation, the student will provide a one-page summary (single-spaced, 12 point font, Times New Roman, 1” margins) to the committee of the material to be presented. No outside help will be allowed. To receive a passing grade, the student must demonstrate to the committee their ability to effectively communicate the information. For a student that receives a grade of conditional pass, the committee will recommend appropriate remedies. If a student receives a grade of fail, a second and final attempt will be granted.

**Plan of Study**

On successful completion of the qualifying examination, the student selects a major professor from the Department to serve as the chairperson of the advisory committee and to direct the research. An advisory committee of at least five Graduate Faculty members from the School of Engineering with at least three from the Mechanical Engineering faculty is then selected by the student and their adviser to assist the student in preparing the plan of study, to conduct the comprehensive examination, and to assist the student in planning research.

Courses completed without an approved program of study filed will not necessarily count toward the degree. The complete plan of study must be submitted before the end of the first semester and include the specific courses and all other requirements (research skills, research topic, etc.), and filed electronically with the Department and the Graduate Division of the School of Engineering.

**Credit by Transfer**

No graduate credit may be transferred toward a doctoral degree, but departments may take relevant prior graduate work into consideration in setting up programs of study.

---

**Proficiency in Research Skill Area and Responsible Scholarship**

All doctoral students must meet the Research Skills requirement before proceeding to comprehensive exams. The requirement must include at least two components:

- Every doctoral student is required to have training in responsible scholarship pertinent to the field of research.
- Every doctoral student is required to obtain research skills pertinent to the doctoral level of research in their field(s).

The responsible scholarship requirement may be met by taking ME 801, in addition to all other course and credit requirements. The Ph.D. student must demonstrate proficiency in at least one research skill area. Since the needs of students differ, the research skills are determined with the advice and approval of the advisory committee. Possible areas may include:

1. **Foreign Language.** The aspirant may demonstrate a reading knowledge in a foreign language in either of two ways:
   - Receive a score in the language on the Educational Testing Service Graduate School Foreign Language Test at, or above, the minimal level prescribed by the Graduate Studies Office.
   - Complete a language course approved by the advisory committee with a grade of B or better.

2. **Computer Science.** To establish competence in computer science, it is necessary to satisfy the advisory committee by demonstrating proficiency in a commonly used programming language and creating at least one original program.

3. **Laboratory Training.** Specific training on research skills relevant to the topic of dissertation by the advisor in their respective laboratory with the help of senior students.

All research skill and responsible scholarship requirements must be satisfied prior to the comprehensive examination and reported to the Graduate Division.

---

**Doctoral Comprehensive Examination**

When a doctoral aspirant has completed the major portion of the course work at a level satisfactory to the graduate degree program and school (typically 18 credit hours beyond the Master's degree, or 42 beyond the Bachelor's degree) and met all other program, school, and general requirements prerequisite to the comprehensive oral examination, including the research skills requirement as appropriately applied and established for the student’s particular program, the degree program must request the Graduate Division of its school to schedule the comprehensive oral examination. It should be determined that the student is in good academic standing (3.0 or higher grade-point average) before scheduling the examination. The examination request (using the Progress to Degree system) must be submitted in advance of the examination date by at least the period specified by the Graduate Division, normally a minimum of two weeks. The Graduate Division ascertains whether all pertinent requirements have been satisfied and if reports of any previously scheduled comprehensive oral examinations have been properly submitted and recorded. [http://policy.ku.edu/graduate-studies/doctoral-oral-exams](http://policy.ku.edu/graduate-studies/doctoral-oral-exams)

The committee for the comprehensive oral examination must consist of at least five members, all of whom must be members of the Graduate Faculty and at least three of whom must be tenured / tenure track Mechanical Engineering Faculty including the committee chair.
members are appointed by the Graduate Division of the school or college on the basis of nominations submitted by the graduate degree program. At least one member must be from a department other than the aspirant’s major department. This member represents Graduate Studies and must be a regular member of the Graduate Faculty. The Graduate Studies representative is a voting member of the committee and has full right to participate in the examination. In the case of any unsatisfactory or irregular aspects of the exam or violation of Graduate Studies policy, the Graduate Studies representative shall provide a written report to the Dean of Graduate Studies for consideration of further action. The examination may be scheduled provided that at least five months have elapsed from the time of the aspirant’s first enrollment at KU considering the Qualifying Exam has been successfully passed.

The comprehensive oral examination covers the major field and any extra-departmental work for which the program wishes to hold the aspirant responsible (students should discuss the oral examination requirements with their advisor and committee). For every scheduled examination, the degree program reports a grade of Honors, Satisfactory, or Unsatisfactory. If the aspirant receives a grade of Unsatisfactory on the comprehensive oral examination, it may be repeated on the recommendation of the degree program, but under no circumstances may it be taken more than three times. In any case, the examination may not be repeated until at least 90 days have elapsed since the last unsuccessful attempt. The schedule for the examination should be announced throughout the Department at least 7 days in advance.

**Post-comprehensive Enrollment**

Doctoral candidates are required, after passing the comprehensive oral examination, to be continuously enrolled each fall and spring semester in one or more hours of dissertation or programmatically equivalent coursework (for example, document hours for DMA students) that both moves the student towards degree completion and reflects, as accurately as possible, the candidate’s demands on faculty time and university facilities. During this time, until all requirements for the degree are completed (including the filing of the dissertation) or until 18 post-comprehensive hours have been completed (whichever comes first), the candidate must enroll for a minimum of 6 hours a semester.

Post-comprehensive enrollment may include enrollment during the semester or summer session in which the comprehensive oral examination has been passed. If after 18 hours of post-comprehensive enrollment the degree is not completed, the candidate must continue to enroll each semester until all degree requirements have been met. The number of hours of each enrollment must be determined by the candidate’s advisor and must reflect as accurately as possible the candidate’s demands on faculty time and university facilities.

**Dissertation**

The doctoral candidate must present a dissertation showing the planning, conduct, and results of original research and/or scholarly creativity. The purpose of the dissertation is to encourage and ensure the development of broad intellectual capabilities and to demonstrate an intensive focus on a problem or research area. The dissertation itself should be an evident product of the candidate’s growth and attainment of the ability to identify significant problems; organize, analyze, and communicate scholarly results; and bring to bear on an area of scholarly or scientific interest a variety of research skills and scholarly or creative processes. The dissertation must show some original accomplishment (sufficient quality to merit publication(s) in refereed journals and it is anticipated that the student will submit one or more journal publications prior to their defense), but it should also demonstrate without doubt the candidate’s potential to make future contributions to knowledge and understanding. Furthermore, a candidate for a doctoral degree must satisfy all Graduate School requirements for the degree.

Both the dissertation research and the dissertation itself are to be completed under the guidance and direction of the committee appointed as described in the Doctoral Student Oral Exam Committee Composition policy:

1. Doctoral committees are composed of at least five voting members;
2. The majority of committee members serving on a doctoral student oral examination committee must be tenured tenure-track faculty holding regular or dissertation graduate faculty status in the candidate’s department/program of study. Tenured tenure-track faculty who are appointed as courtesy faculty within the program/department are considered (for the purposes of committee composition) to be faculty of that program/department;
3. One member must meet the requirements for serving as the Graduate Studies representative. A faculty member from a different department with a courtesy appointment in the student’s department may serve as the Graduate Studies representative or in fulfillment of the committee majority, but cannot serve in both roles at the same time; and
4. Beyond the majority requirement, the additional member may hold any graduate faculty status, including regular, dissertation, or special status. This fifth member can be, but need not be, a member of the candidate’s department/program.

As long as the conditions above are met, the committee may include more than five members.

The doctoral committee chair must hold dissertation status. While committees are not required to have a co-chair, the student or the committee members may decide to select a co-chair. The co-chair can hold any graduate faculty status.

Substitutions of the committee chair (and/or co-chair) are prohibited after the committee has been approved by the Graduate Division of the school/college. If a committee chair (and/or co-chair) needs to be replaced, the revised committee must be approved by the Graduate Division in advance of the exam.

Substitutions of the committee members are permitted as long as the new members hold regular or dissertation graduate faculty status. Special members can be added after the committee has been approved by the Graduate Division of the school/college, but these additions must be approved by the Graduate Division in advance of the exam.

**Dissertation Oral Examination**

Completion of the dissertation is the final academic phase of a doctoral program, culminating in the final oral examination and defense of the dissertation. In all but the rarest cases, tentative approval of the dissertation is followed promptly by the final oral examination. When the completed dissertation has been accepted by the committee in final draft form, and all other degree requirements have been satisfied, the chair of the committee requests the Graduate Division to schedule the final oral examination. This request must be made in advance of the desired examination by at least the period specified by the Graduate Division (normally three weeks). The submission of the request must allow sufficient time to publicize the examination so that interested members of the university community may attend. The final oral
examination may be held no earlier than one (1) month after the successful completion of the comprehensive oral examination. Departments, programs, schools, or the College may require a longer minimum interval between the oral comprehensive exam and the final dissertation defense.

The committee for the final oral examination must consist of at least five members (the members of the dissertation committee plus other members of the Graduate Faculty recommended by the committee chair and the department and appointed by the Graduate Division). At least one member must be from a department other than the major department. This member represents Graduate Studies and must be a regular member of the Graduate Faculty. Before the examination, the Graduate Division provides a list of responsibilities to the Graduate Studies representative. The Graduate Studies representative is a voting member of the committee and has full right to participate in the examination. In the case of any unsatisfactory or irregular aspects of the exam or violation of Graduate Studies policy, the Graduate Studies representative shall provide a written report to the Dean of Graduate Studies for consideration of further action.

The Graduate Division ascertain whether all other degree requirements have been met and it reports of any previously scheduled final oral examinations have been submitted and recorded. Upon approval of the request, the final oral examination is scheduled at the time and place designated by the Graduate Division. This information must be published in a news medium as prescribed by the Graduate Faculty. Interested members of the university community are encouraged to attend these examinations.

For every scheduled final oral examination, the department reports to the Graduate Division a grade of Honors, Satisfactory, or Unsatisfactory for the candidate’s performance. If an Unsatisfactory grade is reported, the candidate may be allowed to repeat the examination on the recommendation of the department.

When the candidate has passed the final oral examination and the members of the dissertation committee have signed the dissertation, a title page and acceptance page with original signatures are to be delivered to the Graduate Affairs office of the school/college in which the student’s program resides so that completion of degree requirements may be officially certified. As a requirement of graduation, the candidate must arrange publication of the dissertation and payment of all applicable fees, through the electronic submission process.

Moreover, the candidate must provide a bound copy to the major professor, and one bound copy to the Mechanical Engineering Department.

**Program Time Constraints**

**Minimum Tenure**

The student must spend three full academic years, or the bona fide equivalent thereof, in resident study at this or some other approved university, including the time spent in attaining the master’s degree. Resident study at less than full time requires a correspondingly longer period, but the requirement is not measured merely in hours of enrollment. Because a minimum number of hours for the degree is not prescribed, no transfer of credit is appropriate. However, graduate degree programs take relevant prior graduate work into consideration in setting up programs of study leading to the doctorate.

**Residence Requirement**

Two semesters, which may include one summer session, must be spent in resident study at KU. During this period, the student must be involved full time in academic or professional pursuits, which may include an appointment for teaching or research if it is directed specifically toward degree objectives. Enrollment in approved distance-learning courses offered through KU cannot be used to meet the doctoral residency requirement. The student must be enrolled in a minimum of 6 credit hours per semester, and the increased research involvement must be fully supported and documented by the dissertation supervisor as contributing to the student’s dissertation or program objectives. Research must be performed under the direct supervision of the major adviser if on campus, or with adequate liaison if off campus.

**Maximum Tenure**

After being admitted to doctoral programs at KU, students complete all degree requirements in eight years. In cases in which compelling circumstances recommend a one-year extension, the Graduate Division has authority to grant the extension on the written advice of the department and dissertation committee. Students who complete the master’s degree at KU and subsequently begin doctoral studies have a maximum total enrolled time of 10 years to complete both degrees. Normal expectations, however, are that most master’s degrees (excluding some professional terminal degrees) should be completed in two years of full-time study, and both master’s and doctorate in six years of full-time study. Some graduate degree programs may have more stringent time restrictions. Students should inquire about the policy in effect in the department in which they plan to study.

A student in any of the above categories may petition the Graduate Division through the department for a leave of absence during either the pre- or post-comprehensive period to pursue full-time professional activities related to the doctoral program and long-range professional goals. Leaves of absence also may be granted because of illness or other emergency. Ordinarily a leave of absence is granted for one year, with the possibility of extension upon request. After an absence of five years, however, a doctoral aspirant or candidate loses status as such and must apply for readmission to the program and the Graduate Division.
Health Professions

Graduation requirements and regulations for every academic program are provided in this catalog; however, this catalog is for informational purposes only and does not constitute a contract. Degree and program requirements and course descriptions are subject to change.

Located on the KU Medical Center campus in Kansas City, Kansas, the KU School of Health Professions (http://healthprofessions.kumc.edu) offers more than 30 academic programs and prepares students for careers in health care, research and leadership.

Undergraduate and graduate degree programs are available, as well as several certificate programs. Admission and degree requirements vary by program.

Advising

It is strongly recommended for students to seek advising from their academic program of interest as soon as possible in their collegiate study. Please refer to the specific academic program for appropriate contact information and advising availability.

To connect with a program in the school, please contact Alex Lopez, outreach and recruitment specialist, at alopez12@kumc.edu or 913-588-1743 (711 TTY)

Clinical Laboratory Sciences (p. 598) Bachelor of Science in Clinical Laboratory Science (p. 604) Doctor of Clinical Laboratory Science (p. 605)

Health Informatics (p. 2262) Master of Science in Health Informatics (p. 2025) Health Informatics Post-Graduate Certificate (p. 2028)

Health Information Management (p. 641) Bachelor of Science in Health Information Management (p. 644)

Nurse Anesthesia (p. 648) Doctor of Nurse Anesthesia Practice (p. 651)

Occupational Therapy (p. 655) Doctor of Occupational Therapy (Entry-Level) (p. 666) Doctor of Occupational Therapy (Post-Professional) (p. 663)

Physical Therapy, Rehabilitation Science, and Athletic Training (p. 669) Master of Science in Athletic Training (p. 675) Doctor of Physical Therapy (p. 678) Doctor of Philosophy in Rehabilitation Science (p. 683)

Respiratory Care and Diagnostic Science (p. 686) Bachelor of Science in Respiratory Care (p. 689) Certificate in Cardiovascular Sonography (p. 596) Certificate in Diagnostic Ultrasound Technology (General and Vascular) (p. 612) Certificate in Nuclear Medicine Technology (p. 647)

Therapeutic Science (p. 691) Doctor of Philosophy in Therapeutic Science (p. 691)

The Office of Graduate Studies at KU Medical Center reviews and approves matters related to graduate study including admission, coursework and degree requirements. Each college or school at the University of Kansas has a graduate division reporting to KU Lawrence Graduate Studies. The Office of Graduate Studies (http://www.kumc.edu/academic-affairs/graduate-studies.html) serves as the graduate division for the schools located on the medical center campus.

Students do not enter programs in the School of Health Professions before the junior year of college. Some programs require an associate's or bachelor's degree in a specific field prior to beginning course work. All have specific prerequisites and minimum grade-point averages for collegiate course work.

Bachelor's degrees are available in the following fields:

- Clinical laboratory science
- Health information management
- Respiratory care

In addition, the following certificate programs at the undergraduate level are available:

- Cardiovascular sonography
- Diagnostic ultrasound technology (general and vascular)
- Nuclear medicine technology

University Honors Program

The school encourages qualified students to participate in the University Honors Program (http://www.honors.ku.edu/).

The School of Health Professions offers graduate programs in the fields of dietetics and nutrition, molecular biotechnology, nurse anesthesia, occupational therapy, physical therapy, rehabilitation science, and therapeutic science. In addition, programs in audiology and speech-language pathology are offered cooperatively with the Lawrence campus via the Intercampus Program in Communicative Disorders.
Basic admission requirements are listed in the Graduate Studies (p. 2449) section of the online catalog; however, individual graduate programs have specific additional requirements.

The School of Health Professions (p. 536) offers the following graduate degrees:

- Master of Arts
- Master of Science
- Doctor of Audiology
- Doctor of Clinical Laboratory Science
- Doctor of Nurse Anesthesia Practice
- Doctor of Occupational Therapy
- Doctor of Physical Therapy
- Doctor of Philosophy
- Doctor of Speech-Language Pathology

Two certificate programs are available at the graduate level:

- Dietetic internship
- Dietetics and integrative medicine

For information about university regulations, see Regulations (http://catalog.ku.edu/regulations/) or visit the University of Kansas Policy Library (http://www.policy.ku.edu/). All students in the School of Health Professions are required to follow and abide by policies stated in the KU School of Health Professions student handbook (https://www.kumc.edu/school-of-health-professions/academics/student-handbook.html) as well as those defined in the handbook of the student’s academic program.

Undergraduate Regulations

Credit/No Credit

A Credit/No Credit option is available to all degree-seeking undergraduates. Students may enroll in one course each semester under the option, if the course is not in the student's major or minor. For more information, visit the KU Policy Library (http://policy.ku.edu/).

Warning: Certain undesirable consequences may result from exercising the option. Some schools, scholarship committees, and honorary societies do not accept this grading system and convert grades of No Credit to "F" when computing grade-point averages.

Check with the department before electing the Credit/No Credit option because most programs will NOT accept this designation for prerequisite courses.

Grading

The departments of Clinical Laboratory Sciences, Health Information Management, and Respiratory Care recognize only grades of A, B, or C as passing. Grades of D and F are not considered passing for the purpose of advancing in the curriculum.

Graduation with Distinction and Highest Distinction

The School of Health Professions awards the Highest Distinction honor to undergraduates having achieved the highest grade-point average among the programs in the school upon graduation. Distinction honors are bestowed upon those with the next highest final grade-point average. The total number of these two categories combined may exceed ten percent of that year's graduating class.

Honor Roll

Students with grade-point averages of 3.5 having completed at least 12 hours with letter grades are recognized on the honor roll or dean’s list in fall and spring. An honor roll notation appears on the transcript.

Transfer of Credit

Only transfer grades of C or higher apply toward graduation from the School of Health Professions. Not all programs in the school accept transfer students. Please check with the appropriate program for full eligibility requirements.

CredTran (http://credittransfer.ku.edu/) is a transfer course equivalency system listing more than 2,200 colleges and universities from which KU has accepted transfer courses in the past. If your school or course is not listed, the student's evaluation will be completed after admittance to KU.

Graduate Regulations

Programs at the graduate level follow policies administered by the Office of Graduate Studies (p. 2473) in addition to those indicated in the KU School of Health Professions student handbook (https://www.kumc.edu/school-of-health-professions/academics/student-handbook.html) as well as those detailed in the handbook of the student’s specific academic program.

Credit/No Credit

Graduate students may select the Credit/No Credit option for certain courses. Students should follow the policy outlined in the University Senate Rules and Regulations, Section 2, article 2.27, and contact the department or program for more information.

Anatomy and Cell Biology Courses

ANTM 380. Special Topics In Anatomy. 1-5 Credits.

Advanced instruction is offered in the form of tutorials for a limited number of graduate students with prior experience in anatomical sciences. The emphasis of the course will be advanced study of a specific area of gross anatomy, neuroanatomy, or histology. In gross anatomy and neuroanatomy, students will do a complete, detailed dissection of a specific area of the body and present it to the faculty with a term paper on a clinically significant aspect of the dissection. In histology, students will prepare specific organs for special histological and immunocytochemical techniques with an oral presentation and term paper. Prerequisite: Permission of instructor.

Clinical Lab Sciences Courses

CLS 210. Introduction to Clinical Laboratory Sciences. 1 Credits.

An introductory overview of the professions of Clinical Laboratory Sciences including types of analyses performed, specialties, interrelationships in the health care system and a visit to a clinical laboratory. This course will enable those considering a major in the Clinical Laboratory Sciences to have a clear definition of the professions. (Same as BIOL 210.)

CLS 520. Phlebotomy. 1 Credits.

Principles and practice of collecting blood specimens for clinical laboratory analyses. Includes specimen identification, equipment, anticoagulants, safety precautions, specimen transport, and processing. Hepatitis immunization required. Prerequisite: Admission to the Clinical Laboratory Science Program or consent of instructor.
CLS 523. Fundamentals of Analytical Techniques Laboratory. 3 Credits.
This course, including lecture, recitation, and laboratory provides theory and hands-on practice of basic laboratory skills. Laboratory exercises include enhancement of skills needed for reagent preparation, pipetting of reagents and specimen, and test performance using a variety of assays (spectrophotometry, urinalysis etc.). Following the accurate collection of data in each experiment, students will analyze and interpret data applying the appropriate analytic/statistical tools, evaluate results for validity, and justify their conclusions. The theory underlying accuracy and precision in laboratory testing (quality control and quality assurance) will be included. Basic laboratory mathematics, method validation, and problem-solving strategies will be emphasized. Prerequisite: Admission to the Clinical Laboratory Sciences program or consent of the instructor.

CLS 530. Clinical Chemistry I. 3 Credits.
Introduction to human physiology and pathophysiology I with emphasis on proteins, carbohydrates, lipids, enzymes, liver & kidney function, blood gases and body fluids. The related chemical pathology tests, their principles, analysis, interpretation, and significance are included. Prerequisite: Admission to the Clinical Laboratory Sciences program or consent of the instructor.

CLS 532. Clinical Microbiology I. 3 Credits.
Pathogenesis and disease processes of pathogenic, opportunistic, and saprophytic bacteria; composition and preparation of media; sterilization and disinfection; antimicrobial agents and susceptibility testing; topics related to theory and applications. Prerequisite: Admission to the Clinical Laboratory Sciences program or consent of the instructor.

CLS 533. Clinical Microbiology I Laboratory. 2 Credits.
A laboratory with recitation addressing diagnostic procedures used for isolation and identification of clinically significant bacteria. Prerequisite: CLS 532 or CLS 532 concurrently, or consent of the instructor.

CLS 536. Hematology I. 3 Credits.
Fundamentals of hematology; the physiology, function, and cytochemistry of normal and abnormal blood cells; the theory and performance of clinical laboratory methods related to these parameters. Prerequisite: Admission to the Clinical Laboratory Sciences program or consent of the instructor.

CLS 537. Hematology I Laboratory. 2 Credits.
A laboratory with recitation emphasizing basic hematologic techniques and identification of normal and abnormal cells in peripheral blood and bone marrow. Prerequisite: CLS 536, or CLS 536 concurrently, or consent of the instructor.

CLS 538. Immunology. 3 Credits.
Covers basic theory of molecular and cellular immunology of innate and adaptive immune systems. Lectures include: structure and function of antibodies, complement, major histocompatibility complexes, B- and T-cells and their receptors, cellular and molecular basis of the immune response and immune regulation, hypersensitivity, and immune tolerance. Clinical applications and methodologies will be incorporated into lectures. Prerequisite: Admission to the Department of Clinical Laboratory Sciences or consent of instructor.

CLS 539. Fundamental Techniques and Clinical Immunology Laboratory. 3 Credits.
This course, including lecture, recitation and laboratory, provides theory and hands-on practice of basic laboratory skills. It is an introduction to safety practices and fundamental laboratory training in phlebotomy, pipetting, microscopy and calibrations. It also focuses on principles and procedures of immunochemistry and serology. Laboratory exercises consist of development of skills needed for reagent preparation and test performance using a variety of assays, accurate collection of data, and interpretation of data applying the appropriate analytic/statistical tools. The theory underlying accuracy and precision in laboratory testing (quality control and quality assurance) will be included. Basic laboratory mathematics, method validation, and problem-solving strategies are emphasized. Laboratory concepts and immunological assays, such as agglutination, precipitation and enzyme immunoassay for diagnosis of infectious diseases and immunological disorders are also included. Prerequisite: Admission to the Clinical Laboratory Science program, completion of BIOL 503 or CLS 538 (or equivalent transfer course) with a grade of C or higher, or concurrent enrollment in CLS 538, or consent of the instructor.

CLS 540. Clinical Chemistry II. 2 Credits.
Introduction to human physiology and pathophysiology II with emphasis on endocrine, therapeutic drugs, clinical toxicology, tumor markers, vitamins and trace elements. The related clinical chemistry tests, their principles, analysis, interpretation, and significance are included. Prerequisite: CLS 530 or consent of instructor.

CLS 541. Professional Development. 2 Credits.
This course combines lectures and projects to give students an introduction to and practice in the following: resume writing and interviewing skills; the components of and the production of a scholarly product; the basic principles involved in education with the identification and writing of educational objectives; the activities and responsibilities involved in laboratory management. Prerequisite: CLS 520 - CLS 549 or consent of instructor.

CLS 542. Clinical Microbiology II. 2 Credits.
Pathogenesis, disease processes, and diagnostic protocols for parasites, medically important fungi and mycobacteria. Prerequisite: Admission to the Clinical Laboratory Sciences program or consent of the instructor.

CLS 543. Clinical Microbiology II Laboratory. 2 Credits.
A laboratory with recitation addressing diagnostic procedures used for isolation and identification of parasites, medically important fungi, and mycobacteria. Prerequisite: Admission to the Clinical Laboratory Sciences program or consent of the instructor.

CLS 544. Immunohematology I. 3 Credits.
Principles of immunohematology as applied to transfusion services, donor services, component preparation and storage, and transfusion therapy. Includes problem solving for transfusion related situations and evaluation of problems related to hemolytic disease of the newborn, autoimmune hemolytic disorders, and transfusion reactions. Prerequisite: BIOL 503 or CLS 538, CLS 546, or consent of instructor.

CLS 545. Immunohematology I Laboratory. 2 Credits.
Principles of immunohematology as applied to transfusion services, donor services, component preparation and storage, and transfusion therapy. Includes problem solving for transfusion related situations and evaluation of problems related to hemolytic disease of the newborn, autoimmune hemolytic disorders, and transfusion reactions. Prerequisite: BIOL 503 or CLS 538, CLS 546, or consent of instructor.

CLS 546. Hematology II. 3 Credits.
Lectures on hemopoiesis, the physiology, function, and cytochemistry of normal and abnormal blood cells, normal and abnormal hemostasis, and the theory and performance of laboratory methods related to these parameters. Prerequisite: CLS 536 and CLS 537 or consent of instructor.

CLS 547. Hematology II Laboratory. 2 Credits.
A laboratory with recitation involving performance of hematology laboratory procedures with emphasis on basic hemologic and coagulation techniques and the identification of normal and abnormal cells.
in the peripheral blood and bone marrow. Prerequisite: CLS 536, CLS 537 and CLS 546 or CLS 546 concurrently, or consent of the instructor.

CLS 549. Clinical Immunology I Laboratory. 2 Credits.
A laboratory with recitation involving performance of immunoassays. Emphasis on theory, methodologies, and clinical correlations. Prerequisite: CLS 523, BIOL 503 or CLS 538, or consent of instructor.

CLS 600. Introductory Biochemistry. 3 Credits.
An introduction to the chemistry and metabolism of carbohydrates, lipids, proteins, nucleic acids, and other biologically important molecules. Topics include cellular processes, reactions and interactions occurring in living organisms. Prerequisite: Admission to the Department of Clinical Laboratory Sciences or consent of instructor.

CLS 605. Introduction to Molecular Diagnostics I. 1 Credits.
An introduction to molecular biology and molecular biological methodologies and technologies commonly used in basic, applied, and diagnostic laboratories. An emphasis is placed on molecular biology principles and techniques used in the clinical laboratory for diagnosis, prognosis, and treatment of disease. Prerequisite: Admission to the Clinical Laboratory Sciences program or consent of the instructor.

CLS 607. Introduction to Molecular Diagnostics I Laboratory. 1 Credits.
An introduction to molecular diagnostic methodologies and technologies commonly used in clinical laboratories. Principles and performance of nucleic acid isolation, restriction enzyme digestion, electrophoresis, amplification, hybridization, and analysis. Applications in infectious and genetic disease. Prerequisite: Admission to the Clinical Laboratory Science program or Cytotechnology program or consent of the instructor.

CLS 608. Introduction to Advanced Biotechniques. 0 Credits.
A lecture course introducing the theory behind a variety of current molecular, biochemical and immunologic techniques utilized in molecular research and diagnostic laboratories. Course content is continued in CLS 610, Advanced Biotechniques Lecture. Prerequisite: Admission to the Clinical Laboratory Sciences program or consent of instructor.

CLS 609. Introduction to Advanced Biotechniques Laboratory. 0 Credits.
Introductory laboratory course with practical application of selected molecular, biochemical, and immunologic techniques. Course content is continued in CLS 611, Advanced Biotechniques Laboratory. Prerequisite: Admission to the Clinical Laboratory Sciences program or consent of instructor.

CLS 610. Advanced Biotechniques Lecture. 3 Credits.
A lecture course covering the theory behind a variety of current molecular, biochemical and immunologic techniques utilized in today’s research and diagnostic laboratories. Material presented will include proper specimen preparation and handling; technique set-up and quality control; trouble shooting and technique modification. Prerequisite: Admission to the Clinical Laboratory Sciences program or consent of instructor.

CLS 611. Advanced Biotechniques Laboratory. 2 Credits.
Laboratory course with practical application of selected molecular, biochemical, and immunological techniques. Designed to provide limited experience with protein purification and analysis techniques, electrophoresis techniques, nucleic acid analysis and manipulation. Prerequisite: Admission to the Clinical Laboratory Sciences program or consent of instructor.

CLS 621. Biotechnology Methodologies Practicum. 4 Credits.
Placement of the student in clinical laboratories performing molecular diagnostic techniques for the analysis of infectious diseases, hereditary conditions, or acquired genetic conditions. Prerequisite: Admission to the Clinical Laboratory Sciences program or consent of instructor.

CLS 622. Problems in Molecular Diagnostics. 2 Credits.
Provides a targeted review of current theory, techniques and application of molecular techniques in the diagnosis of infectious disease, and hereditary and acquired genetic disease. Prerequisite: Admission to the Clinical Laboratory Science or Cytotechnology program, or consent of instructor.

CLS 623. Molecular Genetics Practicum. 4 Credits.
Placement of the student in a molecular genetics research laboratory (utilizing either prokaryotic or eucaryotic organisms or both) working with laboratory staff on an on-going small project within the laboratory. Molecular genetics laboratories utilized could be involved in, but not restricted to, any of the following activities: gene sequencing, cloning or splicing; elucidation of the mechanisms that regulate gene expression; proto-oncogene activation. Prerequisite: Admission to the Clinical Laboratory Sciences program or consent of instructor.

CLS 633. Special Topics Practicum. 4 Credits.
Placement of the student in any of a variety of research laboratories actively participating in molecular biological projects utilizing advanced genetic, biochemical immunologic, or other molecular techniques. Prerequisite: Admission to the Clinical Laboratory Sciences program or consent of instructor.

CLS 638. Clinical Competency Review. 0 Credits.
This review will enable students to identify areas of weakness in their understanding of clinical laboratory science in preparation for clinical rotations. Students will participate in Blackboard-based and in-person laboratory sessions in order to evaluate their performance in meeting required competencies. Prerequisite: CLS 520-CLS 549 inclusive, CLS 605, CLS 607, or consent of instructor.

CLS 639. Urinalysis. 1 Credits.
Tutorial instruction and clinical laboratory experience in urinalysis with the application of knowledge and skills to methodology, instrumentation, and quality control. Advanced content on renal disorders with emphasis on pathological mechanisms, interpretation, and clinical correlation of test results. Prerequisite: CLS 540, or consent of instructor.

CLS 640. Clinical Chemistry III and Immunology II. 2 Credits.
Tutorial instruction in the chemistry of body fluids and immune function focusing on correlation of chemical and immunological analyses to disease states. Addresses organ system disease, metabolic disease, and other special topics. Prerequisite: CLS 540 and CLS 549, or consent of instructor.

CLS 641. Clinical Chemistry and Immunology Practicum. 3 Credits.
Tutorial instruction and clinical laboratory experience in the chemistry of body fluids, with the application of knowledge and skills to methodology, instrumentation, and quality control. Involves correlation of chemical and immunological analyses to pathophysiology. Prerequisite: CLS 540 and CLS 549, or consent of instructor.

CLS 642. Clinical Microbiology III. 2 Credits.
Tutorial instruction addressing pathophysiology and diagnostic protocols of viruses, rickettsia, chlamydia, mycoplasma, and other unusual organisms. Prerequisite: CLS 532, CLS 533, CLS 542 and CLS 543, or consent of instructor.

CLS 643. Clinical Microbiology Practicum. 3 Credits.
Tutorial instruction and clinical laboratory experience in diagnostic microbiology, with the application of knowledge and skills to methodology,
instrumentation, and quality control. Prerequisite: CLS 532, CLS 533, CLS 542 and CLS 543, or consent of instructor.

**CLS 644. Immunohematology II. 1 Credits.**
Tutorial instruction addressing advanced transfusion medicine theory and concepts. Focuses on hospital transfusion services, blood utilization, management, legal and regulatory issues, and special topics. Prerequisite: CLS 544 and CLS 545, or consent of instructor.

**CLS 645. Immunohematology Practicum. 2 Credits.**
Tutorial instruction and clinical laboratory experience in transfusion medicine, with the application of knowledge and skills to methodology, instrumentation, and quality control. Prerequisite: CLS 544, CLS 545, or consent of instructor.

**CLS 646. Hematology III. 2 Credits.**
Tutorial instruction on hematologic and hemorrhagic disorders with emphasis on pathological mechanisms, interpretation, and clinical correlation of test results. Prerequisite: CLS 546 and CLS 547, or consent of instructor.

**CLS 647. Hematology Practicum. 3 Credits.**
Tutorial instruction and clinical laboratory experience in hematology, with the application of knowledge and skills to methodology, instrumentation, and quality control. Prerequisite: CLS 546 and CLS 547, or consent of instructor.

**CLS 650. Clinical Laboratory Science Review. 0 Credits.**
Review of the clinical laboratory science body of knowledge in preparation for, and culminating in the BS in CLS - Clinical Concentration comprehensive examination. Prerequisite: CLS 520-CLS 549 inclusive, CLS 605, CLS 607, CLS 661, and CLS 639-CLS 647 inclusive, or consent of instructor.

**CLS 655. Molecular Biotechnology Review. 0 Credits.**
Review of the clinical laboratory science body of knowledge in preparation for, and culminating in the BS in CLS - Molecular Biotechnology Concentration comprehensive examination. Prerequisite: CLS 520-CLS 549 inclusive, CLS 605-CLS 633 inclusive, and CLS 661 or consent of instructor.

**CLS 661. Management Principles in Health Care. 2 Credits.**
Introduction to basic principles of management and their application in the current health care environment at they pertain to the clinical laboratory. Course content includes: management theory, scope of management, quality issues, budgeting, personnel issues, evaluation and application of management concepts, introductory research methods. Prerequisite: Admission to the Clinical Laboratory Sciences program or consent of the instructor.

**CLS 690. Special Topics. 1-5 Credits.**
A course of study offering the student the opportunity for acquisition of additional knowledge and skills in one of the clinical laboratory routine areas or a specialty area, e.g., cytogenetics, metabolic analysis, or supervision; or at another clinical site. Course requirements designed in cooperation with student. Prerequisite: Admission to the Clinical Laboratory Science program or consent of instructor.

**CLS 710. Molecular Techniques I. 2 Credits.**
A lecture course covering the theory underlying molecular techniques involving nucleic acids and mammalian cell culture. Topics include purification and analysis of nucleic acids, recombinant DNA, construction and screening of genetic libraries, genetic engineering, control of gene expression, construction of gene fusions, amplification, hybridization, and nucleic acid databases and bioinformatic analysis. Prerequisite: Admission to the MS in Molecular Biotechnology program or consent of instructor.

**CLS 711. Molecular Techniques Laboratory I. 2 Credits.**
A laboratory course emphasizing the application, practice, and troubleshooting of molecular techniques involving nucleic acids and mammalian cell culture. Topics include purification and analysis of nucleic acids, recombinant DNA, genetic engineering, control of gene expression, construction of gene fusions, amplification, and hybridization. Topics are covered through a project-based approach. Prerequisite: Admission to the MS in Molecular Biotechnology program or consent of instructor.

**CLS 720. Molecular Techniques II. 2 Credits.**
Lecture and discussion course covering the theory and practice of molecular techniques for protein analysis. General topics include: protein detection, quantification, and characterization; protein separation and identification; protein expression systems; protein extraction, fractionation, solubilization and purification; analysis of protein-protein interactions; proteomics; and mass spectroscopy. Prerequisite: Admission to the MS in Molecular Biotechnology program or consent of instructor.

**CLS 721. Molecular Techniques Laboratory II. 2 Credits.**
Laboratory course for the practice and application of molecular techniques for analyzing and manipulating proteins. Techniques will include: bioinformatics analyses; expression, purification and solubilization of epitope tagged fusion proteins, protein-protein interactions; protein quantification; protein separation by electrophoresis and column chromatography; protein detection by chemical and immunological methods; and LC-MS. Prerequisite: Admission to the MS in Molecular Biotechnology program or consent of instructor.

**CLS 730. Current Issues in Biotechnology. 1 Credits.**
A seminar course that address topics including scientific, business, legal, social, and ethical issues in biotechnology. Students explore these topics through literature discussions, student presentations, and discussions with speakers from biotechnology-related academic and industry sectors. This course is meant for graduate students in the Molecular Biotechnology program. Prerequisite: Consent of instructor.

**CLS 740. Journal Club. 1 Credits.**
This course is an introduction to the critical reading of journal articles from the current literature in molecular biotechnology. Discussions will emphasize the analysis of experimental design and technique, as well as the significance of the results and validity of the author's conclusions. Students will learn how to search for articles and background information pertaining to selected topics, an how to present a polished, professional summary of that literature. Assigned papers for discussion and student presentations will focus on new strategies and technologies in molecular biotechnology of wide fundamental importance, or on hypothesis-based research that uses molecular biotechnological approaches. Prerequisite: Completion of (or concurrent enrollment in ) CLS 710 and CLS 720.

**CLS 742. Scientific Writing. 1 Credits.**
Formats, techniques, and styles of scientific writing. Emphasis will be placed on clear, concise, and effective writing. The class will focus on the process of writing scientific manuscripts and grant proposals. Students will identify and define the sections of scientific manuscripts as well as grant proposals. During the course, each student will write an R21-type (NIH Exploratory/Developmental Research Grant) proposals as could be submitted to the most appropriate NIH Institute. This course is intended for students enrolled in their final semester of the Master of Science in Molecular Biotechnology program. Prerequisite: Consent of Instructor

**CLS 744. Topics in Molecular Biotechnology. 1-5 Credits.**
Advanced course on special topics in molecular biotechnology, offered by arrangement. May include lectures, discussions, readings, laboratory techniques, and supervised research experience. This course is
intended for graduate students in the Molecular Biotechnology program. Prerequisite: Consent of instructor.

**CLS 750. Practicum I. 4 Credits.**
Advanced practical experience in a selected laboratory pursuing applied, basic, or diagnostic research projects utilizing genetic, biochemical, or other molecular biology-related approaches. Students apply and extend their knowledge and skills by performing a research and/or development project under the supervision of a site mentor. This practicum is performed at a site other than those utilized for CLS 751 (Practicum II) and CLS 752 (Practicum III). Prerequisite: Completion of CLS 710, CLS 711, CLS 720, and CLS 721, and consent of the instructor.

**CLS 751. Practicum II. 5 Credits.**
Advanced practical experience in a selected laboratory pursuing applied, basic, or diagnostic research projects utilizing genetic, biochemical, or other molecular biology-related approaches. Students apply and extend their knowledge and skills by performing a research and/or development project under the supervision of a site mentor. This practicum is performed at a site other than those utilized for CLS 750 (Practicum I) and CLS 752 (Practicum III). Prerequisite: Completion of CLS 710, CLS 711, CLS 720, and CLS 721, and consent of the instructor.

**CLS 752. Practicum III. 5 Credits.**
Advanced practical experience in a selected laboratory pursuing applied, basic, or diagnostic research projects utilizing genetic, biochemical, or other molecular biology-related approaches. Students apply and extend their knowledge and skills by performing a research and/or development project under the supervision of a site mentor. This practicum is performed at a site other than those utilized for CLS 750 (Practicum I) and CLS 751 (Practicum II). Prerequisite: Completion of CLS 710, CLS 711, CLS 720, and CLS 721, and consent of the instructor.

**Clinical Lab Sciences Courses**

**DCLS 800. DCLS Advanced Topics. 1 Credits.**
Seminar course that addresses topics and issues relevant to DCLS clinical practice, including ethical and social issues in healthcare practice, health informatics, and communication techniques needed for interaction with healthcare colleagues and patients. Repeatable. Prerequisite: Admission into the Doctorate in Clinical Laboratory Science program, or consent of instructor.

**DCLS 802. Principles of Healthcare Education. 3 Credits.**
This course will address various aspects of teaching in healthcare settings. This includes educating patients and their families, educating other healthcare professionals, and the more formal area of undergraduate and graduate education. Education theory, pedagogical methods, educational resources, learning objectives, and evaluation techniques applicable to each type of educational situation will be addressed. Prerequisite: Admission into the Doctorate in Clinical Laboratory Science program, or consent of instructor.

**DCLS 805. Advanced Molecular Diagnostics. 2 Credits.**
This course focuses on the enhancement of scientific and technical knowledge in nucleic acid-based testing for the diagnosis of acquired and hereditary genetic disorders, and infectious diseases. Topics include an in-depth review of the theory of molecular techniques and the application of these techniques in inherited disorders, oncology, infectious disease, pharmacogenetics, histocompatibility, identity determination, and genomics. Prerequisite: Admission into the Doctorate in Clinical Laboratory Science program, or consent of instructor.

**DCLS 815. Research Methods in Clinical Laboratory Sciences. 2 Credits.**
A discussion of research methods used in clinical laboratory sciences, with an emphasis on selecting and applying appropriate research designs. Includes an overview of the research methods and various approaches in current use in clinical laboratory science; focused on research question formulation; internal and external validity of research; variable measurement and reliability, and generalizability of findings. Specific approaches covered include non-experimental, experimental and quasi-experimental designs, epidemiologic methods (e.g., cohort and case-control studies), survey research, and qualitative research. Prerequisite: Admission into the Doctorate in Clinical Laboratory Science program, or consent of instructor.

**DCLS 820. Evidence Based Practice. 3 Credits.**
Evidence-Based Practice (EBP) encompasses Evidence-Based Medicine and Evidence-Based Laboratory Medicine. EBP is a problem-based approach to decision making using research evidence combined with clinical expertise, the patient’s values, circumstances, and the clinical context. This course addresses the historical development of EBP, why EBP is important, and how to implement use of EBP in clinical decision making, and how to discuss the EBP findings with patients, family members, and other healthcare practitioners. Evaluating research studies for their applicability to EBP and designing research studies based on clinical evidence focused on laboratory testing will make up most of the course content, activities, and assignments. Prerequisite: Admission into the Doctorate in Clinical Laboratory Science program, or consent of instructor.
DCLS 838. Advanced Immunology and Transplant. 3 Credits.
This course focuses on enhancement of scientific and technical knowledge in clinical immunology and transplantation in order to consult with other healthcare practitioners on clinical applications and diagnostic and therapeutic testing of immune-mediated diseases. Topics include autoimmunity, hypersensitivity, immunotherapy and immunotoxicology, transplantation and HLA testing/compatibility, cancer immunology and immunodeficiency. This course also includes test methodologies in cellular, humoral, and molecular immunology, selection and interpretation of test results, and recommendations for follow-up testing for patient monitoring. Prerequisite: Admission into the Doctorate in Clinical Laboratory Science program, or consent of instructor.

DCLS 842. Advanced Clinical Microbiology. 3 Credits.
Course Description: This course focuses on enhancement of scientific and technical knowledge in clinical microbiology necessary for consultation with other healthcare practitioners for (i) the selection of screening and diagnostic tests for suspected infectious diseases, (ii) interpretation of results, and (iii) recommendations for follow-up testing. Topics to be investigated include utilizing molecular diagnostic tests, antimicrobial susceptibility testing and resistance mechanisms, bioterrorism, biofilms, opportunistic and emerging infections, utilization of appropriate microbiology tests, evidence based practice in clinical microbiology, and reducing turn-around time. Current scientific literature, clinical scenarios, case studies, and advanced laboratory practice issues will be used to enhance knowledge and skills. Prerequisite: Admission into the Doctorate in Clinical Laboratory Science program, or consent of instructor.

DCLS 844. Advanced Immunohematology. 3 Credits.
This course will explore advanced blood banking theory and transfusion medicine concepts pertaining to basic-to-advanced serological testing techniques, blood product utilization, molecular immunohematology testing methods, quality assurance, and other relevant topics. Learners will be re-introduced to specialized blood banking procedures including (but not limited to) the following: ABO/Rh, antibody screens, antibody identification, fetal screen, elutions, phenotyping, and crossmatching. Using case studies and discussion, learners will correlate laboratory data to clinical disease processes encountered in transfusion medicine. Prerequisite: Admission into the Doctorate in Clinical Laboratory Science program, or consent of instructor.

DCLS 851. Clinical Correlations I. 3 Credits.
Course Description: This course will correlate clinical presentation and laboratory testing as it relates to physiological changes associated with select diseases of major organ systems (e.g., endocrine, muscle, cardiovascular, respiratory, renal, gastrointestinal, immune, nervous, and reproductive). Prerequisite: Admission into the Doctorate in Clinical Laboratory Science program or instructor permission.

DCLS 852. Clinical Correlations II. 3 Credits.
This course will complement CLS851 Clinical Correlations I and will correlate clinical laboratory testing as it relates to physiological changes associated with patient symptomology (e.g., chest pain, shortness of breath, unresponsiveness, fever of unknown origin, jaundice) and treatment in a consultation model. Prerequisite: Admission into the Doctorate in Clinical Laboratory Science program or instructor permission.

DCLS 880. Principles of Interprofessional Education and Practice Theory. 1 Credits.
An introductory course to core competencies in interprofessional education and practice for healthcare teams including roles and responsibilities, values and ethics, teamwork, communication, and collaborative practice as it relates to the improvement of patient safety outcomes and the provision of quality patient care. Prerequisite: Admission into the Doctorate in Clinical Laboratory Science program, or consent of instructor.

DCLS 881. DCLS Interprofessional Practice. 1 Credits.
This course is designed for DCLS program students to apply core competencies in interprofessional practice for healthcare teams including roles and responsibilities, values and ethics, teamwork, communication, and collaborative practice via participation in interprofessional activities. Prerequisite: Successful completion of DCLS 880 and admission into the Doctorate in Clinical Laboratory Science program, or consent of instructor.

DCLS 890. Advanced Laboratory Operations. 3 Credits.
This course will explore laboratory quality, utilization, accreditation, regulation, and management topics. Core course content explores the selection, implementation, strengths, and weaknesses of appropriate quality assurance programs to maintain desired quality goals. All aspects of laboratory services will be explored to enhance consultative skills that will be applied in the clinical residency. The use of practice guidelines, critical or clinical pathways, algorithms and reflex testing, direct access testing, evidenced-based practice, and outcomes measurements, as well as initiatives to change the practice of laboratory services in all phases (pre-analytical, analytical, and post analytical) are covered. Prerequisite: Admission into the Doctorate in Clinical Laboratory Science program, or consent of instructor.

DCLS 899. Independent Study. 1-3 Credits.
Faculty-guided, student-directed individualized study for students enrolled in the DCLS program who need additional enrollment associated with their plan of study. The specific course requirements are to be described in the Independent Study proposal form to be completed by the student and approved by the faculty mentor and DCLS Program Director prior to enrollment. Can be repeated for credit. Prerequisite: Admission into the Doctorate in Clinical Laboratory Science program.

DCLS 901. DCLS Research I. 2 Credits.
Research I is part of a three-course series (DCLS 901, DCLS 902, DCLS 903) taken consecutively. The goal of DCLS 901 is to initiate the development of a research project by preparing a formal written research proposal that includes selecting a topic, reviewing current literature, preparing and submitting an IRB approval, and other activities required to begin data collection. Prerequisite: Admission into the Doctorate in Clinical Laboratory Science program.

DCLS 902. DCLS Research II. 3 Credits.
Research II is part of a three-course series (DCLS 901, DCLS 902, DCLS 903) taken consecutively. The goal of DCLS 902 is to continue the work begun in DCLS 901 by initiating data collection, analyzing and interpreting the data collected, beginning the writing of a manuscript draft, and other activities required to move the research project forward. Prerequisite: Satisfactory completion of DCLS 901.

DCLS 903. DCLS Research III. 3 Credits.
Research III is part of a three-course series (DCLS 901, DCLS 902, DCLS 903) taken consecutively. The goal of DCLS 903 is to complete the project begun in DCLS 901 and DCLS 902 by finalizing the analysis and interpretation of the data collected and develop a defendable conclusion regarding the research hypothesis. Completion of a final draft of the manuscript describing the research project and outcomes is the culmination of this course. Prerequisite: Satisfactory completion of DCLS 902.

DCLS 911. Clinical Residency I. 4 Credits.
The first of a three-course series (DCLS 911, DCLS 912, DCLS 913) providing a structured and supervised experience correlating coursework with practice. Designed to develop the DCLS student to meet national professional responsibilities. Students work with management, laboratory
staff, physicians, nurses, and other members of the healthcare team to provide guidance in laboratory utilization and interpretation to optimize patient outcomes. Requires 14-16 weeks of full-time placement at a program affiliate. Prerequisite: Permission of instructor.

**DCLS 912. Clinical Residency II. 5 Credits.**
The second of a three-course series (DCLS 911, DCLS 912, DCLS 913) providing a structured and supervised experience correlating coursework with practice. Designed to develop the DCLS student to meet national professional responsibilities. Students work with management, laboratory staff, physicians, nurses, and other members of the healthcare team to provide guidance in laboratory utilization and interpretation to optimize patient outcomes. Requires 14-16 weeks of full-time placement at a program affiliate. Prerequisite: Permission of instructor.

**DCLS 913. Clinical Residency III. 5 Credits.**
The third of a three-course series (DCLS 911, DCLS 912, DCLS 913) providing a structured and supervised experience correlating coursework with practice. Designed to develop the DCLS student to meet national professional responsibilities. Students work with management, laboratory staff, physicians, nurses, and other members of the healthcare team to provide guidance in laboratory utilization and interpretation to optimize patient outcomes. Requires 14-16 weeks of full-time placement at a program affiliate. Prerequisite: Permission of instructor.

**DCLS 999. DCLS Capstone. 1 Credits.**
The capstone is completed during the final semester of the program and consists of a written manuscript and an oral examination. The manuscript, suitable for publication, is based on the research developed and completed during the research course series DCLS 901, 902, and 903. The final oral defense will be scheduled once the final draft of the manuscript is accepted by the student's Graduate Committee. The oral examination is a defense of the manuscript and can include questions regarding general knowledge of clinical laboratory science concepts and applications from across the entire DCLS curriculum. Prerequisite: Satisfactory completion of DCLS 902.

**Dietetics and Nutrition Courses**

**DIET 660. Management of Human Resources in Dietetics. 6 Credits.**
Focus on human resource development and utilization as the student works with food service personnel. Learning encompasses recruiting, training, supervision, and evaluation of employees in a food service system. Open only to seniors majoring in dietetics. Prerequisite: Management concepts or personnel administration.

**DIET 661. Management of Food Processing and Service. 6 Credits.**
Application of theories and concepts pertaining to management functions and interdepartmental relationships in a variety of clinical food service settings. Consideration is given to the newer technological developments in the administration of food services. Open only to seniors majoring in dietetics. Prerequisite: Food service systems and management in dietetics.

**DIET 662. Special Problems in Food Service Management. 3 Credits.**
Advanced experience in the practice of dietetics in an assigned setting. Problems and procedures will vary with interest and needs of the students. Open only to seniors majoring in dietetics. Prerequisite: Food service systems.

**DIET 672. Nutrition Care of Patients. 6 Credits.**
Directed observation and supervised experience in nutritional care of patients. Nutrition principles studied in DIET 670, Applied Normal Nutrition, and DIET 671, Nutrition in Medical Science, are applied in clinical situations. Open only to seniors majoring in dietetics. Prerequisite: Principles of nutrition; and nutrition throughout the life cycle.

**DIET 675. Seminar in Dietetics and Nutrition. 1 Credits.**
Involves study and discussion of text and general materials pertaining to philosophy and methodology in the field of dietetics and nutrition. Guest lecturers will participate. May be repeated for credit providing no course duplication takes place. Open only to seniors majoring in dietetics. Prerequisite: Introduction to dietetics.

**DIET 800. Selected Topics in Dietetics. 1-3 Credits.**
An elective course to allow student credit hours in special issues or problems in dietetics offered by individual faculty. Course content can provide students with investigation of problems and/or issues relevant to theory, research investigation and/or practice related to the field of nutrition and dietetics.

**DIET 801. Current Issues or Trends. 3 Credits.**
Review of current issues in the economic, social, ethical, political, legal, technological, and ecological environments and the effects of these changes on dietetics practice.

**DIET 802. Foods Writing for Professionals. 3 Credits.**
A course focusing on the writing skills needed by the food professional in order to communicate effectively in writing about food and food-related topics. Student experiences include hands-on projects in research and writing for various audiences and types of publications.

**DIET 803. Accounting Concepts & Analysis. 3 Credits.**
An emphasis on financial statement analysis is the main objective of the course. A review of all major accounts in the income statement, balance sheet and statement of cash flow is made in determining a firm's performance and financial condition in relation to what matters most to shareholders and investors. Prerequisite: General Calculus and Linear Algebra

**DIET 805. Entrepreneurship Theory and Practice. 3 Credits.**
Development and management of small businesses or private practice within the dietetics industry. Business plan development, marketing, cost considerations. Overview of consulting to health care and hospitality operations and examination of skills required for success.

**DIET 819. Grant and Scientific Writing for the Professional. 3 Credits.**
Grant writing, identifying external funding, managing grants, preparing manuscripts for peer-reviewed publication, and preparing papers and poster for presentation at professional meetings. Prerequisite: Enrolled GPIDEA.

**DIET 822. Healthcare Administration. 3 Credits.**
A comprehensive review of today's health care institutions and their response to the economic, social/ethical, political/legal, technological, and ecological environments.

**DIET 824. Financial Management and Cost Controls in Dietetics. 3 Credits.**
This course overviews the fundamental knowledge of financial management, managerial accounting, and operational cost controls for dietetics professionals. Topics include a review of managerial accounting concepts for not-for-profit organizations and for-profit organizations based on the Uniform System of Accounts, value and risk analyses, budgeting, asset management, franchising and management contracts, cost-volume-profit analyses, and operational applications for financial performance.

**DIET 829. Nutrition and Aging. 3 Credits.**
An overview of nutrition and the aging process. Physiological, psychological, and sociological aspects of aging, theories of aging,
internal and external factors related to nutrient intake, and nutrient needs will be considered. Physical activity and practical application to community settings is addressed.

**DIET 830. Nutrition: a Focus on Life Stages. 3 Credits.**
The influence of normal physiological stresses on nutritional needs throughout the life span will be explored. Evaluating nutritional status at different stages of life and identifying appropriate needs and services will be included while, at the same time, consideration given for specific characteristics such as physiological condition and cultural heritage.

**DIET 832. Functional Foods for Chronic Disease Prevention. 3 Credits.**
Integrate and evaluate the regulatory principles, food science, nutrient science and nutritional metabolism for the development of functional foods, nutraceuticals, and dietary supplements for chronic disease prevention. Prerequisite: Biochemistry, Human Nutrition, Basic Food Science or consent of instructor.

**DIET 833. Principles of Statistics. 3 Credits.**
A basic course in statistics: Statistical methods applied to experimental and survey data from social or natural sciences; test of hypotheses concerning treatment means; linear regression; product-moment, rank, and bi-serial correlations; contingency tables and chi-square tests.

**DIET 834. Methods of Research in Nutrition. 3 Credits.**
A study of basic research terminology and designs commonly used in nutrition research. Topics include: research on animals, tissue culture and human subjects; qualitative, quantitative and outcomes research; ethical issues in research; dissemination of research findings; and appropriate use of research findings. Prerequisite: Consent of instructor.

**DIET 835. Nutritional Epidemiology. 3 Credits.**
This course emphasizes the important issues related to designing, conducting, and interpreting research on the role of diet or physical activity in the development of disease (health) in human populations. Prerequisite: DIET 833 Statistics or Permission of Instructor.

**DIET 836. Biochemical, Physiological, and Genetic Aspects of Human Nutrition. 3 Credits.**
The topics covered will examine the integration of biochemistry, physiology, genetics, and nutrition. Emphasis will be placed on developing an understanding of how the combination cellular structure and function is related to the metabolic needs of the cell and its response to the environment. The integrated approach will form a basis for evaluating nutritional needs in humans. Prerequisite: courses in nutrition, physiology, and biochemistry, or consent of instructor.

**DIET 837. Nutrition in Diabetes. 3 Credits.**
(3 hours) An in-depth study of diabetes management with emphasis in nutrition care. Topics will include diabetes pathophysiology, clinical care guidelines, basic pharmacology, clinical nutrition education and counseling strategies, and nutrition care planning. Prerequisite: A course in medical nutrition therapy or consent of instructor. Must be a student in the Great Plains IDEA degree program.

**DIET 838. Advanced Medical Nutrition Therapy. 3 Credits.**
This course will discuss the role of diet in disease including diet as a factor related to prevention of diseases or illness, diet as an etiologic agent in illness and diet as a treatment for disease. Medical nutrition therapy is the use of specific nutrition services to treat an illness, injury or condition and involves two phases: 1) assessment and 2) treatment, which includes diet therapy, counseling and/or the use of specialized nutrition supplements.

**DIET 839. Clinical Aspects of Nutrition Support. 3 Credits.**
The course content provides in depth study of specialized visceral and somatic nutrition assessment of the critically ill patient. Content includes extensive review of methods for determining energy expenditure and substrate utilization during specific disease states. Discussion of the aspects of feeding the critically ill patient including timing, enteral and parenteral feeding methodology, specialized medical foods, equipment requirements, feeding complications and prevention, and pharmacological issues. Students will be expected to calculate formulas for both types feeding modalities and provide discussion of the evidence based guidelines for administration of these nutrition therapies. Prerequisite: minimum of 3 cr hours in Medical Nutrition Therapy.

**DIET 840. Foundations of Leadership in Dietetics. 3 Credits.**
Study of the key issues in the theory, research and application of leadership in organizations. This includes defining leadership, understanding situational characteristics that facilitate/hinder effective leadership, understanding effective/dysfunctional leadership and gaining greater insight into one’s own leadership style and functioning. Prerequisite: Must be admitted to the GPIDEA Program.

**DIET 841. International Nutrition and World Hunger. 3 Credits.**
Advanced study of the magnitude, cause, and nature of hunger and undernutrition in low income countries; emphasis on programs, policies and planning directed toward alleviating hunger.

**DIET 842. United States Public Health Nutrition. 1-3 Credits.**
A study of US public health and nutrition concerns in diverse US populations, assessment of nutritional status in commonalities, health communication, nutrition policies and community based nutrition interventions. Exploration of the roles of dietitians, nutritionists, and others in developing and delivering nutrition policies and interventions in US communities. Prerequisite: Must be a student in the Graduate Certificate Dietetic Internship Program, the Dietetics and Nutrition Master of Science Program, or the Great Plains IDEA, or have the consent of the instructor.

**DIET 843. Nutrition Education in the Community. 3 Credits.**
Principles and practices of teaching individuals and groups to translate nutrition knowledge into action. Emphasis on research in and evaluation of nutrition education.

**DIET 844. Behavior Management Theory. 3 Credits.**
An in-depth analysis of the development of the behavioral basis of individual and group behavior in business, governmental, educational, and other organizations with emphasis on current research literature and applications.

**DIET 845. Nutritional Aspects of Oncology. 3 Credits.**
A course focusing on current research examining the role of nutrition in specific cancers. Topics include basic cancer biology, pathology and nutritional research methodology. Sources of information for cancer prevention programs and the application of translational research to clinical patient populations will be discussed.

**DIET 846. Nutrition and Wellness. 3 Credits.**
Course will address wellness promotion through nutrition. Nutritional risk and protective factors will be examined as they relate to public health and individual nutrition.

**DIET 850. Operations Management and Analysis. 3 Credits.**
The study of the role of operations systems in the provision of value for the customer. Operations systems design; capacity determination, resource requirements planning and control, theory of constraints, supply chain management, quality management and control and project management are discussed and analyzed. Prerequisite: Basic graduate statistics course.

**DIET 854. Non-Thesis Research. 1-3 Credits.**
The course is an overview on phytochemicals (non-nutritive biologically active compounds which may have health benefits) from fruits, vegetables, cereals and oilseeds. The course will include discussions of functional foods which are designer foods providing these compounds to the public. It will cover recent findings on chemistry, physiological functions, potential health implications of phytochemicals.

DIET 885. Advanced Human Nutrition: Macronutrients. 3 Credits.
Physiological and biochemical aspects of macronutrients metabolism and human nutrition. Prerequisite: Must be admitted to the GPIDEA Program.

DIET 886. Advanced Nutrition: Nutrigenomics, Nutrigenetics and Advanced Lipid Metabolism in Human Nutrition. 3 Credits.
This course integrates topics related to current biochemical issues in nutritional science. The course will examine topics ranging from the cellular, molecular, and biochemical aspects of nutritional science to translational and applied research at the clinical and educational level. The goal is to emphasize the integrative and complex nature of human nutrition research ranging from basic science to clinical studies to translational and applied studies.

DIET 887. Nutrition and Immunology. 3 Credits.
This course examines the mechanisms underlying the modulation of immune responses by nutritional, naturally occurring and orally active food compounds. The role of nutritional status and changes in the life stages which impact immune response impacting disease initiation and progression. Contributions of the GI system and changes in life stages impacting immunity and their relationship to immune response will be discussed.

DIET 889. Thesis. 1-6 Credits.
Scholarly essay based research, written under the guidance of the student’s adviser. Credit given upon meeting thesis requirements for the master’s program.

Dietetics and Nutrition Courses

DN 671. Nutrition in Medical Science. 6 Credits.
Study of the science of medical nutrition therapy and evidence based practice in the nutritional management of disease during specific stages of the life cycle. Prerequisite: Consent of Instructor

DN 796. Social and Cultural Aspects of Dietetics and Nutrition. 2-4 Credits.
A study of the aspects of society, culture and personality related diet, food habits, and nutrition. The role of the community and its agencies will be considered. Includes field work. Prerequisite: Consent of instructor.

DN 800. Selected Topics in Clinical Dietetics: ____. 1-6 Credits.
A learner-centered, self paced study of topics in applied clinical dietetics. Independent modules are offered to address the science and art of nutritional care relating to specific issues to clinical dietetics. Topics will be grouped in various combinations to provide flexibility of choice. Students may enroll in one or more topics for a total of six credit hours. Prerequisite: By permission of instructor only.

DN 810. Nutrition Assessment. 3 Credits.
Methods and tools used in screening and assessment of nutritional status of individuals and population groups are studied. Assessment methodology includes dietary surveys, computerized dietary intake analysis, anthropometric measures, biochemical measures and clinical evaluations. Laboratory experiences are provided to allow students practice time for learning and applying assessment techniques. Prerequisite: Permission of instructor.

DN 817. Seminar in Dietetics & Nutrition I. 1 Credits.
Seminar designed to promote effectiveness of professional written and oral communication, increase knowledge of research, and review content information in selected topics in dietetics.

DN 818. Seminar in Dietetics & Nutrition II. 1 Credits.
To promote effectiveness of professional written and oral communication, to increase knowledge of research, and to review content information in selected areas in dietetics.

DN 819. Scientific Writing for the Nutritional Sciences. 1 Credits.
Research proposal preparation and/or scientific manuscript writing experience. This course will provide the student with an overview of the steps used in proposal writing and/or the steps in preparation of a scientific manuscript for publication.

DN 820. Nutrition Education Skills for School Teachers. 3 Credits.
This graduate level course will expand understanding of nutrition and healthy eating for classroom teachers and other professionals who work with children. The course has a special emphasis on child and adolescent nutrition and how to translate nutrition facts into classroom applications and school-based interventions. Course topics will include healthy food choices, nutrition guidelines, nutrients, energy balance and weight, child and adolescent nutrition, and nutrition education in the classroom, school-based nutrition interventions, and measuring outcomes of nutrition interventions. Prerequisite: Student must be classroom teacher or consent of instructor.

DN 822. Management Dietetics & Nutrition I. 2 Credits.
Managerial skills in health care quality improvement and food service are practiced. Students are typically enrolled in DN 827 Practicum supervised practice experiences associated with the dietetic internship. Prerequisite: Food service systems or commensurate practical experience.

DN 825. Medical Nutrition Therapy I. 3 Credits.
Course content introduces the student into the concepts of an intermediate study of nutritional therapy of disease. Course content includes evidence-based practice in prevention and nutritional management of diseases. Patient assessment and medical chart documentation are covered. Elements of pathology and biochemistry of the nutrition-related problems are integrated into course topics. This course is designed for students enrolled in the dietetic internship, but students from other departments may enroll with consent of instructor. Prerequisite: Undergraduate coursework in nutrition, diet therapy, biochemistry and physiology; DN 825; or consent of instructor.

DN 827. Practicum in Dietetics and Nutrition. 1-10 Credits.
Supervised practice experience for graduate level students to fulfill the requirements for the Dietetic Internship. Experiences take place in hospitals, clinics, community health care agencies, and other practice settings in which dietetics and nutrition services are provided. Prerequisite: Admission to the graduate program, permission of dietetic internship director or course instructor.

DN 828. Clinical Education in Dietetics. 2-3 Credits.
A study of teaching methods appropriate for use in a clinical setting. Emphasis on development of instructional objectives, learning situations, and methods of evaluations to be used in clinical teaching in dietetics. Prerequisite: Consent of instructor.

DN 829. Nutrition and Aging. 3 Credits.
An overview of nutrition and the aging process. Physiological, psychological, and sociological aspects of aging, theories of aging, internal and external factors related to nutrient intake, and nutrient needs will be considered.

DN 830. Food Technology. 2-3 Credits.
Consideration of current food processing methods and the factors affecting the palatability and nutritive values of human foods. Course includes pertinent information regarding the protection of the food supply.

DN 832. Methods of Research in Nutrition. 3 Credits.
A study of basic research terminology and designs commonly used in nutrition research. Topics include: research on animals, tissue culture and human subjects; qualitative, quantitative and outcomes research; ethical issues in research; dissemination of research findings; and appropriate use of research findings. Prerequisite: Consent of instructor. Same as DIET 834.

DN 834. Biochemical, Physiological, and Genetic Aspects of Human Nutrition. 3 Credits.
The topics covered will examine the integration of biochemistry, physiology, genetics, and nutrition. Emphasis will be placed on developing an understanding of how the combination cellular structure and function is related to the metabolic needs of the cell and its response to the environment. The integrated approach will form a basis for evaluating nutritional needs in humans. Prerequisite: courses in nutrition, physiology, and biochemistry, or consent of instructor. Same as DIET 836.

DN 837. Nutrition in Diabetes. 3 Credits.
(3 hours) An in-depth study of diabetes management with emphasis in nutrition care. Topics will include diabetes pathophysiology, clinical care guidelines, basic pharmacology, clinical nutrition education and counseling strategies, and nutrition care planning. Prerequisite: A course in medical nutrition therapy or consent of instructor.

DN 838. Advanced Medical Nutrition Therapy. 3 Credits.
This course evaluates current issues in medical nutrition therapy. Course content includes evidence-based analysis, the role of diet in disease management including factors related to disease pathophysiology, nutritional assessment and medical nutrition management of specific disease states. Prerequisite: Undergraduate medical nutrition therapy, biochemistry, physiology, or consent of the instructor.

DN 839. Clinical Aspects of Nutrition Support. 3 Credits.

DN 840. Advanced Topics in Nutrition. 1-2 Credits.
Reading and preparation of a paper and/or oral presentation on a selected subject in nutrition. Prerequisite: Consent of instructor.

DN 841. International Nutrition. 1-3 Credits.
A study of global public health and nutrition concerns in various nations, assessment of nutritional status of diverse populations, international health and nutrition organizations, policies, and interventions. We explore the roles of dietitians, nutritionists, and others in creating and implementing international public health and nutrition policies and interventions. To enroll in the course, you must be a student in the Graduate Certificate Dietetic Internship Program, the Dietetics and Nutrition Master of Science Program, or the Great Plains IDEA, or have the consent of the instructor. Cross-listed with DIET 841.

DN 842. United States Public Health Nutrition. 1-3 Credits.
A study of US public health and nutrition concerns in diverse US populations, assessment of nutritional status in commonalities, health communication, nutrition policies and community based nutrition interventions. Exploration of the roles of dietitians, nutritionists, and others in developing and delivering nutrition policies and interventions in US communities. Prerequisite: Must be a student in the Graduate Certificate Dietetic Internship Program, the Dietetics and Nutrition Master of Science Program, or the Great Plains IDEA, or have the consent of the instructor.

DN 854. Special Problems in Dietetics and Nutrition. 1-4 Credits.
Directed study of special problems in nutrition or nutrition care. This course provides for the individual or group study of special problems. Through directed readings, investigations, and projects, the student acquires information with reference to questions in dietetics and nutrition not covered in organized courses.

DN 857. Motivational Interviewing in Public Health Settings. 1 Credit.
The course is designed to introduce participants to Motivational Interviewing, its concepts, and to the subsequent skills required for helping people to change.

DN 860. Collaboration Strategies in Health Care. 1 Credits.
Persuasion and negotiation techniques: skills to evaluate and promote collaboration and goal achievement in a multidisciplinary health care team; analysis of communication styles and strategies to achieve mutual beneficial outcomes.

DN 862. Maternal and Child Nutrition. 3 Credits.
Critical examination of behavioral, physiological, and public health issues impacting dietary and nutritional factors that support normal growth and development. Course content focuses on the early stages of the life cycle: gestation, lactation, infancy, preschool, school age and adolescence. Topics include the fetal programming hypothesis, growth and nutritional requirements, breast and formula feeding of infants, infant weaning, and eating behaviors that lead to normal growth, growth faltering, and pediatric obesity. Prerequisite: Consent of the instructor.

DN 865. Nutrition in Sports and Exercise. 3 Credits.
Gain a deeper understanding of exercise physiology and nutrient requirements in sports and exercise. Examine, discuss, and develop critical thinking skills in areas within sport and exercise nutrition such as exercise metabolism and general exercise periodization as well as energy, macronutrient, micronutrient and fluid needs of athletes engaged in specific sports. Learn and explore current scientific literature regarding body composition and nutrition supplementation in addition to reviewing eating disorders in athletes and evidence-based approaches to weight management in sport. Prerequisite: Biochemistry and/or exercise physiology class or permission of the instructor.

DN 870. Health Behavior Counseling. 1 Credits.
Theoretical and applied issues in health behavior counseling. Students will learn the theories of behavior change and how to apply these to health care issues. Specific health behaviors (i.e., dietary changes, smoking cessation, exercise adherence) will be discussed in the context of chronic disease for children, adults, and the elderly. Effective methods of counseling patients and promoting changes on an individual and small group basis will be presented.

DN 874. Nutrition Therapy for Eating Disorders. 3 Credits.
An online study of eating disorders management and nutrition care. Topics will include eating disorders medical complications, clinical care guidelines, basic pharmacology, clinical nutrition education, nutrition care planning, psychology of eating disorders, team collaboration, and therapeutic modalities or nutrition counseling. Prerequisite: A course in medical nutrition therapy or consent of instructor.

DN 875. Pediatric Clinical Nutrition. 3 Credits.
Examines physiological, biochemical and nutritional aspects of disease processes relevant to infants and children up to 18 years of age. Medical nutrition therapy for a variety of medicine conditions found in this population will be discussed including inborn errors of metabolism, food hypersensitivity, obesity, and diseases of the major organ systems. Prerequisite: DN 826: Applied Clinical Nutrition or equivalent or consent of instructor.

DN 876. Intervention for the Prevention & Management of Obesity. 3 Credits.
This course emphasizes obesity in a population group ranging from childhood to the adult. Course materials will examine the impact of obese conditions on disease development throughout the life cycle. The course will critically analyze current evidence focused on interventions used in the behavioral and clinical management of overweight and obese individuals in community and clinical settings. Prerequisite: Consent of instructor. Same as DIET 876.

DN 880. Dietary and Herbal Supplements. 3 Credits.
Designed to develop the health professional’s skills in partnering with patients to make dietary supplement decisions. Students will investigate the use of botanicals and dietary supplements in nutritional support of aging, maternal health, and wellness. Discussion on supplementation in the prevention and treatment of chronic diseases will include: arthritis, cardiovascular, diabetes, digestive, liver and renal disorders, memory deficits, and ophthalmic dysfunctions. Prerequisite: Human physiology is advisable.

DN 881. Introduction to Dietetics and Integrative Medicine. 3 Credits.
Introduction to principles guiding integrative and functional Medical Nutrition Therapy; assessing, diagnosing, intervening, monitoring, and evaluating an individual client to restore function; focusing on the unique nutritional imbalances characteristic of chronic disease pathophysiology; supporting individuals with persistent symptoms; preventing chronic disease. Prerequisite: Introductory genetics, medical nutrition therapy, or consent of instructor.

DN 882. A Nutrition Approach to Inflammation and Immune Regulation. 3 Credits.
Inflammation and immune system dysregulation is common in chronic disease. The course presents the integrative nutrition approach to...
identify the underlying causes of inflammatory and immune-related conditions and associated nutritional influences; applies individualized nutritional interventions, as powerful modulators of the pathophysiology of inflammatory and immune responses. Prerequisite: Medical nutrition therapy, genetics or consent of instructor.

DN 884. Diet, Physical Activity & Cancer. 3 Credits.

DN 885. Nutritional Biochemistry. 3 Credits.
Course content facilitates the understanding of advanced biochemical principles applied to human nutrition. Topics include protein structure, bioenergetics, enzyme function, nutrient digestion, absorption and metabolism, metabolic regulation and intermediary metabolism, cellular signaling, and genomics encompassing nucleotide metabolism, gene expression and gene regulation. Prerequisite: Undergraduate biochemistry or consent of instructor.

DN 890. Graduate Research. 1-4 Credits.
Individual investigation of special problems in dietetics and nutrition or hospital dietary administration approved by the student’s advisor or advisory committee. Investigation involves original research.

DN 895. Advanced Macronutrients and Integrated Metabolism. 3 Credits.
Energy containing macronutrients and fiber presented from the perspective of their importance in human nutrition. Structural properties, digestion, absorption and metabolism are emphasized. Fuel utilization in response to food intake and exercise, cellular and whole-animal energetic and energy balance integrate metabolism. Students take an active role in presenting and discussing and exhibit advanced skills in analysis and presentation. Prerequisite: BCHM 702 or Equivalent.

DN 896. Advanced Micronutrients and Integrated Metabolism. 3 Credits.
Vitamins and minerals presented from the perspective of their requirements as nutrients for normal human physiological functions with emphasis on their underlying roles in structure, function and metabolism. Students take an active role in selecting, presenting and discussing recent published research and to exhibit advanced skills in analysis and presentation. Prerequisites BCHM 702 or equivalent.

DN 897. Micronutrient Research in Human Nutrition. 1 Credits.
This course requires students to design a research study on a vitamin or mineral. Students submit a written proposal and present it orally and defend the proposal in class. Students will be evaluated on the basis of plausibility, feasibility and originality of the proposed research. Co-requisite DN 896. Prerequisite: Consent of Instructor.

DN 899. Thesis. 1-6 Credits.
Scholarly essay based on research, written under the guidance of the student’s advisor. Credit given upon meeting thesis requirements for the master’s degree. Prerequisite: Consent of advisor.

DN 900. Techniques in Nutrition Research. 3 Credits.
A series of seven laboratory modules emphasizing quantitative methods and experimental analysis. The series of modules will be team taught by departmental faculty. Each module requires data collection, data analysis, and written interpretation or report. Instrumentation, dietary assessment software utilization and cellular microtechniques will be emphasized. Students will be responsible for learning one technique practiced in an outside laboratory setting. Student will rotate between the module sequence based on the number of students enrolled in the class. Prerequisite: DN 895 and DN 896 or permission of instructor of record.

DN 901. Graduate Seminar in Nutrition. 1 Credits.
Advanced course examining current research topics in nutrition. Extensive student and faculty interaction is emphasized utilizing lectures, class discussion of selected scientific readings and oral presentations. Prerequisite: Admission to PhD program in Dietetics and Nutrition or permission of instructor.

DN 910. Leadership Essentials in Clinical Nutrition. 3 Credits.
This course builds upon leadership theories to develop the skills to link theory and practice. After completing this course students will be able to successfully evaluate leadership theories; identify and develop a personal leadership style, increase competencies for effective leadership, and identify positive applications in clinical nutrition. The class also examines the differences between leadership and management and why these differences are important in clinical nutrition. Students also engage in practice of essential management skills for clinical nutrition. The class is designed to be an interactive exploration of personal leadership development and management skills. The student will be asked to respond to critical thinking opportunities and demonstrate their understanding of key concepts through exercises, discussion questions, quizzes, a Learning Journal, and their Leadership Growth Plan.

DN 915. Advanced Nutrition Assessment in Clinical Nutrition. 3 Credits.
The course builds on students’ prior knowledge and provides advanced concepts and skills for nutrition assessment of individuals. The course is structured into four assessment components: biochemical, dietary intake, body composition and nutrition focused physical exam. Main topics include in-depth overview of the assessment methods, strengths and limitations of methodology, evaluation and interpretation of assessment data, sources of measurement errors, validity of assessment methods, and advanced analytical approaches used to assess and interpret laboratory data.

DN 920. Nutrition Communication for Advanced Practice. 3 Credits.
The overall goal of this course is to enhance the student’s professional communication skills across a range of nutrition practice areas. This course will emphasize the nutrition professional’s ability to effectively communicate with a wide audience including community members of all ages, races, and ethnicities; patients in public health and clinic settings, hospitalized patients, non-nutrition health professionals, peers, and researchers. The course will use online didactic methods to establish a background of theory, but student learning and assessment will be project-based.

DN 930. Evidence Analysis in Clinical Nutrition. 3 Credits.
Students will identify a pertinent clinical nutrition question and utilize the Academy of Nutrition and Dietetics’ Evidence Analysis Library Manual to conduct a systematic review. Students will follow the rigorous process of defining a research question, searching and critically evaluating published literature, developing an evidence summary table and composing a systematic review. The goal of the course is a manuscript suitable for publication. Prerequisite: Consent of the instructor.

DN 932. Ethics in Clinical Nutrition Research. 1 Credits.
This course provides information and insights on important tenets that are essential for clinical nutrition research. Topics covered in lectures and moderated discussions include ethical, regulatory, and legal issues, informed consent for research participation, role and function of institutional review boards, just selection of research subjects, ethical aspects of study design, and privacy and confidentiality. Additionally, given the social, religious, and other influences on an individual’s food
choice, the moral and political aspects of food and nutrition research will be discussed. Prerequisite: Permission of instructor if student is not enrolled in a DN degree program.

DN 934. Advanced Methods of Research in Clinical Nutrition. 3 Credits.
This course prepares clinical nutrition students with the knowledge to design, conduct and write up results of a research project; and to read and review the clinical nutrition literature at an advanced level. Broad topics include ethical, regulatory and legal issues, study design and biostatistics, technology transfer, data management and sources of funding support, and clinical research infrastructure. Within these topics special emphasis is paid to educating the student about study designs that could be particularly useful to those with a clinical doctorate, e.g., designs that make use of electronic health records or other pre-existing databases. Students will get practice writing a research protocol and budgeting for a trial. Prerequisite: DN 834 or equivalent introduction to basics of research, or by permission of instructor.

DN 941. Applied Nutritional Epidemiology. 3 Credits.
The overall goal of this course is to provide graduate students the conceptual and applied skills to better interpret and conduct nutrition epidemiology research. Emphasis of this course includes design of a nutritional epidemiology research study, statistical computing, management of nutrition and outcomes-related datasets, methods of statistical analysis, and interpretation of analyses. Prerequisite: DN 934 Advanced Methods of Research in Clinical Nutrition.

DN 950. Interprofessional Collaboration in Clinical Nutrition. 2 Credits.
This course seeks to improve students' abilities to function and lead inter-professional healthcare teams. Students will apply core competencies in interprofessional practice for healthcare including roles and responsibilities, values and ethics, communication, team formation, teamwork, leading teams, decision making in teams, and managing conflict in teams. Prerequisite: Permission of Instructor.

DN 970. Pharmacology in Clinical Nutrition. 3 Credits.
This course provides the principles of clinical pharmacology and nutrition as therapeutic interventions and drug-nutrient and drug-food interactions. Students will apply the concepts to the pharmacological and nutritional management of compromised body systems. The strong conceptual base will prepare students to evaluate and monitor the use of commonly used medications and nutrition and herbal supplements. Applications across the lifespan will be incorporated within the class. Prerequisite: Consent of Instructor.

DN 971. Advanced Nutrition Counseling. 3 Credits.
Advanced Nutrition Counseling: This class is for experienced dietetic practitioners. The course content emphasizes evidence-based strategies and advanced counseling skills to promote behavior and attitude change in patients/clients. Prerequisite: Instructor's consent required.

DN 972. Frontiers in Medical Nutrition Therapy. 3 Credits.
This class is for experienced dietetic practitioners. The course content emphasizes contemporary issues, controversies and evidence-based intervention strategies that can be implemented to improve patient outcomes in areas of lifespan nutrition. Prerequisite: Consent of the instructor.

DN 980. Nutrigenomics and Nutrigenetics in Health and Disease. 3 Credits.
Nuclear receptors and their mechanisms of action, nutritional control of gene expression and functional genomic studies with relationships to nutrient intake and polymorphisms. Prerequisite: DN 836, DN 895, DN 896 or permission of instructor.

DN 990. Doctoral Research. 1-9 Credits.
Original and independent investigation approved by and conducted under the supervision of the student's advisor or advisory committee. This course is in partial fulfillment of the requirements for the Ph.D. degree. Prerequisite: Corequisite: Restricted to Dietetics & Nutrition Ph.D. candidates, or consent of DN advisor. Students must have completed the qualifying exam.

This capstone course is designed to enhance the student's ability to apply graduate knowledge to achieve tangible and relevant clinical research outcomes. All aspects of this translational research project will be included (i.e., planning, data collection, analysis and interpretation of results, written documentation, and oral presentation of the project). The outcome is a manuscript which has been submitted for publication. Collaborative interprofessional patient care projects are strongly encouraged. Prerequisite: DN 930, DN 934, DN 940, and permission of instructor.

DN 992. Applied Clinical Residency in Clinical Nutrition. 3 Credits.
The residency experience is designed to span 360 hours and will be completed within a professional workplace setting. Students will identify an area of practice through which they will provide leadership to develop a research-based clinical initiative or program. Upon completion, the students will provide their clinical team with the program or clinical initiative, along with program evaluation methods. Prerequisite: Acceptance into the DCN program.

DN 999. Dissertation. 1-6 Credits.
Preparation of the written dissertation based upon original research and in partial fulfillment of the requirements for the Ph.D. degree. Prerequisite: DN 990 or consent of advisor.

Health Information Mgmt Courses

HEIM 177. First Year Seminar. 3 Credits.
A limited-enrollment, seminar course for first-time freshmen, addressing current issues in health data and information management. Course is designed to meet the critical thinking learning outcome of the KU Core. First-Year Seminar topics are coordinated and approved by the Office of Academic Programs and Experiential Learning. Prerequisite: Open to Freshmen only (less than 30 hours).

HEIM 210. Introduction to Healthcare. 1 Credits.
This course is an introductory overview of the United States healthcare system. Course content emphasizes organizational structures and patient care settings in healthcare, healthcare professionals and their roles, as well as laws and regulations that influence how healthcare is paid for, quality is assessed, and healthcare data is protected. Current events in healthcare are also addressed. Open to all students.

HEIM 230. Medical Terminology. 3 Credits.
A study of the language of medicine including word construction, definitions, medical abbreviations, and use of terms related to various areas of medical science and health professions. Course requires students to be able to break down medical terms, understand their meanings and pronounce them correctly. This online course is designed for students interested in clinical and health professions.

HEIM 401. Introduction to Health Information Management (HIM). 3 Credits.
This course introduces students to the foundational concepts of health record content, characteristics and requirements, along with the operational processes designed to support and safeguard the healthcare data and information contained therein. Joint Commission survey process
is also included. Industry standard software applications are used for applied, hands-on learning in this course.

**HEIM 415. Healthcare Delivery Systems. 3 Credits.**
This course is an in-depth overview of the United States healthcare system and focuses on the structure and function of services across settings. Special emphasis is placed on the history of healthcare, reimbursements and financing, health policy, outcomes (cost, quality, access) and the integration of care across delivery settings using health information technology.

**HEIM 420. Legal Aspects of Healthcare. 3 Credits.**
This course introduces the student to some of the basic legal principles found in healthcare and health information management (HIM). Fundamentals of law including statutory, regulatory, and judicial practices are reviewed in the context of HIM including tort and liability. Emphasis is placed on HIPAA regulations. Patient legal rights and responsibilities as related to their healthcare are included, as well as fraud and abuse prevention and compliance.

**HEIM 425. Pharmacology Concepts for Health Information Management. 2 Credits.**
A fundamental overview of how drugs affect the human body and how the body impacts drugs used in pharmacotherapy. This course is designed to provide the student with the knowledge necessary for managing patient health information specific to medication administration and management. This course also covers pharmacology topics relevant to analyzing medication administration documentation in the patient health record. Prerequisite: Admission to BS in HIM program or instructor permission.

**HEIM 435. Clinical Concepts for Health Information Management. 3 Credits.**
This course examines ways in which health information professionals apply knowledge of clinical concepts in professional practice. Course content surveys professional practice roles and application of clinical knowledge in daily work, clinical documentation in health records, as well as diseases and conditions affecting the various body systems. Prerequisite: Anatomy and physiology lecture and lab, medical terminology, or instructor consent.

**HEIM 450. Introduction to Professional Practices Experiences. 1 Credits.**
This course is designed to provide students a better understanding of the various career opportunities in the Health Information Management field and develop skills required for professional environments. The emphasis is on professional behavior for health information management professionals in the workplace. Course content is intended to prepare students for site visits, professional practice experiences, internships, and their future careers.

**HEIM 485. Independent Study in Health Information Management. 1-10 Credits.**
The content will vary depending on material appropriate to students. May be repeated for additional credit utilizing a variety of projects and special assignments. Prerequisite: Permission of the program director.

**HEIM 501. Information Resources and Professional Development. 2 Credits.**
This course prepares students to effectively utilize information resources and technology on an academic medical center campus to foster success in the Health Information Management program, professional practice experiences and the health professions. Students will learn to apply software applications, project management strategies, and professional writing and literacy skills. This course has a special emphasis on professionalism, self-awareness, communication, collaboration and critical thinking.

**HEIM 510. Professional Practice Experience / Lab I. 1 Credits.**
This course provides a laboratory/professional practice experience opportunity for the application of concepts learned through previous coursework in addition to further exploration of advanced health information management topics, interprofessional education, and technical writing. Prerequisite: Successful completion of Junior-level HIM academic courses or permission from instructor.

**HEIM 525. Healthcare Database and Architecture. 3 Credits.**
This course is designed to help students understand databases and database management systems. Students will learn to model and understand database design, in conjunction with learning methods to structure data as records, tables, or objects. Students will also learn how query languages are used for searching, sorting, reporting, and other “decision support” activities to best utilize the available data. Along with acquiring knowledge fundamental to management of the electronic health record (EHR), students will develop general technical knowledge to become capable health information professionals. Prerequisite: IST 202, IST 205, or similar course.

**HEIM 540. Health Information Systems. 3 Credits.**
The increased use of technology to support health data and information continues to evolve. This course introduces students to core topics and concepts in health informatics, emphasizing the implementation and management of health information systems. Students learn the conceptual framework and foundational elements of health informatics, selecting and implementing systems through the Systems Development Life Cycle (SDLC), data and information infrastructure, privacy and security aspects, human-computer interaction frameworks and usability concepts, and current trends and supporting technologies.

**HEIM 565. Clinical Terminologies and Classifications I. 4 Credits.**
This course introduces classification systems and terminologies used in healthcare and the relationship of these systems to patient care, research, and reimbursement systems. Course content provides study and application of coding guidelines, conventions, and rules of coding systems. Prerequisite: HEIM 435 or permission of the instructor.

**HEIM 567. Quality and Performance Improvement in Healthcare. 3 Credits.**
This course provides instruction on the principles of quality (QI) and performance improvement (PI) in the context of healthcare. PI drivers, models, techniques, and processes are covered including workflow reengineering. QI program organization, management and effectiveness are addressed. This course also includes content on patient safety, risk management, resource management and assessment of provider competence.

**HEIM 570. Introduction to Healthcare Management. 3 Credits.**
This course introduces theoretical and applicable concepts of management with an emphasis on managing in healthcare organizations. Students explore traditional management roles as well as leadership concepts. Course content depicts management in the context of a complex stakeholder environment evidenced in the healthcare system of the United States.

**HEIM 571. Human Resource Management in Healthcare. 3 Credits.**
Through the course students will have the opportunity to obtain working knowledge of human resource management. Technology and the continuing uncertainty of the economy have affected many aspects of human resource management; a number of tasks formerly performed by an HR office are now the purview of department managers. The course will familiarize students with the environment in which HR functions and the tasks involved in managing people. Topics include: social sustainability, culture, vision, staffing needs analysis, recruiting and
selecting, training, developing, retaining, motivating, and legal rights of the people within the rapidly changing business environment. Prerequisite: HEIM 570 Healthcare Management.

HEIM 575. Applied Statistics and Research Methods in Healthcare. 3 Credits.
Emphasis is on the statistical analysis of healthcare data. Content includes hospital-based statistics, an introduction to epidemiological concepts, research design and methodology, research ethics and protocol, hypothesis testing, data management, analysis and presentation. Prerequisite: HEIM 525 and MATH 365 or similar.

HEIM 585. Healthcare Reimbursement. 3 Credits.
This course examines complex financial systems within the United States healthcare system. Students explore content related to healthcare reimbursement methodologies and revenue cycle management.

HEIM 635. Clinical Terminologies and Classifications II. 3 Credits.
This course offers continued study of classification systems and terminologies used in healthcare and the relationship of these systems to patient care, research, and reimbursement systems. This course includes an introduction to the role of mapping between the various classification systems, nomenclatures and clinical terminologies used in healthcare. Prerequisite: HEIM 565 or permission of the instructor.

HEIM 661. Management Principles in Health Care. 3 Credits.
Introduction to basic principles of management and education and their application in the current healthcare environment. Course content includes: management, quality issues, budgeting, personnel issues, evaluation and application of management concepts, and educational methodologies. Cross listed with CLS 661 and RESP 661. Prerequisite: Admission to the Health Information Management Program or permission of the instructor.

HEIM 665. Topics in Health Information Management. 2 Credits.
This course will utilize case studies, student discussions and guest presentations to address the latest developments in the management of health information. Students will examine key issues and trends within HIM through a series of seminar topics and presentations.

HEIM 670. Independent Study in Health Information Management. 1-10 Credits.
The content will vary depending on material appropriate to students. May be repeated for additional credit utilizing a variety of projects and special assignments. Prerequisite: Permission of the program director.

HEIM 671. Leadership in Healthcare. 3 Credits.
This course applies key concepts in personal, professional and organizational leadership for healthcare management. Special emphasis is on strategic leadership and planning for enterprise-wide health information strategies. Students will focus on leadership styles with an emphasis on self-discovery and professional development within an ever-changing environment.

HEIM 676. Healthcare Analytics. 3 Credits.
This course covers data-driven, computer-based tools and data analysis techniques that aid decision-making in healthcare. Effective use of data analysis increases the quality of strategic and operative planning and reduces the time used for decision-making processes. The course focuses on data-driven techniques and tools including such topics as medical coding systems, database fundamentals, business performance monitoring (managerial dashboards), and data mining applied to the healthcare industry. A number of data mining and predictive modeling approaches are discussed to address specific issues in healthcare. Prerequisite: HEIM 575.

HEIM 679. Information Governance in Healthcare. 3 Credits.
This course examines the role of health information managers as facilitators and champions of information governance in healthcare organizations. Course content includes an exploration of the topic of information governance, as well as introduces strategic considerations for enterprise processes, policies and procedures, standards, and metrics to support information governance efforts. Information is considered throughout the course as a strategic asset for organizational optimization. External users of information and related implications are also discussed.

HEIM 680. Management Internship. 3 Credits.
This is a four-week internship that provides the student with a management capstone experience with the activities and responsibilities commonly performed by the health information administrator. Students receive “hands-on” managerial experience. The internship may take place in any type of healthcare setting throughout the healthcare continuum and industry. Students interpret classroom theory into actual planning, organizing, assessing, and controlling situations in a health information department or related administrative or technical environment. Students are responsible for all costs including room, board, and transportation. Management internship sites are selected based upon such factors as: HIM experience, credentials of the student, expressed wishes from their internship choices. Prerequisite: Successful completion of all HIM professional coursework and/or permission of the instructor.

HEIM 681. Management Practicum. 3 Credits.
This practicum experience provides the student with a management capstone experience in the activities and responsibilities of the health information administrator. The specific practicum topics are selected based on the experience and credentials of the student. Prerequisite: Successful completion of all HIM professional coursework and/or permission of the instructor.

Hearing and Speech Courses

AUD 805. Introduction to Clinical Research. 1 Credits.
The course will provide a comprehensive overview to clinical research. The student will gain an understanding of how to develop clinical research questions including protocol design and the factors that should be considered in initiating a clinical research study. This will include biostatistical considerations, the recruitment of study participants, regulatory issues, and data management, and defining measures and instruments. Students will gain knowledge of how to define clinical research among the various institutional entities involved with clinical research at the University of Kansas Medical Center such as the Research Institute (RI), General Clinical Research Center (GCRC) and the Human Subjects Committee (HSC). Additionally, one component of the course will focus on how to apply for funding (grantsmanship), critical appraisal of research studies, and how to present research data. Prerequisite: Consent of instructor.

AUD 810. Diagnostic Audiology. 4 Credits.
Audiometric calibration, pure tone and speech testing, analysis of audiograms, middle ear testing.

AUD 811. Hearing Disorders. 3 Credits.
A study of disorders of the auditory system including anatomical, physiological, perceptual, and audiological manifestations of pathologies affecting hearing. Prerequisite: AUD 810 and AUD 829.

AUD 813. Psychoacoustics and Theories of Hearing. 3 Credits.
A study of relations between common acoustic stimuli and the responses they elicit; consideration of sensory scales, noise phenomena, and speech intelligibility. Prerequisite: AUD 829.

AUD 814. Hearing Conservation. 1 Credits.
A study of the major components of hearing conservation programs in industrial, educational, and military settings. Forensic audiology issues related to occupational hearing loss are included. Prerequisite: AUD 810 and AUD 829.

**AUD 816. Speech Perception. 2 Credits.**
Acoustic and perceptual characteristics of phonemes, words, and connected speech for normal-hearing adults and infants; how speech perception is assessed clinically and is affected by hearing loss, aging, use of amplification, talker differences, and linguistic factors. (Same as SPLH 716.)

**AUD 817. Pediatric Audiology. 3 Credits.**
Normal and pathological development of the auditory system; pediatric audiometric testing; auditory and communication aspects in the habilitation of hearing-impaired children. Prerequisite: AUD 810.

**AUD 818. Vestibular Systems and Disorders. 3 Credits.**
Study of the anatomy and physiology of the normal peripheral and central vestibular system; clinical assessment of vestibular disorders; vestibular rehabilitation.

**AUD 819. Hearing Aids I. 3 Credits.**
Study of the components, function, fitting, and performance characteristics of hearing aids, applications of amplification in rehabilitative audiology. Prerequisite: AUD 810.

**AUD 820. Rehabilitative Audiology and Counseling. 3 Credits.**
Principles and methods of auditory, communication, and social assessment and intervention with hard of hearing and deaf adults, children, and their families. Prerequisite: AUD 810 and AUD 819 or equivalent.

**AUD 821. Hearing Aids II. 3 Credits.**
The advanced study of the theoretical bases, techniques, and clinical application of hearing aids and their assessment. Participants will review, present, and discuss contemporary issues in hearing aid literature and research. Prerequisite: AUD 819.

**AUD 822. Electro-Acoustics and Instrumentation. 3 Credits.**
A study of the generation, control and measurement of the simple and complex sounds essential to clinical audiology and hearing research.

**AUD 823. Cochlear Implants and Hearing Assistance Technologies. 2 Credits.**
Through lecture and discussion format, this course will cover the principles and methods of assessment, candidacy, surgery, programming and rehabilitation of patients receiving cochlear implants. In addition, hearing assistance technologies such as large area systems and alerting devices will be covered with emphasis on classroom amplification. Prerequisite: AUD 819 and AUD 821 or permission of instructor.

**AUD 824. Central Auditory Processing. 2 Credits.**
The study of the anatomy and physiology of the central auditory system. Analysis and review of the diagnostic procedures and the therapeutic strategies for central auditory processing disorders.

**AUD 826. Tinnitus Management. 2 Credits.**
This course provides an advanced lesson in the evaluation and treatment of tinnitus and decreased sound tolerance. Topics include: diagnostic evaluation, CBT, biofeedback therapy, sound generator selection and programming, hearing aid considerations and programming, verification/validation, and pediatric considerations. Prerequisite: AUD 821.

**AUD 828. Genetics and Hearing Loss. 2 Credits.**
The fundamentals of human genetics as related to hearing loss, including patterns of inheritance, genotypic and phenotypic characteristics of the major forms of syndromic and nonsyndromic hearing loss; genetic counseling, genetic testing, possible genetic treatment, and issues related to them; resources for keeping up with this rapidly changing field. Prerequisite: Permission of instructor.

**AUD 829. Anatomy and Physiology of the Hearing and Vestibular Mechanisms. 3 Credits.**
Advanced study of the anatomical and physiological properties of the human hearing and vestibular mechanisms.

**AUD 841. Clinical Observation. 1 Credits.**
This course provides a community-based application of foundational audiology topics. First-year Au.D. students will observe a variety of community audiology clinics.

**AUD 842. Interprofessional Education for Audiologists. 1 Credits.**
Observation of healthcare professionals providing services at regional hospitals or clinics. Through observations, readings, and reflections, students are oriented to the work of healthcare professionals outside the field of audiology and the role of audiologist within an interprofessional healthcare team.

**AUD 843. Clinical Practice in Audiology. 1-6 Credits.**
Supervised simulation experiences and clinical work at the University and/or University Medical Center audiology clinics, or affiliated, off-campus practicum sites. Prerequisite: Permission of instructor.

**AUD 846. Independent Study in Problems in Audiology. 1-10 Credits.**
**AUD 851. Auditory Evoked Potentials. 3 Credits.**
Theoretical bases, techniques, and clinical applications for auditory evoked potentials including electrocochleography, auditory brainstem response, middle and late latency and cognitive responses. Prerequisite: AUD 810, AUD 822, AUD 829, or permission of instructor.

**AUD 853. Pharmacology for Audiology. 2 Credits.**
Presentation and discussion topics including: basic pharmacology (pharmacokinetics and pharmacodynamics), mechanisms of ototoxicity, selected ototoxic agents, drugs used in otolaryngology, and a review of patient management strategies. Prerequisite: Enrollment in the Au.D. or Ph.D. audiology program or permission of instructor.

**AUD 855. Business Audiology. 2 Credits.**
An introduction to audiology business practice principles. Operational functions of the audiology clinic will be reviewed, including human resources, marketing, legal and ethical practice concerns, billing, coding and reimbursement. Prerequisite: enrollment in the Au.D. or Ph.D. audiology program or permission of instructor.

**AUD 858. Business Audiology. 2 Credits.**
An introduction to audiology business practice principles. Operational functions of the audiology clinic will be reviewed, including human resources, marketing, legal and ethical practice concerns, billing, coding and reimbursement. Prerequisite: enrollment in the Au.D. or Ph.D. audiology program or permission of instructor.

**AUD 899. Thesis. 1-10 Credits.**
**AUD 900. Seminar in Audiology: ____. 1-4 Credits.**
Advanced study of selected topics in audiology such as (but not limited to): cochlear micromechanics and other physiological processes; psychoacoustics, speech perception, cochlear implants, scientific reading, etc. Prerequisite: Enrollment in the Audiology Ph.D. or Au.D. program or permission of instructor.

**AUD 941. Grand Rounds in Audiology. 1 Credits.**
Presentations/discussion of clinical case studies and professional issues in Audiology. Au.D. students and audiology faculty members will participate in these sessions.

**AUD 942. Investigation and Conference. 1 Credits.**
Readings and case study analysis in preparation for the formative and comprehensive exams. Enrollment is restricted to Au.D. students. Prerequisite: 2 semesters of full-time enrollment in the Au.D. program.

**AUD 944. Clinical Rotation. 1-6 Credits.**
Supervised clinical work at university-affiliated, off-campus sites. The Clinic Rotation is intended to prepare students for entry into their Clinical Externship and to foster increasing independence. Clinical skills required are defined in standards set forth by the American Speech-Language Association.

**AUD 945. Clinical Externship. 1-9 Credits.**
Supervised clinical work at the University of Kansas and/or KUMC audiology clinics, or affiliated, off-campus sites. The Clinical Externship is intended to refine clinical skills, increase clinical independence, and ensure that clinical skills meet the certification standards in audiology set forth by the American Speech-Language-Hearing Association. Open to 3rd and 4th year Au.D. students. Approval from Instructor needed for 3rd year students.

**AUD 946. Advanced Grand Rounds in Audiology. 1 Credits.**
Advanced, critical discussion of clinical case studies and professional issues in audiology and interprofessional collaboration. Third- and fourth-year Au.D. students and audiology faculty will participate in these sessions. Prerequisite: 4 credits of AUD 941 or by permission.

**AUD 999. Doctoral Dissertation. 1-12 Credits.**

---

**Hearing and Speech Courses**

**SLPD 801. Seminar on Evidence-Based Practice in Speech-Language Pathology and Other HealthSciences I. 3 Credits.**
This course is designed to give students a thorough understanding of evidence-based principles and procedures so that they could provide evidence-based services in a clinical setting. It is also designed to prepare students to assume a position of leadership in which they would be required to promote and teach evidence-based practices to their staff clinicians. Prerequisite: Consent of instructor.

**SLPD 802. Seminar in Evidence-Based Practices in Communicative Disorders. 3 Credits.**
In this course, students apply information covered in SLPD 801 to their areas of primary concentration. In-class and on-line sessions are led by students and guests from the university and community. Student presentations include primarily reports of progress on their semester project, a meta-analysis dealing with a clinical issue of their choice. Students report on status of (a) their development of the research project, a meta-analysis dealing with a clinical issue of their choice. Students report on status of (a) their development of the research project, a meta-analysis dealing with a clinical issue of their choice. Prerequisite: Consent of instructor.

**SLPD 804. Clinical Practice in Speech-Language Pathology: Advanced Training for the Experienced Clinician. 1-3 Credits.**
Students participate in clinical experiences (assessment and/or treatment) related to their primary and/or secondary area of concentration. Clinical experiences in which the student learns about a particular patient population, standardized and non-standardized assessment measures, instrumentation, computer software, devices, and/or treatment techniques and strategies are possible. Prerequisite: certification in speech-language pathology from the American Speech-Language-Hearing Association.

**SLPD 805. Independent Study in Speech-Language Pathology. 1-3 Credits.**
Investigation of special topics by individual SLPD students. Prerequisite: Consent of Instructor.

**SLPD 903. Capstone Project. 1-6 Credits.**

The Capstone Project reflects the culmination of academic and advanced clinical study and may take many forms (e.g., small original research study, original analysis of data collected by another researcher, research literature meta-analysis, program design and analysis, etc.). The Capstone project will comprise a written report that involves both literature and field activity. A Capstone project represents the research and application of knowledge, as well as an articulated plan for dissemination of the outcomes. Students will enroll in this course for a total of 6 credits. Prerequisite: Consent of Instructor.

**Nurse Anesthesia Courses**

**NURA 800. Professional Aspects of Anesthesia. 3 Credits.**
This course includes orientation to the profession of nurse anesthesia. The student will gain an understanding of the anesthesia department management and organization. The history of anesthesia will be discussed. Ethical, psychological, professional adjustments and legal responsibilities of the nurse anesthetist will be presented.

**NURA 801. Introduction to Clinical Practicum. 1 Credits.**
Students will engage in clinical practice that involves introduction to basic anesthesia skills. Emphasis is given to patient assessment, anesthetic planning and management of the patient population of low risk categories. The course includes introduction to clinical problem solving and "call" experiences that address the trauma patient and emergency surgical anesthesia interventions for pathological states. Prerequisite: Permission of Instructor.

**NURA 805. Clinical Anatomy. 4 Credits.**
An intensive study of the major anatomical systems and regions of the body which have clinical significance for anesthetists and others. Particular attention devoted to the respiratory, cardiovascular, and nervous systems. Regional topics include the anatomy of the head, neck, vertebral column, thorax, axilla, and femoral triangle. Involves both lectures and cadaver dissection, plus appropriate models, x-ray films, and audiovisual materials. Prerequisite: Admission to the Nurse Anesthesia Program or permission of instructor.

**NURA 806. Advanced Physiology. 4 Credits.**
A course designed to lead to an advanced comprehension of the physiology of organ systems in the human in both cellular and organ processes. Physiology subject matter relevant to clinical health sciences include membrane transport, muscle, cardiovascular, respiratory, renal, water and electrolyte balance, gastrointestinal, and endocrine physiology as well as neurophysiology. Cellular mechanisms include the structure and function of ion channels and pumps, mechanisms of calcium regulation, excitation-coupling processes and mechanisms of oxidative cell damage and apoptosis. Prerequisite: Permission of Instructor.

**NURA 808. Health Care Policy for Advanced Nursing Practice. 2 Credits.**
Students will utilize current clinical and legislative issues to examine ways to conceptualize the issues into social policy contexts. Assignments throughout the course are employed to both demonstrate and engage students in leadership and structural systems theories to effect change in healthcare policy. The course includes social policy development across the lifespan, leadership styles which influence change, and the implementation and analysis of policy solutions. Prerequisite: Successful completion of first three semesters of Doctor of Nurse Anesthesia Practice curriculum.

**NURA 809. Adv Pathophysiology. 3 Credits.**
A course designed to lead to advanced comprehension of pathophysiologic processes in the human body. Course content will build upon prior nursing education and professional experiences to provide a scientific basis for clinical application related to anesthetic planning.
and implementation. The intent of this course is to prepare the nurse anesthesia student to engage in critical thinking and problem-solving skills pertinent to the application of best practices involving anesthesia considerations for patients with pathological conditions. Prerequisite: NURA 806 Advanced Physiology.

NURA 811. Advanced Theory in Anesthesia I. 3 Credits.
This is the first of five successive courses relative to the didactic study of the art and science of nurse anesthesiology. Students will acquire the knowledge base pertinent to the perioperative anesthetic management of ophthalmology and otolaryngology procedures and patients with alterations in the endocrine system. Students enhance their critical thinking, problem-solving skills and ability to synthesize didactic information to the clinical environment. In addition, students will be required to engage in analysis of currently published research to identify “best practices” based on research evidence. Prerequisite: Permission of Instructor.

NURA 812. Advanced Theory in Anesthesia II. 3 Credits.
This is the second of five successive courses relative to the didactic study of the art and science of nurse anesthesiology. Students will acquire the knowledge base pertinent to the perioperative anesthetic management of gastrointestinal and hepatobiliary disorders, bariatrics, robotic/ laparoscopic procedures, otolaryngology disorders, and renal disorders. Students enhance their critical thinking, problem-solving skills and ability to synthesize didactic information to the clinical environment. In addition, students will be required to engage in analysis of currently published research to identify “best practices” based on research evidence. Prerequisite: Permission of Instructor.

NURA 813. Advanced Theory in Anesthesia III. 2 Credits.
This is the third of five successive courses relative to the didactic study of the art and science of nurse anesthesiology. Students will acquire the knowledge base pertinent to the perioperative anesthetic management of obstetrical, neonatal and pediatric patients. Students enhance their critical thinking, problem-solving skills and ability to synthesize didactic information to the clinical environment. In addition, students will be required to engage in analysis of currently published research to identify “best practices” based on research evidence. Prerequisite: Permission of Instructor.

NURA 814. Advanced Theory in Anesthesia IV. 3 Credits.
This is the fourth of five successive courses relative to the didactic study of the art and science of nurse anesthesiology. Students will acquire the knowledge base pertinent to the perioperative anesthetic management of neurosurgical, cardiovascular, thoracic, and transplantation patients. Students enhance their critical thinking, problem-solving skills and ability to synthesize didactic information to the clinical environment. In addition, students will be required to engage in analysis of currently published research to identify “best practices” based on research evidence. Prerequisite: Permission of Instructor.

NURA 815. Advanced Theory in Anesthesia V. 3 Credits.
This is the fifth of five successive courses relative to the didactic study of the art and science of nurse anesthesiology. This is the final theory course of didactic study for the art and science of nurse anesthesia. Students will acquire the advanced knowledge pertinent to the perioperative anesthetic management of geriatric patients and patients undergoing orthopedic procedures. Students will enhance their critical problem-solving skills and ability to analyze/synthesize didactic anesthesia content for application to clinical practice. In addition, students will be required to review and engage in analysis of contemporary research to identify “best practices.” The course content is provided as web-based and instructor facilitated learning. Prerequisite: Permission of Instructor.

NURA 820. Information Systems and Data Management in Anesthesia. 1 Credits.
Information systems, data management concepts, and their applications will be explored. This will enable the doctoral prepared nurse anesthetists to utilize resources to facilitate quality improvement, increase patient safety through outcome measurements, and improve resource utilization in the perioperative period. Prerequisite: Permission of instructor.

NURA 821. Advanced Practicum in Anesthesia I. 2 Credits.
This is the first of six courses relative to the application of the art and science of nurse anesthesiology. Each section is designed to address specific surgical categories and the relevant patient care needs and risks. Completion of each course requires acquisition and refinement of clinical skills. Students will demonstrate progression in cognitive, psychomotor and affective skills appropriate to a professional nurse anesthetist. Prerequisite: Permission of Instructor.

NURA 822. Advanced Practicum in Anesthesia II. 2 Credits.
This is the second of six courses relative to the application of the art and science of nurse anesthesia. Each section is designed to address specific surgical categories and the relevant patient care needs and risks. Completion of each course requires acquisition and refinement of clinical skills. Students will demonstrate progression in cognitive, psychomotor and affective skills appropriate to a professional nurse anesthetist. Prerequisite: Permission of Instructor.

NURA 823. Advanced Practicum in Anesthesia III. 2 Credits.
This is the third of six courses relative to the application of the art and science of nurse anesthesia. Each section is designed to address specific surgical categories and the relevant patient care needs and risks. Completion of each course requires acquisition and refinement of clinical skills. Students will demonstrate progression in cognitive, psychomotor and affective skills appropriate to a professional nurse anesthetist. Prerequisite: Permission of Instructor.

NURA 831. Advanced Chemistry and Physics. 2 Credits.
Chemical and physical principles including states and properties of matter, laws governing the behavior of gases, flow and vaporization, oxidation and combustion; principles of electricity and electrical safety; and chemical properties and structure-activity relationships as a foundation for pharmacology. Course will also cover pertinent areas of organic chemistry. Prerequisite: Permission of instructor.

NURA 833. Basic Principles of Anesthesia Practice. 3 Credits.
This course introduces students to the introductory principles and theories regarding the art and science of anesthesia practice. Students will develop a conceptual basis for practice gained through a systems approach applied to development of anesthesia care based upon a strong foundation in physical assessment, physiological monitoring, applications of pharmacology, anesthesia systems, physical and chemical basic sciences. Prerequisite: Admission to the nurse anesthesia program or permission of instructor.

NURA 835. Advanced Physical Assessment and Patient Care Technology for Anesthesia. 3 Credits.
This course is designed to develop and refine the physical assessment skills of the practitioner as well as enhance their understanding, interpretation, and application of laboratory measurements and advanced diagnostic procedures in the perioperative setting. The course is arranged in a systems approach with emphasis placed on the cardiovascular, pulmonary, renal, neurological, and endocrine. Diagnostic procedures and laboratory values specific to each of these systems and their relevance to anesthesia principles and practice will be discussed. The selection of appropriate monitoring devices specific to each system related to
individual patient needs will be discussed. Prerequisite: Permission of instructor.

**NURA 893. Regional Anesthesia/Pain Management. 3 Credits.**
Includes study of conductive anesthesia techniques, pharmacokinetics of local anesthetics, anatomical placement, and physiologic response. The course is inclusive of acute and chronic pain management techniques.

**NURA 880. Advanced Topics: ____. 1-4 Credits.**
Special study allowing a student to pursue a particular subject through readings, directed assignments, and conferences with a faculty member. Prerequisite: Consent of instructor.

**NURA 889. Introduction to Theory, Research Methods and Evidence-Based Practice. 3 Credits.**
Methods of theory development and analysis provide the foundation for the study of concepts and theories from nursing, anesthesiology and related scientific disciplines. Historical, scientific and philosophical frameworks relevant to the theoretical basis of nurse anesthesia are explored. The fundamentals of research methodology are examined including elements of design, measurement, statistical analysis and dissemination. The relationships between research, theory and practice are developed to create an awareness of how "best practice" resources support professional growth, competence and quality. Prerequisite: Permission of instructor.

**NURA 892. Applied Statistics and Analysis in Health Care. 3 Credits.**
Concepts include graduate-level statistical reasoning, statistical principles, and the role as the scientific basis for clinical and public health research and practice. Content includes hospital-based statistics, introduction to epidemiology, relationship of research design to statistical methods, research ethics/protocol, hypothesis testing, and data management. Prerequisite: Permission of instructor.

**NURA 901. Evaluation and Application of Evidence-Based Practice in Anesthesia I. 1 Credits.**
First of four courses in which the student will use analytic methods to critically appraise existing literature from nurse anesthesiology and other disciplines to determine and implement the best evidence for practice. An exploration of the design, implementation and evaluation of quality improvement methodologies will lead the student to an appreciation of the safe, effective, efficient and timely delivery of patient-centered anesthesia care. Previous student knowledge in the domain of research analysis will be applied to the design of evidence-based interventions in current anesthesia practice. Prerequisite: Permission of instructor.

**NURA 902. Evaluation and Application of Evidence-Based Practice in Anesthesia II. 1 Credits.**
Second of four courses in which the student will use analytic methods to critically appraise existing literature from nurse anesthesiology and other disciplines to determine and implement the best evidence for practice. An exploration of the design, implementation and evaluation of quality improvement methodologies will lead the student to an appreciation of the safe, effective, efficient and timely delivery of patient-centered anesthesia care. Previous student knowledge in the domain of research analysis will be applied to the design of evidence-based interventions in current anesthesia practice. Prerequisite: Permission of instructor.

**NURA 903. Evaluation and Application of Evidence-Based Practice in Anesthesia III. 1 Credits.**
Third of four courses in which the student will use analytic methods to critically appraise existing literature from nurse anesthesiology and other disciplines to determine and implement the best evidence for practice. An exploration of the design, implementation and evaluation of quality improvement methodologies will lead the student to an appreciation of the safe, effective, efficient and timely delivery of patient-centered anesthesia care. Previous student knowledge in the domain of research analysis will be applied to the design of evidence-based interventions in current anesthesia practice. Prerequisite: Permission of instructor.

**NURA 904. Evaluation and Application of Evidence-Based Practice in Anesthesia IV. 1 Credits.**
Fourth of four courses in which the student will use analytic methods to critically appraise existing literature from nurse anesthesiology and other disciplines to determine and implement the best evidence for practice. An exploration of the design, implementation and evaluation of quality improvement methodologies will lead the student to an appreciation of the safe, effective, efficient and timely delivery of patient-centered anesthesia care. Previous student knowledge in the domain of research analysis will be applied to the design of evidence-based interventions in current anesthesia practice. Prerequisite: Permission of instructor.

**NURA 912. Leadership in Nurse Anesthesia I. 1 Credits.**
First of two courses which focus the students on leadership projects which were designed in NURA 800, Professional Aspects of Anesthesia. Students will apply a variety of leadership theories as they conduct the projects with nurse anesthesia faculty supervision. At the conclusion of NURA 912, students will evaluate the projects and determine if goals were met, recognize which principles of leadership theory(ies) were utilized in the projects, and prepare an action plan for revisions. Presentations and self-analysis of the projects will be posted as VOPPTs on the ANGEL course site. Prerequisite: Permission of instructor.

**NURA 913. Leadership in Nurse Anesthesia II. 1 Credits.**
Second of two courses which focus the students on leadership projects which were designed in NURA 800, Professional Aspects of Anesthesia. Students will apply a variety of leadership theories as they conduct the projects with nurse anesthesia faculty supervision. At the conclusion of NURA 913, students will evaluate the projects and determine if goals were met, recognize which principles of leadership theory(ies) were utilized in the projects, and prepare an action plan for revisions. Presentations and self-analysis of the projects will be posted as VOPPTs on the ANGEL course site. Prerequisite: Permission of instructor.

**NURA 924. Advanced Practicum IV. 2 Credits.**
Fourth of six clinically-based courses related to the art and science of advanced nurse anesthesia practice and care of patients with specialized anesthesia care. The courses are divided into sequential clinical practicum related to diverse patient types in both normal and abnormal states and for those requiring anesthesia care in specialized areas (cardiothoracic, obstetrics, neurosurgical, etc.) Participation in case presentations may be required as warranted by clinical events. An opportunity is provided to apply advanced clinical decision making skills and evidence-based research to the assessment, management, and evaluation of complex health care problems of a diverse patient population in the perianesthesia care setting. Prerequisite: Permission of instructor.

**NURA 925. Advanced Practicum V. 2 Credits.**
Fifth of six clinically-based courses related to the art and science of advanced nurse anesthesia practice and care of patients with specialized anesthesia care. The courses are divided into sequential clinical practicum related to diverse patient types in both normal and abnormal states and for those requiring anesthesia care in specialized areas (cardiothoracic, obstetrics, neurosurgical, etc.) Participation in case presentations may be required as warranted by clinical events. An opportunity is provided to apply advanced clinical decision making skills and evidence-based research to the assessment, management, and evaluation of complex health care problems of a diverse patient population in the perianesthesia care setting. Prerequisite: Permission of instructor.
Occupational Therapy Courses

OCTH 101. Introduction to Occupational Therapy. 1 Credits.
Survey of the profession of occupational therapy. Includes information on academic and professional requirements, career opportunities, general description, and history of the profession. Open to all students.

OCTH 601. Human Anatomy. 6 Credits.
In OCTH 601, the study of gross anatomy and neuroanatomy in relation to human function and behavior will introduce students to how occupational therapists use anatomical knowledge to gather information about clients. Learning opportunities include lecture and laboratory. Prerequisite: Open to students enrolled in the MOT graduate program or those with permission from the OTEd department.

OCTH 602. Orientation to the Occupational Therapy Profession. 3 Credits.
In OCTH 602, we will examine occupation, explore the underlying philosophy and history of the occupational therapy profession, and implications for current practice and future directions. We will establish expectations for professionalism and practice application of ethical and professional behaviors within the context of occupational therapy practice. Prerequisite: Open to students enrolled in the MOT graduate program or those with permission from the OTEd department.

OCTH 605. Theory and Practice in Occupational Therapy. 2 Credits.
In OCTH 605, we will present established and emerging conceptual models of occupational therapy to guide students in exploration and discussion of assessment and intervention practices. Emerging professional reasoning skills and strategies will support individuals and small groups in synthesis and integration of theoretical concepts applied to diverse practice settings. Prerequisite: Open to students enrolled in the MOT graduate program or those with permission from the OTEd department.

OCTH 622. Analysis and Adaptations of Occupations - I. 4 Credits.
In OCTH 622, we will study the role of occupations and factors influencing occupational performance using the "top-down/bottom-up" analytic approach recommended by the WHO and reinforced by the OT Practice Framework. This course will use service learning as the context for synthesizing an understanding of occupation, the occupational therapy process, and person-centered practice. Prerequisite: Open to students enrolled in the MOT graduate program or those with permission from the OTEd department.

OCTH 635. Lifespan Development from an Occupational Perspective. 4 Credits.
In OCTH 635, we will examine in detail developmental theories and how they intersect with changes in occupations across the lifespan. We will promote an advanced understanding of participation in meaningful activities by practical experiences with real people in authentic settings. Students will gain an understanding and appreciation of the qualitative differences between typical and atypical occupational performance across the lifespan. Prerequisite: Open to students enrolled in the MOT graduate program or those with permission from the OTEd department.

OCTH 644. Culturized Contexts of Occupation. 2 Credits.
In OCTH 644, contextual supports and features of physical, social, and other environments will be explored as potential tools to facilitate maintaining or enhancing occupational performance irrespective of disability status. The interaction of person, context, and environment will be explored through guided discussion, reflection, and extra-mural exploratory assignments. A culminating activity inspires teams of students to assemble course elements to develop a cohesive summary project with practical application. Prerequisite: Open to students enrolled in the MOT graduate program or those with permission from the OTEd department.

OCTH 655. Neuroscience Analysis of Occupational Performance. 3 Credits.
In OCTH 655, we will build upon prior knowledge of neuroanatomy gained through OCTH 601. Principles of neuroscience will be interpreted in clinical application using a strength-based approach to advance understanding of nervous system function. The integration and function of neural systems will be considered in relation to specific challenges and capacity of the nervous system as a whole to support behavior. A practical application and problem-based perspective will be encouraged throughout the course, with students invited to consider consumer perspective and availability of potential supports. Prerequisite: Open to students enrolled...
in the MOT graduate program or those with permission from the OTEd department.

**OCTH 662. Physical Considerations in Facilitating Occupational Performance. 4 Credits.**

In OCTH 662, we will appraise the impact of select medical conditions on person factors and occupational performance in everyday life using scientific reasoning. Students will implement occupational therapy assessment and intervention strategies integrated with knowledge of injury and disease processes to facilitate an understanding of occupational performance outcomes. Particular consideration will be given to addressing complex comorbidities within the context occupational performance. Prerequisite: Open to students enrolled in the MOT graduate program or those with permission from the OTEd department.

**OCTH 670. Practicum - II. 2 Credits.**

In OCTH 670, we will employ the occupational therapy process, to participate in service provision to individuals through level I fieldwork experiences. We will build upon skills from OCTH 630 to advance leadership development and effective communication. This course will use both classroom and community-based practicum experiences. Prerequisite: Open to students enrolled in the MOT graduate program or those with permission from the OTEd department.

**OCTH 672. Psychiatric Considerations in Facilitating Occupational Performance. 3 Credits.**

In OCTH 672, we will examine in detail occupational performance as influenced by psychological conditions using evidence-based practices and principles of mental health. We will emphasize the importance of considering individuals, groups, and organizations with the context of occupational performance. Prerequisite: Open to students enrolled in the MOT graduate program or those with permission from the OTEd department.

**OCTH 680. Independent Study. 1-6 Credits.**

An elective course to allow students to pursue areas of special interest under direction of faculty of his or her choice. Investigation of special issues relevant to an aspect of occupational therapy practice will include study of pertinent practice factors. Student will complete special projects relevant to the practice areas, such as oral presentation, written paper or case analyses. May be repeated for credit. Prerequisite: Permission of department and instructor (offered Spring, Summer and Fall).

**OCTH 682. Analysis and Adaptation of Occupations - II. 2 Credits.**

In OCTH 682, we will support students in service learning settings to expand OCTH 622 task analysis outcomes to include the occupational therapy practice framework to further analyze and apply the occupational therapy process using person-centered practice. Prerequisite: Open to students enrolled in the MOT graduate program or those with permission from the OTEd department.

**OCTH 690. Evaluation and Assessment of Occupational Performance. 2 Credits.**

In OCTH 690, we will examine in detail principles of the evaluation process to analyze occupational performance across the lifespan. We will differentiate, select, interpret, and document both formal and informal measures within a person-centered and contextually relevant approach. Prerequisite: Open to students enrolled in the MOT graduate program or those with permission from the OTEd department.

**OCTH 704. Planning and Intervention in Occupational Therapy. 2 Credits.**

This course will use professional reasoning to analyze cases across the lifespan. We will work in small groups using a problem-based format with faculty mentors as we develop an occupational profile, occupational analysis and evidence-based intervention plans for each case.

**OCTH 710. Service Management: Delivery Systems. 1 Credits.**

This course will explore how service delivery systems influence pragmatic reasoning and occupational therapy practice. We will examine American and global health care systems along with occupational therapy health care delivery settings with a focus on quality, cost, and access related to service delivery. Teaching and learning experiences occur through lecture, on-line materials, class discussion and small group activities.

**OCTH 715. Supervision, Team Relations, and Management Communication. 1 Credits.**

This course emphasizes entry level skills related to supervision, teamwork, and communication within practice environments.

**OCTH 720. Occupational Therapy Practice Models. 7 Credits.**

This course will use practice models to guide evaluation and intervention in occupational therapy practice. Students will gain an understanding of historical and contemporary models, learn the evidence underlying each model and conduct assessments with a consumer from each of the contemporary models.

**OCTH 725. The Research Process. 1 Credits.**

This course will transition from understanding and appraising research (OCTH 783) to generating research (OCTH 790). The purpose of this course is to guide students through planning research by introducing the components of research and describing ways in which research may be conducted. The course reviews research ethics, writing research questions and hypotheses, sampling, measurement and data collection, components of quantitative and qualitative research, and information about disseminating research.

**OCTH 730. Practicum III. 2 Credits.**

This course will build upon practicum and level I fieldwork experiences to continue developing necessary skills for level II fieldwork experiences. We will determine the relevant variables for intervention, work collaboratively with others within each setting, analyze, and reflect upon the experience. We will analyze principles of evidence-based practice and occupation-based intervention.

**OCTH 738. Special Topics in Practice. 1-3 Credits.**

Focused study of theory application, professional topics and skills, and emerging practice questions. Learning experiences may be in the form of guided readings and discussion, directed projects, seminars, or community/clinical experience with focus on advanced supplemental or exploratory learning. Specific topics and formats will vary as they are generated by student interest and faculty expertise.

**OCTH 750. Case-Based Clinical Reasoning. 2 Credits.**

This course will apply the professional reasoning process to understand individuals' occupational performance and analyze services provided based on cases from level II fieldwork experiences. We will participate in small group discussion using a problem-based format to conduct case analysis and develop evidence-based intervention plans.

**OCTH 755. Issues and Trends Seminar. 1 Credits.**

This course will analyze key professional, political, and cultural issues and trends that impact service provision and the populations served by occupational therapists. This seminar format incorporates student-driven service experiences, discussion forums, and small group work to examine issues/trends and recognize opportunities to shape the future of the occupational therapy profession.

**OCTH 760. Professional Development and Leadership in Service Management. 3 Credits.**
This course will discuss professional responsibilities and career development opportunities as they relate to leadership, administration, and management of occupational therapy services. We will use reflective assessments to identify professional leadership strengths and career paths. Students working in small work groups will apply management principles to develop and propose community-based health promotion programs.

**OCTH 765. Family and Community Service Systems. 2 Credits.** This course will use professional reasoning to examine occupational practice within various delivery systems. We will use lecture and small group seminars to analyze systems from level II fieldwork experiences and develop a program evaluation plan based on collaborations between students and fieldwork supervisors.

**OCTH 770. Level II Fieldwork, Part 1. 6 Credits.** A required full-time, three-month supervised experience in a facility meeting specified criteria. Qualified occupational therapists supervise the experience. Students will be exposed to a variety of age ranges and disabilities within different service delivery systems. Prerequisite: Satisfactory completion of required academic coursework.

**OCTH 775. Level II Fieldwork, Part 2. 6 Credits.** A required full-time, three-month supervised experience in a facility meeting specified criteria. Qualified occupational therapists will supervise this experience. Students will be exposed to a variety of age ranges and disabilities within different service delivery systems. Prerequisite: Satisfactory completion of required academic coursework.

**OCTH 776. Population-Based Clinical Reasoning. 3 Credits.** This course will consider population-based concepts and theories to identify, prioritize, and address the health and life participation needs of populations. Within an interprofessional online learning context, students will collaborate to develop community-based assessment and intervention emphasizing promotion, maintenance, and restoration of health and wellness and disease prevention for specific populations.

**OCTH 780. Elective Level II Fieldwork. 3-6 Credits.** An elective (optional) supervised experience in a facility meeting specific criteria. Qualified occupational therapist will supervise this experience. This fieldwork would allow students to pursue areas of special interest. Length and time commitment of experience will be commensurate with credit hours (e.g., each credit requires 80 hours of fieldwork contact at specified site). Prerequisite: Satisfactory completion of required academic coursework.

**OCTH 783. Evidence-Based Practice. 2 Credits.** This course will review, appraise, and integrate various levels of evidence to inform occupational therapy practice. Students will learn where and how to find relevant evidence as well as what factors should be considered in the assessment of evidence. We will review statistics and their use in interpreting outcome data. Students will also learn to synthesize and translate evidence into useful information for practice.

**OCTH 790. Research Practicum and Professional Writing. 3 Credits.** This course will explore how the process of conducting a faculty-mentored research project becomes a platform for developing occupational therapy principles and for guiding practice, and how conveying meaning through professional writing is essential for communicating outcomes, interpretations, and instructions. Prerequisite: OCTH 725. Students from programs outside the MS in Occupational Therapy or PHD in Therapeutic Science need to contact the Occupational Therapy Department for permission to enroll.

**Occupational Therapy (MS) Courses**

**OTMS 699. Special Projects. 1-6 Credits.** (1-6) An elective course to allow student investigation of special issues or problems relevant to applied research and/or practice, under the direction of a faculty member chosen by the student. Systematic coverage of current issues may include a research investigation or study related to pertinent sociocultural trends, practice factors, or emerging issues in service provision. Students will complete special projects such as oral presentations, written papers, or case analysis as negotiate with the faculty mentor. May be repeated for credit. Prerequisite: Enrollment as a non-degree seeking student and permission of the instructor.

**OTMS 701. Professional Development. 3 Credits.** With an emphasis on leadership skills and professionalism, this course will include mentoring, supervising, managing, organizing presentations, and teaching, writing, and contributing through professional organizations (interdisciplinary and occupational therapy). Students professionalism on issues of concern to administrators, staff therapists, educators, or those in private practice. Prerequisite: Permission of Instructor.

**OTMS 705. Multidisciplinary Theoretical Perspectives. 3 Credits.** Students will identify and explore the key theories in occupational therapy and those more specific to their emphasis area with an emphasis on those currently influencing clinical reasoning. Students will demonstrate an understanding of contemporary theories and be able to compare and contrast key theories. Students will develop rationales for theory guided interventions. Furthermore, they will develop an impact summary in their identified area of emphasis. Prerequisite: Permission of Instructor.

**OTMS 735. Practice Models for Applied Science. 3 Credits.** Issues and trends relative to advanced application of theory, assessment and intervention with emphasis on pediatrics will be presented in lecture and discussion. Special projects will emphasize the student's special interests. Although faculty directed, student presentation will be emphasized.

**OTMS 799. Special Topics in Occupational Therapy. 1-6 Credits.** An elective course to allow student investigation of special issues or problems relevant to applied research and/or practice, under the direction of a faculty member chosen by the student. Systematic coverage of current issues may include a research investigation or study related to pertinent sociocultural trends, practice factors, or emerging issues in service provision. Students will complete special projects such as oral presentations, written papers, or case analyses as negotiated with the faculty mentor. May be repeated for credit. Prerequisite: Permission of instructor.

**OTMS 800. Research Proseminar. 1 Credits.** A proseminar conducted by the core graduate faculty in Occupational Therapy and Therapeutic Science. Twice-monthly meeting will involve student and faculty presentations of their current research, as well as provide more opportunities to obtain feedback on research proposals. May be taken more than once for a total of fours credits. (Same as TS 800.)

**OTMS 801. Applied Neuroscience. 3 Credits.** The course will address the major functions of the systems within the central nervous system and how they interact to produce responses to environmental demands. Sensory input, central processing, and output mechanisms will be analyzed. The student will then appraise human behavior in relation to function and dysfunction of the nervous system, both in formulating potential behavioral signs when a specific neurological
Occupational Therapy Doctorate Early Entry Courses

OTDE 700. Foundations in Occupational Therapy. 2 Credits.
This foundational course will support transition to the graduate program and the occupational therapy profession. Students will understand occupation as the foundation of the discipline and discuss the philosophy, history, current practice parameters and future directions of the occupational therapy profession. This course introduces students to constructs of professionalism including ethics and professional behaviors, interprofessionalism, and professional responsibilities within context of occupational therapy. Prerequisite: Acceptance to the entry-level professional OTD program of study.

OTDE 705. Functional Anatomy and Kinesiology to Support Occupational Performance. 3 Credits.
This course will focus on understanding of the physical components of human movement which serve as one foundation for occupational performance. The instructor will facilitate a section-based review of anatomy (e.g., shoulder, elbow, wrist, hand, hip, knee) integrated with the biomechanical and kinesiology principles that occur in typical and atypical movement within each section. The emphasis in this course will be on how to use biomechanical and kinesiology principles to guide the development of occupation-based interventions in people with various abilities across the lifespan through promotion, compensation, adaptation and prevention. Prerequisite: Acceptance to the entry-level doctoral program in Occupational Therapy.

OTDE 710. Professionalism in Context - I: Interpersonal and Interprofessional. 2 Credits.
This course includes professional opportunities for students to apply interpersonal and interprofessional skills and professional reasoning through service learning. Students will gain understanding regarding occupational performance in medical, community and educational contexts across the lifespan. Students will participate in reflections through small group discussions, apply knowledge from fieldwork experiences, conduct assessments, and develop evidence-based interventions. The emphasis for this course in the series is becoming familiar with the interprofessional team process and structure. Prerequisite: Successful completion of all prior coursework required by the OTDE curriculum.

OTDE 711. Professionalism in Context II. 3 Credits.
This course will explore the importance of context in understanding how the person, environment, and tasks all interact to guide occupational performance in everyday life. Students will apply the fundamentals of the evaluation process to assess occupational performance across the lifespan. Prerequisite: Successful completion of all prior coursework required by the OTDE curriculum.

OTDE 715. Scholarly Practice I: Becoming an Evidence-Based Practitioner. 2 Credits.
This course provides a beginning structure for the development of foundational scholarship skills to support and inform evidence-based occupational therapy practice. Topics include university resources for scholarship; finding and evaluating evidence related to conditions, assessments, interventions, outcomes, populations, and patient experiences. Students will be guided in understanding and categorizing levels of evidence provided by primary sources, books, web resources & practice journals. Students will complete writing assignments and identify key elements of scientific reasoning. Prerequisite: Acceptance to the entry-level professional OTD program.

OTDE 716. Scholarly Practice II: Professional Writing. 2 Credits.
This course builds on basic scholarship skills and will provide experience in communicating scholarly findings and articulating interpretation of study outcomes through professional writing. This process will reinforce familiarity with the American Psychological Association (APA) writing style. Writing clarity, good syntax, and proper grammar are essential components of professional writing, and will be considered when assigning grades. Prerequisite: Successful completion of all prior coursework required by the OTDE curriculum.

OTDE 720. Theory to Practice in Occupational Therapy. 2 Credits.
This course prepares students to use occupational therapy theories and professional reasoning to guide the OT process of evaluation, intervention and outcomes. Students will explore contemporary themes in current OT theories and models and examine the roots of these ideas. Students will explore how theory develops and evolves and the potential role of occupational therapy theories to influence health and well-being of individuals, groups and populations. Prerequisite: Acceptance to the entry-level professional OTD program.

OTDE 725. Analysis & Adaptation I. 3 Credits.
This course will analyze the role of occupations and the factors influencing occupational performance in everyday contexts. This course will apply the occupational therapy practice framework to understand occupation as a means and end to occupational therapy practice. This course will use experiential learning for understanding occupation, the occupational therapy process, and person-centered practice. Prerequisite: Acceptance to the entry-level professional OTD program.

OTDE 726. Analysis & Adaptation II. 4 Credits.
This course will apply concepts of professional reasoning and the occupational therapy framework to explore the impact of selected medical and psychosocial conditions on person factors and occupational performance in everyday life. An understanding of these conditions is paired with appropriate occupational therapy assessments and task analysis to understand performance considerations and occupation as a therapeutic means and end to occupational therapy practice. This course will use practical lab and service learning experiences as a context for understanding performance considerations, occupation, the occupational therapy process, and person-centered. Prerequisite: Successful completion of all prior coursework required by the OTDE curriculum.

OTDE 730. Population Health & Wellness. 3 Credits.
This course will present population-based concepts, theory, and evidence that link occupation, health, wellness, and quality of life and prioritize the health and life participation needs of populations. The course will draw from experiences with community partners to develop assessment and intervention emphasizing health promotion, maintenance and restoration of health and wellness and disease prevention for all populations in communities. Prerequisite: Acceptance to the entry-level professional OTD program.

**OTDE 740. Neuroscience Foundations to Support Occupational Performance. 3 Credits.**

Principles of neuroscience will be interpreted in clinical application using a strength-based approach to advance understanding of nervous system function. The integration and function of neural systems will be considered in relation to specific challenges and capacity of the nervous system as a whole to support behavior. A practical application and problem-based perspective will be encouraged throughout the course, with students invited to consider consumer perspective and availability of potential supports. Students will consider human behavior and occupational performance in relation to development and to function/dysfunction of the nervous system, both in formulating potential behavioral signs when a specific neurological site is presented, and in hypothesizing about neurological involvement when given a client description. Prerequisite: Open to students enrolled in the entry-level OTD graduate program or those with permission from the OTEd department. Successful completion of all prior courses required by the OTDE curriculum.

**OTDE 754. Occupational Performance and Participation Across the Lifespan - I. 3 Credits.**

This course is part 1 of theory and practice related to children and adolescents. This course will emphasize the need to examine participation in meaningful activities within authentic contexts with considerations for the effects of a disability, conditions, and age on occupational performance using a person-centered approach. Prerequisite: Successful completion of all prior courses in the OTDE curriculum.

**OTDE 755. Occupational Performance and Participation Across the Lifespan - II. 3 Credits.**

This is PART 2 of the OPPAL series that focuses on theory and practice related to children and adolescents. This course will emphasize the need to examine participation in meaningful activities within authentic contexts with considerations for the effects of a disability, conditions, and age on occupational performance using a person-centered approach. Prerequisites: Successful completion of all prior courses required by the OTDE curriculum.

**OTDE 756. Occupational Performance and Participation Across the Lifespan - III. 5 Credits.**

This course includes study about developmental theories and how occupations change across the lifespan related to adults and older adults. This course will emphasize the need to examine participation in meaningful activities within authentic contexts with considerations for the effects of a disability, conditions, and age on occupational performance. Prerequisite: Successful completion of all prior courses required by the OTDE curriculum.

**OTDE 760. Policy and Advocacy for Occupational Therapy - I. 2 Credits.**

This foundational course will introduce policies and the impact of professional advocacy on occupational therapy practice and systems. Students will understand what policy is, why policy matters, and how laws, payment/reimbursement policy, practice acts and regulatory agencies shape our view of health, ability/disability, and OT practice. Self-assessments provide baseline information for professional development related to policy and advocacy. Prerequisite: Successful completion of all prior courses required by the OTDE curriculum.

**OTDE 761. Policy and Advocacy for Occupational Therapy - II. 3 Credits.**

This course will build on foundational policy information by introducing system specific policies and the work of advocacy as applied to the OT profession, populations and policy development/implementation. Students will examine policy within and across settings and systems that impacts OT practice. Students will learn about stakeholders, policy development and will demonstrate advocacy within teams, across public/private systems. Prerequisite: Successful completion of all prior coursework required by the OTDE curriculum.

**OTDE 784. Educational Research I: Research Design, Analysis, and Interpretation. 3 Credits.**

This course introduces students to the process of conducting research. Students will apply the evidence-based practice cycle, scientific method, and critical thinking skills of research to occupational therapy practice. Students will develop research questions aligned with their interests for OT practice needs, and then explore existing literature and evidence related to their research question. Students will learn about responsible conduct of research as they begin to employ the research process. Students will learn and practice the steps for quantitative research processes using a statistical software package. Students will learn the preliminary stages of how to write and put together the components of a manuscript for a peer-reviewed publication. Prerequisite: Successful completion of all prior courses required by the OTDE curriculum.

**OTDE 815. Supporting Occupational Performance Across the Mental Health Continuum. 3 Credits.**

This course will apply theory and evidence to occupational therapy practice across the continuum of mental health through mental illness in healthcare, social, and educational settings. Students will consider opportunities to support positive mental health for all people and support individuals with psychiatric disorders through assessment and intervention for meaningful, client-determined engagement in everyday life. Prerequisite: Successful completion of all prior coursework required by the OTDE curriculum.

**OTDE 845. Scholarly Practice IV: Interpreting, Integrating, and Translating Evidence. 4 Credits.**

This course will emphasize the processes of conducting and disseminating a research study. Conducting a study includes activities such as subject recruiting, data management and analysis, and evaluating how findings may be used to guide practice. Disseminating research involves understanding how to frame the research based on stakeholder interests and could involve manuscript writing, professional presentations, or discussions with community agencies, families, or consumers. This course allows students to implement a research project based on research questions developed as part of the prior courses in the research sequence in this curriculum. Additionally, students will create a dissemination plan for a community agency wanting information to advance their mission. The goals are to produce an entry-level occupational therapist who is aware of the relation between good research and good practice, is capable of critical analysis of scientific and clinical research literatures, and who is aware of the need for problem identification, good research design and methodology, and the appropriate evaluation, interpretation, and presentation of research findings. Prerequisite: Successful completion of all prior coursework required by the OTDE curriculum.

**OTDE 850. Professionalism in Education. 2 Credits.**

This course focuses on teaching and learning activities in a variety of contexts. This course builds on professional communication strategies
introduced in previous Professionalism in Context I. Students will learn
effective teaching strategies to communicate information to clients, families, and other professionals while gaining confidence as an entry-
level occupational therapy practitioner. Students will gain experience in the
development of scholarly presentations for health care professionals. Relationship development, the exchange of messages, conflict
management, and a better understanding of the Self, will all contribute to the student’s knowledge and understanding of the importance of effective
communication in teaching. Prerequisite: Successful completion of all
prior coursework required by the OTDE curriculum.

OTDE 860. Professionalism in Practice I. 3 Credits.
Students will apply the professional reasoning process to understand individuals’ occupational performance based on cases from level II
fieldwork experiences. Students will conduct case analysis and develop evidence-based intervention plans. Prerequisite: Successful completion of all
prior coursework required by the OTDE curriculum.

OTDE 861. Professionalism in Practice II. 3 Credits.
This course will use professional reasoning to examine occupational practice within various delivery systems. Students will use lecture
and small group seminars to analyze systems from level II fieldwork experiences and provide evidence to support the role of OT in innovative and traditional practice settings. Prerequisite: Successful completion of all
prior coursework required by the OTDE curriculum.

OTDE 870. Contemporary Community Engagement. 2 Credits.
This course introduces the concept of community engagement as a strategy for supporting healthy individuals, populations, and communities. Students will reflect on professional experiences and interests to identify gaps in community resources that impact occupational justice. Students will gain competency in identifying health disparities, analyzing policy, and identifying and communicating with funding agencies to engage community interprofessional partnerships. Prerequisite: Successful completion of all prior coursework required by the OTDE curriculum.

OTDE 900. Occupational Therapy Level II Fieldwork - Part I. 1-12
Credits.
The first of a required full-time, three-month supervised experience in a facility meeting specified criteria. Qualified occupational therapists
supervise the experience. Students will be exposed to a variety of age ranges and disabilities within different service delivery systems. This course can be taken multiple times and must be taken until a total of 12 credit hours have been completed to meet degree requirements. Prerequisite: Satisfactory completion of required academic coursework with a cumulative grade point average of 3.0.

OTDE 901. Occupational Therapy Level II Fieldwork - Part II. 12
Credits.
The second required full-time, three-month supervised experience in a facility meeting specified criteria. Qualified occupational therapists
supervise the experience. Students will be exposed to a variety of age ranges and disabilities within different service delivery systems. By the end of the three-month period, students will be expected to perform at the level of an entry-level therapist. Prerequisite: Satisfactory completion of required academic coursework with a cumulative grade point average of 3.0.

OTDE 902. Occupational Therapy Level II Fieldwork - Alternative. 6-12 Credits.
An alternative supervised experience in a facility meeting specific criteria. Qualified occupational therapists supervise the experience. By the end of the experience, students will be expected to perform at the level of an entry-level therapist. Prerequisite: Satisfactory completion of required academic coursework with a cumulative grade point average of 3.0.

OTDE 915. Professionalism in Leadership and Administration. 3
Credits.
This course will focus on professional responsibilities and essential skills associated with leadership, administration, and management of occupational therapy services. Students will gain knowledge in the principles of program evaluation, business aspects of practice, as well as supervisory and management issues. In addition, students will acquire skills in professional development and leadership skills for the entry-level practitioner. Prerequisite: Successful completion of all prior coursework required by the OTDE curriculum.

OTDE 925. Independent Study - Special Topics. 1-3 Credits.
This is a learning experience tailored to the needs and interests of a student, focused on topic outside of the regular curriculum or explored in
greater detail than is covered by the regular curriculum. The student will work closely with the faculty sponsor to define, pursue, and complete the project. This syllabus is accompanied by a "proposal" form, which must be completed and submitted for consideration by the faculty sponsor at least 8 weeks prior to the start of the term in which the experience will take place. Permission to enroll in this course will not be granted until the proposal has been reviewed and approved by the faculty sponsor. Prerequisite: Successful completion of all prior coursework required by the OTDE curriculum. Consent of the instructor.

OTDE 935. Independent Study - Study Abroad. 1-3 Credits.
This independent study experience allows occupational therapy students to explore the profession in an international setting. The experience must be closely coordinated with the Office of International Programs at KU Medical Center. The student establishes individual learning objectives with the OT department faculty mentor in the semester preceding the experience. Prerequisite: Successful completion of all prior coursework required by the OTDE curriculum. Consent of the instructor.

OTDE 950. Capstone Project Planning. 3 Credits.
This course is designed to foster development of in-depth and advanced knowledge in a specific interest area through guided planning of the Capstone Project. Students will pursue a literature review while considering the needs of a population or organization, and then propose a Capstone Project. This course supports student development of in-depth knowledge as they explore an area of: a) research and scholarship, b) policy and advocacy c) advanced practice, or other content area specified by ACOTE. Prerequisite: Successful completion of all prior coursework required by the OTDE curriculum. Consent of the instructor.

OTDE 952. Capstone Project Planning - III. 1 Credits.
This course will prepare students for their capstone experiences as they begin implementing a plan for their capstone project. Building upon the activities started in OTDE 950 & 951, this course supports student development of in-depth knowledge as they explore an area of: a) research and scholarship, b) policy and advocacy c) advanced practice, or other content area specified by ACOTE. Prerequisite: Successful completion of all prior coursework required by the OTDE curriculum.

OTDE 980. Capstone Dissemination. 3 Credits.
Students will collaborate with faculty mentors and site supervisors to develop scholarly presentations for dissemination. Students will present the results of the capstone project to local, regional and/or national audiences. Students will assume a leadership role in identifying opportunities for publication of the capstone project and completing the submission. This course is completed in conjunction with the capstone experience to provide students with the opportunity to develop skills in professional presentations and publications. Prerequisite: Successful completion of all prior coursework required by the OTDE curriculum.

OTDE 990. Capstone Experience. 14 Credits.
Students will complete a 14-week practical experience at the completion of coursework and level II fieldwork experiences. This experience is designed to provide in-depth knowledge in a specific area of interest. Students will participate in practical experiences and scholarly activities designed to promote autonomous learning. Students will assume a leadership role in the implementation of the capstone project with guidance from faculty mentor and site supervisor. Prerequisite: Successful completion of all prior coursework required by the OTDE curriculum.

**Occupational Therapy (Doctorate) Courses**

**OTD 750. Clinical Reasoning and Problem Based Learning. 3 Credits.**

Students will apply a clinical reasoning process to individuals with occupational performance needs. Cases will be presented from students' clinical experiences. In a problem solving format, students will evaluate models of service delivery, evaluation and intervention delivery and dissemination of information received by the individual. Students will identify and discuss alternatives given a variety of situations and environments. PREREQUISITE: Permission of Department.

**OTD 770. Knowledge For Specialty Practice Area. 3 Credits.**

This course is designed to support and correspond with OTD 780. Students will be matched with a faculty mentor as they develop a literature review in an area of clinical interest. This experience is designed to supplement students' ongoing clinical practice as they develop a library of pertinent empirical readings. Students will be mentored as they develop skills in analytical reading and identification of information that informs best practice. PREREQUISITE: Admission to OTD Program or Permission of Instructor.

**OTD 776. Population Based Health Care. 3 Credits.**

This course will coordinate with OCTH 776. The purpose of this course is to introduce concepts and theories related to providing health care to complex systems and aggregates in the community, state and nation. Emphasis is placed on the promotion, maintenance and restoration of health and wellness and the prevention of disease. Internal and external environmental components which include historical, political, social, cultural and economic factors are presented. The role of the health care provider in identifying, prioritizing and meeting the health and life participation needs of aggregates is discussed. PREREQUISITE: Permission of department. LEC

**OTD 780. Practicum in Specialty Practice Area. 3 Credits.**

This course is designed to support and correspond with OTD 770. Students will complete this course as they work in a clinical environment. They will meet with a faculty mentor to support the analysis and dissemination of their empirical information gathered during OTD 770. They will present their empirical literature findings to their professional colleagues via a clinical research forum. Students will be expected to create three forms of information dissemination and critically review the professional feedback they receive. PREREQUISITE: Permission of department.

**OTD 783. Evidence Based Practice. 3 Credits.**

This course will coordinate with OTCH 783. Students will address the parameters and criteria for evidence-based practice. They will build a library of information that facilitates their evaluation of the status, beliefs, and practice of Occupational Therapy. They will develop skill in the synthesis of empirical evidence and explore dissemination options to service recipients. Students' work will culminate in the formulation of a decision-making paradigm for their future practice decisions. PREREQUISITE: Permission of Department.

**OTD 799. Practice and Research. 3 Credits.**

This is an elective course that allows students to pursue areas of special interest under the direction of a faculty member of his or her choice. This course is designed to support students' learning as they complete their pre-doctoral studies. Investigation of special issues relevant to an aspect of occupational therapy practice will include study of pertinent practice factors. Students will complete special projects relevant to the practice areas of interest, such as an oral presentation, written paper, or case analysis. May be repeated for credit. PREREQUISITE: Permission of Department.

**OTD 825. Qualitative Research Methods. 3 Credits.**

This course is an introduction to qualitative research techniques. Students will have several opportunities to gain hands-on experience using fundamental qualitative research techniques to sharpen their data collection, analysis and write-up skills. The goals of this course are to better understand the role qualitative techniques play in research, identify various ethical issues, sharpen interview and observation skills, and develop foundation skills for collecting, analyzing and interpreting qualitative data. Prerequisite: Permission of Department. Lecture course.

**OTD 835. Quantitative Research for Applied Science. 3 Credits.**

Research relevant to therapeutic intervention comes from a variety of disciplines involving varied research designs and analysis strategies. Students in this course will examine selected research studies and gain skill in analyzing methods and results as well as in applying research findings to practical problems. Students will conduct a systematic review on a specific area of occupational therapy practice.

**OTD 850. Teaching Practicum. 1-3 Credits.**

The purpose of this course is to provide practical learning whereby students receive individual mentorship for the development, implementation and evaluation of a teaching experience. Students will be responsible for developing the material, instructing students, grading assignments and evaluating the teaching experience. The teaching experience is expected to include at least 12 hours of face to face instruction (or the equivalent in on-line teaching or written materials). Teaching experiences can include MOT program lectures or labs, continuing education workshops, patient education programs, or staff inservices or another experience that meets the time and competency requirements. Prerequisite: A graduate level teaching methods course such as NSG 873, NSG 874, C & T 740, C & T 840

**OTD 860. Multidisciplinary Theoretical Perspectives. 3 Credits.**

Students will identify and explore key theories in behavioral, social, and occupational science with an emphasis on those currently influencing clinical reasoning and applications to practice and/or research. Students will demonstrate an understanding of multidisciplinary theoretical frameworks and be able to compare and contrast key theories, while also developing knowledge about theory guided research and practice.

**OTD 865. Occupation-Based Practice. 3 Credits.**

This course is designed to critically review Occupational Therapy theories, research, practice models and frameworks using the tenets of occupation based practice. Students will analyze seminal literature from occupational science and relate theory and evidence to practice. Students will review their specified area of practice to develop a proposed method of practice that incorporates empirical evidence and practice methods. Finally, students will select a mentor from their practice area to review their proposal. Critical feedback will be incorporated into a final presentation and paper. PREREQUISITE: Permission of Department.

**OTD 875. Professional Development. 3 Credits.**

This course will explore professional development from an advanced practice perspective. Students will examine aspects of advanced practice such as leadership (both work and professional), management, group and system communication and change agency. They will explore these topics.
within their current practice settings and select an area of advanced skills to explore in more depth. Students will develop an understanding of how they can impact systems and contribute to the development of healthcare professions.

**OTD 880. Program Evaluation. 3 Credits.**
Leadership in areas of specialty practice will require our graduates to critically evaluate their practice programs. In this course, students will explore the traditional and innovative ways to evaluate professional services and systems, and they will develop skills to conduct program evaluations. Students will examine the purpose and process of program evaluations in a variety of clinical settings. Through lecture, discussion, and a project they will develop and execute a program evaluation in their area of practice. PREREQUISITE: Permission of Department.

**OTD 885. Advanced Practicum. 1-3 Credits.**
This practicum is designed to span 400 hours. Students will identify an area of practice through which they want to develop clinical initiatives and leadership. Selected field experiences will provide opportunities for program development, leadership, and information dissemination. Upon completion, the students will provide his or her clinical team with a program, or research based initiative, along with specified program evaluation methods. PREREQUISITE: Permission of Department and continuous enrollment until completion of competencies.

**OTD 890. Capstone Project. 1-3 Credits.**
The capstone project will comprise a scholarly report individualized to the scope of the project chosen. A capstone project report represents the application of knowledge as well as the search for it, and differs from a thesis such that student opinion and experience is involved. The student must negotiate capstone objectives, evaluation standards and any potential approvals prior to initiation of the project. PREREQUISITE: Permission of OTE Advisor/Mentor after completion of core, elective, and practicum coursework. Total capstone credit will equal 3 hours. Prerequisite: All core, elective, and practicum coursework.

**OTD 899. Special Projects. 1-3 Credits.**
This is an elective course that allows students to pursue areas of special interest under the direction of a doctoral faculty member of his or her choice. This course is designed to support doctoral training. Academic options range from research based studies and/or activities to critical analysis of clinical practice methods. Students will complete special projects relevant to their designated practice area of interest. Students must negotiate learning objectives, academic projects and evaluation standards with their mentor. May be repeated for credit. PREREQUISITE: Permission of department. LEC

**PhysThr, RehabSci & AthlTrng Courses**

**ATTR 701. Foundations in Athletic Training. 1 Credits.**
Introduction to foundational content and basic skills of clinical practice for the athletic training profession. Specific emphasis is placed on behavioral practices of healthcare professionals and clinical skills in patient management. Prerequisite: Admission into the MSAT program or permission of instructor.

**ATTR 708. Applied Anatomy. 1 Credits.**
This course introduces how to use anatomical knowledge to gather basic examination information about the patient. Learning opportunities include lecture and laboratory. Prerequisite: Admission into the MSAT program or permission of instructor.

**ATTR 709. Advanced Topics in Human Anatomy. 6 Credits.**
The student will obtain a basic understanding of human gross anatomy with specific knowledge of upper and lower extremities, head and neck, back and neural structures. At the end of this course the student will be able to apply this knowledge of anatomy to functional and clinical situations. Prerequisite: Admission into the MSAT program or permission of instructor.

**ATTR 713. Integrated Clinical Education I. 2 Credits.**
This course consists of supervised experiences in a clinical setting and seminar sessions that provide opportunities for application of didactic course work. Emphasis will be placed on developing communication, interpersonal, and documentation skills, as well as other athletic training skills and procedures that have been introduced in courses. Prerequisite: Successful completion of the first semester of the MSAT curriculum or permission of instructor.

**ATTR 714. Evaluation & Management I. 4 Credits.**
Review of integrative human pathophysiology with an emphasis upon homeostatic mechanisms and etiologies of disease. The interrelationships of function and dysfunction at the molecular, cellular and tissue level (pathology), organ and systemic level (impairment) and to the total human body (functional limitations) will be applied in each of the body systems. Discussions and applied materials will be tailored to the athletic trainer with an emphasis on clinical tools to medically screen patients for the presence of symptoms and signs. Prerequisite: Successful completion of the first semester of the MSAT curriculum or permission of instructor.

**ATTR 716. Interventions I. 2 Credits.**
Application of the skills obtained in clinical coursework and clinical problem-solving using common athletic training interventions. Prerequisite: Successful completion of the first semester of the MSAT curriculum or permission of instructor.

**ATTR 718. Documentation and Health Informatics. 1 Credits.**
Emphasizes the development of effective documentation skills, including exposure to a variety of documentation formats across various practice setting and implications for proper reimbursement. Concepts of healthcare informatics are introduced including use of an electronic documentation systems and the capability of information systems to support quality care. Disablement classification models, behavioral objectives, and functional outcome concepts are applied to organize patient data and identify treatment goals. Prerequisite: Successful completion of the first semester of the MSAT curriculum or permission of instructor.

**ATTR 719. Applied Kinesiology and Biomechanics. 4 Credits.**
This course involves a study of joint structure and function, and biomechanical principles underlying human motion. Emphasis is placed on the application of kinesiological principles to athletic training situations. Learning opportunities include lecture and laboratory. Prerequisite: Successful completion of the first semester of the MSAT curriculum or permission of instructor.

**ATTR 723. Integrated Clinical Education II. 2 Credits.**
This course consists of supervised experiences in a clinical setting and seminar sessions that provide opportunities for application of didactic course work. Emphasis will be placed on developing communication, interpersonal, and documentation skills, as well as other athletic training skills and procedures that have been introduced in courses. Prerequisite: Successful completion of the first 2 semesters of the MSAT curriculum or permission of instructor.

**ATTR 724. Evaluation & Management II. 6 Credits.**
Builds on the foundation from anatomy, kinesiology and biomechanics. Examination skills and treatment interventions that apply specifically to the musculoskeletal system are provided. Basic examination skills, gait analysis, and therapeutic exercise are discussed and reviewed for common orthopedic conditions. The course will integrate instruction with case-based clinical problem solving. Prerequisite: Successful
completion of the first 2 semesters of the MSAT curriculum or permission of instructor.

**ATTR 725. Research Seminar. 1 Credits.**
An introduction to research in evidence-based practice that allows students to develop clinical questions and integrate evidence into clinical practice. Emphasis is placed on clinical research pertinent to athletic training. Prerequisite: Successful completion of the first 2 semesters of the MSAT curriculum or permission of instructor.

**ATTR 726. Interventions II. 4 Credits.**
Application of the skills obtained in clinical coursework and clinical problem-solving using common athletic training treatment interventions. Prerequisite: Successful completion of the first 2 semesters of the MSAT curriculum or permission of the instructor.

**ATTR 727. Clinical Reasoning I. 1 Credits.**
Explores the nature of clinical reasoning and involves self-reflection, informed decision making, and medical ethics in managing patient care. Knowledge and skills from the curriculum taught to this point will be incorporated through the use of case studies and simulations within the students' educational exposure. The Capstone Project will be introduced. Prerequisite: Successful completion of the first 2 semesters of the MSAT curriculum or permission of instructor.

**ATTR 755. Pharmacology. 2 Credits.**
Pharmacological background for the clinical treatment of patients. Fundamentals of the actions of drugs including mechanisms of therapeutic and adverse effects. Prerequisite: Successful completion of the first semester of the MSAT curriculum or permission of instructor.

**ATTR 793. Integrated Clinical Education III. 1 Credits.**
This course consists of supervised experiences in a clinical setting and seminar sessions that provide opportunities for application of didactic course work. Emphasis will be placed on developing communication, interpersonal, and documentation skills, as well as other athletic training skills and procedures that have been introduced in courses. Prerequisite: Successful completion of the first 3 semesters of the MSAT curriculum or permission of instructor.

**ATTR 800. Independent Study. 1-8 Credits.**
Individually negotiated learning experiences appropriate to the interests and background of the student. Prerequisite: Admission to the MSAT program, or permission of instructor.

**ATTR 807. Clinical Reasoning II. 1 Credits.**
Application and integration of clinical reasoning and medical ethics in managing patient care. Knowledge and skills from the curriculum taught to this point will be incorporated through the use of case studies and simulations within the students' educational exposure. The Capstone Project will continue. Prerequisite: Successful completion of the first 3 semesters of the MSAT curriculum or permission of instructor.

**ATTR 812. Health Care Administration. 2 Credits.**
Contemporary issues in health care which impact the practice of athletic training in the health care system. Changes in the US health care system will be discussed, including managed care, plus essential elements and principles of management in health care organizations, and an overview of human resources and operational management. Financial management specifically reimbursement for patient services, risk management, information management, and compliance will be discussed. Discussion of professional development is intertwined throughout the course. Students will be exposed to business development and entrepreneurial skills needed to practice. Prerequisite: Successful completion of the first 3 semesters of the MSAT curriculum or permission of instructor.

**ATTR 813. Clinical Experience I. 2 Credits.**
An immersive clinical experience that allows for graduated autonomy in developing and providing patient centered skills for successful health care practice. The student will work alongside and under the supervision of a Preceptor to experience all aspects of athletic training practice. Prerequisite: Successful completion of the first 3 semesters of the MSAT curriculum or permission of instructor.

**ATTR 814. Evaluation & Management III. 3 Credits.**
Incorporates concepts from anatomy, kinesiology, basic biomechanics and knowledge of peripheral joint examination and treatment. Terminology, examination, evaluation, development of a treatment plan and treatment techniques and basic differential diagnosis skills for the head, neck, and spine are taught. Prerequisite: Successful completion of the first 3 semesters of the MSAT curriculum or permission of instructor.

**ATTR 816. Interventions III. 2 Credits.**
Application of the skills obtained in clinical coursework and clinical problem-solving using common athletic training interventions. Prerequisite: Successful completion of the first 3 semesters of the MSAT curriculum or permission of instructor.

**ATTR 818. Medical Imaging. 1 Credits.**
An introduction to medical imaging and an overview of its role in the health care delivery system. Topics include basic imaging equipment with an emphasis on digital acquisition and processing. Factors affecting the quality of images and limitations to the techniques are reviewed. Imaging techniques covered include: X-rays, CT scans, Nuclear medicine, ultrasound, MRI and PET. This course will include a component covering the microscopic anatomy of cells. Prerequisite: Successful completion of the first 3 semesters of the MSAT curriculum or permission of instructor.

**ATTR 821. Athletic Training Seminar. 1 Credits.**
Graduate seminar focusing on current issues in athletic training and preparation for the athletic training credentialing exam. Prerequisite: Successful completion of the first 4 semesters of the MSAT curriculum or permission of instructor. Corequisite: ATTR 843.

**ATTR 822. Behavioral Health. 2 Credits.**
Exploration of the development and integration of behavioral, psychosocial, and biomedical science knowledge and techniques relevant to the understanding of health and illness. Content will include application of knowledge and techniques to patient centered care. Prerequisite: Successful completion of the first 4 semesters of the MSAT curriculum or permission of instructor. Corequisite: ATTR 843.

**ATTR 824. Performance Enhancement. 1 Credits.**
Development and application of interventions to optimize sport performance. Prerequisite: Successful completion of the first 4 semesters of the MSAT curriculum or permission of instructor. Corequisite: ATTR 843.

**ATTR 827. Clinical Reasoning III. 1 Credits.**
Application and integration of clinical reasoning and medical ethics in managing patient care. Knowledge and skills from the curriculum taught to this point will be incorporated through the use of case studies and simulations within the students' educational exposure. The Capstone Project will continue. Prerequisite: Successful completion of the first 4 semesters of the MSAT curriculum or permission of instructor. Corequisite: ATTR 843.

**ATTR 837. Clinical Reasoning Capstone. 1 Credits.**
Application and integration of clinical reasoning and medical ethics in managing patient care. Knowledge and skills from the curriculum taught to this point will be incorporated through the use of case studies and simulations within the students' educational exposure. The Capstone...
Project will be completed. Prerequisite: Successful completion of the first 5 semesters of the MSAT curriculum or permission of instructor.

**ATTR 843. Clinical Experience II. 4 Credits.**
An immersive clinical experience that allows for graduated autonomy in developing and providing patient centered skills for successful health care practice. The student will work alongside and under the supervision of a Preceptor to experience all aspects of athletic training practice. Prerequisite: Successful completion of the first 4 semesters of the MSAT curriculum or permission of instructor. Corequisite: ATTR 863.

**ATTR 863. Integrated Clinical Education IV. 1 Credits.**
This course consists of supervised experiences in a clinical setting and seminar sessions that provide opportunities for application of didactic course work. Emphasis will be placed on developing communication, interpersonal, and documentation skills, as well as other athletic training skills and procedures that have been introduced in courses. Prerequisite: Successful completion of the first 4 semesters of the MSAT curriculum or permission of instructor. Corequisite: ATTR 843.

**ATTR 883. Clinical Experience III. 8 Credits.**
An immersive clinical experience that allows for graduated autonomy in developing and providing patient centered skills for successful health care practice. The student will work alongside and under the supervision of a Preceptor to experience all aspects of athletic training practice. Prerequisite: Successful completion of the first 5 semesters of the MSAT curriculum or permission of instructor.

**PhysThr, RehabSci & AthlTrng Courses**

**PTRS 702. Physical Therapy Documentation and Health Informatics. 1 Credits.**
Emphasizes the development of effective documentation skills, including exposure to a variety of documentation formats across various practice settings and implications for proper reimbursement. Concepts of healthcare informatics are introduced including use of an electronic documentation systems and the capability of information systems to support quality care. Disablement classification models, behavioral objectives, and functional outcome concepts are applied to organize patient data and identify treatment goals. Prerequisite: Successful completion of semester 1 of the DPT curriculum or permission of instructor.

**PTRS 703. Applied Anatomy. 1 Credits.**
This course introduces the learner to how physical therapists use anatomical knowledge to gather basic examination information about the patient. Prerequisite: Admission into the DPT program or permission of instructor.

**PTRS 704. Physical Therapy Interventions I. 3 Credits.**
This course focuses on development of skills required by the physical therapist in the generalist acute care environment. Emphasis is placed on body mechanics, workplace safety, infection control, basic mobility assessment, transfers, positioning, line management, responding to clinical emergencies, wheelchair basics, therapeutic exercise, assistive devices, gait training, plan of care and discharge planning. Prerequisite: Successful completion of semester 1 of the DPT curriculum or permission of instructor.

**PTRS 705. Physical Therapy Interventions II. 4 Credits.**
This course will introduce the principles and application of therapeutic biophysical agents. Students will apply skills obtained in previous course work and begin clinical problem-solving using common physical therapy treatment interventions. Topics include integumentary management for wound healing interventions, therapeutic modalities with an emphasis on the healing process, and electrical modalities. Prerequisite: Successful completion of the first 2 semesters of the DPT curriculum or permission of the instructor.

**PTRS 710. Advanced Topics in Human Anatomy. 6 Credits.**
The student will obtain a basic understanding of human gross anatomy with specific knowledge of upper and lower extremities, head and neck, back and neural structures. At the end of this course the student will be able to apply this knowledge of anatomy to functional and clinical situations. Prerequisite: Admission into the DPT program or permission of instructor.

**PTRS 711. Applied Kinesiology and Biomechanics. 4 Credits.**
This course involves a study of joint structure and function, and biomechanical principles underlying human motion. Emphasis is placed on the application of kinesiological principles to clinical physical therapy situations. Prerequisite: Successful completion of semester 1 of DPT curriculum or permission of instructor.

**PTRS 720. Integrated Clinical Experience I. 1 Credits.**
This course consists of supervised experiences in a clinical setting and seminar sessions that provide preliminary opportunities for application of didactic course work. Emphasis will be placed on the development of communication and interpersonal skills in the clinical setting, as well as documentation and physical therapy skills and procedures that have been introduced in courses. Prerequisite: Successful completion of semester 1 of the DPT curriculum or permission of instructor.

**PTRS 730. Integrated Clinical Experience II. 1 Credits.**
This course consists of supervised experiences in a clinical setting and seminar sessions that provide preliminary opportunities for application of didactic course work. Emphasis will be placed on the development of communication and interpersonal skills in the clinical setting, as well as documentation and physical therapy skills and procedures that have been introduced in courses. Prerequisite: Successful completion of the first 2 semesters of the DPT curriculum or permission of instructor.

**PTRS 745. Orthopedic Physical Therapy I. 6 Credits.**
This course builds on the foundation from anatomy, kinesiology and biomechanics. Examination skills and treatment interventions that apply specifically to the musculoskeletal system are provided. Basic examination skills for all peripheral joints, gait analysis, and therapeutic exercise are discussed and reviewed for common orthopedic conditions. The course will integrate instruction with case-based clinical problem solving. Prerequisite: Successful completion of the first 2 semesters of the DPT curriculum or permission of instructor.

**PTRS 746. Musculoskeletal Conditions and Management. 3 Credits.**
Mastery of physical therapy subjective and objective examination and treatment intervention for patients of all ages who present with a musculoskeletal problem with emphasis on amputation, prosthetics, upper and lower extremity orthoses, fracture management and connective tissue disorders. Emphasis will be placed on the most common clinical problems and physical therapy diagnoses. Prerequisite: Successful completion of the first 2 semesters of the DPT curriculum or permission of instructor.

**PTRS 750. Research in Evidence-Based Physical Therapy Practice. 3 Credits.**
An introduction to research in the evidence-based physical therapy practice including the Scientific Method, library and multimedia resources, research process, measurement theory (reliability and validity), research designs, experimental design principles, research ethics, critical review and analysis of research publications, statistical concepts, and writing of a research report and/or research proposal. Throughout, emphasis is placed on clinical research pertinent to physical therapy. Prerequisite:
Successful completion of the first 2 semesters of the DPT curriculum or permission of instructor.

PTRS 807. Ethics in Health Care. 1 Credits.
This course covers the basic ethical concepts, principles, relevant theories, and ethical decision-making models applied to major contemporary health care issues and dilemmas facing health professionals. Development of skills for ethical clinical decision making is the focus. Prerequisites: Permission of instructor.

PTRS 817. Ethics in Health Care. 2 Credits.
This course covers basic ethical concepts, principles, relevant theories and ethical decision-making models applied to major contemporary health care issues and dilemmas facing health professionals. Development of skills for ethical clinical decision making is the focus. Prerequisite: Successful completion of the first 5 semesters of the DPT curriculum or permission of instructor.

PTRS 825. Exercise Physiology. 3 Credits.
This course will provide entry-level DPT students with the knowledge of the physiological functions and adaptations of the human body with exercise. Emphasis will be placed on familiarizing students with sound medical rationale and the basis for treatment considering the immediate and long-term effects of exercise. Prerequisite: Successful completion of the first 3 semesters of the DPT curriculum, or consent of the instructor.

PTRS 826. Cardiopulmonary Physical Therapy. 5 Credits.
Anatomy, physiology and pathophysiology of the cardiovascular and pulmonary systems are studied and related to clinical signs and symptoms. Students are introduced to common evaluation and treatment techniques, as well as the rationale for including physical therapy in the management of cardiopulmonary conditions. These topics are discussed in conjunction with case studies and current research. Prerequisite: Successful completion of the first 5 semesters of the DPT curriculum or permission of instructor.

PTRS 828. Medical Imaging. 1 Credits.
An introduction to medical imaging and an overview of its role in the health care delivery system. Topics include an introduction to basic imaging equipment with an emphasis on digital acquisition and processing. Factors affecting the quality of images and limitations to the techniques are reviewed. Imaging techniques covered include: X-rays, CT scans, Nuclear medicine, ultrasound, MRI and PET. This course will also include a component covering the microscopic anatomy of cells. Prerequisite: Admission to the DPT program or permission of instructor.

PTRS 830. Integrated Clinical Experience III. 2 Credits.
This course consists of supervised experiences in a clinical setting and seminar sessions that provide intermediate opportunities for application of didactic course work. Emphasis will be placed on the development of communication and interpersonal skills in the clinical setting, as well as documentation and physical therapy skills and procedures that have been introduced in courses. Prerequisite: Successful completion of the first 6 semesters of the DPT curriculum or permission of instructor.

PTRS 833. Pediatric Physical Therapy. 3 Credits.
This course introduces fundamental concepts necessary for the entry-level physical therapist to examine, evaluate, and treat the pediatric client. Lecture and lab experiences emphasize a problem-oriented approach to physical therapy management of children with musculoskeletal, neurological, and/or cardiopulmonary impairments. Students will learn to recognize components of normal and abnormal development, particularly during the first year of life. Prerequisite: Successful completion of the first 5 semesters of the DPT curriculum or permission of instructor.

PTRS 840. Integrated Clinical Experience IV. 2 Credits.
This course consists of supervised experiences in a clinical setting and seminar sessions that provide intermediate opportunities for application of didactic course work. Emphasis will be placed on the development of communication and interpersonal skills in the clinical setting, as well as documentation and physical therapy skills and procedures that have been introduced in courses. Prerequisite: Successful completion of the first 5 semesters of the DPT curriculum or permission of instructor.

PTRS 845. Orthopedic Physical Therapy II. 6 Credits.
This course incorporates concepts from anatomy, kinesiology, and basic biomechanics, and knowledge of peripheral joint examination and treatment. Terminology, examination, evaluation, development of a treatment plan and treatment techniques and basic differential diagnosis skills for the spine and the temporomandibular joint are taught. Prerequisite: Successful completion of the first 4 semesters of the DPT curriculum or permission of instructor.

PTRS 846. Orthopedic Physical Therapy III. 3 Credits.
This course incorporates concepts from anatomy, kinesiology, biomechanics, and Orthopedic Physical Therapy I and II courses. Terminology, examination, evaluation, development of a treatment plan and treatment techniques and advanced differential diagnosis skills for complex peripheral and/or spinal disorders are taught. Prerequisite: Successful completion of the first 6 semesters of the DPT curriculum or permission of instructor.

PTRS 852. Neurologic Physical Therapy and Rehabilitation I. 6 Credits.
This course will introduce the principles of neuroscience and describe their application as relevant to physical therapists. The course will introduce the terminology of the nervous system and cover the major functions of the nervous systems. This course will also integrate neurophysiology and neuroanatomy into the clinical presentation of adults with neurologic pathology. The etiology, epidemiology signs, and symptoms of selected neurological conditions will be presented. The medical management of patients with nervous system disorders will be presented in relationship to the practice of physical therapy. The course will introduce evaluation of impairments for persons with neuromuscular pathologies. Students will be presented with case studies from real-life scenarios to progress to more complex patient problems. Prerequisite: Successful completion of the first 4 semesters of the DPT curriculum or permission of instructor.

PTRS 853. Neurologic Physical Therapy and Rehabilitation II. 6 Credits.
This course will focus on rehabilitation approaches for people with neurologic pathology. Students will examine factors that contribute to the control of voluntary movement and the learning of motor skills, and develop an understanding of the relationship between the brain and the purposeful movements that make us human. Students will acquire the skills to hypothesize about the relationship of health conditions and body function/structure to limitations in activities and participation in adults with neurologic pathology. A clinical decision making approach will combine contemporary rehabilitation approaches, consideration of psychosocial and cognitive factors, and research evidence in the discussion of complex patient cases. After completing this course, students will demonstrate novice-level knowledge and skills necessary to complete a physical therapy examination and develop a comprehensive treatment plan for adults with neurologic pathology. Prerequisite: Successful completion of the first 5 semesters of the DPT curriculum or permission of instructor.

PTRS 855. Pharmacology for Physical Therapists. 2 Credits.
Pharmacological background for the clinical treatment of patients referred to physical therapy. Fundamentals of the actions of drugs including mechanisms of therapeutic and adverse effects. Prerequisite: Successful
completion of semester 1 of the DPT curriculum or permission of instructor.

**PTRS 860. Evidence-Based Research Practicum I. 1 Credits.**
Supervised and directed experiences in conducting evidence-based research activities. The research activities involved in this course are broadly defined with emphasis on the enhancement of evidence-based physical therapy practice. The student will be supervised by a member of the faculty. This course is the first of a two-part series of courses, including PTRS 861. Prerequisite: Successful completion of the first 3 semesters of the DPT curriculum or permission of instructor.

**PTRS 861. Evidence-Based Research Practicum II. 1 Credits.**
Supervised and directed experiences in conducting evidence-based research activities. The research activities involved in this course are broadly defined with emphasis on the presentation and communication of an evidence-based research project. The student will be supervised by a member of the faculty. This course is the second of a two-part series of courses, including PTRS 860. Prerequisite: Successful completion of the first 6 semesters of the DPT curriculum, or consent of instructor.

**PTRS 865. Independent Study. 1-3 Credits.**
Individually negotiated learning experiences appropriate to the interests and background of the student. Prerequisite: Admission to the DPT program, or permission of instructor.

**PTRS 877. Administration in Physical Therapy. 2 Credits.**
Designed to familiarize the entry-level therapist with contemporary issues in health care which impact the practice of physical therapy in the health care system. Changes in the US health care system will be discussed, including managed care, plus essential elements and principles of management in health care organizations, and an overview of human resources and operational management. Financial management specifically reimbursement for patient services, risk management, information management, and compliance will be discussed. Discussion of professional development is intertwined throughout the course. Students will be exposed to business development and entrepreneurial skills needed to expand or start up a physical therapy practice. Prerequisite: Successful completion of the first 3 semesters of the DPT curriculum or permission of instructor.

**PTRS 882. Pathophysiology and Physical Therapist Screens. 6 Credits.**
Review of integrative human pathophysiology with an emphasis upon homeostatic mechanisms and etiologies of disease. The interrelationships of function and dysfunction at the molecular, cellular and tissue level (pathology), organ and systemic level (impairment) and to the total human body (functional limitations) will be applied in each of the body systems. Discussions and applied materials will be tailored to the physical therapist with an emphasis on clinical tools to medically screen patients for the presence of symptoms and signs. Prerequisite: Successful completion of semester 1 of the DPT curriculum or permission of instructor.

**PTRS 890. Specialties in Physical Therapy Practice. 2 Credits.**
Requires students to apply the five elements of patient/client management for addressing multi-system impairments across diverse and complex patient populations. Exposure to physical therapy advanced practice specialty areas included, but not limited to, sport medicine, women’s health, neurology, pediatrics, geriatrics, and oncology. Seminar format instruction incorporating case-based instruction, group discussion, and speakers with advanced clinical credentials. Prerequisite: Successful completion of the first 6 semesters of the DPT curriculum or permission of instructor.

**PTRS 920. Full-Time Clinical Experience I. 6-8 Credits.**
Nine to twelve weeks of full-time clinical experience. During the clinical rotation, the student will have the opportunity to develop the patient care skills needed for successful practice as a physical therapist. The student will work under the supervision of an experienced physical therapist in clinical settings affiliated with the program. Prerequisite: Successful completion of the first 7 semesters of the DPT curriculum or permission of instructor.

**PTRS 921. Full-Time Clinical Experience II. 6-8 Credits.**
Nine to twelve weeks of full-time clinical experience. During the clinical rotation, the student will have the opportunity to develop the patient care skills needed for successful practice as a physical therapist. The student will work under the supervision of an experienced physical therapist in clinical settings affiliated with the program. Prerequisite: Successful completion of the first 7 semesters of the DPT curriculum or permission of instructor.

**PTRS 922. Full-Time Clinical Experience III. 6-8 Credits.**
Nine to twelve weeks of full-time clinical experience. During the clinical rotation, the student will have the opportunity to develop the patient care skills needed for successful practice as a physical therapist. The student will work under the supervision of an experienced physical therapist in clinical settings affiliated with the program. Prerequisite: Successful completion of the first 7 semesters of the DPT curriculum or permission of instructor.

**PTRS 923. Full-Time Clinical Experience IV. 2-6 Credits.**
Three to nine weeks of full-time clinical experience. During the clinical rotation the student will have the opportunity to develop the patient care skills needed for successful practice as a physical therapist. The student will work under the supervision of an experienced physical therapist in clinical settings affiliated with the program. Prerequisite: Successful completion of the first 7 semesters of the DPT curriculum or permission of instructor.

**PTRS 924. Specialized Clinical Experience. 1-6 Credits.**
One and a half to nine weeks of clinical experience. During the clinical rotation the student will have the opportunity to have exposure to a different health care system such as an international clinical experience, or a specialized area of physical therapy practice. The student will be under the supervision of an experienced physical therapist in clinical settings affiliated with the program. Prerequisite: Successful completion of the first 7 semesters of the DPT curriculum or permission of instructor.

**PhysThr, RehabSci & AthlTrng Courses**

**REHS 760. Introduction to Matlab Programming. 1 Credits.**
Introduction: matlab windows, input-output, file types, general commands; interactive computation; matrices and vectors, matrix and array operations, scripts and functions applications, graphics. Prerequisite: None

**REHS 803. Research Observations. 1 Credits.**
Students will be introduced to different types of research projects conducted in the department. Students will rotate in up to three research laboratories, sequentially, during a semester. The course is designed to help students select a faculty researcher to mentor them in their dissertation research. Prerequisite: Entry into the PhD in Rehabilitation Science program.

**REHS 805. Seminar in Rehabilitation Science. 1 Credits.**
Students will become familiar with the organization of an experimental scientific paper and learn how to critically assess papers in the field of rehabilitation science. Students will develop writing skills by summarizing scientific papers and communication skills by orally presenting and discussing research literature with his/her peers and colleagues, course
coordinator and other faculty members. Prerequisite: Entry in the PhD program in Rehabilitation Science or permission of instructor.

**REHS 856. Research Design and Methods I. 2 Credits.**
An introduction to research design and methods including library and multimedia resources; research process; measurement theory (reliability and validity); experimental design principles; single subject design and other non-experimental design; critical thinking skill and procedure; critical review and analysis of a research article; basic scientific writing skills; and skills in writing a research report/Manuscript. Prerequisite: Entry into the PhD in Rehabilitation Science program or permission of instructor.

**REHS 857. Research Design and Methods II. 2 Credits.**
An introduction to research design and method including critically appraising the state of art on a research topic; conducting a systematic review of literature; basic concept of statistical analysis, performing and interpreting data analysis using parametric, non-parametric, or correlational analyses; preparation of a research proposal focusing on study rational, novelty, and research questions and hypotheses; ethical issues related to research; basic knowledge of bioinformatics; meta-analysis; and writing of a research proposal. Prerequisite: Entry into the PhD in Rehabilitation Science program or permission of instructor.

**REHS 862. Cellular and Molecular Basis of Rehabilitation. 2 Credits.**
A study of the biology, at the cellular and molecular levels, of pathological processes that impair human function will highlight the mechanisms by which cells/tissues repair and/or adapt following disease/injury or aging. Emphasis will be placed on the body's endogenous ability for rehabilitation or adaptation to disease/injury. Prerequisite: Entry into the PhD in Rehabilitation Science program or permission of instructor.

**REHS 864. Introduction to Rehabilitation Science. 3 Credits.**
This course provides introduction to and overview of rehabilitation science, an interdisciplinary field of study that focuses on restoring functional capacity in a person and improving their interactions with the surrounding environment. Different areas of rehabilitation science will be presented. Features of the pathological conditions and targeted individuals, factors that contribute to the outcomes of the rehabilitation, research tools and measurements, potential optimal rehabilitation techniques, and directions of future research will be discussed. Prerequisite: Entry into the PhD in Rehabilitation Science program or permission of instructor.

**REHS 865. Independent Study. 1-3 Credits.**
Individually negotiated learning experiences appropriate to the interests and background of the student. Prerequisite: Entry in the PhD in Rehabilitation Science program, or permission of instructor.

**REHS 866. Developing Research Aims in Rehabilitation Science. 2 Credits.**
Students will practice writing specific aims, hypothesis and general study design of a research proposal. Prerequisite: Entry into the PhD in Rehabilitation Science program or permission of instructor.

**REHS 870. Teaching Practicum. 1-3 Credits.**
Directed experiences in a planned instructional activity. Student will write course objectives, plan and deliver lectures, produce practical and written exams and assign grades. Prerequisite: Entry in the PhD in Rehabilitation Science program or consent of instructor.

**REHS 873. Research Practicum. 1-3 Credits.**
This course is designed to provide supervised research experience in various laboratories in the department. Prerequisite: Entry in the PhD in Rehabilitation Science program, or consent of instructor.

**REHS 875. Clinical Practicum. 1-3 Credits.**
Specialized clinical training in a highly specific area of specialization. The primary purpose of this course is for the student to develop advanced clinical skills in his/her area of specialization. Prerequisite: Admission to the PhD in Rehabilitation Science program, and permission of instructor.

**REHS 884. Motor Control and Learning. 3 Credits.**
The course will explore the study of the conditions and factors that influence the acquisition, control, and performance of motor skills. Prerequisite: Entry into the PhD in Rehabilitation Science program or permission of instructor.

**REHS 886. Musculoskeletal Rehabilitation. 3 Credits.**
This course will explore the current concepts in musculoskeletal rehabilitation. The healing process of different types of tissue will be reviewed. The pathophysiological mechanisms of pain and acute and chronic injuries will be studied. Examination, evaluation and treatment interventions for the principal musculoskeletal conditions will be reviewed and discussed. Current scientific literature will be investigated and group discussions will be directed to scientific evidence for the variety of rehabilitation practices in musculoskeletal conditions. Prerequisite: Entry into the PhD in Rehabilitation Science program or permission of instructor; REHS 884 Motor Control and Learning or an equivalent.

**REHS 887. Neurorehabilitation. 3 Credits.**
This course will provide an overview of the evidence of neurorehabilitation interventions on all domains of the International Classification of Functioning in various neurological conditions. Following a review of neuroanatomy, neurophysiology, and clinical presentation of common neurological conditions, principles of neuroplasticity and functional re-organization in neurorehabilitation will be outlined. Evidence of traditional concepts and emerging therapies in neurorehabilitation will be presented. Prerequisite: Entry into the PhD in Rehabilitation Science program or permission of instructor.

**REHS 889. Grant Writing. 3 Credits.**
Research proposal writing for PhD comprehensive examinations and grant applications to federal and private funding agencies including all elements of the grant proposal - aims, innovation, significance and design. The process of grant proposal submission, review and resubmission is covered. Prerequisite: Current enrollment in a recognized graduate degree program or permission of instructor.

**REHS 970. Instrumented Analysis of Human Biomechanical Function. 3 Credits.**
An in-depth study that provides critical analysis of equipment and other resources used in analyzing human motion, balance, strength, electrophysiological responses, and cardiorespiratory function. Students will be required to conduct a preliminary study, including design, methodology and data collection using one or more of these instruments. Prerequisite: Entry in the PhD in Rehabilitation Science program, or consent of instructor.

**REHS 980. Graduate Research. 1-10 Credits.**
Original laboratory investigation conducted under the supervision of a senior staff member. Prerequisite: Entry in the PhD in Rehabilitation Science program, or consent of instructor.

**REHS 990. Dissertation in Rehabilitation Science. 1-10 Credits.**
For students in advanced standing enrolled in the PhD in Rehabilitation Science program.

### Respiratory Care Courses

**CVS 21. EKG I. 1 Credits.**
This course is designed to present basic principles of ECG and the fundamentals of the ECG waveform. The student will be introduced to
normal basic patterns and common abnormality recognition. Prerequisite: Admission to the advanced cardiovascular program. LEC.

**CVS 22. Cardiovascular Physiology. 1 Credits.**
During this course the student will focus on cardiovascular physiology. The student will study the circulatory system, addressing the physiology of the heart and blood vessels throughout the body. Prerequisite: Admission to the advanced cardiovascular technology program.

**CVS 23. Patient Care I. 1 Credits.**
This course will provide the student with the basic care skills necessary to function in a hospital and clinical setting. The student will learn about patient rights, HIPPA, patient transfers, proper ergonomics of scanning, hand hygiene, sterile technique, radiation safety and infection control. Prerequisite: Admission to the cardiovascular sonography program.

**CVS 25. Physics I. 2 Credits.**
This course is designed to introduce the student to the fundamental physical principles of Doppler echocardiography, the basic physics of Doppler ultrasound, and the fundamental principles of pulsed wave, continuous wave, and color flow Doppler. Prerequisite: Admission to the cardiovascular sonography program.

**CVS 26. Clinical Practicum I. 6 Credits.**
This course will provide meaningful, well-balanced experiences for the student in the adult echocardiography lab. Clinical Practicum I will focus on the development of image recognition, anatomy identification and patient care. Prerequisite: Admission to the cardiovascular sonography program.

**CVS 27. Adult Cardiovascular Technician I. 2 Credits.**
This course will introduce the student to the principles of diagnostic cardiac catheterization. The student will learn basic skills to assist the cardiologist during cardiac catheterization procedures. Prerequisite: Admission to the advanced cardiovascular technology program.

**CVS 30. Adult Echocardiography I. 3 Credits.**
The student will learn the pathophysiology of acquired valvular heart disease. Two-dimensional, spectral and color flow Doppler findings associated with each valvular disease state. The student will learn to obtain and effectively apply accurate two-dimensional and Doppler measurements as they relate to the evaluation and quantification of valvular disease. Prerequisite: Admission to the cardiovascular sonography program.

**CVS 31. Physics II. 2 Credits.**
This is the second of two ultrasound physics courses designed to prepare the student for the Sonography Principles and Instrumentation exam required for registration through ARDMS. The content of this course will cover fluid dynamics, hemodynamics, vascular principles, and cardiovascular principles. The content of Physics I will be heavily reviewed in preparation for the registry exam. Prerequisite: Admission to the cardiovascular sonography program.

**CVS 32. Pharmacology. 1 Credits.**
The student will become familiar with common medicines used in the cardiovascular setting. The student will learn pharmacological management of patients undergoing invasive and non-invasive cardiac and vascular procedures. Students will learn to correlate drug therapies with interventional procedures and disease states. Prerequisite: Admission to the advanced cardiovascular technology program.

**CVS 33. EKG II. 2 Credits.**
This course is designed to present advanced principles of ECG. The student will be exposed to advanced pattern recognition and the underlying etiology of the rhythm. Prerequisite: Admission to the advanced cardiovascular technology program.

**CVS 35. Patient Care II. 2 Credits.**
This course will provide the student with the advanced care skills necessary to function as a cardiovascular technologist within the laboratory. The student will learn about radiation safety, interpretation of lab values, patient management, high risk patient management, basic life support and advanced cardiac life support. Prerequisite: Admission to the advanced cardiovascular technology program.

**CVS 36. Clinical Practicum II. 8 Credits.**
This course will provide meaningful, well-balanced experiences for the student in the adult echocardiography lab. Clinical Practicum II will focus on the development of image recognition, anatomy identification, and patient care. Prerequisite: Admission to the cardiovascular sonography program.

**CVS 39. Adult Echocardiography II. 3 Credits.**
The student will learn echocardiographic findings associated with cardiomyopathies, the etiology, physiology, cardiac auscultation, physical examination, and EKG findings associated with the various cardiac disease states. The student will learn to obtain and effectively apply accurate two-dimensional and Doppler measurements as they relate to the evaluation and quantification of systolic function, diastolic, and the echocardiographic role in the evaluation of disease. Prerequisite: Admission to the cardiovascular sonography program.

**CVS 40. Vascular Ultrasound I. 4 Credits.**
The student will learn how to assess basic vascular disease using two-dimensional, spectral and color flow Doppler information in the areas of arterial Doppler segmental pressures, plethysmography, ankle brachial indices and carotid duplex imaging. Prerequisite: Admission to the cardiovascular sonography program.

**CVS 41. Pediatric Echocardiography I. 4 Credits.**
The student will demonstrate an understanding of how to utilize a sequential developmental approach. This course will review congenital heart diseases and their associated clinical signs and symptoms. Prerequisite: Admission to the cardiovascular sonography program.

**CVS 42. Physics Review. 1 Credits.**
This course is designed to prepare students to sit for their Sonography Principles and Instrumentation examination through ARDMS. During this course students will review all that they have learned in Physics I and Physics II. Prerequisite: Admission to the program.

**CVS 43. Adult Interventional Cardiology Technician I. 3 Credits.**
The student will receive progressive didactic exposure to the technology, procedures, techniques and basic concepts of interventional cardiology. Prerequisite: Admission to the program.

**CVS 44. Adult Electrophysiology Technician I. 3 Credits.**
The student will have didactic exposure to the technology, procedures, techniques and basic concepts of electrophysiology. Prerequisite: Admission to the program.

**CVS 45. Diversity in Cardiovascular Patient Care. 1 Credits.**
Explore current evidence regarding the demographic based variations in the population that impact cardiovascular care. Prerequisite: Admission to the program.

**CVS 49. Clinical Practicum III. 4 Credits.**
The student will have hands-on experience working in the adult echocardiography lab. Here they will be given the opportunity to improve their technical skills working one-on-one with their preceptor and patients in the clinical setting. Prerequisite: Admission to the cardiovascular sonography program.

**CVS 55. Cardiovascular Assessment and Special Procedures. 1 Credits.**

The student will become familiarized with the special procedures utilized in the echocardiography laboratory. These special procedures will include; transesophageal echocardiography, contrast agents, strain, strain rate imaging and 3D echocardiography. Prerequisite: Admission to the cardiovascular sonography program.

**CVS 56. Adult Echocardiography III. 3 Credits.**
The student will continue to build upon their knowledge of echocardiography by learning cardiac diseases secondary to systemic illness, connective tissue disorders, neurologisal diseases, hematological disorders, pericardial disease, cardiac tumors, masses and diseases of the great vessels. Prerequisite: Admission to the program.

**CVS 57. Vascular Ultrasound II. 4 Credits.**
The student will learn to perform basic vascular assessments using two-dimensional, spectral and color flow Doppler information in the areas of renal duplex ultrasounds, abdominal aorta and iliac imaging. Prerequisite: Admission to the cardiovascular sonography program.

**CVS 58. Pediatric Echocardiography II. 4 Credits.**
The student will learn of Ebstein's malformation of the tricuspid valve, tricuspid atresia with and without D-transposition, partial and complete endocardial cushion defect, cor triatriatum and double outlet right ventricle. Prerequisite: Admission to the cardiovascular sonography program.

**CVS 59. Physics II. 2 Credits.**
This is the second of two ultrasound physics courses designed to prepare the student for the Sonography Principles and Instrumentation exam required for registration through ARDMS. The content of this course will cover fluid dynamics, hemodynamics, vascular principles and cardiovascular principles. The content of Physics I will be heavily reviewed in preparation for the registry exam. Prerequisite: Admission to the program.

**CVS 61. Adult Cardiovascular Cardiology Technician II. 3 Credits.**
The student will have progressive didactic exposure to the technology, procedures, techniques and concepts of interventional cardiology. Prerequisite: Admission to the program.

**CVS 62. Adult Electrophysiology Technician II. 2 Credits.**
The student will have continued progressive didactic exposure to the technology, procedure, techniques, and concepts of electrophysiology. Prerequisite: Admission to the program.

**CVS 63. Patient Care III. 2 Credits.**
The continuation of advanced radiographic identification of the cardiac and vascular anatomy will be presented. In addition, the student will learn about coronary artery disease, angina, heart failure, acute coronary syndrome, shock, valvular heart disease and how this knowledge will be used while working in an invasive cardiology setting. Prerequisite: Admission to the program.

**CVS 64. Complex Arrhythmia Assessment. 1 Credits.**
During this course the student will assess complex electrocardiography, telemetry, and cardiac arrhythmia cases. The student will evaluate the association of significant arrhythmias with cardiac diseases and common treatment options. Prerequisite: Admission to the program.

**CVS 65. Complex Hemodynamic Assessment. 2 Credits.**
The purpose of this course is to provide the student with the knowledge base necessary to understand acquired and congenital cardiovascular diseases, the etiologies associated with the disease state and the presenting clinical signs and symptoms. This course will introduce the student to the principles of hemodynamic monitoring, waveform analysis and interventional cardiovascular procedures. Prerequisite: Admission to the program.

**CVS 66. Adult Interventional Cardiology Technician II. 2 Credits.**
The student will have continued progressive didactic exposure to the technology, procedure, techniques, and concepts of interventional cardiology. Prerequisite: Admission to the program.

**CVS 67. Clinical Practicum IV. 8 Credits.**
The student will have hands-on experience working in their chosen field of adult echocardiography, vascular or pediatric echocardiography. Here they will be given the opportunity to improve their technical skills by working one-on-one with their preceptor in the clinical setting. Prerequisite: Admission to the cardiovascular sonography program.

**CVS 75. Congenital Heart Disease. 1 Credits.**
The student will be introduced to the evaluation of congenital heart disease using the segmental approach. Prerequisite: Admission to the cardiovascular sonography program.

**CVS 76. Vascular Ultrasound III. 3 Credits.**
Upon completion of this course the student will have the necessary knowledge to perform basic vascular assessments using two-dimensional, spectral and color flow Doppler information in the areas of renal duplex ultrasounds, abdominal aorta and iliac imaging. Prerequisite: Admission to the program.

**CVS 77. Pediatric Echocardiography III. 3 Credits.**
Upon completion of this course the student will demonstrate an understanding of Ebstein's malformation of the tricuspid valve, tricuspid atresia with and without D-transposition, partial and complete endocardial cushion defect, cor triatriatum and double outlet right ventricle. Prerequisite: Admission to the program.

**CVS 78. Adult Interventional Cardiology Technician III. 3 Credits.**
The student will have continued progressive didactic exposure to the technology, procedure, techniques, and concepts of interventional cardiology. Prerequisite: Admission to the program.

**CVS 79. Adult Electrophysiology Technician III. 2 Credits.**
The student will have continued progressive didactic exposure to the technology, procedure, techniques, and concepts of electrophysiology. Prerequisite: Admission to the program.

**CVS 80. Introduction to Cardiovascular Research Principles. 1 Credits.**
This course requires the student to research a cardiovascular disease process, write a research paper and present the topic at a cardiology conference in front of peers, nursing personnel, cardiology fellows and the medical staff. The student may include the natural history of the disease process, the historical approach to the diagnosis of the disease, an overview of other modalities used in diagnosing the disease, the imaging techniques used in its diagnosis and the scientific rationale behind the technique. Prerequisite: Admission to the program.

**CVS 81. Concepts in Intravascular Imaging and Intervention I. 2 Credits.**
The student will expand their basic knowledge of the various imaging modalities used during vascular interventional procedures and the various endovascular treatments that they will see throughout their careers. Prerequisite: Admission to the program.

**CVS 82. Concepts in Cardiac Rhythm Management I. 2 Credits.**
During this course the student will learn the fundamentals of cardiac pacing, will understand the basic techniques for interrogation, programming, surveillance and the measurement of pacing and sensing thresholds of ICDs and CRT-Ds. Upon completion of this course the
A student will be able to recognize normal and abnormal pacemaker function. Prerequisite: Admission to the program.

**CVS 84. Senior Project. 1 Credits.**
This course requires the student to research a cardiovascular disease process, write a research paper and present the topic at cardiology conference in front of peers, nursing personnel, cardiology fellows and the medical staff. The student may include the natural history of the disease process, the historical approach to the diagnosis of the disease, an overview of the other modalities used in diagnosing the disease and the scientific rationale behind the technique. In addition, the student may include case studies in the presentation. Prerequisite: Admission to the program.

**CVS 86. Clinical Practicum V. 8 Credits.**
The student will have hands-on experience working in their chosen field of adult echocardiography, vascular or pediatric echocardiography). Here they will be given the opportunity to improve their technical skills by working one-on-one with their preceptor in the clinical setting. Prerequisite: Admission to the cardiovascular sonography program.

**CVS 89. Vascular Ultrasound IV. 3 Credits.**
This course requires the student to research a vascular disease process, write a research paper and present the topic at a cardiovascular conference in front of peers, nursing personnel, cardiology fellows and the medical staff. The student may include the history of the disease process, the approach to the diagnosis of the disease and any other modality used in the diagnosis of the disease. In addition, the student may include case studies in the presentation. Prerequisite: Admission to the program.

**CVS 90. Pediatric Echocardiography IV. 3 Credits.**
Upon the completion of this course the student will demonstrate an understanding of partial and total anomalous pulmonary venous return, persistent left superior vena cava, hypoplastic left heart syndrome and single ventricle. Prerequisite: Admission to the program.

**CVS 91. Adult Echocardiography IV. 1 Credits.**
This course is designed to enable the student to review the materials covered throughout their time spent in the program, preparing them to step into the profession of echocardiography and become registered through ARDMS by passing their RDCS registration exam. Prerequisite: Admission to the program.

**CVS 94. Concepts in Cardiac Rhythm Management II. 3 Credits.**
The student will learn the following basic device knowledge, arrhythmias, remote monitoring management and indications and limitations of biventricular pacing. The student will also learn about echo AV optimization, radiation oncology, MRI, withdrawal of therapy and other specialized inter-departmental workflows. Prerequisite: Admission to the program.

**CVS 95. Concepts in Intravascular Imaging and Intervention II. 3 Credits.**
Intravas Imaging & Interv II Prerequisite: Admission to the program.

**CVS 97. Clinical Practicum VI. 7 Credits.**
The student will have hands-on experience working in their chosen field; catheterization lab, electrophysiology lab, echocardiography lab, vascular lab or the pediatric echocardiography lab. Here they will be given the opportunity to improve their technical skills by working one-on-one with their preceptor in a clinical setting. Prerequisite: Admission to the program.

## Respiratory Care Courses

**NMED 70. Introduction to Nuclear Medicine and Medical Law and Ethics for the Imaging Professional. 3 Credits.**
An introductory overview of the field of nuclear medicine technology with includes medical terminology for clinical nuclear medicine, patient and nursing skills including phlebotomy and vital signs, departmental organization and function, and a basic overview of applied mathematical and statistical analysis used in clinical nuclear medicine. This course will also introduce to the imaging profession the legal aspects to patient care regarding patient rights, ethical theories, risk management, quality patient care. The student will participate in group discussion. Prerequisite: Acceptance into the Nuclear Medicine Training Program

**NMED 71. Nuclear Chemistry and Physics. 2 Credits.**
This course is designed to present the theories of nuclear chemistry and physics including theory of Bohr’s atom, radiation production, decay, physical half life and interaction with matter, chemical reactions and equations, review of periodic chart of elements and trilinear chart of nuclides. Prerequisite: College Physics and College Chemistry along with acceptance into the Nuclear Medicine Training Program

**NMED 72. Radiopharmacy I. 3 Credits.**
This course is designed to present the aspects of radiopharmaceuticals including safety and handling, methods of localization, pharmacology, dose calculation and record keeping, methods of production, and quality control. The course will begin to identify the clinical uses of radiopharmaceuticals as this course will be a prerequisite for Radiopharmacy II. Prerequisite: Acceptance into the Nuclear Medicine Training Program

**NMED 73. Clinical Procedures I. 3 Credits.**
This course is taught in modules corresponding to organ systems of the body from a technical point of view. Each module includes: review of anatomy and physiology, cross-sectional anatomy, clinical indications for nuclear imaging, nuclear imaging procedures, including radiopharmaceuticals for current clinical practices, image interpretation, and review. Prerequisite: Acceptance into the Nuclear Medicine Training Program

**NMED 74. Radiation Biology and Protection. 1 Credits.**
This course is designed to provide the student with an understanding of the effects of radiation on the human body at the cellular, organ and whole body levels including late of effects of radiation exposure and the risk to benefits ratio. This course will provide the students with current federal and state regulations in regards to safe handling, disposal, record keeping, and licensing for the clinical use of radiation. Prerequisite: Acceptance into the Nuclear Medicine Training Program

**NMED 75. Clinical Internship I. 6 Credits.**
Through supervised learning situations in a clinical nuclear medicine imaging department the student will gain knowledge and be required to demonstrate competence in specific imaging of nuclear medicine procedures, radiopharmaceutical distribution, imaging instrumentation, patient safety, occupational safety, and quality control practices in the clinical setting. Prerequisite: Acceptance into the Nuclear Medicine Training Program

**NMED 80. Nuclear Instrumentation, Medical Informatics and Quality Assurance. 3 Credits.**
This course is designed to familiarize the students with basic non-imaging and imaging with nuclear medicine equipment in the clinic. This course will include basic principles of operation, system configuration and performance characteristics of Scintillation cameras and PET systems, computers and quality control and assurance as required by manufacturer and regulatory agencies. It will introduce the student to various types of medical information systems and their uses in the medical imaging. Prerequisite: Acceptance into the Nuclear Medicine Training Program

**NMED 82. Radiopharmacy II. 1 Credits.**
This course is designed to provide the participant with a basic introduction to healthcare research with emphasis on evidence based practices. Students will learn how to identify a research question and conduct a proper literature search. This course will teach students the strengths and weaknesses of different search sources, how to review and critique a scientific article, and present the results of their literature review. Students will learn how to properly cite and develop a bibliography that is consistent with scientific writing, as well as, develop an introduction section of a research paper. This course will familiarize the students with cardiorespiratory medical terminology. Prerequisite: Enrollment in the Respiratory Care Program.

RESP 302. Respiratory Care Evidence Based Practice II. 1 Credits.

This course is the continuation of Respiratory Care Evidence Based Practice I and designed to reinforce the principles of healthcare research, evidence based practices, and the medical terminology used in the cardiorespiratory sciences. Students will refine their ability to identify a research question, conduct a literature search, review and critique a scientific article, and present the results of their literature review. This course will continue to emphasize proper citation and bibliography documentation consistent with scientific writing. Prerequisite: RESP 301 and Enrollment in the Respiratory Care Education Program.

RESP 305. Cardiopulmonary Anatomy and Physiology. 2 Credits.

This course will introduce the student to normal anatomy and physiology of the cardiopulmonary systems. Students will focus on the etiology, and treatment of pulmonary and cardiac diseases, with emphasis on the pulmonary system.

RESP 306. Cardiopulmonary Pathophysiology. 2 Credits.

This course will introduce the student to normal cardiopulmonary systems, as well as, cardiopulmonary pathology. Students will focus on the etiology, pathophysiology, and treatment of pulmonary and cardiac diseases, with emphasis on the pulmonary system.

RESP 310. Clinical Pharmacology. 2 Credits.

The student will learn about adrenergic and parasympatholytic bronchodilators, corticosteroids, mucus-controlling drugs, surfactant agents, antitussives, and the anti-infective drugs used for the treatment of respiratory disorder. Prerequisite: Enrollment in the Respiratory Care Program.

RESP 315. Clinical Application I. 3 Credits.

This course introduces the beginning respiratory therapy student to the clinical environment. The student participates in clinically-oriented workshops, observation rotations, learning laboratory sessions, or simulations that focus on the application of respiratory therapy equipment, theory, patient management, and communication in the clinical setting. Prerequisite: Enrollment in the Respiratory Care Program.

RESP 325. Mechanical Ventilators. 3 Credits.

This course contains such topics as arterial puncture, classification of mechanical ventilators and adjunct devices, and their application to the...
patient. Four hours of lecture/discussion and a 3 hour weekly laboratory acquainting the student with the rationale for continuous mechanical ventilation and the basic operation of adult, pediatric and neonatal mechanical ventilators. Emphasis is placed on the selection of appropriate equipment and assessment of its effect on the patient. Prerequisite: Enrollment in the Respiratory Care Program.

RESP 326. Mechanical Ventilation Lab. 2 Credits.
This course contains such topics as arterial puncture, classification of mechanical ventilators and adjunct devices, and their application to the patient. 2 hour weekly laboratory acquainting the student with the rationale for continuous mechanical ventilation and the basic operation of adult, pediatric, and neonatal mechanical ventilators. Emphasis is placed on the selection of appropriate equipment and assessment of its effect on the patient. Prerequisite: Enrollment in the Respiratory Care Program.

RESP 330. Pulmonary Function. 2 Credits.
Lecture and laboratory introducing the student to basic pulmonary function procedures. This course allows the student to practice pulmonary function tests and interpret the results. Lecture and laboratory topics include such topics as the measurement of lung volumes and capacities, body plethysmography, blood gas analysis, and flow volume loops. Prerequisite: Enrollment in the Respiratory Care Program.

RESP 335. Clinical Application II. 4 Credits.
This course provides the respiratory therapy student with an introduction to the critical care setting. The student will begin to apply the procedures and equipment most often utilized in the intensive care areas. Emphasis is placed on continuous mechanical ventilation, artificial airways, airway care, and bedside pulmonary function testing. The student will assume limited patient care responsibility in the critical care areas. Prerequisite: RESP 315.

RESP 340. Respiratory Review I. 1 Credits.
Respiratory Care Review- This course provides a complete review of the junior year respiratory care curriculum and aids in the preparation for students to take the Self-Assessment examination. Upon successful completion, students will be prepared to begin the senior year curriculum. Prerequisite: Successful completion of the first and second semesters of the respiratory care curriculum.

RESP 341. Respiratory Review II. 2 Credits.
Respiratory Care Review- "Junior Respiratory Care Review". This is the second of a two-course series that provides a complete review of the junior-year respiratory care curriculum and aids in preparing students to take the Self-Assessment examination. Upon successful completion, students will be prepared to begin the senior-year curriculum. Prerequisite: Successful completion of the first semester of the respiratory care curriculum.

RESP 345. Clinical Application 3. 3 Credits.
This course is a continuation of the clinical sequence that provides the respiratory therapy student with experience in the critical care setting. The student applies the procedures and equipment utilized by respiratory care practitioners in the intensive care areas. Emphasis is placed on continuous mechanical ventilation, artificial airways, airway care, and bedside diagnosis. The student assumes progressively more patient care responsibility in the critical care areas under preceptor supervision. Prerequisite: Completion of RESP 335.

RESP 350. Clinical Application (special). 1 Credits.
This course provides the intermediate respiratory therapy student with opportunities to practice basic respiratory therapy procedures. Emphasis placed on performance of respiratory therapy procedures and application of equipment. This course emphasizes such topics as oxygen therapy, aerosol therapy, incentive spirometry, patient assessment, and IPPB therapy. The student will assume limited patient care responsibilities.

RESP 375. Clinical Special. 0 Credits.
This course provides the advanced respiratory therapy student with opportunities to refine procedural and evaluative skills in the critical care areas. The student will spend a minimum of twenty-four hours per week in the clinical setting. Emphasis is placed upon the students ability to evaluate the patients' clinical situation and recommend appropriate therapy modalities to the clinical supervisor. During this course the student will assume wider-ranging patient care responsibilities.

RESP 399. Generalist Practice. 1 Credits.
This course is designed to allow students the opportunity to improve and perfect skills acquired in the junior year clinical courses. Emphasis will be given to refining the students' abilities to assess patient status and administer appropriate therapy modalities. This course may also be used to assess respiratory therapy knowledge and skills of students transferring from other programs. Prerequisite: Permission of instructor.

RESP 400. Chronic Respiratory Disease Management: The Evolving Role of the Respiratory Therapist. 3 Credits.
This course is an introduction to the evolving role of respiratory therapists in health care, especially in the area of chronic disease management. The students will explore various trends that are contributing to the role respiratory therapy may play in patient care. Topics covered in this course include COPD and asthma management, pulmonary rehabilitation, cardiopulmonary exercise testing, home care, elderly care, nutritional care of the pulmonary patient, and communication skills necessary for patient education. Students in this course will gain an understanding of how they can contribute to an inter-professional team in order to provide safe and effective patient care. Presentation of topics in this course may include lecture, group work/discussion, audiovisual, computer and other multimedia aids. Prerequisite: Enrollment in the Respiratory Care Program.

RESP 405. Advanced Critical Care. 4 Credits.
Concepts of the diseases and disorders that effect the critically ill adult are explored. Emphasis is placed on understanding common illnesses such as cardiac dysrhythmias, acute coronary syndrome, trauma of the chest and head, organ failure and toxin exposure as well as the other medical challenges of the critically ill patient. Prerequisite: Enrollment in the Respiratory Care Program.

RESP 410. Neonatal Respiratory Care. 3 Credits.
This course is designed to provide the student with an introductory knowledge of fetal and newborn cardiorespiratory anatomy, physiology, development, pathophysiology, and care. Prerequisite: Senior year standing or permission of instructor.

RESP 411. Neonatal/Pediatric Respiratory Care Lab. 2 Credits.
This course is designed to provide the student with an introductory knowledge of fetal and newborn cardiorespiratory anatomy, physiology, development, pathophysiology, and care in a lab setting. Prerequisite: Senior year standing.

RESP 415. Clinical Application IV. 4 Credits.
This course provides the advanced respiratory therapy student with opportunities to refine procedural and evaluative skills in the critical care areas. In the clinical setting emphasis is placed upon the student's ability to evaluate the patient's clinical situation and recommend appropriate therapy modalities to the clinical instructor. During this course the student will assume a progressively wider range of patient care responsibilities. Prerequisite: Enrollment in the Respiratory Care Program.

RESP 420. Health Care Management, Ethics and Law. 2 Credits.
This course provides an overview of fundamental concepts in healthcare management, law, and ethics. Students will learn the skills and knowledge necessary to be successful in management leadership, management design, and managing diversity. Ethical concerns relevant to the healthcare manager will be addressed. Current and historical controversies in healthcare will be discussed. Upon completion of this course, students will have the knowledge to understand laws, ethics, and management principles of the complex healthcare landscape.

RESP 450. Chronic Respiratory Disease Management. 3 Credits.
This course is open only to online students. This course is an introduction to the evolving role of respiratory therapists in health care, especially in the area of chronic disease management. The students will explore various trends that are contributing to the role respiratory therapy may play in patient care. Topics covered in this course include COPD and asthma management, pulmonary rehabilitation, cardiopulmonary exercise testing, home care, elderly care, nutritional care of the pulmonary patient, and communication skills necessary for patient education. Students in this course will gain an understanding of how they can contribute to an inter-professional team in order to provide safe and effective patient care. Presentation of topics in this course may include lecture, group work/discussion, audiovisual, computer and other multimedia aids.

RESP 460. ACCS Specialty Credential Prep. 3 Credits.
This course will serve as review of material covered on the NBRC Matrix for the NBRC Adult Critical Care Specialty Examination. The purpose of this course is to guide students in the review and preparation for the NBRC ACCS Specialty Examination. This will include weekly covered content, as well as practice exams.

RESP 465. NPS Specialty Credential Prep. 3 Credits.
This course will serve as review of material covered on the NBRC Matrix for the NBRC Neonatal/Pediatric Specialty Examination. The purpose of this course is to guide students in the review and preparation for the NBRC NPS Specialty Examination. This will include weekly covered content, as well as practice exams.

RESP 470. AE-C Specialty Credential Prep. 3 Credits.
This course will provide an in-depth review of asthma education based on the National Asthma Educator Certification Board (NAECB) detailed content outline. Including the asthma condition, patient and family assessment, asthma management and organizational issues. Prerequisite: Enrollment in Respiratory Care.

RESP 480. Simulation and Interprofessional Education (IPE). 3 Credits.
This introductory course is designed for health care students to learn key concepts of building and leading a collaborative health care team. The course addresses both the clinical and behavioral aspects of performance with emphasis on interprofessional simulation-based education. The course is offered in a self-paced online format with a competency-based approach. The course will be taught over an eight-week period. The object of the course is to introduce collaborative practice for providing patient-centered care. The student will be introduced to: Interprofessional education and collaborative practice terminology Core Competencies for Interprofessional Collaborative Practice Foundations of effective health care teamwork Leading a collaborative health care team Skills to develop and implement simulation-based education. Prerequisite: Enrollment in Respiratory Care.

RESP 490. Special Studies or Projects. 1-9 Credits.
This course involves individual study, research or projects in the field of respiratory care under instructor guidance. Written reports and periodic conferences are required. Content and unit credit will be determined by student-instructor conferences and/or departmental conferences. This course may be repeated for a maximum of nine credits. Prerequisite: Admission to the respiratory care program and consent of instructor.

RESP 495. Management, Ethics, and Law in Respiratory Care. 3 Credits.
This course is only open to online students. This course provides an overview of fundamental concepts in healthcare management, law, and ethics. Students will learn the skills and knowledge necessary to be successful in management leadership, management design, and managing diversity. Ethical concerns relevant to the healthcare manager will be addressed. Current and historical controversies in healthcare will be discussed. Upon completion of this course, students will have the knowledge to understand laws, ethics, and management principles of the complex healthcare landscape.

RESP 615. Respiratory Review III. 3 Credits.
This course involves individual student under instructor guidance. A series of practice exams are taken and discussed including a secured practice registry exam and clinical simulation exam. Prerequisite: Enrollment in the Respiratory Care Program.

RESP 620. Community and Global Health. 3 Credits.
This course will explore a wide variety of major health issues that impact us as global citizens. Students will be exposed to an overview of challenges that face the world today as they learn about strategies and programs that promote health in a variety of settings. Through this course, students will become more culturally competent healthcare providers. They will learn about disparities related to ethnicity, socioeconomic issues, human rights, and resource limits as they relate to the health of populations. Prerequisite: Enrollment in the Respiratory Care Program.

RESP 625. Clinical Application V. 4 Credits.
This course provides the students with the opportunity to integrate clinical activities and responsibilities related to neonatal and pediatric respiratory care. Prerequisites: Enrolled in Respiratory Care Program.

RESP 630. Lean Management. 3 Credits.
Lean Management-This course will introduce students to lean management principles such as Lean Six Sigma in healthcare. Students will learn process improvement through lean management concepts which will prepare them for management positions. Prerequisite: Enrollment in the Respiratory Care Program.

RESP 640. Professional Communication. 3 Credits.
Professional Communication-this course will provide students with the tools they need to communicate clearly and effectively which will prepare them for the working world and leadership. Students will learn how to have crucial conversations on how to address serious issues via written or verbal. Prerequisite: Enrollment in the Respiratory Care Program.

RESP 650. Medical Writing & Research. 3 Credits.
This course is designed to introduce the student to the basics of health research and writing methods. Health care research is the necessary foundation for meaningful improvements in clinical practice. This course will make the health research and writing process accessible, manageable, and enjoyable for health care students. Prerequisite: Enrollment in Respiratory Care.

RESP 655. Leadership Management. 3 Credits.
The objective of this course is to prepare undergraduate students to become successful leaders in healthcare by viewing leadership competencies by studying relevant and contemporary skills in today's ever changing healthcare landscape. By the end of the course, students should have an understanding of how to approach complex leadership problems and comprehend them. Prerequisite: Senior year standing or permission of the instructor.
RESP 65. Capstone Project. 6 Credits.
This course is designed to give the student the opportunity to develop a project that is professionally relevant. This project will allow the student to explore opportunities such as implementing process change, protocol creation, and curriculum development. The course is individualized to the students' intellectual interests and professional development. Prerequisite: 5 Core Courses (RESP 650, RESP 495, RESP 620, RESP 480, and RESP 450), 3 Track courses (RESP 460, RESP 470, RESP 465, RESP 630, RESP 640, RESP 655).

Respiratory Care Courses

UTEC 50. Introduction to Diagnostic Ultrasound and Medical Law and Ethics for the Imaging Professional. 3 Credits.
An introductory overview of the field of Diagnostic Ultrasound encompassing medical terminology for the sonographer, departmental function, ergonomics, patient care, and ethical issues in health care. In addition, a study of the department's ultrasound equipment with an extensive review of functionality and design. Prerequisite: Acceptance into the Diagnostic Ultrasound Technology Program.

UTEC 51. Introduction to Sonography Principles and Instrumentation I. 2 Credits.
This course is designed to introduce the students to the basic terminology, the principles of propagation, beams and transducers and possible biological effects. Prerequisite: College Physics along with acceptance into the Diagnostic Ultrasound Technology Program.

UTEC 53. Abdominal I Sonography. 2 Credits.
This course is designed to present and review abdominal cross-sectional and introduce renal anatomy, physiology and pathology, and the associated sonographic appearances. This includes clinical indications for the ultrasound of the kidneys along with sonographic appearances of normal and disease processes with instrumentation, technique, and protocols. Prerequisite: College anatomy and physiology along with acceptance into the Diagnostic Ultrasound Technology Program.

UTEC 55. Gynecologic Sonography. 2 Credits.
This course is designed to educate the student on gynecologic anatomy, physiology and pathology and the sonographic appearances. This includes clinical indications for ultrasound along with instrumentation, technique and protocols. Prerequisite: College Anatomy and Physiology along with acceptance into the Diagnostic Ultrasound Technology Program.

UTEC 56. Clinical Internship I. 5 Credits.
Through supervised clinical experience in the ultrasound imaging department, the student will gain knowledge and be required to demonstrate competence in abdominal and gynecologic clinical imaging and instrumentation. Prerequisite: Acceptance into the Diagnostic Ultrasound Technology Program.

UTEC 60. Sonography Principles and Instrumentation II. 2 Credits.
This course is designed to educate the student on advanced areas of ultrasonic propagation principles, transducer parameters, instrumentation, interactive properties with tissues, possible biological effects and quality control procedures. Introduction to Color and Spectral Doppler is included. Prerequisite: Introduction to Sonography Principles and Instrumentation I.

UTEC 61. Obstetrical Sonography. 3 Credits.
This course is designed to educate the student on normal maternal changes and fetal development throughout gestation. Embryonic and fetal anatomy, anomalies, pathology, biometry and the sonographic appearances are reviewed. Instrumentation, technique, and protocols are studied. Prerequisite: Gynecologic Sonography and college anatomy and physiology.

UTEC 62. Abdominal Sonography II. 2 Credits.
This course is taught in module corresponding to abdominal organs and compartments imaged in the abdomen. This course provides instruction in Liver, Biliary, Pancreas and Spleen. Each module includes: review of anatomy, physiology and pathology, clinical indications for sonography, sonographic appearances of normal and disease processes, along with instrumentation, technique and protocols. Abdominal Doppler of normal, diseased, and transplanted liver and pancreas will be included. Prerequisite: Abdominal Sonography I.

UTEC 63. Obstetrical Sonography 2nd and 3rd Trimester. 1.75 Credits.
This course is designed to educate the student on normal maternal changes and fetal development throughout gestation. Embryonic and fetal anatomy, anomalies, pathology, biometry and the sonographic appearances are reviewed. Instrumentation, technique, and protocols are studied. Prerequisite: Obstetrical Sonography 1st Trimester.

UTEC 64. Small Parts Sonography. 1 Credits.
This course is taught in modules corresponding to superficial structures of the body. This course provides instruction in the thyroid, scrotal, breast, and musculoskeletal sonography. The module includes: review of anatomy, physiology and pathology, clinical indications for sonography, sonographic appearances of normal and disease processes, along with instrumentation, technique and protocols. Prerequisite: Small Parts Sonography I.

UTEC 65. Vascular Technology I. 2 Credits.
This course is taught in modules corresponding to selected sites in the vascular system. Each module includes review of anatomy, physiology, pathology, and clinical indications for noninvasive vascular imaging and disease processes. Instrumentation, technique, and protocols are included. Prerequisite: Advanced Sonography Principles and Instrumentation II and Abdominal Sonography I.

UTEC 66. Clinical Internship II. 6 Credits.
Through supervised clinical experience in the ultrasound imaging department and perinatology department the student will gain knowledge and be required to demonstrate competence in gynecologic, obstetrical, small parts and abdominal clinical imaging and instrumentation including Color and Spectral Doppler evaluation. Prerequisite: Gynecologic Sonography, Small Parts Sonography I and Abdominal Sonography I and II.

UTEC 70. Abdominal Sonography III. 1 Credits.
This course is taught in modules corresponding to abdominal organs and compartments imaged in the abdomen. This course provides instruction in the Retroperitoneum, Peritoneum, Gastrointestinal, Abdominal Wall and Great Vessels. Each module includes: review of anatomy, physiology and pathology, clinical indications for sonography, sonographic appearances of normal and disease processes, along with instrumentation, technique and protocols. Prerequisite: Abdominal Sonography I and II.

UTEC 71. Vascular Technology II. 2 Credits.
This course is taught in modules corresponding to selected sites in the vascular system. Each module includes review of anatomy, physiology, pathology, and clinical indications for noninvasive vascular imaging and disease processes. Instrumentation, technique, and protocols are included. Prerequisite: Vascular Technology I, Sonography Principles and Instrumentation I and II, and Abdominal Sonography I, II, and III.

UTEC 72. Clinical Internship III. 4 Credits.
Through supervised clinical experience in the ultrasound imaging department and perinatology department the students will gain
knowledge and be required to demonstrate competence in gynecologic, obstetrical, small parts, abdominal and vascular clinical imaging and instrumentation including Color and Spectral Doppler evaluation. Prerequisite: Gynecologic Sonography, Small Parts I and II Sonography, Obstetrical Sonography, Abdominal Sonography I and II.

**UTEC 80. Advanced Sonography Seminar I. 3 Credits.**
This course is designed to prepare the student for national board examinations administered by the American Registry of Diagnostic Medical Sonographers in the field of ultrasound and vascular technology. The student will be responsible for "in class" review of ultrasound clinical procedures, including anatomy, physiology, disease processes and sonographic appearances, and sonography principles and instrumentation. In addition, the student will learn post graduate skills to enhance professional opportunities. Prerequisite: Gynecologic, Small Parts I and II, Obstetrical Sonography, and Abdominal Sonography I, II and III, Clinical Internship I, II and III, and Introduction to Sonography Principles and Instrumentation I and Sonography Principles and Instrumentation II and Vascular Technology I.

**UTEC 81. Clinical Internship IV. 8 Credits.**
Through clinical supervised learning situations in a clinical ultrasound imaging department the student will gain knowledge and be required to demonstrate competence in noninvasive vascular imaging procedures and all aspects of instrumentation. Prerequisite: Gynecologic Sonography, Small Parts I and II Sonography, Obstetrical Sonography, Abdominal Sonography I, II, III and Vascular Technology.

**UTEC 90. Advance Sonography Seminar II. 4 Credits.**
This course is designed to prepare the student for national board examinations administered by the American Registry of Diagnostic Medical Sonographers in the field of ultrasound and vascular technology. The student will be responsible for "in class" review of ultrasound clinical procedures, including anatomy, physiology, disease processes and sonographic appearances, ultrasound physics and instrumentation and vascular physics and instrumentation. In addition, the student will learn post graduate skills to enhance professional opportunities. Prerequisite: Gynecologic, Small Parts I and II, Obstetrical Sonography, Clinical Internship I, II, III and IV, and Ultrasound Physics and Instrumentation, Vascular Technology and Vascular Physics and Instrumentation and Advanced Sonography Seminar II.

**UTEC 91. Clinical Internship V. 8 Credits.**
Through clinical supervised learning situations in a clinical ultrasound imaging department the student will gain knowledge and be required to demonstrate competence in noninvasive vascular imaging procedures and all aspects of instrumentation. Prerequisite: Gynecologic Sonography, Small Parts I and II Sonography, Obstetrical Sonography, Abdominal Sonography I, II, III and Vascular Technology.

**Therapeutic Science Courses**

**TS 800. Research Proseminar. 1 Credits.**
A proseminar conducted by the core graduate faculty in Occupational Therapy and Therapeutic Science. Twice-monthly meetings will involve student and faculty presentations of their current research, as well as provide more opportunities to obtain feedback on research proposals. May be taken more than once for a total of four credits. (Same as OTMS 800.)

**TS 805. Multidisciplinary Theoretical Perspectives. 3 Credits.**
Students will identify and explore key theories in behavioral and social science with an emphasis on those currently influencing clinical reasoning and applications to practice and/or research. Students will demonstrate an understanding of multidisciplinary theoretical frameworks and be able to compare and contrast key theories, while also developing knowledge about theory guided research and practice.

**TS 850. From Beliefs to Evidence. 1 Credits.**
Analysis of the role of beliefs about practice in professional culture and how beliefs are affected by the accumulation of research evidence. Topics include the nature of science and beliefs, the nature of evidence, and the debate over evidence-based practice. Students will use topics from their own professional interests for class presentations and written assignments. A minimum of two credits over two successive terms (Fall then Spring) is required (i.e., 1 credit each semester). Note this course alternates in succession with TS990 and TS950, and is offered in the Fall & Spring every 3rd year. Prerequisites: Permission of the instructor.

**TS 880. Special Projects. 1-6 Credits.**
An elective course to allow student investigation of special issues or problems relevant to applied research and/or practice, under the direction of a faculty member chosen by the student. Systematic coverage of current issues may include a research investigation or study related to pertinent sociocultural trends, practice factors, or emerging issues in service provision. Students will complete special projects such as oral presentations, written papers, or case analysis as negotiated with the faculty member. May be repeated for credit. Prerequisite: Permission of instructor.

**TS 900. Evolving Interdisciplinary Views of Disablement. 1 Credits.**
Assessment of how our social and cultural context defines notions of disability and disablement in our society. Topics include historical constructs of disability, public policy related to disability, and social paradigms of disability. Students will evaluate views of disablement from the perspective of their own discipline. A minimum of two credits over two successive terms (Fall then Spring) is required (i.e., 1 credit each semester). Note this course alternates in succession with TS850 and TS890, and is offered in the Fall & Spring every 3rd year. Prerequisite: Consent of the instructor.

**TS 950. Designing Effective Knowledge Transfer. 1 Credits.**
Examination of the principles of knowledge transfer and diffusion of innovation as they relate to practices in therapeutic professions. Topics include the diffusion process, change agents, innovation adoption, and current diffusion methods. Students will evaluate diffusion processes that have occurred within their own professions. A minimum of two credits over two successive terms (Fall then Spring) is required (i.e., 1 credit each semester). Note this course alternates in succession with TS850 and TS990, and is offered in the Fall & Spring every 3rd year. Prerequisite: Consent of the instructor.

**TS 980. Advanced Study in Therapeutic Science. 1-9 Credits.**
Students engage in advanced study of a topic of their interest, guided by an appropriate mentor. Options for engaging in learning include directed readings, interpretation of evidence, discussions, and written syntheses of existing literature. Students typically enroll in offerings of this course several times over a series of successive terms, with the course sequence culminating in the written proposal for original research and an oral defense of that proposal (oral comprehensive examination). Prerequisite: Permission of instructor.

**TS 990. Dissertation in Therapeutic Science. 1-9 Credits.**
Research experience leading to dissertation for doctoral students in Therapeutic Science. Students enroll in offerings of this course over a series of successive terms, culminating in a written dissertation describing original research and an oral defense of the dissertation research. Prerequisite: Permission of instructor.
Intercampus Program in Communicative Disorders

KU offers a clinical doctorate in audiology, a master's degree in speech-language pathology, a clinical doctorate in speech-language pathology and Ph.D. degrees in audiology and speech-language pathology through its Intercampus Program in Communicative Disorders.

About the Intercampus Program in Communicative Disorders

The Intercampus Program in Communicative Disorders comprises the Department of Speech-Language-Hearing: Sciences and Disorders (http://splh.ku.edu/) on the Lawrence campus and the Department of Hearing and Speech (http://www.kumc.edu/school-of-health-professions/ipcd.html) on the KU Medical Center campus. The Department of Speech-Language-Hearing is part of the College of Liberal Arts and Sciences, while the Department of Hearing and Speech is part of the School of Health Professions.

Students pursuing these graduate degrees take course work on the Medical Center campus in Kansas City and on the main campus in Lawrence. A student may live in either community. Block scheduling of courses reduces the frequency of commuting. A committee of faculty from both departments is responsible for instruction, curriculum planning, student selection and advising, clinical practicum policies, and course scheduling.

The College of Liberal Arts and Sciences also offers undergraduate programs in Speech-Language-Hearing: Sciences and Disorders (http://splh.ku.edu/). The Lawrence department collaborates with the departments of Applied Behavioral Science, Linguistics, and Psychology to offer a Ph.D. in child language (p. 1219).

Hearing and Speech Courses

AUD 805. Introduction to Clinical Research. 1 Credits.
The course will provide a comprehensive overview to clinical research. The student will gain an understanding of how to develop clinical research questions including protocol design and the factors that should be considered in initiating a clinical research study. This will include biostatistical considerations, the recruitment of study participants, regulatory issues, and data management, and defining measures and instruments. Students will gain knowledge of how to define clinical research among the various institutional entities involved with clinical research at the University of Kansas Medical Center such as the Research Institute (RI), General Clinical Research Center (GCRC) and the Human Subjects Committee (HSC). Additionally, one component of the course will focus on how to apply for funding (grantsmanship), critical appraisal of research studies, and how to present research data. Prerequisite: Consent of instructor.

AUD 810. Diagnostic Audiology. 4 Credits.
Audiometric calibration, pure tone and speech testing, analysis of audiograms, middle ear testing.

AUD 811. Hearing Disorders. 3 Credits.
A study of disorders of the auditory system including anatomical, physiological, perceptual, and audiological manifestations of pathologies affecting hearing. Prerequisite: AUD 810 and AUD 829.

AUD 813. Psychoacoustics and Theories of Hearing. 3 Credits.
A study of relations between common acoustic stimuli and the responses they elicit; consideration of sensory scales, noise phenomena, and speech intelligibility. Prerequisite: AUD 829.

AUD 814. Hearing Conservation. 1 Credits.
A study of the major components of hearing conservation programs in industrial, educational, and military settings. Forensic audiology issues related to occupational hearing loss are included. Prerequisite: AUD 810 and AUD 829.

AUD 816. Speech Perception. 2 Credits.
Acoustic and perceptual characteristics of phonemes, words, and connected speech for normal-hearing adults and infants; how speech perception is assessed clinically and is affected by hearing loss, aging, use of amplification, talker differences, and linguistic factors. (Same as SPLH 716.)

AUD 817. Pediatric Audiology. 3 Credits.
Normal and pathological development of the auditory system; pediatric audiometric testing; auditory and communication aspects in the habilitation of hearing-impaired children. Prerequisite: AUD 810.

AUD 818. Vestibular Systems and Disorders. 3 Credits.
Study of the anatomy and physiology of the normal peripheral and central vestibular system; clinical assessment of vestibular disorders; vestibular rehabilitation.

AUD 819. Hearing Aids I. 3 Credits.
Study of the components, function, fitting, and performance characteristics of hearing aids, applications of amplification in rehabilitative audiology. Prerequisite: AUD 810.

AUD 820. Rehabilitative Audiology and Counseling. 3 Credits.
Principles and methods of auditory, communication, and social assessment and intervention with hard of hearing and deaf adults, children, and their families. Prerequisite: AUD 810 and AUD 819 or equivalent.

AUD 821. Hearing Aids II. 3 Credits.
The advanced study of the theoretical bases, techniques, and clinical application of hearing aids and their assessment. Participants will review, present, and discuss contemporary issues in hearing aid literature and research. Prerequisite: AUD 819.

AUD 822. Electro-Acoustics and Instrumentation. 3 Credits.
A study of the generation, control and measurement of the simple and complex sounds essential to clinical audiology and hearing research.

AUD 823. Cochlear Implants and Hearing Assistance Technologies. 2 Credits.
Through lecture and discussion format, this course will cover the principles and methods of assessment, candidacy, surgery, programming and rehabilitation of patients receiving cochlear implants. In addition, hearing assistance technologies such as large area systems and alerting devices will be covered with emphasis on classroom amplification. Prerequisite: AUD 819 and AUD 821 or permission of instructor.

AUD 824. Central Auditory Processing. 2 Credits.
The study of the anatomy and physiology of the central auditory system. Analysis and review of the diagnostic procedures and the therapeutic strategies for central auditory processing disorders.

AUD 826. Tinnitus Management. 2 Credits.
This course provides an advanced lesson in the evaluation and treatment of tinnitus and decreased sound tolerance. Topics include: diagnostic evaluation, CBT, biofeedback therapy, sound generator selection and programming, hearing aid considerations and programming, verification/validation, and pediatric considerations. Prerequisite: AUD 821.
AUD 828. Genetics and Hearing Loss. 2 Credits.
The fundamentals of human genetics as related to hearing loss, including patterns of inheritance, genotypic and phenotypic characteristics of the major forms of syndromic and nonsyndromic hearing loss; genetic counseling, genetic testing, possible genetic treatment, and issues related to them; resources for keeping up with this rapidly changing field. Prerequisite: Permission of instructor.

AUD 829. Anatomy and Physiology of the Hearing and Vestibular Mechanisms. 3 Credits.
Advanced study of the anatomical and physiological properties of the human hearing and vestibular mechanisms.

AUD 841. Clinical Observation. 1 Credits.
This course provides a community-based application of foundational audiology topics. First-year Au.D. students will observe a variety of community audiology clinics.

AUD 842. Interprofessional Education for Audiologists. 1 Credits.
Observation of healthcare professionals providing services at regional hospitals or clinics. Through observations, readings, and reflections, students are oriented to the work of healthcare professionals outside the field of audiology and the role of audiology within an interprofessional healthcare team.

AUD 843. Clinical Practice in Audiology. 1-6 Credits.
Supervised simulation experiences and clinical work at the University and/or University Medical Center audiology clinics, or affiliated, off-campus practicum sites. Prerequisite: Permission of instructor.

AUD 846. Independent Study in Problems in Audiology. 1-10 Credits.

AUD 851. Auditory Evoked Potentials. 3 Credits.
Theoretical bases, techniques, and clinical applications for auditory evoked potentials including electrocochleography, auditory brainstem response, middle and late latency and cognitive responses. Prerequisite: AUD 810, AUD 822, AUD 829, or permission of instructor.

AUD 853. Pharmacology for Audiology. 2 Credits.
Presentation and discussion topics including: basic pharmacology (pharmacokinetics and pharmacodynamics), mechanisms of ototoxicity, selected ototoxic agents, drugs used in otolaryngology, and a review of patient management strategies. Prerequisite: Enrollment in the Au.D. or Ph.D. audiology program or permission of instructor.

AUD 858. Business Audiology. 2 Credits.
An introduction to audiology business practice principles. Operational functions of the audiology clinic will be reviewed, including human resources, marketing, legal and ethical practice concerns, billing, coding and reimbursement. Prerequisite: enrollment in the Au.D. or Ph.D. audiology program or permission of instructor.

AUD 899. Thesis. 1-10 Credits.

AUD 940. Seminar in Audiology: ______. 1-4 Credits.
Advanced study of selected topics in audiology such as (but not limited to): cochlear micromechanics and other physiological processes; psychoacoustics, speech perception, cochlear implants, scientific reading, etc. Prerequisite: Enrollment in the Audiology Ph.D. or Au.D. program or permission of instructor.

AUD 941. Grand Rounds in Audiology. 1 Credits.
Presentations/discussion of clinical case studies and professional issues in Audiology. Au. D. students and audiology faculty members will participate in these sessions.

AUD 942. Investigation and Conference. 1 Credits.
Readings and case study analysis in preparation for the formative and comprehensive exams. Enrollment is restricted to Au.D. students. Prerequisite: 2 semesters of full-time enrollment in the Au.D. program.

AUD 944. Clinical Rotation. 1-6 Credits.
Supervised clinical work at university-affiliated, off-campus sites. The Clinical Rotation is intended to prepare students for entry into their Clinical Externship and to foster increasing independence. Clinical skills required are defined in standards set forth by the American Speech-Language Association.

AUD 945. Clinical Externship. 1-9 Credits.
Supervised clinical work at the University of Kansas and/or KUMC audiology clinics, or affiliated, off-campus sites. The Clinical Externship is intended to refine clinical skills, increase clinical independence, and ensure that clinical skills meet the certification standards in audiology set forth by the American speech-Language-Hearing Association. Open to 3rd and 4th year Au.D. students. Approval from Instructor needed for 3rd year students.

AUD 946. Advanced Grand Rounds in Audiology. 1 Credits.
Advanced, critical discussion of clinical case studies and professional issues in audiology and interprofessional collaboration. Third- and fourth-year Au.D. students and audiology faculty will participate in these sessions. Prerequisite: 4 credits of AUD 941 or by permission.

AUD 999. Doctoral Dissertation. 1-12 Credits.

Hearing and Speech Courses
SLPD 801. Seminar on Evidence-Based Practice in Speech-Language Pathology and Other HealthSciences I. 3 Credits.
This course is designed to give students a thorough understanding of evidence-based principles and procedures so that they could provide evidence-based services in a clinical setting. It is also designed to prepare students to assume a position of leadership in which they would be required to promote and teach evidence-based practices to their staff clinicians. Prerequisite: Consent of instructor.

SLPD 802. Seminar in Evidence-Based Practices in Communicative Disorders. 3 Credits.
In this course, students apply information covered in SLPD 801 to their areas of primary concentration. In-class and on-line sessions are led by students and guests from the university and community. Student presentations include primarily reports of progress on their semester project, a meta-analysis dealing with a clinical issue of their choice. Students report on status of (a) their development of the research question; (b) details of the literature search; (c) evaluation of relevant studies; (d) determination of level of evidence provided by the studies; (e) calculation and aggregation of effect sizes; and (f) conclusions regarding the impact of the analysis on clinical practice. Guest presenters, including program and university faculty as well as clinic administrators and practitioners from the community, lead discussions on advantages of and problems with using evidence-based practices to help them make decisions in the speech-language clinic.

SLPD 804. Clinical Practice in Speech-Language Pathology: Advanced Training for the Experienced Clinician. 1-3 Credits.
Students participate in clinical experiences (assessment and/or treatment) related to their primaryur and/or secondary area of concentration. Clinical experiences in which the student learns about a particular patient population, standardized and non-standardized assessment measures, instrumentation, computer software, devices, and/or treatment techniques and strategies are possible. Prerequisite: certification in speech-language pathology from the American Speech-Language-Hearing Association.
SLPD 805. Independent Study in Speech-Language Pathology. 1-3 Credits.
Investigation of special topics by individual SLPD students. Prerequisite: Consent of Instructor.

SLPD 903. Capstone Project. 1-6 Credits.
The Capstone Project reflects the culmination of academic and advanced clinical study and may take many forms (e.g., small original research study, original analysis of data collected by another researcher, research literature meta-analysis, program design and analysis, etc.). The Capstone project will comprise a written report that involves both literature and field activity. A Capstone project represents the research and application of knowledge, as well as an articulated plan for dissemination of the outcomes. Students will enroll in this course for a total of 6 credits. Prerequisite: Consent of Instructor.

Speech-Language-Hearing Courses

SPLH 161. Survey of Communication Disorders. 3 Credits. S
Provides a general understanding of normal and deviant speech, language, and hearing in adults and children. This course considers the normal development of communication behavior, the nature of communication disorders, and the interaction of speech pathology and audiology with allied fields (e.g., education, medicine, psychology, special education).

SPLH 177. First Year Seminar: ______. 3 Credits. U
A limited-enrollment, seminar course for first-time freshmen, addressing current issues in Speech-Language and Hearing. Course is designed to meet the critical thinking learning outcome of the KU Core. First-Year Seminar topics are coordinated and approved by the Office of First-Year Experience. Prerequisite: First-time freshman status.

SPLH 220. The Physics of Speech. 4 Credits. N
An introduction to the acoustic structure of speech intended for non-science majors. Emphasis will be placed on the methods and standards by which scientists measure and evaluate the physical characteristics of speech. Topics will include: simple harmonic motion, the propagation of sound waves, aerodynamic aspects of vocal fold vibration, resonance, digital speech processing, frequency analysis, and speech synthesis. Three class hours and one laboratory per week. (Same as LING 120.) Prerequisite: MATH 101 or 104 or equivalent.

SPLH 250. Study Abroad Topics in: ______. 1-5 Credits. S
A course designed to enhance international experience in topic areas related to speech-language-hearing at the junior/senior level. Coursework must be arranged through the Office of KU Study Abroad. May be repeated for credit if the content differs. Prerequisite: Department permission.

SPLH 418. Introduction to Cognitive Science. 3 Credits. S
Examines the data and methodologies of the disciplines that comprise Cognitive Science, an inter-disciplinary approach to studying the mind and brain. Topics may include: consciousness, artificial intelligence, linguistics, education and instruction, neural networks, philosophy, psychology, anthropology, evolutionary theory, cognitive neuroscience, human-computer interaction, and robotics. (Same as LING 418, PHIL 418, and PSYC 418.) Prerequisite: Consent of instructor.

SPLH 430. Communication in Autism. 3 Credits.
This course will provide you with an introduction to the characteristics and communication of individuals with Autism Spectrum Disorder (ASD). This course will focus on diagnostic criteria, early identification, communication assessment and intervention considerations, and partnering with families who have family members with ASD. This course is offered at the 400 and 800 levels with additional assignments at the 800 level. Not open to students with credit in SPLH 830.

SPLH 449. Laboratory/Field Work in Human Biology. 1-3 Credits. N
This biological anthropology lab course builds upon concepts introduced in ANTH 150 and ANTH 304. It provides students with practical, hands-on experience in biological anthropology laboratory methods and theory. Topics include: genetics, osteology, forensic anthropology, modern human biological variation, primatology, paleoanthropology, and human evolution. Students integrate their knowledge of human variation, genetics, and critical approaches to the concept of social and biological race. For the final project, students analyze genetic markers using a commercial ancestry test. They will either be given anonymous data to work with, or, if they pay an optional laboratory fee, they can investigate their own genome for the final project. This fee for self-study is not required for full participation in the final project. (Same as ANTH 449, BIOL 449, and PSYC 449.) Prerequisite: Either ANTH 304, ANTH 340, Human Biology major, or permission of instructor.

SPLH 450. Study Abroad Topics in: ______. 1-5 Credits. S
A course designed to enhance international experience in topic areas related to speech-language-hearing at the junior/senior level. Coursework must be arranged through the Office of KU Study Abroad. May be repeated for credit if the content differs. Prerequisite: Department permission.

SPLH 451. Directed Study Abroad in Speech-Language-Hearing. 1-3 Credits. S
An independent study designed to enhance international experience in topic areas related to speech-language-hearing. Investigation of special topic or project selected by the student with advisor approval, supervision by a KU SPLH instructor and an authorized agent of the study abroad site. Experience must be arranged through the Office of KU Study Abroad. Such study may take the form of directed reading and/or directed research/clinical observation. A daily journal and final report is required. A maximum of six hours of credit may be counted, with no more than three in a single area of study. Prerequisite: Consent of instructor

SPLH 452. Examining Global Perspectives in Speech-Language-Hearing: ______. 3 Credits.
For students enrolled in an SPLH-sponsored Study Abroad program. Students participate in 12 hours of meetings in preparation for the Study Abroad experience. Pre-trip meetings focus generally on multi-cultural issues relevant to speech-language-hearing practice as well as specific cultural, lingustic, and service delivery issues for the target country. Students spend two weeks abroad, visiting sites to observe different types of service delivery for people with disabilities and places that are culturally and historically relevant. Periodic debriefing and small group discussions are conducted during the time abroad. A daily journal and post-visit reflection paper is required. Prerequisite: Instructor permission required.

SPLH 462. Principles of Speech Science. 3 Credits. N
Survey of the physiology of speech production, and the physics of sound. Emphasis upon methodologies in the laboratory study of normal speech. Prerequisite: SPLH 120 or SPLH 220, or concurrent enrollment in SPLH 220 or consent of instructor.

SPLH 463. Principles of Hearing Science. 3 Credits. N
This class discusses the concepts and principles relevant to normal hearing processing: anatomy, psychophysical methods, and basic subjective correlates of the auditory system. Prerequisite: SPLH 120, or concurrent enrollment in SPLH 120, or consent of instructor.

SPLH 464. Undergraduate Seminar in: ______. 1-3 Credits. S
Course organized any given semester to study particular subject matter or to take advantage of special competence by an individual faculty member. Topics change as needs and resources develop. Class discussion, readings, and individual projects. (Distribution credit given for two-three hours only.)

SPLH 465. Fundamentals of Clinical Phonetics. 1 Credits. S
Introduction to classification of American English speech sounds based on articulatory phonetics. Practice in phonetic transcription and analysis of normal and abnormal speech. Laboratory exercises to give students hands-on experience with selected topics from lecture. Prerequisite: Corequisite: SPLH 220.

SPLH 466. Language Science. 3 Credits. S
Introduction to structure/function of human languages as it relates to language development and disorders; processes involved in the expression and reception of language and the methodologies employed to study these processes.

SPLH 498. Departmental Research. 1-8 Credits. S
Study may be directed toward either reading for integration of knowledge and insight in Speech-Language-Hearing, or original research in the field. Student creates a plan of activities at the beginning of each semester under the mentor's guidance. Student and mentor review this plan at the end of each semester to evaluate progress. Departmental Honors students must complete a written report or a public oral presentation detailing the purpose, methods, results, and impact of the research. This final product partially fulfills the requirements for Departmental Honors. (Eight hours maximum credit, which may be distributed through 4 semesters. No student may enroll for more than 4 hours of credit in a given semester). Prerequisite: Consent of Departmental Research Coordinator.

SPLH 499. Directed Study in Speech-Language-Hearing. 1-3 Credits. S
Investigation of special topic or project selected by the student with advice, approval, and supervision of an instructor. Such study may take the form of directed reading and/or directed research/clinical observation. Individual reports and conferences. (Distribution credit given for two-three hours only.) A maximum of six hours of credit may be counted, with not more than four in a single area of study.) Prerequisite: Consent of instructor.

SPLH 516. Speech Perception. 2 Credits. S
Acoustic and perceptual characteristics of phonemes, words, and connected speech for normal-hearing adults and infants; how speech perception is assessed clinically and is affected by hearing loss, aging, use of amplification, talker differences, and linguistic factors. Prerequisite: SPLH 120 Physics of Speech. Prerequisite or Corequisite: SPLH 463 Principle of Hearing Science.

SPLH 565. Language Sample Analysis Lab. 1 Credits. S
The study of the analysis of language produced by children with respect to its phonological, lexical, morphological, syntactic, and pragmatic characteristics. Prerequisite: Corequisite: SPLH 566.

SPLH 566. Language Development. 3 Credits. SI S
Study of language acquisition in children, including phonologic, morphologic, syntactic, and semantic components. Methods of language measurement, the role of comprehension, and pragmatic aspects of language use are included. May be taught in lecture or online format.

SPLH 568. Introduction to Audiological Assessment and Rehabilitation. 4 Credits. U
Introduction to methods for assessing and treating hearing disorders in adults and children, as well as conditions that result in hearing loss. Course includes clinical observation and extensive hands-on experience with clinical techniques. Prerequisite: SPLH 463.

SPLH 571. Introduction to Speech-Language Pathology. 4 Credits. U
This course provides training in clinical management of communicative disorders in children and adults. Principles of evaluation, application of diagnostic information, intervention planning, intervention process, data collection and application, report writing, and interactions with parents and other professionals are examined. Participation in observation and laboratory activities is required.

SPLH 575. Multicultural Considerations in Speech-Language-Hearing I. 1 Credits. S
This course introduces foundational concepts of culture and diversity, bilingualism, bias, and components and processes leading to cultural competency. Students explore health and educational disparities in the United States and beyond. Students will reflect on their cultural identity, and how their experiences and perspectives may differ from others, and how their experiences can influence service delivery in speech-language pathology and audiology. Prerequisite: SPLH 566 or LING 415 or consent of instructor.

SPLH 578. Multicultural Considerations in Speech-Language-Hearing II. 1 Credits. S
This course builds on foundational concepts from SPLH 575 by exploring potential cultural and linguistic characteristics of populations that are typically underrepresented in many sectors of the United States, including education and health care. Case studies are implemented to examine cultural and linguistic influences on assessment and treatment processes in speech-language pathology and audiology. Prerequisite: SPLH 578.

SPLH 620. The Communicating Brain: The Ultimate Personal Computer. 3 Credits. U
This course introduces the study of human neuroscience with a particular focus on human communication. The course provides an overview of the relevant anatomical structures and function along with an introduction to the basic methods used to investigate central nervous system function. Students are introduced to the study of perceptual, motor, and language function in the nervous system through a series of examples drawn from normal function and clinical cases. The examples are selected to highlight how these systems develop and are influenced by experience, implantable devices developed to interface with the nervous system, and how computers and animals are used as models to learn about nervous system function. Prerequisite: A 400-level course in SPLH, or consent of instructor.
SPLH who have not completed this prerequisite. Not open to students with credit in SPLH 568. Prerequisite: Graduate standing.

SPLH 670. Beginning Clinical Practice in Audiology. 1-3 Credits. N

Testing of hearing using pure tone air and bone conduction tests with both normal and hearing-impaired individuals. Prerequisite: SPLH 568, or concurrent enrollment in SPLH 568, overall GPA 3.0 and consent of instructor.

SPLH 672. Clinical Practice in Speech-Language Pathology. 3 Credits. S

Clinical practice with children and adults. Group and individual conferences with staff required. Repeatable once for credit. Prerequisite: SPLH 571 and overall GPA of 3.0.

SPLH 716. Speech Perception. 2 Credits.

Acoustic and perceptual characteristics of phonemes, words, and connected speech for normal-hearing adults and infants; how speech perception is assessed clinically and is affected by hearing loss, aging, use of amplification, talker differences, and linguistic factors. (Same as AUD 816.)

SPLH 736. Foundations of Early Intervention. 3 Credits.

This course explores evidence-based principles and practices of providing early intervention services, including requirements of IDEA Part C, mission and key principles of early intervention and recommended practices and standards. Students will engage in guided field observations of assessment, intervention and collaborative practices, reflective practice and teaming/coaching activities. (Same as SPED 736.)

SPLH 737. Infants and Toddlers with Significant Needs. 3 Credits.

This course explores the challenges infants and toddlers with significant developmental needs face and how to best support their participation in daily activities. Challenges faced by medical, physical, communication, social-emotional, hearing, vision, and mental health issues will be discussed along with how to support these needs across disciplines and in the home and community activities. This course will provide in-depth review of the unique challenges these children and families face and how providers from various backgrounds can work together to best support children and families. Environmental adaptations and direct instructional techniques to maximize independence tailored to the infant and toddler’s strengths and needs will be explored. Information is also provided on assistive technology designed to provide supports. Functional behavioral assessment procedures, proactive intervention strategies and psycho-educational approaches as well as the development of collaborative support plans will be studied. (Same as SPED 737.)

SPLH 752. Examining Global Perspectives in Speech-Language-Hearing: _____, 2-3 Credits.

For students enrolled in an SPLH-sponsored Study Abroad program. Students may be required to participate in pre-program meetings in preparation for the Study Abroad experience. Pre-trip meetings will focus generally on multi-cultural issues relevant to speech-language-hearing practice as well as specific cultural, linguistic, and service delivery issues for the target country. Students may be required to facilitate discussions or prepare presentations for these meetings. While abroad, students will observe and/or provide different types of service delivery for people with disabilities and visit places that are culturally and historically relevant. Periodic debriefing and small group discussions will be conducted during the time abroad. Credit hours will be determined based on the specific experience in consultation with the instructor(s).

SPLH 764. Seminar in: _____. 1-3 Credits.

The subject matter of this seminar will be special topics from speech pathology and audiology. Special prerequisite may be established for a given topic.

SPLH 799. Proseminar in Child Language. 2 Credits.

A review and discussion of current issues in children’s language acquisition. May be repeated for credit. Graded on a satisfactory/unsatisfactory basis. (Same as ABSC 797, CLDP 799, LING 799 and PSYC 799.)

SPLH 816. Language Development. 3 Credits.

Study of language acquisition in children, including the morphologic, syntactic, and semantic components. Methods of language measurement, the role of comprehension, and pragmatic aspects of language use will be included. Not open to students who have credit for SPLH 566. Laboratory by appointment.

SPLH 820. Developmental Phonological Disorders. 2 Credits.

Focuses on speech and non-speech characteristics of children with developmental phonological disorders. Emphasis placed on collection and phonetic transcription of speech samples, phonological analysis of transcribed data, and decision-making processes in assessment and intervention.

SPLH 822. Dysarthria/Apraxia. 2 Credits.

This course describes the neuroanatomic bases of motor-speech processes, the diagnosis, classification, assessment, prognosis, and treatment of dysarthria(s) and apraxia(s).

SPLH 824. Fluency Disorders. 2 Credits.

The nature of stuttering in children and adults is discussed. Theories regarding etiology, development, and maintenance of the disorder are presented. Emphasis is placed on various clinical approaches to assessment, measurement, and treatment.

SPLH 826. Phonatory Disorders. 2 Credits.

This course reviews the function of the laryngeal and respiratory mechanisms including the parameters and processes of phonation. Primary content addresses diagnosis, description, and treatment of organic and non-organic disorders of phonation.

SPLH 828. Speech Disorders in Special Populations. 2 Credits.

This course reviews anatomy and physiology of the velopharyngeal mechanism. Diagnosis and management of velopharyngeal dysfunction and associated problems considered. Anatomy, physiology, and rehabilitation associated with certain oral, pharyngeal, and laryngeal abnormalities discussed. Emphasis is on the speech problems of adults following medical management. Populations include individuals with laryngectomies, glossectomies, and tracheotomies.

SPLH 830. Communication in Autism. 3 Credits.

This course will provide an introduction to the characteristics and communication of individuals with Autism Spectrum Disorder (ASD). This course will focus on diagnostic criteria, early identification, communication assessment and intervention considerations, and partnering with families who have family members with ASD. This course is offered at the 400 and 800 levels with additional assignments at the 800 level. Not open to students with credit in SPLH 430.

SPLH 832. Dysphagia. 2 Credits.

This course covers normal and disordered swallowing. Evaluation and treatment of swallowing disorders, the dysphagia team, and dysphagia in special populations are considered.

SPLH 833. Dysphagia Treatment in Adults. 2 Credits.

This course is designed to build critical thinking and analysis skills for developing and implementing appropriate treatment plans for adults with dysphagia. Foundations of non-instrumental swallow assessment,
rehabilitation, and compensation will be addressed. This course will also cover issues of ethics, cultural considerations in dysphagia management, and professional communication. Learning experiences will include evidence-based curriculum, hands-on practice, and critical thinking activities. Prerequisite: SPLH 832.

SPLH 834. Augmentative and Alternative Communication and Literacy. 2 Credits.
This course is designed to provide resources and information to prepare students to collaborate with others in increasing the literacy opportunities and skills of individuals with complex communication needs, particularly those who use augmentative and alternative communication.

SPLH 838. Augmentative and Alternative Communication in Schools. 2 Credits.
This course provides information about augmentative and alternative communication (AAC) services in school settings. Students will participate in readings and activities that will provide information concerning the roles, responsibilities, and contributions of school speech-language pathologists relative to AAC.

SPLH 840. Language Disorders of Children: Infants and Toddlers. 2 Credits.
This course examines factors relating to language disorders in the birth to three population. At-risk populations, as well as those with known etiologies, are considered. Information on assessment, intervention, and service delivery models is addressed. Issues relating to Public Law 99-457 are also examined.

SPLH 842. Language Disorders of Children: Preschool. 2 Credits.
This course examines language disorders of preschool-age children in the late preschool years. The course includes information on incidence, characteristics, assessment, and intervention. Theoretical issues and their implication for language intervention are also examined.

SPLH 844. Language Disorders of Children: School Age. 2 Credits.
This course examines language development during the school years and how problems in this development interact with school performance. Emphasis is placed on the role of the speech-language pathologist in the early identification, assessment, and remediation of language-learning problems.

SPLH 846. Language Disorders of Adults. 2 Credits.
Neurological aspects of language processes, classification of aphasia, and assessment of language deficits are discussed. Management approaches including intervention strategies and rehabilitation are also considered.

SPLH 848. Language Disorders of Special Populations. 2 Credits.
This course focuses on communication differences in individuals with intellectual disabilities, autism, cerebral palsy, dual sensory impairments, and other conditions affecting communication competence. Communication characteristics as well as assessment and intervention strategies are studied.

SPLH 850. Cognitive-Linguistic Disorders of Adults. 2 Credits.
This course will prepare students to work with adults with acquired cognitive-linguistic disorders, with a focus on: Alzheimer's Disease, Traumatic Brain Injury, and Right Hemisphere Disorder, including etiologies and disease processes. Theoretical and practical knowledge will be presented regarding the primary cognitive domains of attention, memory, and executive function, as well as their impact on discourse-level language. The course will cover neuroanatomy, assessment procedures, interventions, family/communication partner training, and psychosocial aspects of cognitive-linguistic disorders.

SPLH 852. Augmentative and Alternative Communication in Developmental and Intellectual Disabilities. 2 Credits.
This course describes augmentative and alternative communication (AAC) assessment and intervention issues as they apply to children and adults with intellectual and developmental disabilities. Areas of study include AAC systems, assessment strategies and procedures, intervention strategies, and AAC information resources.

SPLH 853. Augmentative and Alternative Communication and Adult Acquired Disorders. 2 Credits.
This course will discuss the concepts and evidence related to assessment and intervention in the area of augmentative and alternative communication for adults with acquired disorders. Content will be related specifically to adults with acquired communication disorders and focus more on high tech than low tech but information and evidence related to both will be presented. Information about AAC systems appropriate for adults, assessment protocols, approaches to intervention, and advocacy will be applied in a case-based format.

SPLH 854. Reading Disorders. 2 Credits.
This course addresses the perceptual, linguistic, and cognitive processes utilized in written communication. Acquired and developmental disorders of written language are examined in relation to issues concerning characteristics, etiology, early identification, assessment, and remediation.

SPLH 856. Bilingual Child Speech-Language Assessment and Intervention. 2 Credits.
This course will address best practices for conducting appropriate, least-biased assessment and intervention with bilingual populations, specifically English learners (ELs). We will examine topics covering the assessment, diagnosis, and treatment of speech (phonology; fluency) and language (morphosyntax; semantics) skills distributed across two languages in bilingual individuals with speech and or language disorders. We will also explore issues pertinent to bilingual clinical service delivery including federal law mandates, working with interpreters, cultural sensitivity and humility with multicultural populations (children and caregivers), consideration of dialectal variation, non-standardized assessment and intervention approaches, ongoing assessment during intervention, writing measurable intervention goals for bilingual speakers, advocating for bilingual families, and problematic clinical scenarios. The course will primarily focus on bilingual speech-language assessment and intervention with Spanish-speaking ELs. However, the underlying core clinical principles and approaches apply to ELs who speak languages other than Spanish.

SPLH 860. Evaluation of Speech and Language. 2 Credits.
Provides a general framework for speech and language evaluations. Issues related to initiation and termination of treatment are discussed. Practice is provided in evaluating norm- and criterion-referenced information used in diagnostic, referral, and treatment decisions.

SPLH 861. Seminar in Research Methodology in Speech Pathology and Audiology: 3 Credits.
This seminar is concerned with the design, instrumentation, execution, and reporting of research in audiology and speech pathology. SPLH 760 or its equivalent and some statistics are recommended before entering this seminar.

SPLH 862. Clinical Processes. 1 Credits.
Orients student to clinical procedures, policies, requirements, and expectations of program. Therapy models, planning, and philosophies are discussed along with implementation and evaluation of therapy
procedures. Professional issues are also considered. May be repeated for credit.

SPLH 864. Advanced Clinical Practice in Speech-Language Pathology. 1-6 Credits.
Students conduct supervised clinical work in a variety of settings. May be repeated for credit. Prerequisite: Department approval. Group and individual conferences with staff required.

SPLH 866. Field Study in Speech-Language Pathology. 5 Credits.
The field study provides work experiences in clinical activities. The student takes this course near the end of the degree program. Assignments include supervised work in a variety of approved settings. May be repeated for credit. Prerequisite: SPLH 660 or equivalent research methods course.

SPLH 868. Professional Issues. 1 Credits.
Forum for the presentation and discussion of scientific and professional issues by faculty and advanced graduate students. May be repeated for credit.

SPLH 874. Master’s Research Practicum. 1-3 Credits.
This course is designed to give students experience in conducting research. Students apply and extend their knowledge and skills by participating in a research project under the supervision of a mentor. Students may assist with or independently conduct research in speech, language, or hearing. Prerequisite: SPLH 660 or equivalent research methods course.

SPLH 876. Independent Study in Problems of Speech, Language, and Hearing. 1-6 Credits.
Investigation of special topics by individual master’s level students. Paper required. Prerequisite: Consent of instructor.

SPLH 888. Multicultural Considerations in Speech-Language-Hearing I. 1 Credits.
This course introduces foundational concepts of culture and diversity, bilingualism, bias, and components and processes leading to cultural competency. Students explore health and educational disparities in the United States and beyond. Students will reflect on their cultural identity, and how their experiences and perspectives may differ from others, and how their experiences can influence service delivery in speech-language pathology and audiology. This course is offered at the 500 and 800 levels, with additional assignments at the 800 level.

SPLH 889. Multicultural Considerations in Speech-Language-Hearing II. 1 Credits.
This course builds on foundational concepts from SPLH 888 by exploring potential cultural and linguistic characteristics of populations that are typically underrepresented in many sectors of the United States, including education and health care. Case studies are implemented to examine cultural and linguistic influences on assessment and treatment processes in speech-language pathology and audiology. This course is offered at the 500 and 800 levels, with additional assignments at the 800 level. Prerequisite: SPLH 888 or consent of instructor.

SPLH 899. Master’s Thesis. 1-6 Credits.
Thesis Hours. Graded on a satisfactory progress/limited progress/no progress basis.

SPLH 900. Proseminar in Communicative Disorders. 1 Credits.
A weekly forum for students and faculty to discuss professional issues and interdisciplinary research in communicative disorders and related fields. May be repeated for credit. Limited to two hours credit counted toward an MA or AuD degree. Limited to four hours credit counted toward the PhD degree. Graded on a satisfactory/unsatisfactory basis.

SPLH 964. Seminar in: ______. 1-3 Credits.
The subject matter of this seminar will be special topics from speech pathology and audiology, including those related to research methodology and research or academic careers. Special prerequisites may be established for a given topic.

SPLH 970. Independent Study in Problems of Speech and Hearing. 1-6 Credits.
Investigation of special topics by individual students. Paper required.

SPLH 974. Doctoral Research Practicum. 1-6 Credits.
Application of research methodology in a laboratory situation. Emphasis is on direct participation in designing and conducting an experimental investigation in speech or hearing.

SPLH 975. Directed Teaching: Speech Pathology and Audiology. 1-3 Credits.
Provides experiences in classroom and laboratory instruction under supervision of graduate faculty. Variable credit to reflect amount of instructional responsibility assumed. May be repeated up to a maximum of six semester hours.

SPLH 976. Independent Study in Grant Writing. 1-3 Credits.
Lectures and discussion on issues in the conduct of a scientific career, with emphasis on practical topics of special importance in behavioral science. Topics will include the academic and scientific roles of behavioral scientists, establishing a research lab, communicating research findings, tenure processes, gender equity, ethical conduct, and good scientific citizenship. Discussions will highlight important case studies. (Same as CLDP and PSYC 982.)

SPLH 998. Issues in Scientific Conduct. 3 Credits.
Lectures and discussion on issues in the conduct of a scientific career, with emphasis on practical topics of special importance in behavioral science. Topics will include the academic and scientific roles of behavioral scientists, establishing a research lab, communicating research findings, tenure processes, gender equity, ethical conduct, and good scientific citizenship. Discussions will highlight important case studies. (Same as CLDP and PSYC 982.)

SPLH 999. Doctoral Dissertation. 1-12 Credits.
Dissertation Hours. Graded on a satisfactory progress/limited progress/no progress basis.

Clinical Doctor of Speech-Language Pathology

The Doctor of Speech-Language Pathology (SLPD) degree program is designed for post-master’s speech-language pathologists holding the ASHA Certificate of Clinical Competence wanting to specialize in an area of interest with a clinical doctoral degree. At this time, the SLPD program does not require accreditation from ASHA.

Master’s Degree and GPA

Admission to the program requires a master’s degree in speech-language pathology from an ASHA-accredited university program (https://www.asha.org/eweb/ashadynamicpage.aspx?site=asha&webcode=caalisting&caacat=all) with a cumulative grade-point average of a minimum 3.0 on a 4.0 scale. Note that applicants with higher GPAs may receive admissions preference.

ASHA Certification
In addition, applicants must present evidence of current ASHA Certificate of Clinical Competence (http://www.asha.org/certification/).

**English Language Requirement**
All students are expected to have strong command of the English language. Both domestic and international students may be subject to evaluation of English proficiency. All students may be subject to the TOEFL requirement if his/her native language is not English. The requirement is posted in the Academic Catalog (p. 2454) and on the International Programs (http://www.kumc.edu/international-programs/academic-english-requirements.html) website.

**Background Check**
The Joint Commission requires all incoming students to pay for a background check, (p. 2456) and this may affect eligibility to enter the program. Applicants will be asked to provide information and make the payment once officially accepted into the program. For more information, please see the School of Health Professions background check instructions. (http://www.kumc.edu/school-of-health-professions/background-checks-and-drug-screening-for-students.html) A drug screening is required of all students participating in clinical settings.

**Technical Standards and Accommodations**
Please read the program technical standards (http://www.kumc.edu/school-of-health-professions/ipcd/speech-language-pathology-(slpd)/technical-standards.html) carefully. Signed verification will be required of students after they have been accepted. Reasonable accommodations will be made for any accepted student who has a documented disability and can meet program expectations. Applicants with documented disabilities can request reasonable accommodations if needed during the admissions process.

**International Students**
An applicant is considered an international student if he or she requires a visa, or currently resides in the U.S. with non-immigrant status, or currently resides in the U.S. while applying for permanent residency. Additional requirements and documentation, such as proof of English language proficiency, are required for international students to become eligible for KU programs. Please visit the KU Office of International Student Services before applying. (http://iss.ku.edu) More information: information for international students in the School of Health Professions. (http://www.kumc.edu/school-of-health-professions/information-for-international-applicants.html)

For more information or to contact the program, please visit the IPCD website (http://hearing.kumc.edu).

The SLPD (Clinical Doctor of Speech-Language Pathology) degree program is designed for post-master’s speech-language pathologists holding the ASHA Certificate of Clinical Competence and wanting to specialize in an area of interest with a clinical doctoral degree.

It may be completed in eighteen months (including summer and with a common entry point in the fall semester). Exceptions to this timeline may occur for the student who chooses to complete the program on a part-time basis. A full-time student usually enrolls in 10 - 14 credit hours each fall and spring semester and 6 to 8 credit hours in the summer session. A minimum of 33 credit hours is required to complete the SLPD program requirements.

**Degree requirements:**
- Degree requirements are normally completed within one full-time to three part-time years of admission to the program with the maximum time allowed as eight years.
- Cumulative grade-point average (GPA) of at least a 3.0 for all KU graduate coursework.
- Successful completion of a minimum of 33 credit hours.
- Successful completion of the Capstone Project. This is an individually designed, mentored project that demonstrates a synthesis of the knowledge and skills developed in the program.
- Enrollment in a minimum of one (1) credit hour the semester the student will graduate.
- Successful completion of the following courses:

**Program Applied Research Concentration = 15 credits**

- SLPD 801, Seminar in Evidence Based Practices in Communication Disorders A, 3 credits
- SLPD 802, Seminar in Evidence Based Practices in Communication Disorders A, 3 credits
- SLPD 903, Applied Research Experience (Capstone Project), 6 credits
- BIOS 704, Biostatistics - Prin Stat Pub Hlth, 3 credits

**Primary Concentration of Study = 10 - 12 credits**

Courses may be taken from within the IPCD program or other graduate programs on the KUMC and KU campuses, however, selected courses should reflect advanced knowledge not present in the MA curriculum.

- Neuro-developmental disorders
- Adult language disorders
- Child language disorders
- Clinical Supervision
- Clinical Leadership
- Literacy

**Secondary Concentration of Study = 8 - 10 credits**

Courses are selected jointly by student and advisor to represent a correlative area of study.

**TOTAL HOURS = 33**

- Specific elective courses are selected to complement the student’s program in consultation with the student’s academic advisor.
- Degree requirements and course descriptions are subject to change. See student handbook (https://www.kumc.edu/school-of-health-
professions/academics/student-handbook.html) for additional program information. In most cases, use the catalog of the year student entered the program. Other years' catalogs».

• For more information or to contact the program, please visit the IPCD website (http://hearing.kumc.edu/).

Technical Standards

The clinical doctorate degree in speech-language pathology signifies that the holder is prepared to assume leadership in clinical practice after developing advanced practice competencies. Therefore, all individuals admitted to the University of Kansas must meet the following abilities and expectations with or without accommodation(s). KU is an AA/EO/Title XI institution.

NOTE: Reasonable accommodations will be considered and may be made to qualified students who disclose a disability, so long as such accommodation does not significantly alter the essential requirements of the curriculum and the training program, or significantly affect the safety of patient care. Students who disclose a disability are considered for the program if otherwise qualified. Qualified students with a disability who wish to request accommodations should provide appropriate documentation of disability and submit a request for accommodation to one of the following offices:

Academic Accommodations Services
3901 Rainbow Boulevard, MS 4029
Kansas City, KS 66160
913-945-7035; 711 TTY

Student Access Center
1450 Jayhawk Blvd., Room 22
Lawrence, KS 66045
access@ku.edu
785-864-4064; 711 TTY
All students admitted to the KU Intercampus Program in Communicative Disorders must be able to meet the following requirements and expectations with or without accommodation(s).

**Problem Solving:**

The culminating activity in the preparation of the clinical doctorate in speech-language pathology is advanced clinical reasoning. The SLPD student is expected to develop advanced expertise and demonstrate leadership, teaching, advanced practice, and evidence-based practice skills. Therefore, a candidate should be able to understand research, make correct observations, and engage in reasoning, analysis, and synthesis.

**Communication:**

- Written Communication – The student must be able to assimilate information from a variety of written sources (e.g., medical/school records, professional journals and texts, etc.). Students are required to use information from written sources and to produce appropriate written documentation for a variety of readers. Students demonstrate the ability to prioritize written information based on the needs of the reader.
- Verbal Communication – Students must be able to communicate factual information effectively to a variety of audiences. Student communication must be appropriate to the setting (e.g., patients/clients, caregivers, professional colleagues, etc.). Students demonstrate the ability to prioritize verbal information based on the needs of the audience.

**Sensorimotor:**

Students must have sufficient gross motor, fine motor, and equilibrium functions, and functional use of sensory systems to enable them to perform all tasks essential to their career paths.

**Behavior and Social Attributes:**

Students are expected to exhibit professional behaviors and attitudes during their participation in classroom, clinical, and research experiences. The student must be able to communicate effectively and sensitively with patients and colleagues, including individuals from different cultural and social backgrounds. This includes, but is not limited to, an ability to establish rapport and communicate with others, to use appropriate language, possess flexibility toward changes, and to accept responsibility for one's own conduct.

**Doctor of Audiology**

The Doctor of Audiology (Au.D.) degree is intended to produce audiologists for clinical practice and is designed to be completed in four years (including summers).

This program has been planned to meet the academic and clinical requirements of the American Speech-Language-Hearing Association (ASHA). The ASHA Council on Academic Accreditation in Audiology and Speech-Language Pathology accredits this program.

A combined Au.D./Ph.D. track also is available. This track facilitates the completion of both degrees in a 6-year post-baccalaureate period.

Students who wish to earn both Au.D. and Ph.D. degrees should contact an advisor.

**Admission to Graduate Studies**

An applicant seeking to pursue graduate study in the College may be admitted as either a degree-seeking or non-degree seeking student. Policies and procedures of Graduate Studies govern the process of Graduate admission. These may be found in the Graduate Studies (p. 2449) section of the online catalog.

Please consult the Departments & Programs (p. 747) section of the online catalog for information regarding program-specific admissions criteria and requirements. Special admissions requirements pertain to Interdisciplinary Studies degrees, which may be found in the Graduate Studies section of the online catalog.

A bachelor's degree is required. It is expected students will have obtained a broad general education to serve as a background prior to graduate study. Undergraduate course work in mathematics and in basic and applied sciences is strongly encouraged.

If the bachelor's degree is not in the area of audiology or communication sciences and disorders, applicants should have 12 hours of basic sciences and mathematics in addition to courses in the following content areas (or their equivalents):

- Physics of Speech
- Principles of Speech Science
- Principles of Hearing Science
- Language Development
- Intro to Aud Assessment and Rehab
- Intro to Speech-Language Pathology

**Background Check**

The Joint Commission requires all incoming students to obtain a background check (p. 2456). This one-time fee must be paid directly to the company performing the background investigation and the report provided to KU after acceptance into the program. For more information, please see the School of Health Professions background check instructions. (http://www.kumc.edu/school-of-health-professions/background-checks-and-drug-screening-for-students.html) A drug screening may be required prior to work in clinical settings.

**International Students:**

An applicant is considered an international student if he or she requires a visa, or currently resides in the U.S. with non-immigrant status, or currently resides in the U.S. while applying for permanent residency. Additional requirements and documentation, such as proof of English language proficiency, are required for international students to become eligible for KU programs. Please review the information for international students (http://www.kumc.edu/school-of-health-professions/information-for-international-applicants.html) before applying.

All students, both domestic and foreign, must meet minimum English proficiency (p. 2455) requirements.

For more information or to contact the program, please visit the IPCD website (http://hearing.kumc.edu).

The Au.D. program prepares students to meet the academic and clinical requirements for the ASHA Certificate of Clinical Competence. The degree is designed to be completed in 4 years (including summers, with a common entry point in fall semester). A minimum of 98 credit hours
including academic course work, independent research, and clinical practicum is required.

Specific guidelines for certification are contained in the ASHA Certification and Membership Handbook, available on the ASHA website http://www.asha.org/.

Technical Standards

The doctorate degree in audiology signifies that the holder will satisfy the academic and clinical practicum requirements as stated by the American Speech-Language-Hearing Association for the Certificate of Clinical Competence. It follows that graduates must have the knowledge and skills to practice in the area of audiology. Therefore, all individuals admitted to the University of Kansas Intercampus Program in Communicative Disorders must meet the following abilities and expectations with or without accommodation(s).

NOTE: Reasonable accommodations will be considered and may be made to qualified students who disclose a disability, so long as such accommodation does not significantly alter the essential requirements of the curriculum and the training program, or significantly affect the safety of patient care. Students who disclose a disability are considered for the program if otherwise qualified. Qualified students with a disability who wish to request accommodations should provide appropriate documentation of disability and submit a request for accommodation to one of the following offices:

Academic Accommodations Services
3901 Rainbow Boulevard, MS 4029
Kansas City, KS 66160
913-945-7035; 711 TTY

Student Access Center
1450 Jayhawk Blvd., Room 22
Lawrence, KS 66045
access@ku.edu
785-864-4064; 711 TTY

The culminating activity in the preparation of an audiologist is clinical reasoning. Therefore, a candidate for the Au.D. degree must be able to make correct observations and have the skills of measurement, calculation, reasoning, analysis, and synthesis.

All students admitted to the KU Intercampus Program in Communicative Disorders must be able to meet the following requirements and expectations with or without accommodation(s).

Observation/Sensory Motor

• Observe demonstrations and learn from experiences in the classroom, laboratory, and clinical situations.
• Carry out speech/language/hearing assessments and intervention strategies/techniques including the operation of complex, electronic instrumentation. Diagnosis, assessment, and intervention of speech/language/hearing problems typically involves the functional use of the senses in order to palpate certain areas of the patients’ head and neck.
• Interpret and comprehend text, numbers, and graphs displayed in print and video.
• Observe and respond to subtle cues of patient’s moods, temperament, and social behavior.

Physical/Psychomotor

• Perform actions requiring coordination of both gross and fine muscular movement, equilibrium and use of the senses.
• Respond quickly in clinic situations, not only for safety, but also therapeutically.
• Travel to numerous clinical sites for practical experience.
• Use an electronic keyboard to operate instruments and to calculate, record, evaluate, and transmit information.

Communication

• Be able to share and to elicit information from patients/clients, supervisor, peers and other health professionals verbally and in a recorded format.
• Effectively, confidently, and sensitively converse with patients and their families.
• Interpret and comprehend technical and professional materials.
• Prepare papers, produce reports, and complete documentation for patient records.
• Assimilate information from written sources (texts, journals, medical/school records).
• Take paper, computer, and laboratory examinations and prepare scholarly papers.

Judgment

• Demonstrate judgment in the classroom, laboratory, and clinic situations that shows the intellect and emotional health necessary to make mature, sensitive, and effective decisions in the following areas:
  • Relationships with professors, supervisors, peers, and patients/clients
  • Professional and ethical behavior
  • Effectiveness of diagnostic, assessment, and intervention strategies.
• Demonstrate an understanding of the rationale and justification for one’s performance.
• Critically evaluate one’s own performance and be flexible toward change to promote professional and clinical process.
• Recognize and correct behaviors disruptive to classroom teaching, research, and patient care.
• Manage the use of time to complete clinical and academic assignments within realistic constraints.
• Recognize potentially hazardous materials, equipment, and situations and proceed in a manner to minimize risk of injury to those in the area.
• Make correct observations and have the problem solving skills necessary for measurement, calculation, reasoning, analysis, and synthesis.

Doctor of Philosophy in Speech-Language Pathology or Audiology

The Intercampus Program in Communicative Disorders offers Ph.D. programs in both speech-language pathology and in audiology for post-baccalaureate study of normal and disordered aspects of communication. These programs are designed to prepare suitably qualified individuals for leadership positions in research and academia. A major focus of these programs is to advance the science of these fields, and to elucidate the scientific basis for the procedures and processes used in clinical practice.

Students may pursue the Ph.D. in conjunction with entry-level clinical graduate degrees. As a result, the program offers both a combined M.A./Ph.D. and a combined Au.D./Ph.D. track. These tracks facilitate the completion of both degrees (the clinical graduate degree and the Ph.D.) in approximately a 6-year post-baccalaureate period. Students interested in the M.A./Ph.D track are encouraged to contact the program for information about the application process. Students who wish to earn both Au.D. and Ph.D. degrees should contact their advisor.

Admission to Graduate Studies

An applicant seeking to pursue graduate study in the College may be admitted as either a degree-seeking or non-degree seeking student. Policies and procedures of Graduate Studies govern the process of Graduate admission. These may be found in the Graduate Studies (p. 2449) section of the online catalog.

Please consult the Departments & Programs (p. 747) section of the online catalog for information regarding program-specific admissions criteria and requirements. Special admissions requirements pertain to Interdisciplinary Studies degrees, which may be found in the Graduate Studies section of the online catalog.

Admission to the Ph.D. Program

Although applications may be submitted at any time, there is a deadline for priority status, as it aligns with funding and scholarship availability. A full list of the required application materials, as well as the priority deadline, can be found on the Eligibility and Requirements (https://www.kumc.edu/school-of-health-professions/academics/departments/hearing-and-speech/academics/research-doctoral-degrees/eligibility-and-requirements.html) and How to Apply (https://www.kumc.edu/school-of-health-professions/academics/departments/hearing-and-speech/academics/research-doctoral-degrees/how-to-apply.html) pages of our Department’s website (https://www.kumc.edu/school-of-health-professions/academics/departments/hearing-and-speech/academics/research-doctoral-degrees.html).

Eligibility criteria for admission to the Ph.D. program follow Graduate Studies’ admission policy (http://policy.ku.edu/graduate-studies/admission-to-graduate-study/). To be considered for admission to graduate status in the program, a student must hold a bachelor’s degree. All students are expected to have strong command of the English Language. Non-native speakers of English must meet English proficiency requirements (https://gradapply.ku.edu/english-requirements/).

Because PhD students pursue an individualized plan of study, a faculty mentor is a critical requirement of the program. Potential applicants should investigate faculty mentor possibilities by (1) reviewing faculty bios and laboratory information (http://ipcd.kumc.edu/), and (2) reading recent research articles written by KU faculty. Applicants are strongly encouraged to contact faculty who may be a good match to their interests prior to applying.

Upon admission, the student and his or her adviser choose a doctoral advisory committee. The committee is responsible for guiding the student’s progress through the selected program of study.

Incoming students who have not completed a substantive graduate research project (e.g., a master’s thesis, Au.D. research project, etc.) must initiate a thesis-equivalent research project, under the direction of a three-member committee, during the first year of enrollment. This project must be completed before the comprehensive oral examination.

Doctor of Philosophy in Speech-Language Pathology

Acquiring a doctorate in speech-language pathology at a minimum requires the following:

Completion of academic coursework

• A minimum of 24 graduate hours in a major area of interest. These hours include:
  • 1-credit enrollment in SPLH 900 Proseminar in Communicative Disorders every semester (except summer) until the end of the semester that the oral comprehensive exams are passed. A maximum number of 4 credits of SPLH 900 counts towards the 24 graduate hours in a major area of interest.
  • A minimum of 1 semester of directed teaching, SPLH 975 Directed Teaching.
  • A minimum of 1 course or an independent study in grant writing is required.
  • A minimum of 12 graduate hours in a correlative area
  • A minimum of 15 graduate hours in research skills/responsible scholarship
  • Students are required to complete a departmentally approved course on Responsible Scholarship. Students can locate potential coursework in consultation with their faculty advisor or student handbook.
  • Completion of a preliminary research experience

Each student’s plan for completing these requirements should be detailed in their Plan of Study and selected in consultation of their faculty advisor and approved by their Doctoral Advisory Committee.

Additional Degree Requirements:

• Satisfactory performance on annual reviews
• Satisfactory performance on written and oral comprehensive examinations
• Students are required to produce three products for the completion of the written comprehensive examination. The variety of products can be found in the student handbook.
• The oral comprehensive exam focuses primarily on the examination of the student’s written products. However, students must be prepared to be examined in other areas of SLP.
• A majority vote of the oral comprehensive exam determines satisfactory or unsatisfactory performance. If an unsatisfactory performance is given, a student may re-take the oral comprehensive exam up to three times. If a student performs at an unusually high level, the student may be given a performance rating of “honors.” The honors distinction requires a unanimous vote of all committee members.
• Satisfactory completion of a dissertation prospectus, including written and oral prospectus.
• The student, with the guidance of the dissertation advisor, will submit in writing a Prospectus that details a proposed original study to the Dissertation Committee. The Prospectus Meeting will begin with the student’s presentation of the major elements of the proposed dissertation. At the completion of the meeting, the Committee may meet with or without the student to determine if the student should move on to the data collection phase and/or any other recommendations.
• Satisfactory completion of a written dissertation and oral defense of the dissertation.
• The student will present his/her dissertation with an opportunity for questions from the audience.
• Majority vote of the committee determines satisfactory or unsatisfactory performance. Honors performance is determined through anonymous ballot, and the awarding of honors requires a unanimous vote by the dissertation committee.

Note that the above are the MINIMUM requirements. Each student’s plan of study will vary depending on entry skills (i.e., relevant knowledge and skills acquired through prior training, work or research experience), chosen specialization, and career aspirations. Students in this program must meet the general requirements of the university including the research skills and responsible scholarship requirement (http://policy.ku.edu/graduate-studies/research-skills-responsible-scholarship/) and fulfill the basic program requirements to receive the Ph.D. degree.

For more detailed information about degree requirements, including potential elective coursework, can be found in the graduate student handbook (https://www.kumc.edu/school-of-health-professions/academics/student-handbook.html).

Doctor of Philosophy in Audiology

Acquiring a doctorate in audiology at a minimum requires the following:

Completion of academic coursework

• A minimum of 24 graduate hours in a major area of interest. These hours include:
  • 1-credit enrollment in SPLH 900 Proseminar in Communicative Disorders every semester (except summer) until the end of the semester that the oral comprehensive exams are passed. A maximum number of 4 credits of SPLH 900 counts towards the 24 graduate hours in a major area of interest.
  • A minimum of 1 semester of directed teaching, SPLH 975 Directed Teaching.
  • A minimum of 1 course or an independent study in grant writing is required.
  • A minimum of 12 graduate hours in a correlative area
• A minimum of 15 graduate hours in research skills/responsible scholarship
  • Students are required to complete a departmentally approved course on Responsible Scholarship. Students can locate potential coursework in consultation with their faculty advisor or student handbook.
• Completion of a preliminary research experience

Each student’s plan for completing these requirements should be detailed in their Plan of Study and selected in consultation of their faculty advisor and approved by their Doctoral Advisory Committee.

Additional Degree Requirements:

• Satisfactory performance on annual reviews
• Satisfactory performance on written and oral comprehensive examinations
  • Students are required to produce three products for the completion of the written comprehensive examination. The variety of products can be found in the student handbook.
  • The oral comprehensive exam focuses primarily on the examination of the student’s written products. However, students must be prepared to be examined in other areas of audiology.
  • A majority vote of the oral comprehensive exam determines satisfactory or unsatisfactory performance. If an unsatisfactory performance is given, a student may re-take the oral comprehensive exam up to three times. If a student performs at an unusually high level, the student may be given a performance rating of “honors.” The honors distinction requires a unanimous vote of all committee members.
• Satisfactory completion of a dissertation prospectus, including written and oral prospectus.
• The student, with the guidance of the dissertation advisor, will submit in writing a Prospectus that details a proposed original study to the Dissertation Committee. The Prospectus Meeting will begin with the student’s presentation of the major elements of the proposed dissertation. At the completion of the meeting, the Committee may meet with or without the student to determine if the student should move on to the data collection phase and/or any other recommendations.
• Satisfactory completion of a written dissertation and oral defense of the dissertation.
• The student will present their dissertation with an opportunity for questions from the audience.
• Majority vote of the committee determines satisfactory or unsatisfactory performance. Honors performance is determined through anonymous ballot, and the awarding of honors requires a unanimous vote by the dissertation committee.

Note that the above are the MINIMUM requirements. Each student’s plan of study will vary depending on entry skills (i.e., relevant knowledge and skills acquired through prior training, work or research experience), chosen specialization, and career aspirations. Students in this program must meet the general requirements of the university including the research skills and responsible scholarship requirement (http://policy.ku.edu/graduate-studies/research-skills-responsible-scholarship/) and fulfill the basic program requirements to receive the Ph.D. degree.

For more detailed information about degree requirements, including potential elective coursework, can be found in the graduate student

**Different entry paths:**
Students without a graduate degree (e.g., M.A., Au.D.) have several options in pursuing the Ph.D. degree. Some decide to pursue a research emphasis plan of study. Others opt to work on clinical certification in the speech-language pathology or audiology programs while also in the Ph.D. program. These combined degree tracks (M.A./Ph.D. or Au.D./Ph.D.) involve a higher course load. Details may be found in the Ph.D. student handbook. (https://www.kumc.edu/school-of-health-professions/academics/student-handbook.html)

Students entering the Ph.D. program with a graduate degree will complete the Ph.D. program requirements outlined in the curriculum on this page, with some adjustments based on relevant skills acquired during prior graduate study. Details may be found in the (https://www.kumc.edu/school-of-health-professions/academics/student-handbook.html) Ph.D. student handbook. (https://www.kumc.edu/school-of-health-professions/academics/student-handbook.html)

For more information or to contact the program, please visit the IPCD website (https://www.kumc.edu/school-of-health-professions/departments/hearing-and-speech.html).

**Technical Standards**

The Ph.D. degrees in audiology and speech-language pathology signifies that the holder is ready to engage in a research career. Therefore, all individuals admitted to the University of Kansas Intercampus Program in Communicative Disorders must meet the following abilities and expectations with or without accommodation(s). KU is an AA/EO/Title XI institution.

NOTE: Reasonable accommodations will be considered and may be made to qualified students who disclose a disability, so long as such accommodation does not significantly alter the essential requirements of the curriculum and the training program, or significantly affect the safety of patient care. Students who disclose a disability are considered for the program if otherwise qualified. Qualified students with a disability who wish to request accommodations should provide appropriate documentation of disability and submit a request for accommodation to one of the following offices:

Academic Accommodations Services
3901 Rainbow Boulevard, MS 4029
Kansas City, KS 66160
913-945-7035; 711 TTY

Student Access Center
1450 Jayhawk Blvd., Room 22
Lawrence, KS 66045
access@ku.edu
785-864-4064; 711 TTY

The culminating activity in the preparation of a researcher is the ability to formulate, conduct and disseminate research. In the academic arena, teaching skills usually are required. Therefore, a candidate for the Ph.D. degree must be able to make correct observations and have the skills of measurement, calculation, reasoning, analysis, and synthesis.

All students admitted to the KU Intercampus Program in Communicative Disorders must be able to meet the following requirements and expectations with or without accommodation(s).

**Observation/Sensory Motor**

- Observe demonstrations and learn from experiences in the classroom, laboratory, and other research settings.
- Carry out research techniques including the operation of complex, electronic instrumentation. Some types of research may involve the functional use of the senses in order to palpate certain areas of the patients' head and neck or to observe the function of the head and neck.
- Interpret and comprehend text, numbers, and graphs displayed in print and video.
- Observe and respond to subtle cues of participant's moods, temperament, and social behavior.

**Physical/Psychomotor**

- Perform actions requiring coordination of both gross and fine muscular movement, equilibrium and use of the senses.
- Respond quickly in research situations, not only for safety, but also therapeutically.
- Travel to numerous research sites for practical experience.
- Use an electronic keyboard to operate instruments and to calculate, record, evaluate, and transmit information.

**Communication**

- Be able to share and to elicit information from participants, mentors, peers and other research collaborators verbally and in a recorded format.
- Effectively, confidently, and sensitively converse with participants and their families.
- Interpret and comprehend technical and professional materials.
- Prepare papers, produce reports, and complete documentation for research purposes.
- Assimilate information from written sources (texts, journals, medical/school records).
- Take paper, computer, and laboratory examinations and prepare scholarly papers.

**Judgment**

- Demonstrate judgment in the classroom, laboratory, and other research situations that shows the intellect and emotional health necessary to make mature, sensitive, and effective decisions in the following areas:
  - Relationships with professors, collaborators, peers, and participants
  - Professional and ethical behavior
  - Effectiveness of research approaches.
- Demonstrate an understanding of the rationale and justification for one's performance.
- Critically evaluate one's own performance and be flexible toward change to promote professional and research process.
• Recognize and correct behaviors disruptive to classroom teaching, and research.
• Manage the use of time to complete research and academic assignments within realistic constraints.
• Recognize potentially hazardous materials, equipment, and situations and proceed in a manner to minimize risk of injury to those in the area.
• Make correct observations and have the problem solving skills necessary for measurement, calculation, reasoning, analysis, and synthesis.

Master of Arts in Speech-Language Pathology

The master's degree in speech-language pathology is designed to produce highly skilled clinicians seeking to enter the field and is typically completed in five full-time semesters (including a summer semester). The program length may vary, for example, for the student requiring prerequisites to be completed or one pursuing additional thesis or coursework. A master's degree from KU will, in most circumstances, satisfy the prerequisites to be completed or one pursuing additional thesis or coursework. For a full list of the prerequisite coursework please see our prerequisite (https://splh.ku.edu/pre-requisite/) page.

Requirements for the M.A. Degree with a Major in Speech-Language Pathology

Students with undergraduate degrees in other fields (e.g., psychology, linguistics) typically need to complete undergraduate prerequisite coursework in communication sciences and disorders before applying and/or being admitted to a graduate program in speech-language pathology or audiology.

Prerequisite Course Work for the MA SLP Graduate Program

• An acceptable bachelor’s degree
• Coursework in speech-language-hearing must include the following: Physics of Speech; Principles of Speech Science; Principles of Hearing Science; Fundamentals of Clinical Phonetics; Language Analysis Lab; Language Development; Introduction to Audiological Assessment and Rehabilitation; Introduction to Speech-Language Pathology; Research Methods in Speech-Language Hearing; Statistics.
• Additional requirements for ASHA Certification include coursework in biological sciences, physical sciences, and social/behavioral sciences. Courses in biological and physical sciences specifically related to communication sciences and disorders cannot be applied to this requirement.

Degree Requirements

The program requires 34 credit hours of experiences for breadth and an additional 16 hours for depth. All of these credit hours are at the 700-level or above, with the exception of the Advanced Elective hours. Advanced Electives can include any approved graduate course.

Required Graduate Experiences for Depth

| SPLH 866 | Field Study in Speech-Language Pathology         | 5     |
| Advanced electives (SPLH, outside department, or thesis) | 6     |
| Second field study or fourth practicum experiences | 5     |
Students should view the student handbook for a list of electives and should consult their faculty advisor to determine elective coursework selection.

Other Requirements:

• Complete a formative assessment according to the timeline and expectations outlined in the student handbook.

Summative (or optional Thesis) Exam:

• Students must pass the oral summative exam (including the thesis defense if applicable). Potential outcomes include honors, pass, revision, or fail. Please see the student handbook for criteria on revised exams. If an outcome is recorded as a fail, a student may re-take the exam. If a student fails the exam twice, the program will consider the student as making unsatisfactory progress and unable to continue in the program.

• If students complete an optional thesis as part of their summative exam, students must enroll in a minimum of 4 thesis credits (SPLH 899). These thesis credits can count towards the required research requirement.

For more information or to contact the program, please visit the IPCD website (http://hearing.kumc.edu)

**Technical Standards**

The master’s degree in speech-language pathology signifies the holder will satisfy the academic and practicum requirements as stated by the American Speech-Language-Hearing Association to be eligible to continue on to the clinical fellowship year. It follows that graduates must have the knowledge and skills to practice in the area of speech-language pathology. Therefore, all individuals admitted to the University of Kansas Intercampus Program in Communicative Disorders must meet the following abilities and expectations with or without accommodation(s).

KU is an AA/EO/Title XI institution.

NOTE: Reasonable accommodations will be considered and may be made to qualified students who disclose a disability, so long as such accommodation does not significantly alter the essential requirements of the curriculum and the training program, or significantly affect the safety of patient care. Students who disclose that they have a disability are considered for the program if they are otherwise qualified. Qualified students with a disability who wish to request accommodations should provide appropriate documentation of disability and submit a request for accommodation to one of the following offices:

Academic Accommodations Services
3901 Rainbow Boulevard, MS 4029

The culminating activity in the preparation of a speech-language pathologist is clinical reasoning. Therefore, a candidate for the master’s degree must be able to make correct observations and have the skills of measurement, calculation, reasoning, analysis, and synthesis.

All students admitted to the KU Intercampus Program in Communicative Disorders must be able to meet the following requirements and expectations with or without accommodation(s).

**Observation/Sensory Motor**

• Observe demonstrations and learn from experiences in the classroom, laboratory, and clinical situations.

• Carry out speech/language/hearing assessments and intervention strategies/techniques including the operation of complex, electronic instrumentation. Diagnosis, assessment, and intervention of speech/language/hearing problems typically necessitates the functional use of the senses of vision, hearing, and touch such as palpating certain areas of the patient’s head and neck.

• Comprehend text, numbers, images and graphs.

• Observe and respond to subtle cues of patient’s moods, temperament, and social behavior.

**Physical/Psychomotor**

• Perform actions requiring coordination of both gross and fine muscular movement, equilibrium and use of tactile, hearing, and visual senses.

• Respond quickly in clinic situations, not only for safety, but also therapeutically.

• Travel to numerous clinical sites for practical experience.

• Use an electronic keyboard to operate instruments and to calculate, record, evaluate, and transmit information.

**Communication**

• Be able to share and to elicit information from patients/clients, supervisor, peers and other health professionals verbally and in a recorded format.

• Effectively, confidently, and sensitively converse with patients and their families.

• Comprehend technical and professional materials.

• Prepare papers, produce reports, and complete documentation for patient records.

• Assimilate information from written sources (texts, journals, medical/school records).

• Take paper, computer, and laboratory examinations and prepare scholarly papers.

**Judgment**

• Demonstrate judgment in the classroom, laboratory, and clinic situations that shows the intellect and emotional health necessary to make mature, sensitive, and effective decisions in the following areas:

  • relationships with professors, supervisors, peers, and patients/clients

  • professional and ethical behavior
to function in a hospital and clinical setting. The student will learn about the circulatory system, addressing the physiology of each valve and the development of image recognition, anatomy identification, and comprehensive course work and teaches the student to use independent judgment in the acquisition of diagnostic information.

The following concentration areas are available in this program:

- **Adult echocardiography and vascular technology** Become a credentialed Registered Diagnostic Cardiac Sonographer (RDCS) and Registered Vascular Technologist (RVT) through American Registry for Diagnostic Medical Sonography (ARDMS) or a Registered Cardiac Sonographer (RCS) and a Registered Vascular Specialist (RVS) through Cardiovascular Credentialing International (CCI)

- **Adult and pediatric echocardiography** Become a credentialed Registered Diagnostic Cardiac Sonographer with a specialty in pediatric echocardiography (PE) through ARDMS or a Registered Congenital Cardiac Sonographer (RCCS) through Cardiovascular Credentialing International (CCI).

**Courses**

**CVS 21. EKG I. 1 Credits.**

This course is designed to present basic principles of ECG and the fundamentals of the ECG waveform. The student will be introduced to normal basic patterns and common abnormality recognition. Prerequisite: Admission to the advanced cardiovascular program, LEC.

**CVS 22. Cardiovascular Physiology. 1 Credits.**

During this course the student will focus on cardiovascular physiology. The student will study the circulatory system, addressing the physiology of the heart and blood vessels throughout the body. Prerequisite: Admission to the advanced cardiovascular technology program.

**CVS 23. Patient Care I. 1 Credits.**

This course will provide the student with the basic care skills necessary to function in a hospital and clinical setting. The student will learn about patient rights, HIPPA, patient transfers, proper ergonomics of scanning, hand hygiene, sterile technique, radiation safety and infection control. Prerequisite: Admission to the cardiovascular sonography program.

**CVS 25. Physics I. 2 Credits.**

This course is designed to introduce the student to the fundamental physics principles of Doppler echocardiography, the basic physics of Doppler ultrasound, and the fundamental principles of pulsed wave, continuous wave, and color flow Doppler. Prerequisite: Admission to the cardiovascular sonography program.

**CVS 26. Clinical Practicum I. 6 Credits.**

This course will provide meaningful, well-balanced experiences for the student in the adult echocardiography lab. Clinical Practicum I will focus on the development of image recognition, anatomy identification and patient care. Prerequisite: Admission to the cardiovascular sonography program.

**CVS 27. Adult Cardiovascular Technician I. 2 Credits.**

This course will introduce the student to the principles of diagnostic cardiac catheterization. The student will learn basic skills to assist the cardiologist during cardiac catheterization procedures. Prerequisite: Admission to the advanced cardiovascular technology program.

**CVS 30. Adult Echocardiography I. 3 Credits.**

The student will learn the pathophysiology of acquired valvular heart disease. Two-dimensional, spectral and color flow Doppler findings associated with each valvular disease state. The student will learn to obtain and effectively apply accurate two-dimensional and Doppler measurements as they relate to the evaluation and quantification of valvular disease. Prerequisite: Admission to the cardiovascular sonography program.

**CVS 31. Physics II. 2 Credits.**

This is the second of two ultrasound physics courses designed to prepare the student for the Sonography Principles and Instrumentation exam required for registration through ARDMS. The content of this course will cover fluid dynamics, hemodynamics, vascular principles, and cardiovascular principles. The content of Physics I will be heavily reviewed in preparation for the registry exam. Prerequisite: Admission to the cardiovascular sonography program.

**CVS 32. Pharmacology. 1 Credits.**

The student will become familiar with common medicines used in the cardiovascular setting. The student will learn pharmacological management of patients undergoing invasive and non-invasive cardiac and vascular procedures. Students will learn to correlate drug therapies with interventional procedures and disease states. Prerequisite: Admission to the advanced cardiovascular technology program.

**CVS 33. EKG II. 2 Credits.**

This course is designed to present advanced principles of ECG. The student will be exposed to advanced pattern recognition and the underlying etiology of the rhythm. Prerequisite: Admission to the advanced cardiovascular technology program.

**CVS 35. Patient Care II. 2 Credits.**

This course will provide the student with the advanced care skills necessary to function as a cardiovascular technologist within the laboratory. The student will learn about radiation safety, interpretation of lab values, patient management, high risk patient management, basic life support and advanced cardiac life support. Prerequisite: Admission to the advanced cardiovascular technology program.

**CVS 36. Clinical Practicum II. 8 Credits.**

This course will provide meaningful, well-balanced experiences for the student in the adult echocardiography lab. Clinical Practicum II will focus on the development of image recognition, anatomy identification, and...
patient care. Prerequisite: Admission to the cardiovascular sonography program.

**CVS 39. Adult Echocardiography II. 3 Credits.**
The student will learn echocardiographic findings associated with cardiomyopathies, the etiology, physiology, cardiac auscultation, physical examination, and EKG findings associated with the various cardiac disease states. The student will learn to obtain and effectively apply accurate two-dimensional and Doppler measurements as they relate to the evaluation and quantification of systolic function, diastolic, and the echocardiographic role in the evaluation of disease. Prerequisite: Admission to the cardiovascular sonography program.

**CVS 40. Vascular Ultrasound I. 4 Credits.**
The student will learn how to assess basic vascular disease using two-dimensional, spectral and color flow Doppler information in the areas of arterial Doppler segmental pressures, plethysmography, ankle brachial indices and carotid duplex imaging. Prerequisite: Admission to the cardiovascular sonography program.

**CVS 41. Pediatric Echocardiography I. 4 Credits.**
The student will demonstrate an understanding of how to utilize a sequential developmental approach. This course will review congenital heart diseases and their associated clinical signs and symptoms. Prerequisite: Admission to the cardiovascular sonography program.

**CVS 42. Physics Review. 1 Credits.**
This course is designed to prepare students to sit for their Sonography Principles and Instrumentation examination through ARDMS. During this course students will review all that they have learned in Physics I and Physics II. Prerequisite: Admission to the program.

**CVS 43. Adult Interventional Cardiology Technician I. 3 Credits.**
The student will receive progressive didactic exposure to the technology, procedures, techniques and basic concepts of interventional cardiology. Prerequisite: Admission to the program.

**CVS 44. Adult Electrophysiology Technician I. 3 Credits.**
The student will have didactic exposure to the technology, procedures, techniques and basic concepts of electrophysiology. Prerequisite: Admission to the program.

**CVS 45. Diversity in Cardiovascular Patient Care. 1 Credits.**
Explore current evidence regarding the demographic based variations in the population that impact cardiovascular care. Prerequisite: Admission to the program.

**CVS 49. Clinical Practicum III. 4 Credits.**
The student will have hands-on experience working in the adult echocardiography lab. Here they will be given the opportunity to improve their technical skills working one-on-one with their preceptor and patients in the clinical setting. Prerequisite: Admission to the cardiovascular sonography program.

**CVS 55. Cardiovascular Assessment and Special Procedures. 1 Credits.**
The student will become familiarized with the special procedures utilized in the echocardiography laboratory. These special procedures will include; transeosophageal echocardiography, contrast agents, strain, strain rate imaging and 3D echocardiography. Prerequisite: Admission to the cardiovascular sonography program.

**CVS 56. Adult Echocardiography III. 3 Credits.**
The student will continue to build upon their knowledge of echocardiography by learning cardiac diseases secondary to systemic illness, connective tissue disorders, neurological diseases, hematological disorders, pericardial disease, cardiac tumors, masses and diseases of the great vessels. Prerequisite: Admission to the program.

**CVS 57. Vascular Ultrasound II. 4 Credits.**
The student will learn to perform basic vascular assessments using two-dimensional, spectral and color flow Doppler information in the areas of renal duplex ultrasounds, abdominal aorta and iliac imaging. Prerequisite: Admission to the cardiovascular sonography program.

**CVS 58. Pediatric Echocardiography II. 4 Credits.**
The student will learn of Ebstein’s malformation of the tricuspid valve, tricuspid atresia with and without D-transposition, partial and complete endocardial cushion defect, cor triatriatum and double outlet right ventricle. Prerequisite: Admission to the cardiovascular sonography program.

**CVS 59. Physics II. 2 Credits.**
This is the second of two ultrasound physics courses designed to prepare the student for the Sonography Principles and Instrumentation exam required for registration through ARDMS. The content of this course will cover fluid dynamics, hemodynamics, vascular principles and cardiovascular principles. The content of Physics I will be heavily reviewed in preparation for the registry exam. Prerequisite: Admission to the program.

**CVS 61. Adult Cardiovascular Cardiology Technician II. 3 Credits.**
The student will have progressive didactic exposure to the technology, procedures, techniques and concepts of interventional cardiology. Prerequisite: Admission to the program.

**CVS 62. Adult Electrophysiology Technician II. 2 Credits.**
The student will have continued progressive didactic exposure to the technology, procedure, techniques, and concepts of electrophysiology. Prerequisite: Admission to the program.

**CVS 63. Patient Care III. 2 Credits.**
The continuation of advanced radiographic identification of the cardiac and vascular anatomy will be presented. In addition, the student will learn about coronary artery disease, angina, heart failure, acute coronary syndrome, shock, valvular heart disease and how this knowledge will be used while working in an invasive cardiology setting. Prerequisite: Admission to the program.

**CVS 64. Complex Arrhythmia Assessment. 1 Credits.**
During this course the student will assess complex electrocardiography, telemetry, and cardiac arrhythmia cases. The student will evaluate the association of significant arrhythmias with cardiac diseases and common treatment options. Prerequisite: Admission to the program.

**CVS 65. Complex Hemodynamic Assessment. 2 Credits.**
The purpose of this course is to provide the student with the knowledge base necessary to understand acquired and congenital cardiovascular diseases, the etiologies associated with the disease state and the presenting clinical signs and symptoms. This course will introduce the student to the principles of hemodynamic monitoring, waveform analysis and interventional cardiovascular procedures. Prerequisite: Admission to the program.

**CVS 66. Adult Interventional Cardiology Technician II. 2 Credits.**
The student will have continued progressive didactic exposure to the technology, procedure, techniques, and concepts of interventional cardiology. Prerequisite: Admission to the program.

**CVS 67. Clinical Practicum IV. 8 Credits.**
The student will have hands-on experience working in their chosen field of adult echocardiography, vascular or pediatric echocardiography. Here they will be given the opportunity to improve their technical skills by working one-on-one with their preceptor in the clinical setting. Prerequisite: Admission to the cardiovascular sonography program.
CVS 75. Congenital Heart Disease. 1 Credits.
The student will be introduced to the evaluation of congenital heart disease using the segmental approach. Prerequisite: Admission to the cardiovascular sonography program.

CVS 76. Vascular Ultrasound III. 3 Credits.
Upon completion of this course the student will have the necessary knowledge to perform basic vascular assessments using two-dimensional, spectral and color flow Doppler information in the areas of renal duplex ultrasounds, abdominal aorta and iliac imaging. Prerequisite: Admission to the program.

CVS 77. Pediatric Echocardiography III. 3 Credits.
Upon completion of this course the student will demonstrate an understanding of Ebstein's malformation of the tricuspid valve, tricuspid atresia with and without D-transposition, partial and complete endocardial cushion defect, cor triatriatum and double outlet right ventricle. Prerequisite: Admission to the program.

CVS 78. Adult Interventional Cardiology Technician III. 3 Credits.
The student will have continued progressive didactic exposure to the technology, procedure, techniques, and concepts of interventional cardiology. Prerequisite: Admission to the program.

CVS 79. Adult Electrophysiology Technician III. 2 Credits.
The student will have continued progressive didactic exposure to the technology, procedure, techniques, and concepts of electrophysiology. Prerequisite: Admission to the program.

CVS 80. Introduction to Cardiovascular Research Principles. 1 Credits.
This course requires the student to research a cardiovascular disease process, write a research paper and present the topic at a cardiology conference in front of peers, nursing personnel, cardiology fellows and the medical staff. The student may include the natural history of the disease process, the historical approach to the diagnosis of the disease, an overview of other modalities used in diagnosing the disease, the imaging techniques used in its diagnosis and the scientific rationale behind the technique. Prerequisite: Admission to the program.

CVS 81. Concepts in Intravascular Imaging and Intervention I. 2 Credits.
The student will expand their basic knowledge of the various imaging modalities used during vascular interventional procedures and the various endovascular treatments that they will see throughout their careers. Prerequisite: Admission to the program.

CVS 82. Concepts in Cardiac Rhythm Management I. 2 Credits.
During this course the student will learn the fundamentals of cardiac pacing, will understand the basic techniques for interrogation, programming, surveillance and the measurement of pacing and sensing thresholds of ICDs and CRT-Ds. Upon conclusion of this course the student will be able to recognize normal and abnormal pacemaker function. Prerequisite: Admission to the program.

CVS 84. Senior Project. 1 Credits.
This course requires the student to research a cardiovascular disease process, write a research paper and present the topic at cardiology conference in front of peers, nursing personnel, cardiology fellows and the medical staff. The student may include the natural history of the disease process, the historical approach to the diagnosis of the disease, an overview of the other modalities used in diagnosing the disease and the scientific rationale behind the technique. In addition, the student may include case studies in the presentation. Prerequisite: Admission to the program.

CVS 86. Clinical Practicum V. 8 Credits.
The student will have hands-on experience working in their chosen field of adult echocardiography, vascular or pediatric echocardiography. Here they will be given the opportunity to improve their technical skills by working one-on-one with their preceptor in the clinical setting. Prerequisite: Admission to the cardiovascular sonography program.

CVS 88. Vascular Ultrasound IV. 3 Credits.
This course requires the student to research a vascular disease process, write a research paper and present the topic at a cardiovascular conference in front of peers, nursing personnel, cardiology fellows and the medical staff. The student may include the history of the disease process, the approach to the diagnosis of the disease and any other modality used in the diagnosis of the disease. In addition, the student may include case studies in the presentation. Prerequisite: Admission to the program.

CVS 89. Pediatric Echocardiography IV. 3 Credits.
Upon the completion of this course the student will demonstrate an understanding of partial and total anomalous pulmonary venous return, persistent left superior vena cava, hypoplastic left heart syndrome and single ventricle. Prerequisite: Admission to the program.

CVS 90. Adult Echocardiography IV. 1 Credits.
This course is designed to enable the student to review the materials covered throughout their time spent in the program, preparing them to step into the profession of echocardiography and become registered through ARDMS by passing their RDCS registration exam. Prerequisite: Admission to the program.

CVS 91. Concepts in Cardiac Rhythm Management II. 3 Credits.
The student will learn the following basic device knowledge, arrhythmias, remote monitoring management and indications and limitations of biventricular pacing. The student will also learn about echo AV optimization, radiation oncology, MRI, withdrawal of therapy and other specialized inter-departmental workflows. Prerequisite: Admission to the program.

CVS 92. Concepts in Intravascular Imaging and Intervention II. 3 Credits.
Intravas Imaging & Interv II Prerequisite: Admission to the program.

CVS 93. Clinical Practicum VI. 7 Credits.
The student will have hands-on experience working in their chosen field; catheterization lab, electrophysiology lab, echocardiography lab, vascular lab or the pediatric echocardiography lab. Here they will be given the opportunity to improve their technical skills by working one-on-one with their preceptor in a clinical setting. Prerequisite: Admission to the program.

Certificate in Cardiovascular Sonography

This is a 21-month certificate program in which students spend 30 to 40 hours each week at clinical affiliates dividing time between didactic coursework and hands-on clinical applications.

Students in the program benefit from the wide variety of diagnostic examinations conducted at The University of Kansas Health System and affiliated clinical sites. The curriculum incorporates detailed, structured, and comprehensive course work and teaches the student to use independent judgment in the acquisition of diagnostic information.

The following concentration areas are available in this program:
• Adult echocardiography and vascular technology
  • Become a credential Registered Diagnostic Cardiac Sonographer (RDCCS) and Registered Vascular Technologist (RVT) through American Registry for Diagnostic Medical Sonography (ARDMS) or a Registered Cardiologist Sonographer (RCS) and a Registered Vascular Specialist (RVS) through cardiovascular Credentialing International (CCI).

• Adult and pediatric echocardiography
  • Become a credentialed Registered Diagnostic Cardiac Sonographer with a specialty in pediatric echocardiography (PE) through ARDMS or a Registered Congenital Cardiac Sonographer (RCCS) through Cardiovascular Credentialing International (CCI).

1. Degree/Academic Requirements
A bachelor’s or associate’s degree with an emphasis in science is preferred. Students without a bachelor’s degree must be currently enrolled in a bachelor’s program with an emphasis on health care-related field, and/or have substantial experience working in a health care field. All college coursework must be from accredited institutions. Credentials or transcripts not from an accredited U.S. academic institution will require evaluation by KU before acceptance.

2. Prerequisite Courses
The following courses must be completed from an accredited institution with a “C” grade or better to be eligible for this program: algebra, English or speech/oral communication, human anatomy and physiology, medical terminology, and physics.

3. Grade Point Average
An overall grade point average of 2.5 (on a 4.0 scale) is required to be eligible to apply. In addition, student transcripts must document an individual course grade of no less than a “C” on each prerequisite course (above).

4. Health and Physical Requirements
Good physical and mental health are essential to this field. Specifically, excellent visual acuity is necessary. The student must also possess manual dexterity, sufficient hearing and speech ability, and good physical coordination in positioning patients and operating equipment. Students must have a full utility of both arms, both hands, and fingers in order to perform examinations and operate the equipment. The ability to handle extremely heavy objects is required.

Physical or other disabilities are evaluated on a case-by-case basis by the program and the Equal Opportunity Office at KU Medical Center. Please review the program’s technical standards (https://www.kumc.edu/school-of-health-professions/academics/departments/respiratory-care-and-diagnostic-science/academics/respiratory-care-degree-programs/respiratory-care-bachelors-degree/technical-standards.html) for details.

5. Background Check and Drug Screen

The Joint Commission requires all incoming students to submit to a background check (http://www.kumc.edu/school-of-health-professions/background-checks-and-drug-screening-for-students.html) and provide the report to KU. This one-time fee must be paid directly to the company performing the background investigation. Applicants will be asked to provide information and make the payment only after official acceptance into the program. For more information, please see the School of Health Professions background check instructions. (http://www.kumc.edu/school-of-health-professions/background-checks-and-drug-screening-for-students.html) Drug screening is required for activities in a clinical environment. Depending on geographic location, more than one drug test may be needed.

6. International Students
An applicant is considered an international student if he or she requires a visa, or currently resides in the U.S. with non-immigrant status, or currently resides in the U.S. while applying for permanent residency. Additional requirements and documentation are required for international students to become eligible for KU programs. Please review the information for international students (http://www.kumc.edu/school-of-health-professions/information-for-international-applicants.html) before applying.

This is a 21-month certificate program in which students spend 30 to 40 hours each week at clinical affiliates dividing time between didactic course work and hands-on clinical applications. Students in the program benefit from the wide variety of diagnostic examinations conducted at The University of Kansas Health System and affiliated clinical sites. The curriculum incorporates detailed, structured, and comprehensive course work and teaches the student to use independent judgment in the acquisition of diagnostic information.

During training, students choose to specialize in one of the following concentration areas:
  • Adult Echocardiography & Vascular Technology
  • Adult & Pediatric Echocardiography

Clinical Laboratory Sciences

The mission of the Department of Clinical Laboratory Sciences is to provide undergraduate and graduate programs in which qualified students can prepare themselves for careers in the clinical laboratory sciences and molecular biotechnology. The department is responsive to current workforce needs in health care and life science systems, and provides leadership in developing programs to meet those needs.

Located at the region's premier academic health center, the Department of Clinical Laboratory Sciences is a part of the School of Health Professions (http://healthprofessions.kumc.edu/) on the Medical Center campus of the University of Kansas. KU Medical Center (http://www.kumc.edu/) is located in the heart of the Kansas City metropolitan area at 39th and Rainbow Boulevard – about 40 minutes away from the main KU campus (http://www.ku.edu/) in Lawrence, Kansas.

To support its missions, the Department of Clinical Laboratory Sciences offers the following degree programs:

Bachelor of Science in Clinical Laboratory Science

This four-year, entry-level degree is for those with an interest in performing diagnostic testing on blood, bodily fluids, and other human specimens. The BS in CLS is available in two options: (i) the Clinical Concentration which is an accredited Medical Laboratory Science (MLS) program, or (ii) the Molecular Biotechnology Concentration which is an accredited Diagnostic Molecular Scientist (DMS) program. Students are also offered the option of completing both the MLS and DMS programs by adding an additional semester of study. The MLS and DMS programs are accredited by the National Accrediting Agency for Clinical Laboratory Sciences (http://www.naacscl.org/), 5600 N. River Road, Suite 720, Rosemont, IL 60018, 773-714-8880.

Doctorate in Clinical Laboratory Science

The doctorate program allows practicing, certified medical laboratory scientists the opportunity for advanced practice and training at the highest level. Besides providing career advancement opportunities, the DCLS graduate will be able to institutionalize new models of clinical consultation to clinicians, other health care providers, and patients to guide their decisions about utilization of laboratory tests or services. This three-year program includes two years of core curriculum courses and one year of clinical residency, if completed on a full-time basis (part-time options are available).

Advising and FAQ

For information about clinical laboratory science at KU, please visit the department’s website (http://cls.kumc.edu). Students interested in entering these programs should contact an advisor as early as possible to ensure prerequisite course work will be completed. Advising and campus visits are available Monday-Friday by appointment. Please email clsed@kumc.edu for information. For advising on the KU Lawrence campus, please see the KU Undergraduate Advising Center (http://advising.ku.edu/).

Courses

CLS 210. Introduction to Clinical Laboratory Sciences. 1 Credits.
An introductory overview of the professions of Clinical Laboratory Sciences including types of analyses performed, specialties, interrelationships in the health care system and a visit to a clinical laboratory. This course will enable those considering a major in the Clinical Laboratory Sciences to have a clear definition of the professions. (Same as BIOL 210.)

CLS 520. Phlebotomy. 1 Credits.
Principles and practice of collecting blood specimens for clinical laboratory analyses. Includes specimen identification, equipment, anticoagulants, safety precautions, specimen transport, and processing. Hepatitis immunization required. Prerequisite: Admission to the Clinical Laboratory Science Program or consent of instructor.

CLS 523. Fundamentals of Analytical Techniques Laboratory. 3 Credits.
This course, including lecture, recitation, and laboratory provides theory and hands-on practice of basic laboratory skills. Laboratory exercises include enhancement of skills needed for reagent preparation, pipetting of reagents and specimen, and test performance using a variety of assays (spectrophotometry, urinalysis etc.). Following the accurate collection of data in each experiment, students will analyze and interpret data applying the appropriate analytic/statistical tools, evaluate results for validity, and justify their conclusions. The theory underlying accuracy and precision in laboratory testing (quality control and quality assurance) will be included. Basic laboratory mathematics, method validation, and problem-solving strategies will be emphasized. Prerequisite: Admission to the Clinical Laboratory Sciences program or consent of the instructor.

CLS 530. Clinical Chemistry I. 3 Credits.
Introduction to human physiology and pathophysiology I with emphasis on proteins, carbohydrates, lipids, enzymes, liver & kidney function, blood gases and body fluids. The related clinical chemistry tests, their principles, analysis, interpretation, and significance are included. Prerequisite: Admission to the Clinical Laboratory Sciences program or consent of the instructor.

CLS 532. Clinical Microbiology I. 3 Credits.
Pathogenesis and disease processes of pathogenic, opportunistic, and saprophytic bacteria; composition and preparation of media; sterilization and disinfection; antimicrobial agents and susceptibility testing; topics related to theory and applications. Prerequisite: Admission to the Clinical Laboratory Sciences program or consent of the instructor.

CLS 533. Clinical Microbiology I Laboratory. 2 Credits.
A laboratory with recitation addressing diagnostic procedures used for isolation and identification of clinically significant bacteria. Prerequisite: CLS 532 or CLS 532 concurrently, or consent of the instructor.

CLS 536. Hematology I. 3 Credits.
Fundamentals of hematopoiesis; the physiology, function, and cytochemistry of normal and abnormal blood cells; the theory and performance of clinical laboratory methods related to these parameters. Prerequisite: Admission to the Clinical Laboratory Sciences program or consent of the instructor.

**CLS 537. Hematology I Laboratory. 2 Credits.**
A laboratory with recitation emphasizing basic hematologic techniques and identification of normal and abnormal cells in peripheral blood and bone marrow. Prerequisite: CLS 536, or CLS 536 concurrently, or consent of the instructor.

**CLS 538. Immunology. 3 Credits.**
Covers basic theory of molecular and cellular immunology of innate and adaptive immune systems. Lectures include: structure and function of antibodies, complement, major histocompatibility complexes, B- and T-cells and their receptors, cellular and molecular basis of the immune response and immune regulation, hypersensitivity, and immune tolerance. Clinical applications and methodologies will be incorporated into lectures. Prerequisite: Admission to the Department of Clinical Laboratory Sciences or consent of instructor.

**CLS 539. Fundamental Techniques and Clinical Immunology Laboratory. 3 Credits.**
This course, including lecture, recitation and laboratory, provides theory and hands-on practice of basic laboratory skills. It is an introduction to safety practices and fundamental laboratory training in phlebotomy, pipetting, microscopy and calibrations. It also focuses on principles and procedures of immunology and serology. Laboratory exercises consist of development of skills needed for reagent preparation and test performance using a variety of assays, accurate collection of data, and interpretation of data applying the appropriate analytic/statistical tools. The theory underlying accuracy and precision in laboratory testing (quality control and quality assurance) will be included. Basic laboratory mathematics, method validation, and problem-solving strategies are emphasized. Laboratory concepts and immunological assays, such as agglutination, precipitation and enzyme immunoassay for diagnosis of infectious diseases and immunological disorders are also included. Prerequisite: Admission to the Clinical Laboratory Science program, completion of BIOL 503 or CLS 538 (or equivalent transfer course) with a grade of C or higher, or concurrent enrollment in CLS 538, or consent of the instructor.

**CLS 540. Clinical Chemistry II. 2 Credits.**
Introduction to human physiology and pathophysiology II with emphasis on hormones, therapeutic drugs, clinical toxicology, tumor markers, vitamins and trace elements. The related clinical chemistry tests, their principles, analysis, interpretation, and significance are included. Prerequisite: CLS 530 or consent of instructor.

**CLS 541. Professional Development. 2 Credits.**
This course combines lectures and projects to give students an introduction to and practice in the following: resume writing and interviewing skills; the components of and the production of a scholarly product; the basic principles involved in education with the identification and writing of educational objectives; the activities and responsibilities involved in laboratory management. Prerequisite: CLS 520 - CLS 549 or consent of instructor.

**CLS 542. Clinical Microbiology II. 2 Credits.**
Pathogenesis, disease processes, and diagnostic protocols for parasites, medically important fungi and mycobacteria. Prerequisite: Admission to the Clinical Laboratory Sciences program or consent of the instructor.

**CLS 543. Clinical Microbiology II Laboratory. 2 Credits.**
A laboratory with recitation addressing diagnostic procedures used for isolation and identification of parasites, medically important fungi, and mycobacteria. Prerequisite: Admission to the Clinical Laboratory Sciences program or consent of the instructor.

**CLS 544. Immunohematology I. 3 Credits.**
Principles of immunohematology as applied to transfusion services, donor services, component preparation and storage, and transfusion therapy. Includes problem solving for transfusion related situations and evaluation of problems related to hemolytic disease of the newborn, autoimmune hemolytic disorders, and transfusion reactions. Prerequisite: BIOL 503 or CLS 538, CLS 546, or consent of instructor.

**CLS 545. Immunohematology I Laboratory. 2 Credits.**
Principles of immunohematology as applied to transfusion services, donor services, component preparation and storage, and transfusion therapy. Includes problem solving for transfusion related situations and evaluation of problems related to hemolytic disease of the newborn, autoimmune hemolytic disorders, and transfusion reactions. Prerequisite: BIOL 503 or CLS 538, CLS 546, or consent of instructor.

**CLS 546. Hematology II. 3 Credits.**
Lectures on hematopoiesis, the physiology, function, and cytochemistry of normal and abnormal blood cells, normal and abnormal hemostasis, and the theory and performance of laboratory methods related to these parameters. Prerequisite: CLS 536 and CLS 537 or consent of instructor.

**CLS 547. Hematology II Laboratory. 2 Credits.**
A laboratory with recitation involving performance of hematology laboratory procedures with emphasis on basic hematologic and coagulation techniques and the identification of normal and abnormal cells in the peripheral blood and bone marrow. Prerequisite: CLS 536, CLS 537 and CLS 546 or CLS 546 concurrently, or consent of the instructor.

**CLS 549. Clinical Immunology I Laboratory. 2 Credits.**
A laboratory with recitation involving performance of immunoassays. Emphasis on theory, methodologies, and clinical correlations. Prerequisite: CLS 523, BIOL 503 or CLS 538, or consent of instructor.

**CLS 600. Introductory Biochemistry. 3 Credits.**
An introduction to the chemistry and metabolism of carbohydrates, lipids, proteins, nucleic acids, and other biologically important molecules. Topics include cellular processes, reactions and interactions occurring in living organisms. Prerequisite: Admission to the Department of Clinical Laboratory Sciences or consent of instructor.

**CLS 605. Introduction to Molecular Diagnostics I. 1 Credits.**
An introduction to molecular biology and molecular biological methodologies and technologies commonly used in basic, applied, and diagnostic laboratories. An emphasis is placed on molecular biology principles and techniques used in the clinical laboratory for diagnosis, prognosis, and treatment of disease. Prerequisite: Admission to the Clinical Laboratory Sciences program or consent of the instructor.

**CLS 607. Introduction to Molecular Diagnostics I Laboratory. 1 Credits.**
An introduction to molecular diagnostic methodologies and technologies commonly used in clinical laboratories. Principles and performance of nucleic acid isolation, restriction enzyme digestion, electrophoresis, amplification, hybridization, and analysis. Applications in infectious and genetic disease. Prerequisite: Admission to the Clinical Laboratory Science program or Cytotechnology program or consent of the instructor.

**CLS 608. Introduction to Advanced Biotechniques. 0 Credits.**
A lecture course introducing the theory behind a variety of current molecular, biochemical and immunologic techniques utilized in molecular research and diagnostic laboratories. Course content is continued in
CLS 610, Advanced Biotechniques Lecture. Prerequisite: Admission to the Clinical Laboratory Sciences program or consent of instructor.

CLS 609. Introduction to Advanced Biotechniques Laboratory. 0 Credits.
Introductory laboratory course with practical application of selected molecular, biochemical, and immunologic techniques. Course content is continued in CLS 611, Advanced Biotechniques Laboratory. Prerequisite: Admission to the Clinical Laboratory Sciences program or consent of instructor.

CLS 610. Advanced Biotechniques Lecture. 3 Credits.
A lecture course covering the theory behind a variety of current molecular, biochemical and immunologic techniques utilized in today's research and diagnostic laboratories. Material presented will include proper specimen preparation and handling; technique set-up and quality control; trouble shooting and technique modification. Prerequisite: Admission to the Clinical Laboratory Sciences program or consent of instructor.

CLS 611. Advanced Biotechniques Laboratory. 2 Credits.
Laboratory course with practical application of selected molecular, biochemical, and immunological techniques. Designed to provide limited experience with protein purification and analysis techniques, electrophoresis techniques, nucleic acid analysis and manipulation. Prerequisite: Admission to the Clinical Laboratory Sciences program or consent of instructor.

CLS 621. Biotechnology Methodologies Practicum. 4 Credits.
Placement of the student in clinical laboratories performing molecular diagnostic techniques for the analysis of infectious diseases, hereditary conditions, or acquired genetic conditions. Prerequisite: Admission to the Clinical Laboratory Sciences program or consent of instructor.

CLS 622. Problems in Molecular Diagnostics. 2 Credits.
Provides a targeted review of current theory, techniques and application of molecular techniques in the diagnosis of infectious disease, and hereditary and acquired genetic disease. Prerequisite: Admission to the Clinical Laboratory Science or Cytotechnology program, or consent of instructor.

CLS 623. Molecular Genetics Practicum. 4 Credits.
Placement of the student in a molecular genetics research laboratory (utilizing either prokaryotic or eucaryotic organisms or both) working with laboratory staff on an on-going small project within the laboratory. Molecular genetics laboratories utilized could be involved in, but not restricted to, any of the following activities: gene sequencing, cloning or splicing; elucidation of the mechanisms that regulate gene expression; proto-oncogene activation. Prerequisite: Admission to the Clinical Laboratory Sciences program or consent of instructor.

CLS 633. Special Topics Practicum. 4 Credits.
Placement of the student in any of a variety of research laboratories actively participating in molecular biological projects utilizing advanced genetic, biochemical immunologic, or other molecular techniques. Prerequisite: Admission to the Clinical Laboratory Sciences program or consent of instructor.

CLS 638. Clinical Competency Review. 0 Credits.
This review will enable students to identify areas of weakness in their understanding of clinical laboratory science in preparation for clinical rotations. Students will participate in Blackboard-based and in-person laboratory sessions in order to evaluate their performance in meeting required competencies. Prerequisite: CLS 520-CLS 549 inclusive, CLS 605, CLS 607, or consent of instructor.

CLS 639. Urinalysis. 1 Credits.
Tutorial instruction and clinical laboratory experience in urinalysis with the application of knowledge and skills to methodology, instrumentation, and quality control. Advanced content on renal disorders with emphasis on pathological mechanisms, interpretation, and clinical correlation of test results. Prerequisite: CLS 540, or consent of instructor.

CLS 640. Clinical Chemistry III and Immunology II. 2 Credits.
Tutorial instruction in the chemistry of body fluids and immune function focusing on correlation of chemical and immunological analyses to disease states. Addresses organ system disease, metabolic disease, and other special topics. Prerequisite: CLS 540 and CLS 549, or consent of instructor.

CLS 642. Clinical Microbiology III. 2 Credits.
Tutorial instruction addressing pathophysiology and diagnostic protocols of viruses, rickettsia, chlamydia, mycoplasma, and other unusual organisms. Prerequisite: CLS 532, CLS 533, CLS 542 and CLS 543, or consent of instructor.

CLS 634. Clinical Microbiology Practicum. 3 Credits.
Tutorial instruction and clinical laboratory experience in diagnostic microbiology, with the application of knowledge and skills to methodology, instrumentation, and quality control. Prerequisite: CLS 532, CLS 533, CLS 542 and CLS 543, or consent of instructor.

CLS 644. Immunohematology II. 1 Credits.
Tutorial instruction addressing advanced transfusion medicine theory and concepts. Focuses on hospital transfusion services, blood utilization, management, legal and regulatory issues, and special topics. Prerequisite: CLS 544 and CLS 545, or consent of instructor.

CLS 645. Immunohematology Practicum. 2 Credits.
Tutorial instruction and clinical laboratory experience in transfusion medicine, with the application of knowledge and skills to methodology, instrumentation, and quality control. Prerequisite: CLS 544, CLS 545, or consent of instructor.

CLS 646. Hematology III. 2 Credits.
Tutorial instruction on hematologic and hemorrhagic disorders with emphasis on pathological mechanisms, interpretation, and clinical correlation of test results. Prerequisite: CLS 546 and CLS 547, or consent of instructor.

CLS 647. Hematology Practicum. 3 Credits.
Tutorial instruction and clinical laboratory experience in hematology, with the application of knowledge and skills to methodology, instrumentation, and quality control. Prerequisite: CLS 546 and CLS 547, or consent of instructor.

CLS 650. Clinical Laboratory Science Review. 0 Credits.
Review of the clinical laboratory science body of knowledge in preparation for, and culminating in the BS in CLS - Clinical Concentration comprehensive examination. Prerequisite: CLS 520-CLS 549 inclusive, CLS 605, CLS 607, CLS 661, and CLS 639-CLS 647 inclusive, or consent of instructor.

CLS 655. Molecular Biotechnology Review. 0 Credits.
Review of the clinical laboratory science body of knowledge in preparation for, and culminating in the BS in CLS - Molecular Biotechnology Concentration comprehensive examination. Prerequisite: CLS 520-
CLS 549 inclusive, CLS 605-CLS 633 inclusive, and CLS 661 or consent of instructor.

CLS 661. Management Principles in Health Care. 2 Credits.
Introduction to basic principles of management and their application in the current health care environment at they pertain to the clinical laboratory. Course content includes: management theory, scope of management, quality issues, budgeting, personnel issues, evaluation and application of management concepts, introductory research methods. Prerequisite: Admission to the Clinical Laboratory Sciences program or consent of the instructor.

CLS 690. Special Topics. 1-5 Credits.
A course of study offering the student the opportunity for acquisition of additional knowledge and skills in one of the clinical laboratory routine areas or a specialty area, e.g., cytogenetics, metabolic analysis, or supervision; or at another clinical site. Course requirements designed in cooperation with student. Prerequisite: Admission to the Clinical Laboratory Science program or consent of instructor.

CLS 710. Molecular Techniques I. 2 Credits.
A lecture course covering the theory underlying molecular techniques involving nucleic acids and mammalian cell culture. Topics include purification and analysis of nucleic acids, recombinant DNA, construction and screening of genetic libraries, genetic engineering, control of gene expression, construction of gene fusions, amplification, hybridization, and nucleic acid databases and bioinformatic analysis. Prerequisite: Admission to the MS in Molecular Biotechnology program or consent of instructor.

CLS 711. Molecular Techniques Laboratory I. 2 Credits.
A laboratory course emphasizing the application, practice, and troubleshooting of molecular techniques involving nucleic acids and mammalian cell culture. Topics include purification and analysis of nucleic acids, recombinant DNA, genetic engineering, control of gene expression, construction of gene fusions, amplification, and hybridization. Topics are covered through a project-based approach. Prerequisite: Admission to the MS in Molecular Biotechnology program or consent of instructor.

CLS 720. Molecular Techniques II. 2 Credits.
Lecture and discussion course covering the theory and practice of molecular techniques for protein analysis. General topics include: protein detection, quantification, and characterization; protein separation and identification; protein expression systems; protein extraction, fractionation, solubilization and purification; analysis of protein-protein interactions; proteomics; and mass spectroscopy. Prerequisite: Admission to the MS in Molecular Biotechnology program or consent of instructor.

CLS 721. Molecular Techniques Laboratory II. 2 Credits.
Laboratory course for the practice and application of molecular techniques for analyzing and manipulating proteins. Techniques will include: bioinformatics analyses; expression, purification and solubilization of epitope tagged fusion proteins, protein-protein interactions; protein quantification; protein separation by electrophoresis and column chromatography; protein detection by chemical and immunological methods; and LC-MS. Prerequisite: Admission to the MS in Molecular Biotechnology program or consent of instructor.

CLS 730. Current Issues in Biotechnology. 1 Credits.
A seminar course that address topics including scientific, business, legal, social, and ethical issues in biotechnology. Students explore these topics through literature discussions, student presentations, and discussions with speakers from biotechnology-related academic and industry sectors. This course is meant for graduate students in the Molecular Biotechnology program. Prerequisite: Consent of instructor.

CLS 740. Journal Club. 1 Credits.
This course is an introduction to the critical reading of journal articles from the current literature in molecular biotechnology. Discussions will emphasize the analysis of experimental design and technique, as well as the significance of the results and validity of the author's conclusions. Students will learn how to search for articles and background information pertaining to selected topics, an how to present a polished, professional summary of that literature. Assigned papers for discussion and student presentations will focus on new strategies and technologies in molecular biotechnology of wide fundamental importance, or on hypothesis-based research that uses molecular biotechnological approaches. Prerequisite: Completion of (or concurrent enrollment in ) CLS 710 and CLS 720.

CLS 742. Scientific Writing. 1 Credits.
Formats, techniques, and styles of scientific writing. Emphasis will be placed on clear, concise, and effective writing. The class will focus on the process of writing scientific manuscripts and grant proposals. Students will identify and define the sections of scientific manuscripts as well as grant proposals. During the course, each student will write an R21-type (NIH Exploratory/Developmental Research Grant) proposals as could be submitted to the most appropriate NIH Institute. This course is intended for students enrolled in their final semester of the Master of Science in Molecular Biotechnology program. Prerequisite: Consent of Instructor

CLS 744. Topics in Molecular Biotechnology. 1-5 Credits.
Advanced course on special topics in molecular biotechnology, offered by arrangement. May include lectures, discussions, readings, laboratory techniques, and supervised research experience. This course is intended for graduate students in the Molecular Biotechnology program. Prerequisite: Consent of instructor.

CLS 750. Practicum I. 4 Credits.
Advanced practical experience in a selected laboratory pursuing applied, basic, or diagnostic research projects utilizing genetic, biochemical, or other molecular biology-related approaches. Students apply and extend their knowledge and skills by performing a research and/or development project under the supervision of a site mentor. This practicum is performed at a site other than those utilized for CLS 751 (Practicum II) and CLS 752 (Practicum III). Prerequisite: Completion of CLS 710, CLS 711, CLS 720, and CLS 721, and consent of the instructor.

CLS 751. Practicum II. 5 Credits.
Advanced practical experience in a selected laboratory pursuing applied, basic, or diagnostic research projects utilizing genetic, biochemical, or other molecular biology-related approaches. Students apply and extend their knowledge and skills by performing a research and/or development project under the supervision of a site mentor. This practicum is performed at a site other than those utilized for CLS 750 (Practicum I) and CLS 752 (Practicum III). Prerequisite: Completion of CLS 710, CLS 711, CLS 720, and CLS 721, and consent of the instructor.

CLS 752. Practicum III. 5 Credits.
Advanced practical experience in a selected laboratory pursuing applied, basic, or diagnostic research projects utilizing genetic, biochemical, or other molecular biology-related approaches. Students apply and extend their knowledge and skills by performing a research and/or development project under the supervision of a site mentor. This practicum is performed at a site other than those utilized for CLS 750 (Practicum I) and CLS 751 (Practicum II). Prerequisite: Completion of CLS 710, CLS 711, CLS 720, and CLS 721, and consent of the instructor.

Courses

DCLS 800. DCLS Advanced Topics. 1 Credits.
Seminar course that addresses topics and issues relevant to DCLS clinical practice, including ethical and social issues in healthcare practice, health informatics, and communication techniques needed for interaction
with healthcare colleagues and patients. Repeatable. Prerequisite: Admission into the Doctorate in Clinical Laboratory Science program, or consent of instructor.

DCLS 802. Principles of Healthcare Education. 3 Credits.
This course will address various aspects of teaching in healthcare settings. This includes educating patients and their families, educating other healthcare professionals, and the more formal area of undergraduate and graduate education. Education theory, pedagogical methods, educational resources, learning objectives, and evaluation techniques applicable to each type of educational situation will be addressed. Prerequisite: Admission into the Doctorate in Clinical Laboratory Science program, or consent of instructor.

DCLS 805. Advanced Molecular Diagnostics. 2 Credits.
This course focuses on the enhancement of scientific and technical knowledge in nucleic acid-based testing for the diagnosis of acquired and hereditary genetic disorders, and infectious diseases. Topics include an in-depth review of the theory of molecular techniques and the application of these techniques in inherited disorders, oncology, infectious disease, pharmacogenetics, histocompatibility, identity determination, and genomics. Prerequisite: Admission into the Doctorate in Clinical Laboratory Science program, or consent of instructor.

DCLS 815. Research Methods in Clinical Laboratory Sciences. 2 Credits.
A discussion of research methods used in clinical laboratory sciences, with an emphasis on selecting and applying appropriate research designs. Includes an overview of the research methods and various approaches in current use in clinical laboratory science; focused on research question formulation; internal and external validity of research; variable measurement and reliability, and generalizability of findings. Specific approaches covered include non-experimental, experimental and quasi-experimental designs, epidemiologic methods (e.g., cohort and case-control studies), survey research, and qualitative research. Prerequisite: Admission into the Doctorate in Clinical Laboratory Science program, or consent of instructor.

DCLS 820. Evidence Based Practice. 3 Credits.
Evidence-Based Practice (EBP) encompasses Evidence-Based Medicine and Evidence-Based Laboratory Medicine. EBP is a problem-based approach to decision making using research evidence combined with clinical expertise, the patient's values, circumstances, and the clinical context. This course addresses the historical development of EBP, why using EBP in clinical decision making improves patient care, when and how to implement and use EBP in clinical decision making, and how to discuss the EBP finding with patients, family members, and other healthcare practitioners. Evaluating research studies for their applicability to EBP and designing research studies based on clinical evidence focused on laboratory testing will make up most of the course content, activities, and assignments. Prerequisite: Admission into the Doctorate in Clinical Laboratory Science program, or consent of instructor.

DCLS 828. Advanced Immunology and Transplant. 3 Credits.
This course focuses on enhancement of scientific and technical knowledge in clinical immunology and transplantation in order to consult with other healthcare practitioners on the selection of screening and diagnostic tests for hematological disorders, interpretation of results, and recommendations for follow-up testing. Topics to be investigated include physiology and regulation of the hematopoietic system and hemostasis, and the genetic, molecular and cellular mechanisms underlying the pathophysiology of selected hematological disorders such as anemias, leukemias, lymphomas, and disorders of hemostasis with additional focus on utilization of appropriate hematology, hemostasis, and molecular diagnostic tests, and reducing turn-around time. Prerequisite: Admission into the Doctorate in Clinical Laboratory Science program, or consent of instructor.

DCLS 830. Advanced Clinical Chemistry. 3 Credits.
This course focuses on in-depth physiology and pathophysiology together with the principles of current and emerging chemistry tests. Emphasis on the correlation between chemistry tests and disease states, interpretation and limitations of chemistry test results. Current clinical chemistry literature, clinical scenarios, case studies, and advanced laboratory practice issues will be used to enhance knowledge and skills. Prerequisite: Admission into the Doctorate in Clinical Laboratory Science program, or consent of instructor.

DCLS 836. Advanced Hematology. 3 Credits.
This course focuses on enhancement of scientific and technical knowledge in hematology and hemostasis to consult with other healthcare practitioners on the selection of screening and diagnostic tests for hematological disorders, interpretation of results, and recommendations for follow-up testing. Topics to be investigated include physiology and regulation of the hematopoietic system and hemostasis, and the genetic, molecular and cellular mechanisms underlying the pathophysiology of selected hematological disorders such as anemias, leukemias, lymphomas, and disorders of hemostasis with additional focus on utilization of appropriate hematology, hemostasis, and molecular diagnostic tests, and reducing turn-around time. Prerequisite: Admission into the Doctorate in Clinical Laboratory Science program, or consent of instructor.

DCLS 838. Advanced Immunology and Transplant. 3 Credits.
This course focuses on enhancement of scientific and technical knowledge in clinical immunology and transplantation in order to consult with other healthcare practitioners on the selection of screening and diagnostic tests for immune-mediated diseases. Topics include autoimmunity, hypersensitivity, immunotherapy and immunotoxicology, transplantation and HLA testing/compatibility, cancer immunology and immunodeficiency. This course also includes test methodologies in cellular, humoral, and molecular immunology, selection and interpretation of test results, and recommendations for follow-up testing for patient monitoring. Prerequisite: Admission into the Doctorate in Clinical Laboratory Science program, or consent of instructor.

DCLS 842. Advanced Clinical Microbiology. 3 Credits.
Course Description: This course focuses on enhancement of scientific and technical knowledge in clinical microbiology necessary for consultation with other healthcare practitioners for (i) the selection of screening and diagnostic tests for suspected infectious diseases, (ii) interpretation of results, and (iii) recommendations for follow-up testing. Topics to be investigated include utilizing molecular diagnostic tests, antimicrobial susceptibility testing and resistance mechanisms, bioterrorism, biofilms, opportunistic and emerging infections, utilization of appropriate microbiology tests, evidence based practice in clinical microbiology, and reducing turn-around time. Current scientific literature, clinical scenarios, case studies, and advanced laboratory practice issues will be used to enhance knowledge and skills. Prerequisite: Admission into the Doctorate in Clinical Laboratory Science program, or consent of instructor.

DCLS 844. Advanced Immunohematology. 3 Credits.
This course will explore advanced blood banking theory and transfusion medicine concepts pertaining to basic-to-advanced serological testing techniques, blood product utilization, molecular immunohematology testing methods, quality assurance, and other relevant topics. Learners will be re-introduced to specialized blood banking procedures including (but not limited to) the following: ABO/Rh, antibody screens, antibody identification, fetal screen, elutions, phenotyping, and crossmatching. Using case studies and discussion, learners will correlate laboratory data to clinical disease processes encountered in transfusion medicine.
Prerequisite: Admission into the Doctorate in Clinical Laboratory Science program, or consent of instructor.

**DCLS 851. Clinical Correlations I. 3 Credits.**
Course Description: This course will correlate clinical presentation and laboratory testing as it relates to physiological changes associated with select diseases of major organ systems (e.g., endocrine, muscle, cardiovascular, respiratory, renal, gastrointestinal, immune, nervous, and reproductive). Prerequisite: Admission into the Doctorate in Clinical Laboratory Science program or instructor permission.

**DCLS 852. Clinical Correlations II. 3 Credits.**
This course will complement CLS851 Clinical Correlations I and will correlate clinical laboratory testing as it relates to physiological changes associated with patient symptomology (e.g., chest pain, shortness of breath, unresponsiveness, fever of unknown origin, jaundice) and treatment in a consultation model. Prerequisite: Admission into the Doctorate in Clinical Laboratory Science program or instructor permission.

**DCLS 880. Principles of Interprofessional Education and Practice Theory. 1 Credits.**
An introductory course to core competencies in interprofessional education and practice for healthcare teams including roles and responsibilities, values and ethics, teamwork, communication, and collaborative practice as it relates to the improvement of patient safety outcomes and the provision of quality patient care. Prerequisite: Admission into the Doctorate in Clinical Laboratory Science program, or consent of instructor.

**DCLS 881. DCLS Interprofessional Practice. 1 Credits.**
This course is designed for DCLS program students to apply core competencies in interprofessional practice for healthcare teams including roles and responsibilities, values and ethics, teamwork, communication, and collaborative practice via participation in interprofessional activities. Prerequisite: Successful completion of DCLS 880 and admission into the Doctorate in Clinical Laboratory Science program, or consent of instructor.

**DCLS 890. Advanced Laboratory Operations. 3 Credits.**
This course will explore laboratory quality, utilization, accreditation, regulation, and management topics. Core course content explores the selection, implementation, strengths, and weaknesses of appropriate quality assurance programs to maintain desired quality goals. All aspects of laboratory services will be explored to enhance consultative skills that will be applied in the clinical residency. The use of practice guidelines, critical or clinical pathways, algorithms and reflex testing, direct access testing, evidenced-based practice, and outcomes measurements, as well as initiatives to change the practice of laboratory services in all phases (pre-analytical, analytical, and post analytical) are covered. Prerequisite: Admission into the Doctorate in Clinical Laboratory Science program, or consent of instructor.

**DCLS 899. Independent Study. 1-3 Credits.**
Faculty-guided, student-directed individualized study for students enrolled in the DCLS program who need additional enrollment associated with their plan of study. The specific course requirements are to be described in the Independent Study proposal form to be completed by the student and approved by the faculty mentor and DCLS Program Director prior to enrollment. Can be repeated for credit. Prerequisite: Admission into the Doctorate in Clinical Laboratory Science program.

**DCLS 901. DCLS Research I. 2 Credits.**
Research I is part of a three-course series (DCLS 901, DCLS 902, DCLS 903) taken consecutively. The goal of DCLS 901 is to initiate the development of a research project by preparing a formal written research proposal that includes selecting a topic, reviewing current literature, preparing and submitting an IRB approval, and other activities required to begin data collection. Prerequisite: Admission into the Doctorate in Clinical Laboratory Science program.

**DCLS 902. DCLS Research II. 3 Credits.**
Research II is part of a three-course series (DCLS 901, DCLS 902, DCLS 903) taken consecutively. The goal of DCLS 902 is to continue the work begun in DCLS 901 by initiating data collection, analyzing and interpreting the data collected, beginning the writing of a manuscript draft, and other activities required to move the research project forward. Prerequisite: Satisfactory completion of DCLS 901.

**DCLS 903. DCLS Research III. 3 Credits.**
Research III is part of a three-course series (DCLS 901, DCLS 902, DCLS 903) taken consecutively. The goal of DCLS 903 is to complete the project begun in DCLS 901 and DCLS 902 by finalizing the analysis and interpretation of the data collected and develop a defendable conclusion regarding the research hypothesis. Completion of a final draft of the manuscript describing the research project and outcomes is the culmination of this course. Prerequisite: Satisfactory completion of DCLS 902.

**DCLS 911. Clinical Residency I. 4 Credits.**
The first of a three-course series (DCLS 911, DCLS 912, DCLS 913) providing a structured and supervised experience correlating coursework with practice. Designed to develop the DCLS student to meet national professional responsibilities. Students work with management, laboratory staff, physicians, nurses, and other members of the healthcare team to provide guidance in laboratory utilization and interpretation to optimize patient outcomes. Requires 14-16 weeks of full-time placement at a program affiliate. Prerequisite: Permission of instructor.

**DCLS 912. Clinical Residency II. 5 Credits.**
The second of a three-course series (DCLS 911, DCLS 912, DCLS 913) providing a structured and supervised experience correlating coursework with practice. Designed to develop the DCLS student to meet national professional responsibilities. Students work with management, laboratory staff, physicians, nurses, and other members of the healthcare team to provide guidance in laboratory utilization and interpretation to optimize patient outcomes. Requires 14-16 weeks of full-time placement at a program affiliate. Prerequisite: Permission of instructor.

**DCLS 913. Clinical Residency III. 5 Credits.**
The third of a three-course series (DCLS 911, DCLS 912, DCLS 913) providing a structured and supervised experience correlating coursework with practice. Designed to develop the DCLS student to meet national professional responsibilities. Students work with management, laboratory staff, physicians, nurses, and other members of the healthcare team to provide guidance in laboratory utilization and interpretation to optimize patient outcomes. Requires 14-16 weeks of full-time placement at a program affiliate. Prerequisite: Permission of instructor.

**DCLS 999. DCLS Capstone. 1 Credits.**
The capstone is completed during the final semester of the program and consists of a written manuscript and an oral examination. The manuscript, suitable for publication, is based on the research developed and completed during the research course series DCLS 901, 902, and 903. The final oral defense will be scheduled once the final draft of the manuscript is accepted by the student’s Graduate Committee. The oral examination is a defense of the manuscript and can include questions regarding general knowledge of clinical laboratory science concepts and applications from across the entire DCLS curriculum. Prerequisite: Satisfactory completion of DCLS 902.
Bachelor of Science in Clinical Laboratory Science

As “illness investigators,” medical laboratory scientists use sophisticated instruments to analyze blood and other body tissue and fluids. They provide the essential information used to make diagnoses and plan treatment. The University of Kansas’ one-of-a-kind program offers cutting-edge training and technology combined with real-world experience for students interested in clinical laboratory science. Students learn in a innovative dual-track program featuring molecular biotechnology and the traditional clinical concentrations.

Students interested in clinical laboratory science should contact an advisor (clsed@kumc.edu) early in their college work. This program requires two years of preparatory college course work and two years of professional course work in clinical laboratory science. Interested students should contact the department (http://cls.kumc.edu/) at KU Medical Center for advising as early as possible in their college careers (advising is also available in the Undergraduate Advising Center on the Lawrence campus).

Applications are available online (http://cls.kumc.edu/). The program begins each fall semester. Applications should be submitted by December 15 of the year before the anticipated start date. Also required: complete college transcript(s) and three letters of recommendation, two of which should be from college basic science instructors.

Admission Requirements

An applicant to the program must have completed, or be on track to complete, the required college preparatory course work, with a minimum grade of C in each prerequisite course, before entering the program in the fall. The student must have earned a 2.70 GPA overall and in the following courses: chemistry, biology, and math.

International students, or those for whom English is a second language, may have additional requirements relative to language proficiency, residency, and citizenship status. See: information for international students (http://www.kumc.edu/school-of-health-professions/information-for-international-applicants.html)

Good physical and mental health is essential. Minor physical handicaps are not considered deterrents to admission. Physical examinations are required before registration in CLS course work. The admissions committee requires a personal interview with the applicant.

A background check and documentation of shadow experience is also required. Prospective students should review the program requirements, including prerequisite course work, and complete list of eligibility requirements (https://www.kumc.edu/school-of-health-professions/academics/departments/clinical-laboratory-sciences/academics/bachelors-degree-in-cls-program/eligibility-and-requirements.html).

Following 2 years of preparatory undergraduate study, students enter the program as juniors. A clinical concentration and molecular biotechnology concentration are available. Until the second semester of the senior year, students in both concentrations take the same course work. Also during the senior year, students rotate through 14 to 16 weeks of practicum experience at collaborating affiliates.

A new course of study, categorical concentration, has been developed for science majors who already hold a baccalaureate degree from an accredited institution and are currently working in a clinical laboratory in hematology, chemistry, or microbiology.

### Doctor of Clinical Laboratory Sciences

The Doctorate in Clinical Laboratory Science (DCLS) is the terminal practice degree for the Clinical Laboratory Science profession. This degree provides an opportunity for advanced practice in multiple venues including clinical institutions, reference laboratories, physician practices, industry, public health agencies, government facilities, and academic institutions. Clinical Laboratory Science professionals holding the DCLS will provide a critical interface between practice, research, and health care policy. They will assure the effective and appropriate utilization of laboratory tests and information by eliminating unnecessary tests and ordering tests that should have been ordered but were not. This will result in decreased costs, earlier diagnosis, and improved patient outcomes.

The three-year, full-time program consists of a minimum of 76 credit hours divided between advanced theory courses (core curriculum),
research, and a one-year clinical residency. Course delivery may include face-to-face, online, and hybrid formats. The core curriculum may be completed as a distance learning program and on a full-time or part-time basis. However, the residency component requires full-time attendance at a clinical affiliate.

The core curriculum is designed to advance the foundational knowledge of the bachelor’s-level medical laboratory scientist in the areas of hematology, clinical chemistry, clinical microbiology, immunohematology, clinical immunology, and molecular diagnostics. The core curriculum also includes clinical correlations, evidence-based medicine, and interprofessional practice. Information gained from this course work is integrated with knowledge from other disciplines in health care such as health policy and management, pharmacology, health care education, public health and epidemiology, and advanced pathophysiology.

Research is a component of this program and students will be expected to complete research projects over the course of the program culminating in a capstone project suitable for publication. Research projects will advance practice in clinical laboratory medicine, such as the development and implementation of diagnostic and interpretive algorithms, clinical practice guidelines, and collaborative interprofessional patient care.

The one-year clinical residency will provide immersion in the workings of the health care system by integrating the resident into patient care alongside physicians, nurses, pharmacists, and other health care professionals in clinical practice environments at program affiliates. During the residency, the students will work with management, laboratory staff, physicians, nurses, and other members of the healthcare team to provide guidance in laboratory utilization and interpretation thereby optimizing patient outcomes. The residency focuses on laboratory test selection and result interpretation. In addition to the direct learning by the resident, he or she can educate the patient and the other members of the health care team on the proper utilization of lab tests, correct specimen requirements, and interfering factors affecting results.

Graduates of this program will be prepared to act as consultants to health care providers, serve as laboratory directors, educate patients and health care providers, perform and disseminate research on evidence-based practice and test utilization, and enter academic positions.

The DCLS curriculum addresses the competencies established for the profession by the American Society for Clinical Laboratory Science Doctorate in Clinical Laboratory Science Oversight Committee and NAACLS accreditation guidelines for the DCLS.

Admission to the doctorate in clinical laboratory science program is a competitive application process. Applications are submitted online. Applications and supporting materials are reviewed, and qualified applicants are invited for a personal interview. Detailed instructions on how to apply are posted on the doctorate in clinical laboratory science program (https://www.kumc.edu/school-of-health-professions/academics/departments/clinical-laboratory-sciences/academics/doctorate-in-cls-program/how-to-apply.html) website. Students are admitted for the fall semester only. Applications for the fall semester must be received by March 1 for first consideration.

In order to be considered for admission into this program, the following are required:

**Completed prerequisite course work**

- Bachelor's degree in a life science (e.g., biochemistry, biology, cell biology, clinical laboratory science, microbiology, molecular biosciences etc.) must be completed prior to enrollment in the program.
- A NAACLS-accredited MLS/MT program must be completed (or equivalent). Applicants holding MLS(ASCP) certification through Route 2 are eligible to apply if having completed a NAACLS-accredited or military MLT program.

**Grade point average**

- Cumulative undergraduate grade point average of 3.00 on a 4.00 scale is required.
- For applicants who transferred credits into their Bachelor’s degree, the Office of Graduate Studies will take those credits into consideration for the cumulative Bachelor’s GPA.
- Applicants with a GPA below 3.00 may be considered for admission on a case-by-case basis.

**Required credentials**

- Professional certification as a generalist from the American Society of Clinical Pathology Board of Certification is required: MLS(ASCP)CM, MLS(ASCP) , or MT(ASCP) with proof of continuing education equivalent to the BOC CMP.

**Professional work experience**

- A minimum two years of post-certification, full-time experience in a U.S. clinical laboratory as a medical laboratory scientist (or comparable role) is required at the time of application. Preference will be given to those with experience as a generalist or who have worked in multiple areas of the clinical laboratory. Applicants with less than two-years of full-time experience may be considered for admission on a case-by-case basis.
- The department will evaluate work experience and determine if the work experience criteria are met for each applicant.

**Health and physical requirements**

- Good physical and mental health are essential. Physical or other disabilities are evaluated on a case-by-case basis by the program and by the Office of Equal Opportunity and Academic Compliance. Please review the program's technical standards (https://www.kumc.edu/school-of-health-professions/academics/departments/clinical-laboratory-sciences/academics/doctorate-in-cls-program/technical-standards.html) for details.
- Physical examinations are required prior to the time of registration for classes at KU Medical Center.
- All students are required to carry health insurance. KU Medical Center offers a health insurance policy for eligible students. Selected for the Kansas Board of Regents institutions by the State of Kansas, this plan is offered through Student Health Services at KU Medical Center and is underwritten by UnitedHealthCare Student Resources. For information about the policy, please visit www.uhcsr.com/kumc (http://www.uhcsr.com/kumc/).

Students exclusively taking courses online are not eligible to enroll in the Basic Student Plan through UnitedHealthCare.

**Background check/drug screening**

- The Joint Commission requires all incoming students to pay for a background check and provide the report to the university. This one-time fee must be paid directly to the company performing the background investigation. This requirement only applies to students
officially admitted into the program. A drug screen may also be required by each clinical residency site the student utilizes during the program. More: School of Health Professions background check and drug screening. (http://www.kumc.edu/school-of-health-professions/background-checks-and-drug-screening-for-students.html)

**English language proficiency**

All applicants, regardless of citizenship or residency status, are required to have command of the English language. Proof of English language proficiency may be required through the TOEFL or IELTS testing systems, a personal interview, the personal goals statement or other methods.

- Internet-based TOEFL minimum requirements: at least 23 or higher on the reading and listening sections; a score of 5.0 or 23 or higher on the writing section; a score of 26 or higher on the speaking section.
- IELTS minimum requirements: overall band score of 7.5 and no part score lower than 7.0.

**International Students**

An applicant is considered an international student if he or she requires a visa, or currently resides in the U.S. with non-immigrant status, or currently resides in the U.S. while applying for permanent residency. Additional requirements and documentation are required for international students to become eligible for KU programs. Please review the information for international students (http://www.kumc.edu/school-of-health-professions/information-for-international-applicants.html) before applying.

Applicants will be assessed based on these requirements. After an applicant has been admitted, a program may defer an applicant’s admission for one year after which time the applicant must submit a new application.

Admission requirements are subject to change. In most cases, use the catalog of the year student entered the program. Other years’ catalogs.

**DCLS Core Course Descriptions**

**DCLS 800. DCLS Advanced Topics. 1 Credits.**

Seminar course that addresses topics and issues relevant to DCLS clinical practice, including ethical and social issues in healthcare practice, health informatics, and communication techniques needed for interaction with healthcare colleagues and patients. Repeatable. Prerequisite: Admission into the Doctorate in Clinical Laboratory Science program, or consent of instructor.

**DCLS 802. Principles of Healthcare Education. 3 Credits.**

This course will address various aspects of teaching in healthcare settings. This includes educating patients and their families, educating other healthcare professionals, and the more formal area of undergraduate and graduate education. Education theory, pedagogical methods, educational resources, learning objectives, and evaluation techniques applicable to each type of educational situation will be addressed. Prerequisite: Admission into the Doctorate in Clinical Laboratory Science program, or consent of instructor.

**DCLS 805. Advanced Molecular Diagnostics. 2 Credits.**

This course focuses on the enhancement of scientific and technical knowledge in nucleic acid-based testing for the diagnosis of acquired and hereditary genetic disorders, and infectious diseases. Topics include an in-depth review of the theory of molecular techniques and the application of these techniques in inherited disorders, oncology, infectious disease, pharmacogenetics, histocompatibility, identity determination, and genomics. Prerequisite: Admission into the Doctorate in Clinical Laboratory Science program, or consent of instructor.

**DCLS 815. Research Methods in Clinical Laboratory Sciences. 2 Credits.**

A discussion of research methods used in clinical laboratory sciences, with an emphasis on selecting and applying appropriate research designs. Includes an overview of the research methods and various approaches in current use in clinical laboratory science; focused on research question formulation; internal and external validity of research; variable measurement and reliability, and generalizability of findings. Specific approaches covered include non-experimental, experimental and quasi-experimental designs, epidemiologic methods (e.g., cohort and case-control studies), survey research, and qualitative research. Prerequisite: Admission into the Doctorate in Clinical Laboratory Science program, or consent of instructor.

**DCLS 820. Evidence Based Practice. 3 Credits.**

Evidence-Based Practice (EBP) encompasses Evidence-Based Medicine and Evidence-Based Laboratory Medicine. EBP is a problem-based approach to decision making using research evidence combined with clinical expertise, the patient’s values, circumstances, and the clinical context. This course addresses the historical development of EBP, why using EBP in clinical decision making improves patient care, when and how to implement and use EBP in clinical decision making, and how to discuss the EBP finding with patients, family members, and other healthcare practitioners. Evaluating research studies for their applicability to EBP and designing research studies based on clinical evidence focused on laboratory testing will make up most of the course content, activities, and assignments. Prerequisite: Admission into the Doctorate in Clinical Laboratory Science program, or consent of instructor.

**DCLS 830. Advanced Clinical Chemistry. 3 Credits.**

This course focuses on in depth physiology and pathophysiology together with the principles of current and emerging chemistry tests. Emphasis on the correlation between chemistry tests and disease states, interpretation and limitations of chemistry test results. Current clinical chemistry literature, clinical scenarios, case studies, and advanced laboratory practice issues will be used to enhance knowledge and skills. Prerequisite: Admission into the Doctorate in Clinical Laboratory Science program, or consent of instructor.

**DCLS 836. Advanced Hematology. 3 Credits.**

This course focuses on enhancement of scientific and technical knowledge in hematology and hemostasis to consult with other healthcare practitioners on the selection of screening and diagnostic tests for hematological disorders, interpretation of results, and recommendations for follow-up testing. Topics to be investigated include physiology and regulation of the hematopoietic system and hemostasis, and the genetic, molecular and cellular mechanisms underlying the pathophysiology of selected hematological disorders such as anemias, leukemias, lymphomas, and disorders of hemostasis with additional focus on utilization of appropriate hematology, hemostasis, and molecular diagnostic tests, and reducing turn-around time. Prerequisite: Admission into the Doctorate in Clinical Laboratory Science program, or consent of instructor.

**DCLS 838. Advanced Immunology and Transplant. 3 Credits.**

This course focuses on enhancement of scientific and technical knowledge in clinical immunology and transplantation in order to consult with other healthcare practitioners on clinical applications and diagnostic and therapeutic testing of immune-mediated diseases. Topics include autoimmunity, hypersensitivity, immunotherapy and immunotoxicology, transplantation and HLA testing/compatibility, cancer immunology and immunodeficiency. This course also includes test methodologies in
cellular, humoral, and molecular immunology, selection and interpretation of test results, and recommendations for follow-up testing for patient monitoring. Prerequisite: Admission into the Doctorate in Clinical Laboratory Science program, or consent of instructor.

**DCLS 842. Advanced Clinical Microbiology. 3 Credits.**
Course Description: This course focuses on enhancement of scientific and technical knowledge in clinical microbiology necessary for consultation with other healthcare practitioners for (i) the selection of screening and diagnostic tests for suspected infectious diseases, (ii) interpretation of results, and (iii) recommendations for follow-up testing. Topics to be investigated include utilizing molecular diagnostic tests, antimicrobial susceptibility testing and resistance mechanisms, bioterrorism, biofilms, opportunistic and emerging infections, utilization of appropriate microbiology tests, evidence based practice in clinical microbiology, and reducing turn-around time. Current scientific literature, clinical scenarios, case studies, and advanced laboratory practice issues will be used to enhance knowledge and skills. Prerequisite: Admission into the Doctorate in Clinical Laboratory Science program, or consent of instructor.

**DCLS 844. Advanced Immunohematology. 3 Credits.**
This course will explore advanced blood banking theory and transfusion medicine concepts pertaining to basic-to-advanced serological testing techniques, blood product utilization, molecular immunohematology testing methods, quality assurance, and other relevant topics. Learners will be re-introduced to specialized blood banking procedures including (but not limited to) the following: ABO/Rh, antibody screens, antibody identification, fetal screen, elutions, phenotyping, and crossmatching. Using case studies and discussion, learners will correlate laboratory data to clinical disease processes encountered in transfusion medicine. Prerequisite: Admission into the Doctorate in Clinical Laboratory Science program, or consent of instructor.

**DCLS 851. Clinical Correlations I. 3 Credits.**
Course Description: This course will correlate clinical presentation and laboratory testing as it relates to physiological changes associated with select diseases of major organ systems (e.g., endocrine, muscle, cardiovascular, respiratory, renal, gastrointestinal, immune, nervous, and reproductive). Prerequisite: Admission into the Doctorate in Clinical Laboratory Science program or instructor permission.

**DCLS 852. Clinical Correlations II. 3 Credits.**
This course will complement CLS851 Clinical Correlations I and will correlate clinical laboratory testing as it relates to physiological changes associated with patient symptomology (e.g., chest pain, shortness of breath, unresponsiveness, fever of unknown origin, jaundice) and treatment in a consultation model. Prerequisite: Admission into the Doctorate in Clinical Laboratory Science program or instructor permission.

**DCLS 880. Principles of Interprofessional Education and Practice Theory. 1 Credits.**
An introductory course to core competencies in interprofessional education and practice for healthcare teams including roles and responsibilities, values and ethics, teamwork, communication, and collaborative practice as it relates to the improvement of patient safety outcomes and the provision of quality patient care. Prerequisite: Admission into the Doctorate in Clinical Laboratory Science program, or consent of instructor.

**DCLS 881. DCLS Interprofessional Practice. 1 Credits.**
This course is designed for DCLS program students to apply core competencies in interprofessional practice for healthcare teams including roles and responsibilities, values and ethics, teamwork, communication, and collaborative practice via participation in interprofessional activities. Prerequisite: Successful completion of DCLS 880 and admission into the Doctorate in Clinical Laboratory Science program, or consent of instructor.

**DCLS 890. Advanced Laboratory Operations. 3 Credits.**
This course will explore laboratory quality, utilization, accreditation, regulation, and management topics. Core course content explores the selection, implementation, strengths, and weaknesses of appropriate quality assurance programs to maintain desired quality goals. All aspects of laboratory services will be explored to enhance consultative skills that will be applied in the clinical residency. The use of practice guidelines, critical or clinical pathways, algorithms and reflex testing, direct access testing, evidenced-based practice, and outcomes measurements, as well as initiatives to change the practice of laboratory services in all phases (pre-analytical, analytical, and post analytical) are covered. Prerequisite: Admission into the Doctorate in Clinical Laboratory Science program, or consent of instructor.

The Doctorate in Clinical Laboratory Science (DCLS) program at the University of Kansas is designed to prepare certified medical laboratory scientists for advanced practice in multiple venues including clinical institutions, reference laboratories, physician practices, industry, public health agencies, government facilities, and academic institutions. Course work is divided between advanced theory courses ("Core Curriculum"), research, and clinical residency. The DCLS curriculum addresses the competencies established for the profession by the American Society for Clinical Laboratory Science Doctorate in Clinical Laboratory Science Oversight Committee and NAACLS accreditation guidelines for the DCLS.

**Degree Requirements:**
- On a full-time basis, degree requirements are normally completed within 3 years of admission to the program, although a maximum of 8 years is allowed. The core curriculum can be complete on a part-time basis, but the DCLS Research and Clinical Residency components require one year of full-time enrollment.
- Cumulative grade-point average (GPA) of at least a 3.0 for all KU graduate coursework.
- Successful completion of a minimum of 76 credit hours.
- Successful completion of the University's Research Skills and Responsible Scholarship requirement before proceeding to the DCLS comprehensive exam.
  - Successful completion of DCLS 815 (Research Methods in Clinical Laboratory Sciences) and DCLS 820 (Evidence Based Practice) meets the Research Skills requirement.
  - Successful completion of PRVM 853 (Responsible Conduct of Research) or PTRS 807 (Ethics in Health Care) meets the Responsible Scholarship requirement.
- Successful completion of the DCLS comprehensive examination. Prior to starting the clinical residency, a comprehensive examination is required of all degree candidates. Students will demonstrate their (i) command of the clinical laboratory science body of knowledge, (ii) ability to analyze data, and (iii) expertise in the broad scope of clinical practice. Students must be in good academic standing (i.e. hold a minimum 3.0 cumulative GPA) to be eligible for the comprehensive examination. The examination must be completed prior to enrollment in residency courses with a minimum score of 80% to be considered successful.
- Successful completion of the DCLS Research Project requirement. A prospectively planned and approved translational research project which is advisor-guided, student-directed, and designed to support and enhance students’ ability to apply their graduate knowledge and achieve tangible outcomes. The DCLS Research Project is a three-
course series (DCLS 901, DCLS 902, DCLS 903) that includes all aspects of a translational research project, including the planning, data collection, analysis/interpretation of results, preparation, and presentation of the research project, both oral and written. Research projects will advance practice in clinical laboratory medicine, such as the development and implementation of diagnostic and interpretive algorithms, clinical practice guidelines, and collaborative interprofessional patient care.

• Successful completion of the DCLS Clinical Residency requirement. A three-course series (DCLS 911, DCLS 912, DCLS 913), this year-long clinical residency is designed to develop the DCLS professional to meet national professional responsibilities. Residency places the student in clinical practice environments at program affiliates. During the residency, the students will work with management, laboratory staff, physicians, nurses, and other members of the healthcare team to provide guidance in laboratory utilization and interpretation thereby optimizing patient outcomes. Residency is provided in structured clinical rotations occurring at clinical affiliates. Skills and knowledge will be evaluated through competency-based assessments and portfolio development. The portfolio will contain documentation of experiences and work products developed during the residency rotations. This may include de-identified summaries of consultations, papers and abstracts published or submitted, PowerPoint presentations, method evaluation data and/or written procedures from utilization projects.

• Successful completion of the DCLS Capstone requirement. The capstone is completed during the final semester of the program and consists of a written and an oral examination. The written component consists of a manuscript suitable for publication based on the research requirement described above. The oral examination is a defense of the manuscript and can include questions regarding general knowledge of clinical laboratory science concepts and applications.

• Enrollment in a minimum of one (1) credit hour the semester the student will graduate.

• Successful completion of the following courses:

* DCLS 800 will be taken during each residency semester.

Degree requirements and course descriptions are subject to change. Any courses taken as an equivalent must be approved by the Graduate Director and the Office of Graduate Studies. In most cases, use the catalog of the year student entered the program. Other years’ catalogs» (http://catalog.ku.edu/archives/).

The DCLS is a minimum 76 credit hour program designed to be completed in a three year time frame if enrolled full time (see program progression below, part-time options are available). Course work is divided between the “Core Curriculum” (advanced theory courses) completed in the first two years of full-time study, and one full year of full-time clinical residency (during which research and residency courses are completed).

A recommended plan of study for full-time students in the DCLS program is shown below.

Essential Movement Requirements

1. Perform actions requiring coordination of both gross and fine muscular movement, equilibrium and use of senses.
2. Move freely and safely about healthcare settings (hospitals, patient rooms, clinics, laboratory, etc.).
3. Travel to sites both on and off campus involved in coursework and residency.
4. Perform moderately taxing continuous physical work over several hours.
5. Use an electronic keyboard to generate, calculate, record, evaluate, and transmit information.

6. Prepare assignments, both written and on-line.
7. Deliver public presentations to large and small audiences.

Essential Communication Requirements

1. Read, interpret, and comprehend technical and professional materials (e.g., textbooks, journal articles, handbooks, instruction manuals, and patient healthcare records).
2. Be able to share and to elicit information from patients, healthcare providers, peers, and research collaborators verbally and in a recorded format.
3. Assimilate information to prepare papers, produce reports, and complete documentation for patient care and research purposes.
4. Effectively, confidently, sensitively, and confidentially communicate with patients, laboratory staff, and healthcare providers regarding laboratory test selection, interpretation, and follow-up.
5. Communicate effectively (speaking, writing, typing, graphics, or telecommunication) with faculty, students, laboratory staff, patients, and other healthcare professionals.
6. Take paper and computer examinations.

Essential Intellectual Requirements

1. Understand and perform measurements, calculations, synthesis, analysis, reasoning and problem solving.
2. Participate in research activities involving the laboratory or patient oriented research activities.
3. Possess sufficient judgment to recognize and correct performance deviations.

Essential Behavioral and Social Requirements

1. Manage the use of time and be able to systematize actions in order to complete academic, professional and technical tasks within realistic constraints.
2. Possess the emotional health necessary to effectively employ intellect, act ethically, and exercise appropriate judgment.
3. Demonstrate appropriate affective behaviors and mental attitudes as to not jeopardize the emotional, physical, mental and behavioral safety of other individuals with whom there is interaction in academic, clinical, and residency settings.
4. Possess the mental and emotional rigor to maintain relationships and demonstrate respect to all people, including students, faculty, patients, and other healthcare professionals at residency settings, without showing bias or preference on the basis of race, color, age, sex, religion or creed, national origin or ancestry, gender expression, gender identity, disability, veteran status, sexual orientation or genetic testing & screening.
5. Adapt to professional and technical change, being flexible and creative.
6. Use appropriate language.
7. Demonstrate empathy when appropriate.
8. Work effectively in inter-professional teams.
9. Demonstrate an understanding of the rationale and justification for one’s performance.
10. Demonstrate attention to detail and flexibility to function in a clinical and/or research setting.
11. Recognize potentially hazardous materials, equipment, and situations and proceed safely in order to minimize risk of injury to self and nearby individuals.

Total Hours 77

Students enroll in DCLS 800 during each clinical residency semester.

Graduates of the clinical laboratory science doctoral program must have the knowledge and skills to function in a broad variety of clinical laboratory and patient care environments, including hospitals, reference, public health, and physician office settings. Therefore, the following abilities and expectations must be met by all students in the program.

Essential Observational Requirements

1. Read and comprehend text, numbers, and graphs displayed in print and other visual displays.
2. Perform comparative observations of text, movement, shapes, graphs, colors, etc.
3. Observe and respond to subtle cues of individual’s moods, temperament, and social behavior.
4. Observe, learn from, and analyze medical record content, including discernment and use of clinical and administrative data displayed within the medical record.
5. Observe, learn from, and analyze statistical, financial, and reimbursement data, including utilizing spreadsheets, software, databases, and performing mathematical calculations.
6. Observe, learn from, and analyze class demonstrations and experiences in disciplines relevant to Clinical Laboratory Sciences that include but are not limited to information management, biochemistry, physiology, statistics, clinical correlations, and research methodology.

12. Practice honesty, compassion, and responsibility.
13. Be forthright about errors or uncertainty.
14. Critically evaluate one’s own performance, accept constructive criticism, and look for ways to improve.
15. Critically evaluate the performance of students, patients, and healthcare providers, tactfully offering constructive comments.
16. Provide professional and technical services while experiencing the stresses of heavy workloads (i.e., large number of tasks to complete in a limited amount of time), task–related uncertainty (i.e., ambiguous test-ordering, ambivalent test interpretation), emergent demands (i.e., “stat” test orders, interaction with other members of the healthcare team), and a distracting environment (i.e., high noise levels, crowding, complex visual stimuli).

Diagnosis Ultrasound Technology (General and Vascular)

Overview

KU’s certificate in diagnostic ultrasound and vascular technology is an 18-month accredited certificate program that prepares the student sonographer to use complex ultrasound equipment in a clinical setting. The sonographer, after advanced training, uses high-frequency sound waves for diagnostic purposes under the direction of a radiologist. A certificate from The University of Kansas School of Health Professionals is awarded to the student upon successful completion of the program at its KU Medical Center campus in Kansas City, Kansas.

Graduates are candidates to take the national registry examinations given by the American Registry of Diagnostic Medical Sonographers in the areas of abdomen, obstetrics and gynecology, vascular technology, and sonography principles and instrumentation. Those who pass the exams become registered diagnostic medical sonographers and registered vascular technologists.

More about this program and the profession can be found on the program’s website (http://www.kumc.edu/school-of-health-professions/ultrasound.html).

The University of Kansas Diagnostic Ultrasound and Vascular Technology program is accredited by the Commission on Accreditation of Allied Health Education Programs (www.caahep.org) upon the recommendation of the Joint Review Committee on Education in Diagnostic Medical Sonography (JRC-DMS). The Commission on Accreditation of Allied Health Education Programs, 1361 Park Street, Clearwater, FL 33756; 727-210-2350, www.caahep.org (http://www.caahep.org).

Program accreditation, outcomes, and gainful employment disclosure are available at ultrasound.kumc.edu (http://ultrasound.kumc.edu).

Courses

UTEC 50. Introduction to Diagnostic Ultrasound and Medical Law and Ethics for the Imaging Professional. 3 Credits.
An introductory overview of the field of Diagnostic Ultrasound encompassing medical terminology for the sonographer, departmental function, ergonomics, patient care, and ethical issues in health care. In addition, a study of the department’s ultrasound equipment with an extensive review of functionality and design. Prerequisite: Acceptance into the Diagnostic Ultrasound Technology Program.

UTEC 51. Introduction to Sonography Principles and Instrumentation I. 2 Credits.
This course is designed to introduce the students to the basic terminology, the principles of propagation, beams and transducers and possible biological effects. Prerequisite: College Physics along with acceptance into the Diagnostic Ultrasound Technology Program.

UTEC 53. Abdominal I Sonography. 2 Credits.
This course is designed to present and review abdominal cross-sectional and introduce renal anatomy, physiology and pathology, and the associated sonographic appearances. This includes clinical indications for the ultrasound of the kidneys along with sonographic appearances of normal and disease processes with instrumentation, technique, and protocols. Prerequisite: College Anatomy and Physiology along with acceptance into the Diagnostic Ultrasound Technology Program.

UTEC 55. Gynecologic Sonography. 2 Credits.
This course is designed to educate the student on gynecologic anatomy, physiology and pathology and the sonographic appearances. This includes clinical indications for ultrasound along with instrumentation, technique and protocols. Prerequisite: College Anatomy and Physiology along with acceptance into the Diagnostic Ultrasound Technology Program.

UTEC 56. Clinical Internship I. 5 Credits.
Through supervised clinical experience in the ultrasound imaging department, the student will gain knowledge and be required to demonstrate competence in abdominal and gynecologic clinical imaging and instrumentation. Prerequisite: Acceptance into the Diagnostic Ultrasound Technology Program.

UTEC 60. Sonography Principles and Instrumentation II. 2 Credits.
This course is designed to educate the student on advanced areas of ultrasonic propagation principles, transducer parameters, instrumentation, interactive properties with tissues, possible biological effects and quality control procedures. Introduction to Color and Spectral Doppler is included. Prerequisite: Introduction to Sonography Principles and Instrumentation I.

UTEC 61. Obstetrical Sonography. 3 Credits.
This course is designed to educate the student on normal maternal changes and fetal development throughout gestation. Embryonic and fetal anatomy, anomalies, pathology, biometry and the sonographic appearances are reviewed. Instrumentation, technique, and protocols are studied. Prerequisite: Gynecologic Sonography and college anatomy and physiology.

UTEC 62. Abdominal Sonography II. 2 Credits.
This course is taught in module corresponding to abdominal organs and compartments imaged in the abdomen. This course provides instruction in Liver, Biliary, Pancreas and Spleen. Each module includes: review of anatomy, physiology and pathology, clinical indications for sonography, sonographic appearances of normal and disease processes, along with instrumentation, technique and protocols. Abdominal Doppler of normal, diseased, and transplanted liver and pancreas will be included. Prerequisite: Abdominal Sonography I

UTEC 63. Obstetrical Sonography 2nd and 3rd Trimester. 1.75 Credits.
This course is designed to educate the student on normal maternal changes and fetal development throughout gestation. Embryonic and fetal anatomy, anomalies, pathology, biometry and the sonographic
appears are reviewed. Instrumentation, technique, and protocols are studied. Prerequisite: Obstetrical Sonography 1st Trimester

**UTEC 64. Small Parts Sonography. 1 Credits.**
This course is taught in modules corresponding to superficial structures of the body. This course provides instruction in the thyroid, scrotal, breast, and musculoskeletal sonography. The module includes: review of anatomy, physiology and pathology, clinical indications for sonography, sonographic appearances of normal and disease processes, along with instrumentation, technique and protocols. Prerequisite: Small Parts Sonography I.

**UTEC 65. Vascular Technology I. 2 Credits.**
This course is taught in modules corresponding to selected sites in the vascular system. Each module includes review of: anatomy, physiology, pathology, and clinical indications for noninvasive vascular imaging and disease processes. Instrumentation, technique, and protocols are included. Prerequisite: Advanced Sonography Principles and Instrumentation II and Abdominal Sonography I.

**UTEC 66. Clinical Internship II. 6 Credits.**
Through supervised clinical experience in the ultrasound imaging department and perinatology department the student will gain knowledge and be required to demonstrate competence in gynecologic, obstetrical, small parts and abdominal clinical imaging and instrumentation including Color and Spectral Doppler evaluation. Prerequisite: Gynecologic Sonography, Small Parts Sonography I and Abdominal Sonography I and II.

**UTEC 70. Abdominal Sonography III. 1 Credits.**
This course is taught in modules corresponding to abdominal organs and compartments imaged in the abdomen. This course provides instruction in the Retroperitoneum, Peritoneum, Gastrointestinal, Abdominal Wall and Great Vessels. Each module includes: review of anatomy, physiology and pathology, clinical indications for sonography, sonographic appearances of normal and disease processes, along with instrumentation, technique and protocols. Prerequisite: Abdominal Sonography I and II.

**UTEC 71. Vascular Technology II. 2 Credits.**
This course is taught in modules corresponding to selected sites in the vascular system. Each module includes review of: anatomy, physiology, pathology, and clinical indications for noninvasive vascular imaging and disease processes. Instrumentation, technique, and protocols are included. Prerequisite: Vascular Technology I, Sonography Principles and Instrumentation I and II, and Abdominal Sonography I, II, and III.

**UTEC 72. Clinical Internship III. 4 Credits.**
Through supervised clinical experience in the ultrasound imaging department and perinatology department the students will gain knowledge and be required to demonstrate competence in gynecologic, obstetrical, small parts, abdominal and vascular clinical imaging and instrumentation including Color and Spectral Doppler evaluation. Prerequisite: Gynecologic Sonography, Small Parts I and II Sonography, Obstetrical Sonography, Abdominal Sonography I and II.

**UTEC 80. Advanced Sonography Seminar I. 3 Credits.**
This course is designed to prepare the student for national board examinations administered by the American Registry of Diagnostic Medical Sonographers in the field of ultrasound and vascular technology. The student will be responsible for “in class” review of ultrasound clinical procedures, including anatomy, physiology, disease processes and sonographic appearances, and sonography principles and instrumentation. In addition, the student will learn post graduate skills to enhance professional opportunities. Prerequisite: Gynecologic, Small Parts I and II, Obstetrical Sonography, and Abdominal Sonography I, II and III, Clinical Internship I, II and III and Introduction to Sonography Principles and Instrumentation I and Sonography Principles and Instrumentation II and Vascular Technology I.

**UTEC 81. Clinical Internship IV. 8 Credits.**
Through supervised clinical supervised learning situations in a clinical ultrasound imaging department the student will gain knowledge and be required to demonstrate competence in noninvasive vascular imaging procedures and all aspects of instrumentation. Prerequisite: Gynecologic Sonography, Small Parts I and II Sonography, Obstetrical Sonography, Abdominal Sonography I, II, III and Vascular Technology.

**UTEC 90. Advance Sonography Seminar II. 4 Credits.**
This course is designed to prepare the student for national boards administered by the American Registry of Diagnostic Medical Sonographers in the field of ultrasound and vascular technology. The student will be responsible for in class review of ultrasound clinical procedures, including anatomy, physiology, disease processes and sonographic appearances, ultrasound physics and instrumentation and vascular physics and instrumentation. In addition, the student will learn post graduate skills to enhance professional opportunities. Prerequisite: Gynecologic, Small Parts I and II, Obstetrical Sonography I, II and III, Clinical Internship I, II, III and IV and Ultrasound Physics and Instrumentation, Vascular Technology and Vascular Physics and Instrumentation and Advanced Sonography Seminar II.

**UTEC 91. Clinical Internship V. 8 Credits.**
Through clinical supervised learning situations in a clinical ultrasound imaging department the student will gain knowledge and be required to demonstrate competence in noninvasive vascular imaging procedures and all aspects of instrumentation. Prerequisite: Gynecologic Sonography, Small Parts I and II Sonography, Obstetrical Sonography, Abdominal Sonography I, II, III and Vascular Technology.

**Certificate in Diagnostic Ultrasound Technology (General and Vascular)**

KU’s certificate in diagnostic ultrasound and vascular technology is an 18-month, accredited certificate program that prepares the student sonographer to use complex ultrasound equipment in a clinical setting. The sonographer, after advanced training, uses high-frequency sound waves for diagnostic purposes under the direction of a radiologist.

A certificate from the University of Kansas is awarded to the student upon successful completion of the program at its KU Medical Center campus in Kansas City, Kansas. Instruction is provided by skilled professionals employed by The University of Kansas Health System and KU Medical Center.

Graduates are candidates to take the national registry examinations given by the American Registry of Diagnostic Medical Sonographers in the areas of abdomen, obstetrics and gynecology, vascular technology, and sonography principles and instrumentation. Those who pass the exams become registered diagnostic medical sonographers and registered vascular technologists.

More about this program and the profession can be found on the program’s website (http://www.kumc.edu/school-of-health-professions/ultrasound.html).

**Admission**

The following are required for entry to this program:
1. Applicant must have completed, or be currently enrolled in, at the minimum a 24-month radiologic technology program (60 semester credit hours or 84 quarter credit hours).

   Please note: The required RT program is not available at the University of Kansas – please visit the program website (https://www.kumc.edu/school-of-health-professions/academics/departments/respiratory-care-and-diagnostic-science/academics/diagnostic-ultrasound-and-vascular-technology-certificate-program.html) for schools offering accredited AART programs.

2. Applicants must be a registered radiologic technologist (ARRT) or must be registry-certified before program start date in September.

3. Post-secondary credits, with a cumulative grade-point average of 2.5 on a 4.0 scale, are required in the following courses:
   - Communication skills (English, speech, or composition)
   - General college-level physics and/or radiographic physics
   - Human anatomy and physiology
   - Algebra, statistics (or higher) mathematics course

4. The student will be required to pass the ARRT registry exam before entrance into the ultrasound program.

5. Good physical and mental health are essential to the field of ultrasound. Physical or other disabilities are evaluated on a case by case basis by the program and by the Office of Institutional Opportunity and Access. Please review the program's technical standards (https://www.kumc.edu/school-of-health-professions/academics/departments/respiratory-care-and-diagnostic-science/academics/respiratory-care-degree-programs/respiratory-care-bachelors-degree/technical-standards.html) for details.

6. Background check: the Joint Commission on Accreditation of Healthcare Organizations (JCAHO) requires all incoming students to pay for a background check. Applicants will be asked to provide information and make the payment once officially accepted into the program. A drug screening may also be required. For more information, please see School of Health Professions background check and drug screening information. (http://www.kumc.edu/school-of-health-professions/background-checks-and-drug-screening-for-students.html)

7. International students: an applicant is considered an international student if he or she requires a visa, or currently resides in the U.S. with non-immigrant status, or currently resides in the U.S. while applying for permanent residency. Additional requirements and documentation, such as proof of English language proficiency, are required for international students to become eligible for KU programs. Please review the information for international students (http://www.kumc.edu/school-of-health-professions/information-for-international-applicants.html) before applying.

## Certificate Program Requirements

The student spends 40 hours a week in the 18-month program, with time divided between classroom courses and clinical application. Didactic studies include courses in medical law and ethics, introduction to sonography, sonography principles and instrumentation, abdomen, OB/GYN, small parts, neurosonology, and vascular technology.

## Dietetics and Nutrition

Dietetics is the science of managing food and nutrition to promote health. Registered dietitians are food and nutrition experts who provide nutritional services in hospitals, schools, nursing care facilities, and other institutions. These essential health care professionals are responsible for developing food and nutrition programs to prevent and treat illness or promote general dietary health.

The mission of the KU Department of Dietetics and Nutrition:

"To conduct research in nutrition science and dietetics, and to produce exemplary graduates empowered to influence human health."

The department offers the following programs in the fields of dietetics and nutrition:

**Dietetic Internship Graduate Certificate**

This program prepares graduates for a career as a registered dietitian. A baccalaureate degree from an accredited university or college and completed course work approved by the Accreditation Council for Education in Nutrition and Dietetics is required. Graduates are eligible for the registration examination to acquire the RD credential. The certificate includes 14 graduate credit hours applicable toward the Master of Science degree.

**Dietetics and Integrative Medicine Graduate Certificate**

An opportunity for working professionals or graduate students, students in this online program explore a personalized approach to prevention and treatment of chronic disease by embracing conventional and complementary therapies. Students may enter with bachelor's or master's degrees in dietetics, nutrition, biological sciences or other health care professions.

**Master of Science in Dietetics and Nutrition**

With course work in biochemical, clinical and behavioral aspects of nutrition, this program offers many benefits including expanded job opportunities and increased knowledge in the science of nutrition. Students engage in the research process while interacting with leading nutrition and clinical researchers.
The Doctorate in Clinical Nutrition (DCN) is an online, professional practice degree focused on producing advanced-level practitioners in clinical nutrition; food and nutrition managers, administrators, and consultants; public health nutritionists; and transformational researchers in higher education. Graduates of the KUMC Doctorate in Clinical Nutrition (DCN) program will be rigorously trained to provide leadership in prevention, intervention, and treatment of chronic diseases at the individual and population level. DCN graduates will complete cutting-edge coursework, a work-based practicum, and an outcomes-based research project.

Ph.D. in Medical Nutrition Science
Students with degrees in nutrition or biological sciences have the opportunity for clinical and translational research at a world-class academic health center renowned for its research facilities. This program emphasizes training in the core sciences of nutrition, biochemistry, biostatistics and the most advanced research methodology.

Courses
DIET 660. Management of Human Resources in Dietetics. 6 Credits.
Focus on human resource development and utilization as the student works with food service personnel. Learning encompasses recruiting, training, supervision, and evaluation of employees in a food service system. Open only to seniors majoring in dietetics. Prerequisite: Management concepts or personnel administration.

DIET 661. Management of Food Processing and Service. 6 Credits.
Application of theories and concepts pertaining to management functions and interdepartmental relationships in a variety of clinical food service settings. Consideration is given to the newer technological developments in the administration of food services. Open only to seniors majoring in dietetics. Prerequisite: Food service systems and management in dietetics.

DIET 662. Special Problems in Food Service Management. 3 Credits.
Advanced experience in the practice of dietetics in an assigned setting. Problems and procedures will vary with interest and needs of the students. Open only to seniors majoring in dietetics. Prerequisite: Food service systems.

DIET 672. Nutrition Care of Patients. 6 Credits.
Directed observation and supervised experience in nutritional care of patients. Nutrition principles studied in DIET 670, Applied Normal Nutrition, and DIET 671, Nutrition in Medical Science, are applied in clinical situations. Open only to seniors majoring in dietetics. Prerequisite: Principles of nutrition; and nutrition throughout the life cycle.

DIET 675. Seminar in Dietetics and Nutrition. 1 Credit.
Involves study and discussion of text and general materials pertaining to philosophy and methodology in the field of dietetics and nutrition. Guest lecturers will participate. May be repeated for credit providing no course duplication takes place. Open only to seniors majoring in dietetics. Prerequisite: Introduction to dietetics.

DIET 800. Selected Topics in Dietetics. 1-3 Credits.
An elective course to allow student credit hours in special issues or problems in dietetics offered by individual faculty. Course content can provide students with investigation of problems and/or issues relevant to theory, research investigation and/or practice related to the field of nutrition and dietetics.

DIET 801. Current Issues or Trends. 3 Credits.
Review of current issues in the economic, social, ethical, political, legal, technological, and ecological environments and the effects of these changes on dietetics practice.

DIET 802. Foods Writing for Professionals. 3 Credits.
A course focusing on the writing skills needed by the food professional in order to communicate effectively in writing about food and food-related topics. Student experiences include hands-on projects in research and writing for various audiences and types of publications.

DIET 803. Accounting Concepts & Analysis. 3 Credits.
An emphasis on financial statement analysis is the main objective of the course. A review of all major accounts in the income statement, balance sheet and statement of cash flow is made in determining a firm's performance and financial condition in relation to what matters most to shareholders and investors. Prerequisite: General Calculus and Linear Algebra

DIET 805. Entrepreneurship Theory and Practice. 3 Credits.
Development and management of small businesses or private practice within the dietetics industry. Business plan development, marketing, cost considerations. Overview of consulting to health care and hospitality operations and examination of skills required for success.

DIET 819. Grant and Scientific Writing for the Professional. 3 Credits.
Grant writing, identifying external funding, managing grants, preparing manuscripts for peer-reviewed publication, and preparing papers and poster for presentation at professional meetings. Prerequisite: Enrolled GPIEDA.

DIET 822. Healthcare Administration. 3 Credits.
A comprehensive review of today's health care institutions and their response to the economic, social/ethical, political/legal, technological, and ecological environments.

DIET 824. Financial Management and Cost Controls in Dietetics. 3 Credits.
This course overviews the fundamental knowledge of financial management, managerial accounting, and operational cost controls for dietetics professionals. Topics include a review of managerial accounting concepts for not-for-profit organizations and for-profit organizations based on the Uniform System of Accounts, value and risk analyses, budgeting, asset management, franchising and management contracts, cost-volume-profit analyses, and operational applications for financial performance.

DIET 829. Nutrition and Aging. 3 Credits.
An overview of nutrition and the aging process. Physiological, psychological, and sociological aspects of aging, theories of aging, internal and external factors related to nutrient intake, and nutrient needs will be considered. Physical activity and practical application to community settings is addressed.

DIET 830. Nutrition: a Focus on Life Stages. 3 Credits.
The influence of normal physiological stresses on nutritional needs throughout the life span will be explored. Evaluating nutritional status at different stages of life and identifying appropriate needs and services will be included while, at the same time, consideration given for specific characteristics such as physiological condition and cultural heritage.
DIET 832. Functional Foods for Chronic Disease Prevention. 3 Credits.
Integrate and evaluate the regulatory principles, food science, nutrient science and nutritional metabolism for the development of functional foods, nutraceuticals, and dietary supplements for chronic disease prevention. Prerequisite: Biochemistry, Human Nutrition, Basic Food Science or consent of instructor.

DIET 833. Principles of Statistics. 3 Credits.
A basic course in statistics: Statistical methods applied to experimental and survey data from social or natural sciences; test of hypotheses concerning treatment means; linear regression; product-moment, rank, and bi-serial correlations; contingency tables and chi-square tests.

DIET 834. Methods of Research in Nutrition. 3 Credits.
A study of basic research terminology and designs commonly used in nutrition research. Topics include: research on animals, tissue culture and human subjects; qualitative, quantitative and outcomes research; ethical issues in research; dissemination of research findings; and appropriate use of research findings. Prerequisite: Consent of instructor.

DIET 835. Nutritional Epidemiology. 3 Credits.
This course emphasizes the important issues related to designing, conducting, and interpreting research on the role of diet or physical activity in the development of disease (& health) in human populations. Prerequisite: DIET 833 Statistics or Permission of Instructor.

DIET 836. Biochemical, Physiological, and Genetic Aspects of Human Nutrition. 3 Credits.
The topics covered will examine the integration of biochemistry, physiology, genetics, and nutrition. Emphasis will be placed on developing an understanding of how the combination cellular structure and function is related to the metabolic needs of the cell and its response to the environment. The integrated approach will form a basis for evaluating nutritional needs in humans. Prerequisite: DIET 833 Statistics or Permission of Instructor.

DIET 837. Nutrition in Diabetes. 3 Credits.
(3 hours) An in-depth study of diabetes management with emphasis in nutrition care. Topics will include diabetes pathophysiology, clinical care guidelines, basic pharmacology, clinical nutrition education and counseling strategies, and nutrition care planning. Prerequisite: A course in medical nutrition therapy or consent of instructor. Must be a student in the Great Plains IDEA degree program.

DIET 838. Advanced Medical Nutrition Therapy. 3 Credits.
The course will discuss the role of diet in disease including diet as a factor related to prevention of diseases or illness, diet as an etiologic agent in illness and diet as a treatment for disease. Medical nutrition therapy is the use of specific nutrition services to treat an illness, injury or condition and involves two phases: 1) assessment and 2) treatment, which includes diet therapy, counseling and/or the use of specialized nutrition supplements.

DIET 839. Clinical Aspects of Nutrition Support. 3 Credits.
The course content provides in depth study of specialized visceral and somatic nutrition assessment of the critically ill patient. Content includes extensive review of methods for determining energy expenditure and substrate utilization during specific disease states. Discussion of the aspects of feeding the critically ill patient including timing, enteral and parenteral feeding methodology, specialized medical foods, equipment requirements, feeding complications and prevention, and pharmacological issues. Students will be expected to calculate formulas for both types feeding modalities and provide discussion of the evidence based guidelines for administration of these nutrition therapies. Prerequisite: minimum of 3 cr hours in Medical Nutrition Therapy.

DIET 840. Foundations of Leadership in Dietetics. 3 Credits.
Study of the key issues in the theory, research and application of leadership in organizations. This includes defining leadership, understanding situational characteristics that facilitate/hinder effective leadership, understanding effective/dysfunctional leadership and gaining greater insight into one's own leadership style and functioning. Prerequisite: Must be admitted to the GPIDEA Program.

DIET 841. International Nutrition and World Hunger. 3 Credits.
Advanced study of the magnitude, cause, and nature of hunger and undernutrition in low income countries; emphasis on programs, policies and planning directed toward alleviating hunger.

DIET 842. United States Public Health Nutrition. 1-3 Credits.
A study of US public health and nutrition concerns in diverse US populations, assessment of nutritional status in commonalities, health communication, nutrition policies and community based nutrition interventions. Exploration of the roles of dietitians, nutritionists, and others in developing and delivering nutrition policies and interventions in US communities. Prerequisite: Must be a student in the Graduate Certificate Dietetic Internship Program, the Dietetics and Nutrition Master of Science Program, or the Great Plains IDEA, or have the consent of the instructor.

DIET 843. Nutrition Education in the Community. 3 Credits.
Principles and practices of teaching individuals and groups to translate nutrition knowledge into action. Emphasis on research in and evaluation of nutrition education.

DIET 844. Behavior Management Theory. 3 Credits.
An in-depth analysis of the development of the behavioral basis of individual and group behavior in business, governmental, educational, and other organizations with emphasis on current research literature and applications.

DIET 845. Nutritional Aspects of Oncology. 3 Credits.
A course focusing on current research examining the role of nutrition in specific cancers. Topics include basic cancer biology, pathology and nutritional research methodology. Sources of information for cancer prevention programs and the application of translational research to clinical patient populations will be discussed.

DIET 846. Nutrition and Wellness. 3 Credits.
Course will address wellness promotion through nutrition. Nutritional risk and protective factors will be examined as they relate to public health and individual nutrition.

DIET 850. Operations Management and Analysis. 3 Credits.
The study of the role of operations systems in the provision of value for the customer. Operations systems design; capacity determination, resource requirements planning and control, theory of constraints, supply chain management, quality management and control and project management are discussed and analyzed. Prerequisite: Basic graduate statistics course.

DIET 854. Non-Thesis Research. 1-3 Credits.
Directed study of special problems in nutrition or nutrition care. This course provides for the individual or group study of special problems. Through directed readings, investigations and projects, the student acquires information with reference to questions in dietetics and nutrition not covered in organized courses. This course fulfills the research requirements for the Non-Thesis Option.

DIET 862. Maternal and Child Nutrition. 3 Credits.
Critical examination of behavioral, physiological, and public health issues impacting dietary and nutritional factors that support normal growth and development. Course content focuses on the early stages of the life cycle: gestation, lactation, infancy, preschool, school age, and adolescence.
Topics include the fetal programming hypothesis, growth and nutritional requirements, breast and formula feeding of infants, infant weaning, and eating behaviors that lead to normal growth, growth faltering, and pediatric obesity. Cross-listed with DN 862. Prerequisite: Registered Dietitian, or registry eligible dietitian.

**DIET 865. Nutrition and Human Performance. 3 Credits.**
This course is designed to develop an understanding of nutrition, based upon knowledge of the biochemical and physiological process and functions of specific nutrients in meeting nutritional requirements. Emphasis will be placed upon the relationship of optimal nutrition and physical efficiency and performance.

**DIET 870. Nutrition Counseling and Education Methods. 3 Credits.**
Nutrition education for groups and individuals in clinical and community settings. Includes discussion and experience in applying learning theory, assessing educational needs, stating goals and objectives, selecting learning activities, implementing and evaluating instruction, and documenting care provided.

**DIET 874. Nutrition Therapy for Eating Disorders. 3 Credits.**
An online study of eating disorders management and nutrition care. Topics will include eating disorders medical complications, clinical care guidelines, basic pharmacology, clinical nutrition education, nutrition care planning, psychology of eating disorders, team collaboration, and therapeutic modalities for nutrition counseling. Prerequisite: A course in medical nutrition therapy or consent of instructor.

**DIET 875. Pediatric Clinical Nutrition. 3 Credits.**
Examines physiological, biochemical and nutritional aspects of disease processes relevant to infants and children up to 18 years of age. Medical nutrition therapy for a variety of medicine conditions found in this population will be discussed including inborn errors of metabolism, food hypersensitivity, obesity, and diseases of the major organ systems. Cross-listed with DN 875. Prerequisite: Registered Dietitian or registry eligible dietitian.

**DIET 876. Intervention for the Prevention & Management of Obesity. 3 Credits.**
This course emphasizes obesity in a population group ranging from childhood to the adult. Course materials will examine the impact of obese conditions on disease development throughout the life cycle. The course will critically analyze current evidence focused on interventions used in the behavioral and clinical management of overweight and obese individuals in community and clinical settings. Prerequisite: Consent of instructor.

**DIET 880. Dietary and Herbal Supplements. 3 Credits.**
Explore the safety and efficacy of botanical/herbal and dietary supplements in health applications including dietary supplementation in the prevention and treatment of chronic disease. Prerequisite: Human physiology is advisable.

**DIET 881. Phytochemicals. 3 Credits.**
The course is an overview on phytochemicals (non-nutritive biologically active compounds which may have health benefits) from fruits, vegetables, cereals and oilseeds. The course will include discussions of functional foods which are designer foods providing these compounds to the public. It will cover recent findings on chemistry, physiological functions, potential health implications of phytochemicals.

**DIET 885. Advanced Human Nutrition: Macronutrients. 3 Credits.**
Physiological and biochemical aspects of macronutrients metabolism and human nutrition. Prerequisite: Must be admitted to the GPIDEA Program.

**DIET 886. Advanced Nutrition: Nutrigenomics, Nutrigenetics and Advanced Lipid Metabolism in Human Nutrition. 3 Credits.**
This course integrates topics related to current biochemical issues in nutritional science. The course will examine topics ranging from the cellular, molecular, and biochemical aspects of nutritional science to translational and applied research at the clinical and educational level. The goal is to emphasize the integrative and complex nature of human nutrition research ranging from basic science to clinical studies to translational and applied studies.

**DIET 887. Nutrition and Immunology. 3 Credits.**
This course examines the mechanisms underlying the modulation of immune responses by nutritional, naturally occurring and orally active food compounds. The role of nutritional status and changes in the life stages which impact immune response impacting disease initiation and progression. Contributions of the GI system and changes in life stages impacting immunity and their relationship to immune response will be discussed.

**DIET 896. Macronutrients in Human Nutrition. 3 Credits.**
Interrelationships of micronutrients in terms of biochemistry, physiology, genetics, and nutrition. Emphasis will be placed on developing an understanding of how the coordination of structure and function is related to the metabolic needs of the cell and its response to the environment. This integrated approach will form the basis for evaluating the micronutrient needs of humans in both normal and altered metabolic states.

**DIET 899. Thesis. 1-6 Credits.**
Scholarly essay based research, written under the guidance of the student's advisor. Credit given upon meeting thesis requirements for the master's program.

**Courses**

**DN 671. Nutrition in Medical Science. 6 Credits.**
Study of the science of medical nutrition therapy and evidence based practice in the nutritional management of disease during specific stages of the life cycle. Prerequisite: Consent of Instructor

**DN 796. Social and Cultural Aspects of Dietetics and Nutrition. 2-4 Credits.**
A study of the aspects of society, culture and personality related diet, food habits, and nutrition. The role of the community and its agencies will be considered. Includes field work. Prerequisite: Consent of instructor.

**DN 800. Selected Topics in Clinical Dietetics:_____. 1-6 Credits.**
A learner-centered, self paced study of topics in applied clinical dietetics. Independent modules are offered to address the science and art of nutritional care relating to specific issues to clinical dietetics. Topics will be grouped in various combinations to provide flexibility of choice. Students may enroll in one or more topics for a total of six credit hours. Prerequisite: By permission of instructor only.

**DN 810. Nutrition Assessment. 3 Credits.**
Methods and tools used in screening and assessment of nutritional status of individuals and population groups are studied. Assessment methodology includes dietary surveys, computerized dietary intake analysis, anthropometric measures, biochemical measures and clinical evaluations. Laboratory experiences are provided to allow students practice time for learning and applying assessment techniques. Prerequisite: Permission of instructor.

**DN 817. Seminar in Dietetics & Nutrition I. 1 Credits.**
Seminar designed to promote effectiveness of professional written and oral communication, increase knowledge of research, and review content information in selected topics in dietetics.

**DN 818. Seminar in Dietetics & Nutrition II. 1 Credits.**
To promote effectiveness of professional written and oral communication, to increase knowledge of research, and to review content information in selected areas in dietetics.

**DN 819. Scientific Writing for the Nutritional Sciences. 1 Credits.**
Research proposal preparation and/or scientific manuscript writing experience. This course will provide the student with an overview of the steps used in proposal writing and/or the steps in preparation of a scientific manuscript for publication.

**DN 820. Nutrition Education Skills for School Teachers. 3 Credits.**
This graduate level course will expand understanding of nutrition and healthy eating for classroom teachers and other professionals who work with children. The course has a special emphasis on child and adolescent nutrition and how to translate nutrition facts into classroom applications and school-based interventions. Course topics will include healthy food choices, nutrition guidelines, nutrients, energy balance and weight, child and adolescent nutrition, and nutrition education in the classroom, school-based nutrition interventions, and measuring outcomes of nutrition interventions. Prerequisite: Student must be classroom teacher or consent of instructor.

**DN 822. Management Dietetics & Nutrition I. 2 Credits.**
Managerial skills in health care quality improvement and food service are practiced. Students are typically enrolled in DN 827 Practicum supervised practice experiences associated with the dietetic internship. Prerequisite: Food service systems or commensurate practical experience.

**DN 823. Management Dietetics & Nutrition II. 2 Credits.**
Managerial style is related to food policy, financial benchmarking and applied nutrition practice. Students are typically enrolled in DN 827 Practicum supervised practice experiences associated with the dietetic internship. Prerequisite: Food service systems or commensurate practical experience.

**DN 825. Medical Nutrition Therapy I. 3 Credits.**
Course content introduces the student into the concepts of an intermediate study of nutritional therapy of disease. Course content includes evidence-based practice in prevention and nutritional management of diseases. Patient assessment and medical chart documentation are covered. Elements of pathology and biochemistry of the nutrition-related problems are integrated into course topics. This course is designed for students enrolled in the dietetic internship, but students from other departments may enroll with consent of instructor. Prerequisite: Undergraduate coursework in nutrition, diet therapy, biochemistry and physiology or consent of instructor.

**DN 826. Medical Nutrition Therapy II. 3 Credits.**
Course content includes current nutrition theory and evidence-based practice in treatment of disease. Advanced therapies and patient management in nutrition support will be discussed. Course topics include parenteral nutrition, fluid and electrolyte management, liver diseases, cancer, gestational diabetes, and renal diseases. Elements of pathology and biochemistry of the nutrition-related problems are integrated into course topics. This course is designed for students enrolled in the dietetic internship, but students from other departments may enroll with consent of instructor. Prerequisite: Undergraduate coursework in nutrition, diet therapy, biochemistry and physiology; DN 825; or consent of instructor.

**DN 827. Practicum in Dietetics and Nutrition. 1-10 Credits.**
Supervised practice experience for graduate level students to fulfill the requirements for the Dietetic Internship. Experiences take place in hospitals, clinics, community health care agencies, and other practice settings in which dietetics and nutrition services are provided. Prerequisite: Admission to the graduate program, permission of dietetic internship director or course instructor.

**DN 828. Clinical Education in Dietetics. 2-3 Credits.**
A study of teaching methods appropriate for use in a clinical setting. Emphasis on development of instructional objectives, learning situations, and methods of evaluation to be used in clinical teaching in dietetics. Prerequisite: Consent of instructor.

**DN 829. Nutrition and Aging. 3 Credits.**
An overview of nutrition and the aging process. Physiological, psychological, and sociological aspects of aging, theories of aging, internal and external factors related to nutrient intake, and nutrient needs will be considered.

**DN 830. Food Technology. 2-3 Credits.**
Consideration of current food processing methods and the factors affecting the palatability and nutritive values of human foods. Course includes pertinent information regarding the protection of the food supply.

**DN 834. Methods of Research in Nutrition. 3 Credits.**
A study of basic research terminology and designs commonly used in nutrition research. Topics include: research on animals, tissue culture and human subjects; qualitative, quantitative and outcomes research; ethical issues in research; dissemination of research findings; and appropriate use of research findings. Prerequisite: Consent of instructor. Same as DIET 834.

**DN 836. Biochemical, Physiological, and Genetic Aspects of Human Nutrition. 3 Credits.**
The topics covered will examine the integration of biochemistry, physiology, genetics, and nutrition. Emphasis will be placed on developing an understanding of how the combination cellular structure and function is related to the metabolic needs of the cell and its response to the environment. The integrated approach will form a basis for evaluating nutritional needs in humans. Prerequisite: Courses in nutrition, physiology, and biochemistry, or consent of instructor. Same as DIET 836.

**DN 837. Nutrition in Diabetes. 3 Credits.**
(3 hours) An in-depth study of diabetes management with emphasis in nutrition care. Topics will include diabetes pathophysiology, clinical care guidelines, basic pharmacology, clinical nutrition education and counseling strategies, and nutrition care planning. Prerequisite: A course in medical nutrition therapy or consent of instructor.

**DN 838. Advanced Medical Nutrition Therapy. 3 Credits.**
This course evaluates current issues in medical nutrition therapy. Course content includes evidence based analysis, the role of diet in disease management including factors related to disease pathophysiology, nutritional assessment and medical nutrition management of specific disease states. Prerequisite: Undergraduate medical nutrition therapy, biochemistry, physiology, or consent of the instructor.

**DN 839. Clinical Aspects of Nutrition Support. 3 Credits.**

**DN 840. Advanced Topics in Nutrition. 1-2 Credits.**
Reading and preparation of a paper and/or oral presentation on a selected subject in nutrition. Prerequisite: Consent of instructor.

DN 841. International Nutrition. 1-3 Credits.
A study of global public health and nutrition concerns in various nations, assessment of nutritional status of diverse populations, international health and nutrition organizations, policies, and interventions. We explore the roles of dietitians, nutritionists, and others in creating and implementing international public health and nutrition policies and interventions. To enroll in the course, you must be a student in the Graduate Certificate Dietetic Internship Program, the Dietetics and Nutrition Master of Science Program, or the Great Plains IDEA, or have the consent of the instructor. Cross-listed with DIET 841.

DN 842. United States Public Health Nutrition. 1-3 Credits.
A study of US public health and nutrition concerns in diverse US populations, assessment of nutritional status in commonalities, health communication, nutrition policies and community based nutrition interventions. Exploration of the roles of dietitians, nutritionists, and others in developing and delivering nutrition policies and interventions in US communities. Prerequisite: Must be a student in the Graduate Certificate Dietetic Internship Program, the Dietetics and Nutrition Master of Science Program, or the Great Plains IDEA, or have the consent of the instructor.

DN 854. Special Problems in Dietetics and Nutrition. 1-4 Credits.
Directed study of special problems in nutrition or nutrition care. This course provides for the individual or group study of special problems. Through directed readings, investigations, and projects, the student acquires information with reference to questions in dietetics and nutrition not covered in organized courses.

DN 857. Motivational Interviewing in Public Health Settings. 1 Credit.
The course is designed to introduce participants to Motivational Interviewing, its concepts, and to the subsequent skills required for helping people to change.

DN 860. Collaboration Strategies in Health Care. 1 Credit.
Persuasion and negotiation techniques: skills to evaluate and promote collaboration and goal achievement in a multidisciplinary health care team; analysis of communication styles and strategies to achieve mutual beneficial outcomes.

DN 862. Maternal and Child Nutrition. 3 Credits.
Critical examination of behavioral, physiological, and public health issues impacting dietary and nutritional factors that support normal growth and development. Course content focuses on the early stages of the life cycle: gestation, lactation, infancy, preschool, school age and adolescence. Topics include the fetal programming hypothesis, growth and nutritional requirements, breast and formula feeding of infants, infant weaning, and eating behaviors that lead to normal growth, growth faltering, and pediatric obesity. Prerequisite: Consent of the instructor.

DN 865. Nutrition in Sports and Exercise. 3 Credits.
Gain a deeper understanding of exercise physiology and nutrient requirements in sports and exercise. Examine, discuss, and develop critical thinking skills in areas within sport and exercise nutrition such as exercise metabolism and general exercise periodization as well as energy, macronutrient, micronutrient and fluid needs of athletes engaged in specific sports. Learn and explore current scientific literature regarding body composition and nutrition supplementation in addition to reviewing eating disorders in athletes and evidence-based approaches to weight management in sport. Prerequisite: Biochemistry and/or exercise physiology class or permission of the instructor.

DN 870. Health Behavior Counseling. 1 Credit.
Theoretical and applied issues in health behavior counseling. Students will learn the theories of behavior change and how to apply these to health care issues. Specific health behaviors (i.e., dietary changes, smoking cessation, exercise adherence) will be discussed in the context of chronic disease for children, adults, and the elderly. Effective methods of counseling patients and promoting changes on an individual and small group basis will be presented.

DN 874. Nutrition Therapy for Eating Disorders. 3 Credits.
An online study of eating disorders management and nutrition care. Topics will include eating disorders medical complications, clinical care guidelines, basic pharmacology, clinical nutrition education, nutrition care planning, psychology of eating disorders, team collaboration, and therapeutic modalities or nutrition counseling. Prerequisite: A course in medical nutrition therapy or consent of instructor.

DN 875. Pediatric Clinical Nutrition. 3 Credits.
Examines physiological, biochemical and nutritional aspects of disease processes relevant to infants and children up to 18 years of age. Medical nutrition therapy for a variety of medicine conditions found in this population will be discussed including inborn errors of metabolism, food hypersensitivity, obesity, and diseases of the major organ systems. Prerequisite: DN 826: Applied Clinical Nutrition or equivalent or consent of instructor.

DN 876. Intervention for the Prevention & Management of Obesity. 3 Credits.
This course emphasizes obesity in a population group ranging from childhood to the adult. Course materials will examine the impact of obese conditions on disease development throughout the life cycle. The course will critically analyze current evidence focused on interventions used in the behavioral and clinical management of overweight and obese individuals in community and clinical settings. Prerequisite: Consent of instructor. Same as DIET 876.

DN 880. Dietary and Herbal Supplements. 3 Credits.
Designed to develop the health professional's skills in partnering with patients to make dietary supplement decisions. Students will investigate the use of botanicals and dietary supplements in nutritional support of aging, maternal health, and wellness. Discussion on supplementation in the prevention and treatment of chronic diseases will include: arthritis, cardiovascular, diabetes, digestive, liver and renal disorders, memory deficits, and ophthalmic dysfunctions. Prerequisite: Human physiology is advisable.

DN 881. Introduction to Dietetics and Integrative Medicine. 3 Credits.
Introduction to principles guiding integrative and functional Medical Nutrition Therapy; assessing, diagnosing, intervening, monitoring, and evaluating an individual client to restore function; focusing on the unique nutritional imbalances characteristic of chronic disease pathophysiology; supporting individuals with persistent symptoms; preventing chronic disease. Prerequisite: Introductory genetics, medical nutrition therapy, or consent of instructor.

DN 882. A Nutrition Approach to Inflammation and Immune Regulation. 3 Credits.
Inflammation and immune system dysregulation is common in chronic disease. The course presents the integrative nutrition approach to identify the underlying causes of inflammatory and immune-related conditions and associated nutritional influences; applies individualized nutritional interventions, as powerful modulators of the pathophysiology of inflammatory and immune responses. Prerequisite: Medical nutrition therapy, genetics or consent of instructor.

DN 884. Diet, Physical Activity & Cancer. 3 Credits.

**DN 885. Nutritional Biochemistry. 3 Credits.**

Course content facilitates the understanding of advanced biochemical principles applied to human nutrition. Topics include protein structure, bioenergetics, enzyme function, nutrient digestion, absorption and metabolism, metabolic regulation and intermediary metabolism, cellular signaling, and genomics encompassing nucleotide metabolism, gene expression and gene regulation. Prerequisite: Undergraduate biochemistry or consent of instructor.

**DN 890. Graduate Research. 1-4 Credits.**

Individual investigation of special problems in dietetics and nutrition or hospital dietary administration approved by the student's advisor or advisory committee. Investigation involves original research.

**DN 895. Advanced Macronutrients and Integrated Metabolism. 3 Credits.**

Energy containing macronutrients and fiber presented from the perspective of their importance in human nutrition. Structural properties, digestion, absorption and metabolism are emphasized. Fuel utilization in response to food intake and exercise, cellular and whole-animal energetic and energy balance integrate metabolism. Students take an active role in presenting and discussing and exhibit advanced skills in analysis and presentation. Prerequisite: BCHM 702 or Equivalent.

**DN 896. Advanced Micronutrients and Integrated Metabolism. 3 Credits.**

Vitamins and minerals presented from the perspective of their requirements as nutrients for normal human physiological functions with emphasis on their underlying roles in structure, function and metabolism. Students take an active role in selecting, presenting and discussing recent published research and to exhibit advanced skills in analysis and presentation. Prerequisites BCHM 702 or equivalent.

**DN 897. Micronutrient Research in Human Nutrition. 1 Credits.**

This course requires students to design a research study on a vitamin or mineral. Students submit a written proposal and present it orally and defend the proposal in class. Students will be evaluated on the basis of plausibility, feasibility and originality of the proposed research. Co-requisite DN 896. Prerequisite: Consent of Instructor.

**DN 899. Thesis. 1-6 Credits.**

Scholarly essay based on research, written under the guidance of the student's advisor. Credit given upon meeting thesis requirements for the master's degree. Prerequisite: Consent of advisor.

**DN 900. Techniques in Nutrition Research. 3 Credits.**

A series of seven laboratory modules emphasizing quantitative methods and experimental analysis. The series of modules will be team taught by departmental faculty. Each module requires data collection, data analysis, and written interpretation or report. Instrumentation, dietary assessment software utilization and cellular microtechniques will be emphasized. Students will be responsible for learning one technique practiced in an outside laboratory setting. Student will rotate between the module sequence based on the number of students enrolled in the class. Prerequisite: DN 895 and DN 896 or permission of instructor of record.

**DN 901. Graduate Seminar in Nutrition. 1 Credits.**

Advanced course examining current research topics in nutrition. Extensive student and faculty interaction is emphasized utilizing lectures, class discussion of selected scientific readings and oral presentations. Prerequisite: Admission to PhD program in Dietetics and Nutrition or permission of instructor.

**DN 910. Leadership Essentials in Clinical Nutrition. 3 Credits.**

This course builds upon leadership theories to develop the skills to link theory and practice. After completing this course students will be able to successfully evaluate leadership theories; identify and develop a personal leadership style, increase competencies for effective leadership, and identify positive applications in clinical nutrition. The class also examines the differences between leadership and management and why those differences are important in clinical nutrition. Students also engage in practice of essential management skills for clinical nutrition. The class is designed to be an interactive exploration of personal leadership development and management skills. The student will be asked to respond to critical thinking opportunities and demonstrate their understanding of key concepts through exercises, discussion questions, quizzes, a Learning Journal, and their Leadership Growth Plan.

**DN 915. Advanced Nutrition Assessment in Clinical Nutrition. 3 Credits.**

This course builds on students’ prior knowledge and provides advanced concepts and skills for nutrition assessment of individuals. The course is structured into four assessment components: biochemical, dietary intake, body composition and nutrition focused physical exam. Main topics include in-depth overview of the assessment methods, strengths and limitations of methodology, evaluation and interpretation of assessment data, sources of measurement errors, validity of assessment methods, and advanced analytical approaches used to assess and interpret laboratory data.

**DN 920. Nutrition Communication for Advanced Practice. 3 Credits.**

The overall goal of this course is to enhance the student’s professional communication skills across a range of nutrition practice areas. This course will emphasize the nutrition professional’s ability to effectively communicate with a wide audience including community members of all ages, races, and ethnicities; patients in public health and clinic settings, hospitalized patients, non-nutrition health professionals, peers, and researchers. The course will use online didactic methods to establish a background of theory, but student learning and assessment will be project-based.

**DN 930. Evidence Analysis in Clinical Nutrition. 3 Credits.**

Students will identify a pertinent clinical nutrition question and utilize the Academy of Nutrition and Dietetics’ Evidence Analysis Library Manual to conduct a systematic review. Students will follow the rigorous process of defining a research question, searching and critically evaluating published literature, developing an evidence summary table and composing a systematic review. The goal of the course is a manuscript suitable for publication. Prerequisite: Consent of the instructor.

**DN 932. Ethics in Clinical Nutrition Research. 1 Credits.**

This course provides information and insights on important tenets that are essential for clinical nutrition research. Topics covered in lectures and moderated discussions include ethical, regulatory, and legal issues, informed consent for research participation, role and function of institutional review boards, just selection of research subjects, ethical aspects of study design, and privacy and confidentiality. Additionally, given the social, religious, and other influences on an individual's food choice, the moral and political aspects of food and nutrition research will be discussed. Prerequisite: Permission of instructor if student is not enrolled in a DN degree program.

**DN 934. Advanced Methods of Research in Clinical Nutrition. 3 Credits.**
This course prepares clinical nutrition students with the knowledge to design, conduct and write up results of a research project; and to read and review the clinical nutrition literature at an advanced level. Broad topics include ethical, regulatory and legal issues, study design and biostatistics, technology transfer, data management and sources of funding support, and clinical research infrastructure. Within these topics special emphasis is paid to educating the student about study designs that could be particularly useful to those with a clinical doctorate, e.g., designs that make use of electronic health records or other pre-existing databases. Students will get practice writing a research protocol and budgeting for a trial. Prerequisite: DN 834 or equivalent introduction to basics of research, or by permission of instructor.

DN 941. Applied Nutritional Epidemiology. 3 Credits.

The overall goal of this course is to provide graduate students the conceptual and applied skills to better interpret and conduct nutrition epidemiology research. Emphasis of this course includes design of a nutritional epidemiology research study, statistical computing, management of nutrition and outcomes-related datasets, methods of statistical analysis, and interpretation of analyses. Prerequisite: DN 934 Advanced Methods of Research in Clinical Nutrition.

DN 950. Interprofessional Collaboration in Clinical Nutrition. 2 Credits.

This course seeks to improve students’ abilities to function and lead inter-professional healthcare teams. Students will apply core competencies in interprofessional practice for healthcare including roles and responsibilities, values and ethics, communication, team formation, teamwork, leading teams, decision making in teams, and managing conflict in teams. Prerequisite: Permission of Instructor.

DN 970. Pharmacology in Clinical Nutrition. 3 Credits.

This course provides the principles of clinical pharmacology and nutrition as therapeutic interventions and drug-nutrient and drug-food interactions. Students will apply the concepts to the pharmacological and nutritional management of compromised body systems. The strong conceptual base will prepare students to evaluate and monitor the use of commonly used medications and nutrition and herbal supplements. Applications across the lifespan will be incorporated within the class. Prerequisite: Consent of Instructor.

DN 971. Advanced Nutrition Counseling. 3 Credits.

Advanced Nutrition Counseling: This class is for experienced dietetic practitioners. The course content emphasizes evidence-based strategies and advanced counseling skills to promote behavior and attitude change in patients/clients. Prerequisite: Instructor’s consent required.

DN 972. Frontiers in Medical Nutrition Therapy. 3 Credits.

This class is for experienced dietetic practitioners. The course content emphasizes contemporary issues, controversies and evidence-based intervention strategies that can be implemented to improve patient outcomes in areas of lifespan nutrition. Prerequisite: Consent of the instructor.

DN 980. Nutrigenomics and Nutrigenetics in Health and Disease. 3 Credits.

Nuclear receptors and their mechanisms of action, nutritional control of gene expression and functional genomic studies with relationships to nutrient intake and polymorphisms. Prerequisite: DN 836, DN 895, DN 896 or permission of instructor.

DN 990. Doctoral Research. 1-9 Credits.

Original and independent investigation approved by and conducted under the supervision of the student’s advisor or advisory committee. This course is in partial fulfillment of the requirements for the Ph.D. degree. Prerequisite: Corequisite: Restricted to Dietetics & Nutrition Ph.D. candidates, or consent of DN advisor. Students must have completed the qualifying exam.

This capstone course is designed to enhance the student’s ability to apply graduate knowledge to achieve tangible and relevant clinical research outcomes. All aspects of this translational research project will be included (i.e., planning, data collection, analysis and interpretation of results, written documentation, and oral presentation of the project). The outcome is a manuscript which has been submitted for publication. Collaborative interprofessional patient care projects are strongly encouraged. Prerequisite: DN 930, DN 934, DN 940, and permission of instructor.

DN 992. Applied Clinical Residency in Clinical Nutrition. 3 Credits.

The residency experience is designed to span 360 hours and will be completed within a professional workplace setting. Students will identify an area of practice through which they will provide leadership to develop a research-based clinical initiative or program. Upon completion, the students will provide their clinical team with the program or clinical initiative, along with program evaluation methods. Prerequisite: Acceptance into the DCN program.

DN 999. Dissertation. 1-6 Credits.

Preparation of the written dissertation based upon original research and in partial fulfillment of the requirements for the Ph.D. degree. Prerequisite: DN 990 or consent of advisor.

Dietetic Internship Graduate Certificate

KU offers a dietetic internship graduate certificate program with a medical nutrition therapy emphasis that prepares graduates for a career as a registered dietitian. This program is designed for those applicants who have already completed a master’s degree. The mission of the program is to produce competent entry-level registered dietitian nutritionists with enhanced skills in nutrition therapy using evidence-based practices to support the health of citizens of Kansas, the region, the nation, and the world.

The program prepares graduates to be competent entry-level registered dietitian nutritionists.

- At least 80% of program interns complete program requirements within 12 months (150% of the program length).
- 80% of program graduates take the CDR credentialing exam for dietitian nutritionists within 12 months of program completion.
- The program’s one-year pass rate (graduates who pass the registration exam within one year of first attempt) on the CDR credentialing exam for dietitian nutritionists is at least 80%.
- 80% of employers who respond to a survey on program graduates in their first year of employment indicate that graduates demonstrate adequate knowledge and practice ability for entry-level practice as a dietitian (rating of at least 4 on a 5-point scale) over a 3-year period.
- Three years post program completion, 80% of respondents to graduate surveys rate their preparation for entry level practice as adequately prepared or better over a 3-year period.

The program prepares graduates for practice in the field of dietetics and nutrition and participation in professional organizations.
• Of graduates seeking employment, 75% are employed in nutrition and dietetics or related fields within 12 months of graduation.
• 60% of respondents to graduate surveys are members of the Academy of Nutrition and Dietetics or related professional organizations over a 3-year period.

Students completing the dietetic internship graduate certificate program have already completed a graduate degree, and thus, will be eligible to complete the national examination administered by the Commission on Dietetic Registration (https://www.cdrnet.org/RDN/) for the purpose of receiving the registered dietitian credential. KU dietetic interns have an excellent first-time pass rate on the national exam. All U.S. states with licensure and certification requirements currently accept the registered dietitian credential for state licensure and certification purposes. The Commission on Dietetic Registration provides information on specific state licensure requirements.

Accreditation
The University of Kansas dietetic internship graduate certificate program is fully accredited by the Accreditation Council for Education in Nutrition and Dietetics (ACEND) (https://www.eatrightpro.org/acend/) which is the accrediting agency for the Academy of Nutrition and Dietetics (https://www.eatrightpro.org/about-us/who-we-are/). Documents relating to accreditation may be obtained from the department office.

Applicants to this program follow the national computer-matching procedure mandated by the Academy of Nutrition and Dietetics (https://www.eatrightpro.org/acend/students-and-advancing-education/application-process-for-students/computer-matching-applicant-responsibilities/) for application to internships. The application process is conducted online through the Dietetic Internship Centralized Application Services (DICAS) and also requires a supplemental online application to KU.

The program begins in the fall semester. The application window is December 1 through February 15 each year. Information on how to apply and related links for the DICAS application and the supplemental application are posted on the Department of Dietetics and Nutrition (http://www.kumc.edu/school-of-health-professions/dietetics-and-nutrition/dietetic-internship-graduate-certificate/how-to-apply.html) website.

Applicants must also complete the computer match process and indicate KU as one of the desired institutions for enrollment by February 15. For information on the process and computer match forms, contact your didactic program director or D & D Digital Online Dietetics Internship Matching Service. (https://www.dnddigital.com)

Admission requirements:
• A master’s degree from a regionally accredited institution is required and must be documented by submission of official transcript indicating the degree has been conferred before entering the program. The master’s degree may be in any field.
• A bachelor’s degree from a didactic program in dietetics (DPD) (https://www.eatrightpro.org/acend/accredited-programs/program-directory/) accredited by the Accreditation Council for Education in Nutrition and Dietetics is required and must be documented by submission of official transcript indicating the degree has been conferred before entering the program. Official transcripts from all institutions attended are also required.

Please note: the University of Kansas does not offer an accredited DPD program that meets this requirement.

Degrees earned outside the United States must be evaluated for equivalency. For guidelines, see the international fact sheet (https://www.eatrightpro.org/acend/students-and-advancing-education/international-students/) provided by the Accreditation Council for Education in Nutrition and Dietetics (ACEND) (https://www.eatrightpro.org/acend/). Students with degrees from outside the U.S. may be subject to transcript evaluation indicating the degree is equivalent to a U.S. degree and meets the minimum cumulative grade-point average requirement.
• A cumulative grade-point average of at least a 3.0 on a 4.0 scale for the bachelor’s degree is required.
• Applicants who are not native speakers of English, whether domestic or international, must demonstrate they meet the minimum English proficiency requirement.
• Applicants will submit a resume or curriculum vitae indicating prior employment, participation in professional and/or voluntary organizations (e.g., hospital, alumni or nonprofit) and evidence of leadership.
• A verification statement or declaration of intent form must be completed by the applicant’s didactic program director and must have an original or digital signature.
• Three references are required and must be from faculty, advisors, employers, or others who are familiar with the applicant’s work and character. The recommendations may not be obtained from family members, friends, etc.
• Personal statement of no more than 1000 words is required. Questions to be addressed in the personal statement include the following:
  • Why do you want to enter the dietetics profession?
  • Discuss experiences that have helped to prepare you for a career as an RDN.
  • What are your short-term and long-term goals?
  • What are your strengths and weaknesses or areas needing improvement?
  • If an Applicant meets the admission requirements, he/she will be asked to complete a brief virtual interview.
  • The Joint Commission requires all incoming students to pay for a background check (p. 2456). This one-time fee must be paid directly to the company performing the background investigation. For more information, please see the School of Health Professions background check instructions. (http://www.kumc.edu/school-of-health-professions/background-checks-and-drug-screening-for-students.html)

Applicants will be assessed on academic performance, work and volunteer experience, leadership and research experience, personal statement, responses to interview questions, awards and honors, and references. After an applicant has been admitted, a program may defer an applicant’s admission for one year after which time the applicant must submit a new application. Admission requirements are subject to change. In most cases, use the catalog of the year student entered the program. Other years’ catalogs».

Certificate Program information: (p. 2466)
No student may work toward a graduate certificate without being accepted as a graduate certificate student in a specific graduate certificate program. Graduate certificates are not granted retroactively. An individual who is
not currently a degree-seeking graduate student at KU must apply and may be admitted directly to a graduate certificate program.

Graduate credit from another institution may not be transferred to a graduate certificate program.

The Dietetic Internship Graduate Certificate program consists of 16 credit hours. The program is designed for those individuals who already possess a graduate degree. The program prepares graduates for entry into careers as registered dietitians. Successful completion of the internship allows the student to take the registration examination to acquire the registered dietitian (RD) credential and enter the profession as a registered dietitian.

**Certificate requirements:**

- Certificate requirements are normally completed within 8 months of admission to the program although a maximum of 12 months is allowed.
- Cumulative grade-point average (GPA) of at least a 3.0 for all KU graduate certificate coursework.
- Enrollment in a minimum of one (1) credit hour the semester the program is completed. Graduate certificates may not be granted retroactively.
- Successful completion of 1,000 hours of supervised practice in a variety of practice settings. Satisfied through enrollment in a minimum of 8 credit hours of DN 827 Practicum in Dietetics and Nutrition.
- The practice experiences include clinical and community nutrition, food and nutrition management and a culminating practice area of interest experience designed by the intern to meet personal professional and educational goals. Interns are able to choose from a variety of practice sites for each experience and are encouraged to submit ideas for new practice sites to the program director.
- Receive a passing score on all ACEND core competencies (https://www.eatrightpro.org/acend/accreditation-standards-fees-and-policies/2022-standards/).
- Successful completion of a minimum of 16 credit hours including the following courses:

*Total Hours 16*

- Pass the program final exam with a score of 80% or greater (or raw score of 25.0 or higher).

Graduate credit from another institution may not be transferred to a graduate certificate program.

Certificate requirements and course descriptions are subject to change. Any courses taken as an equivalent must be approved by the Graduate Director and the Office of Graduate Studies. In most cases, use the catalog of the year student entered the program. *Other years’ catalogs*.

Classes in this program are held one day each week on campus for the fall and spring semesters. Supervised practice experiences are 32 hours per week in the fall and spring semesters at assigned sites.

The practice experiences include clinical and community nutrition, food and nutrition management, and a culminating practice area of interest experience designed by the intern to meet personal professional and educational goals. Interns are able to choose from a variety of practice sites for each experience and are encouraged to submit ideas for new practice sites to the program director.

The student enrolls in DN 827 Practicum in Dietetics and Nutrition each semester and must complete a total of 8 credit hours of this course. The total number of credits required for the certificate program is 16 credit hours.

*Total Hours 18*

KU offers a Dual MS degree/Dietetic Internship Program with a medical nutrition therapy emphasis that prepares graduates for a career as a registered dietitian. The mission of the program is to produce competent entry-level registered dietitian nutritionists with enhanced skills in nutrition therapy using evidence-based practices to support the health of citizens of Kansas, the region, the nation, and the world.

The program prepares graduates to be competent entry-level registered dietitian nutritionists.

- At least 80% of program interns complete program requirements within 30 months (150% of the program length).
- 80% of program graduates take the CDR credentialing exam for dietitian nutritionists within 12 months of program completion.
- The program’s one-year pass rate (graduates who pass the registration exam within one year of first attempt) on the CDR credentialing exam for dietitian nutritionists is at least 80%.
- 80% of employers who respond to a survey on program graduates in their first year of employment indicate that graduates demonstrate adequate knowledge and practice ability for entry-level practice as a dietitian (rating of at least 4 on a 5-point scale) over a 3-year period.
- Three years post program completion, 80% of respondents to graduate surveys rate their preparation for entry level practice as adequately prepared or better over a 3-year period.

The program prepares graduates for practice in the field of dietetics and nutrition and participation in professional organizations.

- Of graduates seeking employment, 75% are employed in nutrition and dietetics or related fields within 12 months of graduation.
- 60% of respondents to graduate surveys are members of the Academy of Nutrition and Dietetics or related professional organizations over a 3-year period.

Students completing the Dual MS/DI program receive a Master of Science in Dietetics and Nutrition and a verification statement which allows them to be eligible to take the national RDN examination administered by the Commission on Dietetic Registration (https://www.cdrnet.org/RDN/) for the purpose of receiving the registered dietitian nutritionist credential. KU dietetic interns have an excellent first-time pass rate on the
national exam. All U.S. states with licensure and certification requirements currently accept the registered dietitian credential for state licensure and certification purposes. The Commission on Dietetic Registration provides information on specific state licensure requirements.

Accreditation
The University of Kansas dietetic internship graduate certificate program is fully accredited by the Accreditation Council for Education in Nutrition and Dietetics (ACEND) (https://www.eatrightpro.org/acend/which is the accrediting agency for the Academy of Nutrition and Dietetics (https://www.eatrightpro.org/about-us/who-we-are)). Documents relating to accreditation may be obtained from the department office.

Admissions
Applicants to this program follow the national computer-matching procedure mandated by the Academy of Nutrition and Dietetics (https://www.eatrightpro.org/acend/students-and-advancing-education/application-process-for-students/) for application to internships. The application process is conducted online through the Dietetic Internship Centralized Application Services (DICAS) and also requires a supplemental online application to KU.

The program begins in the fall semester. The application window is December 1 through February 15 each year. Information on how to apply and related links for the DICAS application and the supplemental application are posted on the Department of Dietetics and Nutrition (http://www.kumc.edu/school-of-health-professions/dietetics-and-nutrition/dietetic-internship-graduate-certificate/how-to-apply.html) website. Applicants must also complete the computer match process and indicate KU as one of the desired institutions for enrollment by February 15. For information on the process and computer match forms, contact your didactic program director or D & D Digital Online Dietetics Internship Matching Service. (https://www.dddigital.com/)

ADMISSION REQUIREMENTS:
- A bachelor's degree from a didactic program in dietetics (DPD) (https://www.eatrightpro.org/acend/accredited-programs/about-accredited-programs/) accredited by the Accreditation Council for Education in Nutrition and Dietetics is required and must be documented by submission of official transcript indicating the degree has been conferred before entering the program. Official transcripts from all institutions attended are also required.

Please note: the University of Kansas does not offer an accredited DPD program that meets this requirement.

Degrees earned outside the United States must be evaluated for equivalency. For guidelines, see the international fact sheet (https://www.eatrightpro.org/acend/students-and-advancing-education/international-students/education-and-credentialing-requirements-for-those-with-foreign-degrees/) provided by the Accreditation Council for Education in Nutrition and Dietetics (ACEND) (https://www.eatrightpro.org/acend/). Students with degrees from outside the U.S. may be subject to transcript evaluation indicating the degree is equivalent to a U.S. degree and meets the minimum cumulative grade-point average requirement.

A cumulative grade-point average of at least a 3.0 on a 4.0 scale for the bachelor's degree is required.

- Applicants who are not native speakers of English, whether domestic or international, must demonstrate they meet the minimum English proficiency requirement (p. 2455). (p. 2455)

- Applicants will submit a resume or curriculum vitae indicating prior employment, participation in professional and/or voluntary organizations (e.g., hospital, alumni or nonprofit) and evidence of leadership.

- A verification statement or declaration of intent form must be completed by the applicant's didactic program director and must have an original or digital signature.

- Three references are required and must be from faculty, advisors, employers, or others who are familiar with the applicant's work and character. The recommendations may not be obtained from family members, friends, etc.

- Personal statement of no more than 1000 words is required. Questions to be addressed in the personal statement include the following:
  - Why do you want to enter the dietetics profession?
  - Discuss experiences that have helped to prepare you for a career as an RDN.
  - What are your short-term and long-term goals?
  - What are your strengths and weaknesses or areas needing improvement?

- If an Applicant meets the admission requirements, he/she will be asked to complete a brief virtual interview.

- The Joint Commission requires all incoming students to pay for a background check (p. 2456). This one-time fee must be paid directly to the company performing the background investigation. For more information, please see the School of Health Professions background check instructions. (http://www.kumc.edu/school-of-health-professions/background-checks-and-drug-screening-for-students.html)

Applicants will be assessed on academic performance, work and volunteer experience, leadership and research experience, personal statement, responses to virtual interview, awards and honors, and references. After an applicant has been admitted, a program may defer an applicant's admission for one year after which time the applicant must submit a new application. Admission requirements are subject to change.

The Dual Program: MS in Dietetics and Nutrition and Dietetic Internship Certificate consists of 38 credit hours of graduate course work and a minimum of 1,000 hours of supervised practice experience. The program prepares graduates for entry into careers as a registered dietitian. Students completing the Dual MS/DI program receive a Master of Science in Dietetics and Nutrition degree, Dietetic Internship Graduate Certificate, and a verification statement which allows them to be eligible to take the national RDN examination administered by the Commission on Dietetic Registration (https://www.cdrnet.org/RDN/) for the purpose of receiving the registered dietitian nutritionist credential.

DEGREE REQUIREMENTS:
- Cumulative grade-point average (GPA) of at least a 3.0 for all KU graduate certificate coursework.
- Enrollment in a minimum of one (1) credit hour the semester the program is completed.
- Successful completion of 1,000 hours of supervised practice in a variety of practice settings. Satisfied through enrollment in a minimum of 8 credit hours of DN 827 Practicum in Dietetics and Nutrition.
- The practice experiences include clinical and community nutrition, food and nutrition management and a culminating practice area of interest experience designed by the intern to meet personal professional and educational goals. Interns are able to choose from
a variety of practice sites for each experience and are encouraged to submit ideas for new practice sites to the program director.

- Receive a passing score on all ACEND core competencies (https://www.eatrightpro.org/acend/accreditation-standards-fees-and-policies/2022-standards/).
- Pass the program final exam with a score of 80% (or raw score of 25.0) or greater.
- Successful completion of a minimum of 38 credit hours including the following courses:

</tr>
</tbody>
</table>

For the Non-thesis option:

- Successful completion of a general examination (p. 2457) the semester the student will graduate. The general exam is an oral exam administered by three faculty members that covers the competencies students are expected to gain through the M.S. degree program.
- Completion of DN 854-Special Problems in Dietetics and Nutrition occurs the semester the student successfully defends the project. Students submit a written proposal and conduct an oral presentation of the proposal. If satisfactory, students then prepare a final written report and conduct an oral presentation (defense) of the report which is followed by questions from the research committee.
- The project is generally completed in 1 to 2 semesters and may include one or more of the following:
  - Written intensive review of the literature on a given topic, based on "Evidence-Based Analysis" procedures of the Academy of Nutrition and Dietetics;
  - Participation with a faculty member in the development of a research proposal or grant;
  - Participation with a faculty member in conducting a pilot project;
  - Participation with a faculty member in the design, implementation, or evaluation of a program in a specialized area of dietetics practice;
  - Collection and/or analysis of data in conjunction with a faculty member engaged in research.
  - Successful completion of a minimum of 3 credit hours of elective coursework.

For the Thesis option:

- Successful completion of a general examination (p. 2457) the semester the student will graduate. The general exam is an oral exam administered by three faculty members that covers the competencies students are expected to gain through the M.S. degree program.
- Successful completion of a thesis defense (p. 2457) and of DN 899-Thesis. The defense occurs during the semester the student will graduate. Thesis research is usually conducted over 3 semesters and involves all aspects of research including preparing a proposal, collection and analysis of data, and a thesis. The thesis is presented in written form and orally in a presentation to the thesis committee followed by questions (or defense) and an oral examination before the thesis committee.
- Successful thesis submission and publication (p. 2457) (according to Office of Graduate Studies policy.)
- Successful completion of 3 credit hours of DN 890 – Graduate Research. This course is taken in place of the 3 hours of elective coursework.
- Degree requirements and course descriptions are subject to change. Any courses taken as an equivalent must be approved by the Graduate Director and the Office of Graduate Studies. In most cases, use the catalog of the year student entered the program. Other years’ catalogs.

Upon acceptance into the program, candidates will be asked to acknowledge their ability to meet these standards with or without accommodations.

The following technical standards, in conjunction with the academic standards, are requirements for admission, retention, and program completion. The term “candidate” refers to candidates for admission to the program as well as current students who are candidates for retention or program completion.

These requirements may be achieved with or without reasonable accommodations. Candidates with disabilities are encouraged to contact the Academic Accommodations Office at (913) 945-7035 (TTY) or cukoko@kumc.edu early in the application process to begin a confidential conversation about what accommodations they may need to meet these standards.

The program prepares candidates to practice dietetics and nutrition within organizations and businesses. Graduates require knowledge and skills to function in diverse practice settings. An essential requirement for completing the Dietetic Internship Graduate Certificate is an ability to function within a clinical learning environment and to interact with a variety of interprofessional teams and patients.

Candidates admitted in the program must be able to perform the following:

**Communicate:** Candidates must have the ability to use multiple communication techniques (oral, written, nonverbal) to enable communication with clients, teachers, and the health care team. Candidates must be able to report to members of the team, express...
accurate information to clients, and teach, explain, direct, and counsel people.

Observe: Candidates must be able to observe lectures, demonstrations, research, and practice situations in the practice of health sciences. Observation is necessary to perform competent health assessments and interventions. Candidates must also be able to observe, learn from, and analyze health record content, including discernment and use of clinical data displayed within the health record.

Ethical Standards: Candidates must demonstrate professional attitudes and behaviors and must perform in an ethical manner in dealing with others. Personal integrity is required and the adherence to standards that reflect the values and functions of the profession of dietetics. Candidates are required to abide by the professional code of ethics for dietetics and student honor codes.

Psychomotor: Candidates must have sufficient motor capacities and motilities to be able to generate, calculate, record, evaluate and transmit information; prepare assignments; deliver public presentations to large and small audiences; collect specimens and perform basic tests and physical assessments on individuals, e.g., finger sticks for blood glucose testing, using glucometers, assessing skin fold thickness, taking blood pressure, and placing feeding tubes; work in institutional and food demonstration kitchens to prepare foods and direct employees involved in food services; and conduct patient visits individually and with health care team members to provide nutrition care. Candidates must be able to travel to supervised practice experiences.

Intellectual and Cognitive Abilities: Candidates must be able to measure, calculate reason, analyze, synthesize, integrate, and remember to apply information. Creative problem solving and clinical reasoning requires all of these intellectual abilities.

Professional and Social Attributes: Candidates must exercise good judgment and promptly complete all responsibilities required of the program. They must develop mature, sensitive, and effective professional relationships with others. Candidates must be able to evaluate one’s own performance critically, accept constructive criticism, and look for ways to improve.

In addition, candidates must be able to tolerate taxing workloads and function effectively under stress. They must be able to adapt to changing environments, display flexibility, and function in the face of uncertainties and ambiguities. Concern for others, interpersonal competence, and motivation are requisites for the program.

Accommodations are not applied retroactively and a disability-related explanation will not negate poor performance. More information may be found in the Students with Disabilities Policies and Procedures Manual (https://kumc-publicpoliciesandprocedures.policystat.com/policy/6321369/latest/).

Dietetics and Integrative Medicine Graduate Certificate

KU’s graduate certificate in dietetics and integrative medicine offers an opportunity for working professionals or graduate students to acquire knowledge to function as a skilled advisor to the patient and a collaborative member of interprofessional health care teams. The program is open to students with bachelor’s or master’s degrees in dietetics, nutrition, biological sciences or other health care professions.

The program explores a personalized approach to prevention and treatment of chronic disease that embraces conventional and complementary therapies. It reaffirms the importance of the therapeutic relationship, a focus on the whole person, lifestyle, biochemical individuality and environmental influences.

This is an online program only with no campus visits required. The 12 credit hours are delivered as web-based courses, affording great flexibility to students. The program is administered by the KU Department of Dietetics and Nutrition (p. 613).

This program is open to students with bachelor’s or master’s degrees in dietetics, nutrition, biological sciences or other healthcare professions. Applications are accepted online. Detailed instructions on how to apply are available on the Department of Dietetics and Nutrition (http://www.kumc.edu/school-of-health-professions/dietetics-and-nutrition/dietetics-and-integrative-medicine-graduate-certificate.html) website. Application deadlines are July 1 for fall semester, December 1 for spring semester, and May 1 for summer semester.

Admission requirements:

- A bachelor’s degree from a regionally accredited institution is required and must be documented by submission of official transcript indicating the degree has been conferred before entering the program. Official transcripts for all courses from all institutions attended are also required. The bachelor’s degree may be in any field.
- Students with degrees from outside the U.S. require transcript evaluation indicating the degree is equivalent to a U.S. degree and meets the minimum cumulative grade-point average requirement.
- Students must have a cumulative grade-point average of at least a 3.0 on a 4.0 scale in his or her bachelor’s degree program.
- Applicants who are not native speakers of English, whether domestic or international, must demonstrate they meet the minimum English proficiency requirement.
- Students must possess the registered dietitian license (or other health care professional certification) and/or be enrolled in a health professions degree program at the graduate level at the time of application.
- A résumé or curriculum vitae is required and must include prior employment, participation in professional and/or voluntary organizations (e.g., hospital, alumni or nonprofit).
- A statement of career goals will be submitted with the application or may be included in the résumé document.
- Three references are required. The references must be from faculty, advisors, employers, or others familiar with the applicant’s work and character. The recommendations may not be obtained from family members, friends, etc.
- The Joint Commission requires all incoming students to pay for a background check (p. 2456). This one-time fee must be paid directly to the company performing the background investigation. For more information, please see the School of Health Professions Background Check Instructions. (http://www.kumc.edu/school-of-health-professions/background-checks-and-drug-screening-for-students.html)

Applicants will be assessed based on these requirements. After an applicant has been admitted, a program may defer an applicant's admission for one year after which time the applicant must submit a new
Certificate Program information: (p. 2466)
No student may work toward a graduate certificate without being accepted as a graduate certificate student in a specific graduate certificate program. Graduate certificates are not granted retroactively. An individual who is not currently a degree-seeking graduate student at KU must apply and may be admitted directly to a graduate certificate program.

The graduate certificate program is not a means of entry into a graduate degree program. If students admitted to a graduate certificate program are later admitted to a graduate degree program as degree-seeking, applicable courses taken for the graduate certificate program may, upon recommendation of the department and within general guidelines, be approved by the Office of Graduate Studies to be counted toward the degree.

While the courses comprising a graduate certificate may be used as evidence in support of a student's application for admission to a graduate degree program, the certificate itself is not considered to be a prerequisite and does not guarantee admission into any graduate degree program. The certificate program is not intended to serve as a default system for students in a degree program who find that they are not able to complete the degree for academic or other reasons. Should a student drop out of a degree program and seek admission to a certificate program, all certificate admission requirements must be followed for admission and conferral.

Graduate credit from another institution may not be transferred to a graduate certificate program.

The Dietetics and Integrative Medicine Graduate Certificate program consists of 12 credit hours. This is an online program only, with no campus visits required. The program offers an opportunity for working professionals or graduate students to acquire knowledge to function as a skilled advisor to the patient and a collaborative member of multidisciplinary health care teams.

Certificate requirements:
- Certificate requirements are normally completed within one (1) year of admission to the program although a maximum of 4 years is allowed.
- Cumulative grade-point average (GPA) of at least a 3.0 for all KU graduate certificate coursework.
- Enrollment in a minimum of one (1) credit hour the semester the program is completed. Graduate certificates may not be granted retroactively.
- Successful completion of a minimum of 12 credit hours.
- Successful completion of the following courses:

Reasonable accommodation will be considered and may be made to qualified students who disclose a disability, so long as such accommodation does not significantly alter the essential requirements of the curriculum and the training program, or significantly affect the safety of patient care. Students who disclose that they have a disability are considered for the program if they are otherwise qualified. Qualified students with a disability who wish to request accommodations should provide appropriate documentation of disability and submit a request for accommodation to:

The Office for Academic Accommodations
Cyn Ukoko, Senior Coordinator of Academic Accommodations
913-945-7035 or 711 TTY
cukoko@kumc.edu

The Department of Dietetics & Nutrition and the University of Kansas Medical Center have a commitment to nondiscrimination, access and reasonable accommodation of students with disabilities. Therefore, all students admitted to the Dietetics and Integrative Medicine Certificate program in Dietetics & Nutrition must be able to meet the following requirements and expectations with or without an accommodation. The certificate prepares students to practice dietetics and nutrition and to interpret and participate in research in nutrition within academic and healthcare organizations. Graduates need knowledge and skills to function in diverse practice and research settings. All students who are admitted into the certificate program in Dietetics & Nutrition are able to do the following:

Observe: Students must be able to observe lectures, demonstrations, research, and practice situations in the practice and research of health sciences.

Communicate: Students must have the ability to use multiple communication techniques (oral, written, nonverbal) to enable
communication with clients, teachers, health providers, and faculty. Students must be able to report to members of the team, express accurate information to clients, and teach, explain, direct, and counsel people.

**Psychomotor:** Students must have sufficient motor capacities and motilities to execute various tasks and physical maneuvers such as: collecting specimens and perform basic tests and physical assessments on individuals, e.g., finger sticks for blood glucose testing, using glucometers, skin fold thickness, blood pressure, and placing feeding tubes; working in institutional and food demonstration kitchens to prepare foods and direct employees involved in food services; and conducting patient visits individually and with health care team members to provide nutrition care. Graduate students who are not involved with clinical experiences are expected to demonstrate during their research assistantship sufficient motor capabilities and motilities to execute various tasks similar to those in the clinical rotations.

**Intellectual and Cognitive Abilities:** Students must be able to measure, calculate reason, analyze, synthesize, integrate, and remember to apply information. Creative problem solving and clinical reasoning requires all of these intellectual abilities.

**Professional and Social Attributes:** Students must exercise good judgment and promptly complete all responsibilities required of the program. They must develop mature, sensitive, and effective professional relationships with others. They must be able to tolerate taxing workloads and function effectively under stress. They must be able to adapt to changing environments, display flexibility, and function in the face of uncertainties and ambiguities. Concern for others, interpersonal competence, and motivation are requisites for the program.

**Master of Science in Dietetics and Nutrition**

The master’s degree in dietetics and nutrition is designed for professionals in nutrition and for others with a science background.

**Advantages of this program:**

- **Practice Competence:** Students gain advanced knowledge of the biochemical, pathological, and physiological processes of disease to build a better understanding of disease prevention and treatment. While the practice competencies of the dietetics professional are continually evolving, entry into practice as a registered dietitian nutritionist (RDN) will require a master’s degree, beginning in 2024.

- **Research Competency:** Research experience is more important than ever in today’s health care fields. Students graduating from the MS degree program, with or without the RDN credential, are able to participate in research and apply findings in research, public health, and/or clinical practice. Graduates with RDN credentials are required to conduct outcomes research and utilize evidence-based practice to translate research findings in clinical settings. Participating in research and applying research findings to dietetics and nutrition practice are useful and valued skills.

The master’s degree alone does not lead to the registered dietitian credential. More information about becoming a registered dietitian is found here: eatrightPRO.org (https://www.eatrightpro.org/acend/accredited-programs/about-accredited-programs/)

An online master’s degree for registered dietitians is offered through the Great Plains IDEA (p. 632) (Interactive Distance Education Alliance) program.

The application process for this program is online. Detailed instructions on how to apply are posted on the Department of Dietetics and Nutrition (http://www.kumc.edu/school-of-health-professions/dietetics-and-nutrition/master-of-science-in-dietetics-and-nutrition.html) website. Application deadlines are June 1 for fall semester, October 30 for spring semester and March 31 for summer semester.

**Admission requirements:**

- A bachelor’s degree from a regionally accredited institution is required and must be documented by submission of official transcript indicating the degree has been conferred before entering the program. Official transcripts for all classes taken from all institutions attended are also required. The bachelor’s degree may be in any field.
- Students with degrees from outside the U.S. may be subject to transcript evaluation indicating the degree is equivalent to a U.S. degree and meets the minimum cumulative grade-point average requirement.
- Applicants must possess a cumulative grade-point average of at least a 3.0 on a 4.0 scale for his or her bachelor’s degree program.
- Applicants who are not native speakers of English, whether domestic or international, must demonstrate they meet the minimum English proficiency requirement.
- Before entering the program, students must have completed prerequisite courses in biochemistry (one semester), physiology (one semester), and nutrition (more than one semester preferred).
- A resume or curriculum vitae is required and must include prior employment and participation in professional and/or voluntary organizations (e.g., hospital, alumni or nonprofit.)
- A goal statement will be submitted in the online application and will explain the applicant’s educational and professional goals.
- Three references are required. The references must be from a faculty member, adviser, employer, or other person familiar with the applicant’s work and character. The recommendations may not be obtained from family members, friends, etc.
- The Joint Commission requires all incoming students to pay for a background check (p. 2456). This one-time fee must be paid directly to the company performing the background investigation. For more information, please see the School of Health Professions Background Check Instructions. (http://www.kumc.edu/school-of-health-professions/background-checks-and-drug-screening-for-students.html)

Applicants will be assessed based on these requirements. Applicants who meet admission requirements will be interviewed by department faculty. After an applicant has been admitted, a program may defer an applicant’s admission for one year after which time the applicant must submit a new application.

Admission requirements are subject to change. In most cases, use the catalog of the year student entered the program. Other years’ catalogs.

The Master of Science in Dietetics and Nutrition degree program consists of 30 credit hours with both thesis and non-thesis research options. This program offers course work in the biochemical, clinical, and behavioral aspects of nutrition.
Degree requirements:
- Degree requirements are normally completed within 2 years of admission to the program although a maximum of 7 years is allowed.
- Completion of a minimum of 30 credit hours.
- Cumulative grade-point average (GPA) of at least a 3.0 for all KU graduate coursework.
- Enrollment in a minimum of one credit hour the semester the student will graduate.
- Successful completion of the following courses:

<table>

For the non-thesis option:
- Successful completion of a general examination (p. 2457) the semester the student will graduate. The general exam is an oral exam administered by three faculty members that covers the competencies students are expected to gain through the M.S. degree program.
- Completion of DN 854-Special Problems in Dietetics and Nutrition occurs the semester the student successfully defends the project. Students submit a written proposal and conduct an oral presentation of the proposal. If satisfactory, students then prepare a final written report and conduct an oral presentation (defense) of the report which is followed by questions from the research committee. The project is generally completed in 1 to 2 semesters and may include one or more of the following:
  - written intensive review of the literature on a given topic, based on "Evidence-Based Analysis" procedures of the Academy of Nutrition and Dietetics;
  - participation with a faculty member in the development of a research proposal or grant;
  - participation with a faculty member in conducting a pilot project;

For the thesis option:
- Successful completion of a general examination (p. 2457) the semester the student will graduate. The general exam is an oral exam administered by three faculty members that covers the competencies students are expected to gain through the M.S. degree program.
- Successful completion of a thesis defense (p. 2457) and of DN 899-Thesis and DN 890 Graduate Research. The defense occurs during the semester the student will graduate. Thesis research is usually conducted over 3 semesters and involves all aspects of research including preparing a proposal, collection and analysis of data, and a thesis. The thesis is presented in written form and orally in a presentation to the thesis committee followed by questions (or defense) and an oral examination before the thesis committee.
- Successful thesis submission and publication (p. 2457) (according to Office of Graduate Studies policy.)
- Successful completion of a minimum of 9 credit hours of elective coursework. For students in the KU dietetic internship program, 9 hours of electives completed during the internship count as the elective hours. Those choosing the non-thesis option required an additional 3 elective hours. For master's students who are not former KU interns, up to 6 graduate credit hours of electives may be taken outside the department if the courses are relevant to the career goals of the student.

Degree requirements and course descriptions are subject to change. Any courses taken as an equivalent must be approved by the Graduate Director and the Office of Graduate Studies. In most cases, use the catalog of the year student entered the program. Other years' catalogs.

Typical Plan of Study

Non-thesis option (30 minimum credit hours with 12 hours elective credits):

10 10 4
The program prepares graduates to be competent entry-level registered dietitian nutritionists with enhanced skills in nutrition therapy emphasis that prepares graduates for a career as a registered dietitian. The mission of the program is to produce competent entry-level registered dietitian nutritionists with enhanced skills in nutrition therapy emphasis that prepares graduates for a career as a registered dietitian. The mission of the program is to produce competent entry-level registered dietitian nutritionists within 12 months of program completion. All U.S. states with licensure and certification requirements currently accept the registered dietitian credential for state licensure and certification purposes. The Commission on Dietetic Registration provides information on specific state licensure requirements.

Accreditation
The University of Kansas dietetic internship graduate certificate program is fully accredited by the Accreditation Council for Education in Nutrition and Dietetics (ACEND) (https://www.eatrightpro.org/acend/) which is the accrediting agency for the Academy of Nutrition and Dietetics (https://www.eatrightpro.org/about-us/who-we-are/). Documents relating to accreditation may be obtained from the department office.

Admissions
Applicants to this program follow the national computer-matching procedure mandated by the Academy of Nutrition and Dietetics (https://www.eatrightpro.org/acend/students-and-advancing-education/application-process-for-students/) for application to internships. The application process is conducted online through the Dietetic Internship Centralized Application Services (DICAS) and also requires a supplemental online application to KU.

The program begins in the fall semester. The application window is December 1 through February 15 each year. Information on how to apply and related links for the DICAS application and the supplemental application are posted on the Department of Dietetics and Nutrition (http://www.kumc.edu/school-of-health-professions/dietetics-and-nutrition/dietetic-internship-graduate-certificate/how-to-apply.html) website.

Applicants must also complete the computer match process and indicate KU as one of the desired institutions for enrollment by February 15. For information on the process and computer match forms, contact your didactic program director or D & D Digital Online Dietetics Internship Matching Service. (https://www.dnddigital.com/)

ADMISSION REQUIREMENTS:

- A bachelor’s degree from a didactic program in dietetics (DPD) (https://www.eatrightpro.org/acend/accredited-programs/about-accredited-programs/) accredited by the Accreditation Council for Education in Nutrition and Dietetics is required and must be
documented by submission of official transcript indicating the degree has been conferred before entering the program. Official transcripts from all institutions attended are also required.

**Please note: the University of Kansas does not offer an accredited DPD program that meets this requirement.**

Degrees earned outside the United States must be evaluated for equivalency. For guidelines, see the international fact sheet (https://www.eatrightpro.org/acend/students-and-advancing-education/international-students-education-and-credentialing-requirements-for-those-with-foreign-degrees/) provided by the Accreditation Council for Education in Nutrition and Dietetics (ACEND) (https://www.eatrightpro.org/acend/). Students with degrees from outside the U.S. may be subject to transcript evaluation indicating the degree is equivalent to a U.S. degree and meets the minimum cumulative grade-point average requirement.

A cumulative grade-point average of at least a 3.0 on a 4.0 scale for the bachelor's degree is required.

- Applicants who are not native speakers of English, whether domestic or international, must demonstrate they meet the minimum English proficiency requirement (p. 2455). (p. 2455)
- Applicants will submit a resume or curriculum vitae indicating prior employment, participation in professional and/or voluntary organizations (e.g., hospital, alumni or nonprofit) and evidence of leadership.
- A verification statement or declaration of intent form must be completed by the applicant's didactic program director and must have an original or digital signature.
- Three references are required and must be from faculty, advisors, employers, or others who are familiar with the applicant's work and character. The recommendations may not be obtained from family members, friends, etc.
- Personal statement of no more than 1000 words is required. Questions to be addressed in the personal statement include the following:
  - Why do you want to enter the dietetics profession?
  - Discuss experiences that have helped to prepare you for a career as an RDN.
  - What are your short-term and long-term goals?
  - What are your strengths and weaknesses or areas needing improvement?
- If an Applicant meets the admission requirements, he/she will be asked to complete a brief virtual interview.
- The Joint Commission requires all incoming students to pay for a background check (p. 2456). This one-time fee must be paid directly to the company performing the background investigation. For more information, please see the School of Health Professions background check instructions. (http://www.kumc.edu/school-of-health-professions/background-checks-and-drug-screening-for-students.html)

Applicants will be assessed on academic performance, work and volunteer experience, leadership and research experience, personal statement, responses to virtual interview, awards and honors, and references. After an applicant has been admitted, a program may defer an applicant's admission for one year after which time the applicant must submit a new application. Admission requirements are subject to change.

The Dual Program: MS in Dietetics and Nutrition and Dietetic Internship Certificate consists of 38 credit hours of graduate course work and a minimum of 1,000 hours of supervised practice experience. The program prepares graduates for entry into careers as a registered dietitian. Students completing the Dual MS/DI program receive a Master of Science in Dietetics and Nutrition degree, Dietetic Internship Graduate Certificate, and a verification statement which allows them to be eligible to take the national RDN examination administered by the Commission on Dietetic Registration (https://www.cdrnet.org/RDN/) for the purpose of receiving the registered dietitian nutritionist credential.

**DEGREE REQUIREMENTS:**

- Cumulative grade-point average (GPA) of at least a 3.0 for all KU graduate certificate coursework.
- Enrollment in a minimum of one (1) credit hour the semester the program is completed.
- Successful completion of 1,000 hours of supervised practice in a variety of practice settings. Satisfied through enrollment in a minimum of 8 credit hours of DN 827 Practicum in Dietetics and Nutrition.
- The practice experiences include clinical and community nutrition, food and nutrition management and a culminating practice area of interest experience designed by the intern to meet personal professional and educational goals. Interns are able to choose from a variety of practice sites for each experience and are encouraged to submit ideas for new practice sites to the program director.
- Receive a passing score on all ACEND core competencies (https://www.eatrightpro.org/acend/accreditation-standards-fees-and-policies/2022-standards/).
- Pass the program final exam with a score of 80% (or raw score of 25.0) or greater.
- Successful completion of a minimum of 38 credit hours including the following courses:

For the Non-thesis option:
• Successful completion of a general examination (p. 2457) the semester the student will graduate. The general exam is an oral exam administered by three faculty members that covers the competencies students are expected to gain through the M.S. degree program.

• Completion of DN 854-Special Problems in Dietetics and Nutrition occurs the semester the student successfully defends the project. Students submit a written proposal and conducts an oral presentation of the proposal. If satisfactory, students then prepare a final written report and conduct an oral presentation (defense) of the report which is followed by questions from the research committee.

• The project is generally completed in 1 to 2 semesters and may include one or more of the following:
  • Written intensive review of the literature on a given topic, based on "Evidence-Based Analysis" procedures of the Academy of Nutrition and Dietetics;
  • Participation with a faculty member in the development of a research proposal or grant;
  • Participation with a faculty member in conducting a pilot project;
  • Participation with a faculty member in the design, implementation, or evaluation of a program in a specialized area of dietetics practice;
  • Collection and/or analysis of data in conjunction with a faculty member engaged in research.

• Successful completion of a minimum of 3 credit hours of elective coursework.

For the Thesis option:

• Successful completion of a general examination (p. 2457) the semester the student will graduate. The general exam is an oral exam administered by three faculty members that covers the competencies students are expected to gain through the M.S. degree program.

• Successful completion of a thesis defense (p. 2457) and of DN 899-Thesis. The defense occurs during the semester the student will graduate. Thesis research is usually conducted over 3 semesters and involves all aspects of research including preparing a proposal, collection and analysis of data, and a thesis. The thesis is presented in written form and orally in a presentation to the thesis committee followed by questions (or defense) and an oral examination before the thesis committee.

• Successful thesis submission and publication (p. 2457) (according to Office of Graduate Studies policy.)

• Successful completion of 3 credit hours of DN 890 – Graduate Research. This course is taken in place of the 3 hours of elective coursework.

• Degree requirements and course descriptions are subject to change. Any courses taken as an equivalent must be approved by the Graduate Director and the Office of Graduate Studies. In most cases, use the catalog of the year student entered the program. Other years’ catalogs».

Upon acceptance into the Master of Science in Dietetics and Nutrition Program, students are asked to acknowledge their ability to meet these standards with or without accommodations. The following technical standards, in conjunction with the academic standards, are requirements for admission, retention and program completion.

Reasonable accommodation will be considered and may be made to qualified students who disclose a disability, so long as such accommodation does not significantly alter the essential requirements of the curriculum and the training program, or significantly affect the safety of patient care.

Qualified students with a disability who wish to request accommodations should provide appropriate documentation of disability and submit a request for accommodation to:

The Office for Academic Accommodations

Cyn Ukoko, Senior Coordinator of Academic Accommodations
913-945-7035 or 711 TTY
cukoko@kumc.edu
1040 Dykes Library

Academic Accommodations Intake Form (https://redcap.kumc.edu/surveys/?s=LKXK9HWJY9HH37KN)

The Department of Dietetics & Nutrition and the University of Kansas Medical Center have a commitment to nondiscrimination, access and reasonable accommodation of students with disabilities. Therefore, all students admitted to the MS Degree in Dietetics & Nutrition must be able to meet the following requirements and expectations with or without an accommodation. The MS degree prepares students to practice dietetics and nutrition and to interpret and participate in research in nutrition within academic and healthcare organizations. Graduates need knowledge and skills to function in diverse practice and research settings. All students who are admitted into the MS degree program in Dietetics & Nutrition are able to do the following:

Observation: Specific observation skills include, but are not limited to, being able to observe lectures, demonstrations, research, and practice situations in the practice and research of health sciences.

Communicate: Students must have the ability to use multiple communication techniques (oral, written, nonverbal) that enable them to communicate with clients, teachers, health providers, and faculty. Students must be able to report to members of the team, express accurate information to clients, and teach, explain, direct, and counsel people.

Ethical Standards: Students must demonstrate professional attitudes and behaviors and must perform in an ethical manner in dealing with others as outlined in the Academy of Nutrition and Dietetics Code of Ethics for the Nutrition and Dietetics Profession. Personal integrity is required and the adherence to standards that reflect the values and the functions of the profession of dietetics and nutrition. Students are required to abide by student honor codes and research ethics.

Psychomotor: Students must be able to demonstrate the following skills: ability to generate, calculate, record, evaluation and transit information; prepare assignments; deliver public presentations to large and small audiences; collect specimens and perform basic tests and physical assessments on individuals, e.g., finger sticks for blood glucose testing, using glucometers, assessing skin fold thickness, taking blood pressure, and placing feeding tubes; working in institutional and food demonstration kitchens to prepare foods and direct employees involved in food services; and conducting patient visits individually and with health care team members to provide nutrition care. Graduate students who are not involved with clinical experiences are expected to demonstrate during
Master of Science Great Plains IDEA program

The Great Plains IDEA (https://www.gpidea.org/program/dietetics/) (Interactive Distance Education Alliance) is a consortium of six universities that provides an online 36-credit hour master's degree in dietetics and nutrition. Admission is limited to credentialed registered dietitians or individuals with verification from an accredited didactic program in dietetics (DPD). Note: Obtaining the DPD verification statement and subsequently completing the MS distance program in dietetics does not qualify one to practice as an RD. Completion of 1000 hours of supervised practice through an ACEND accredited program is also needed before sitting for the exam to be an RD.

Students enroll for all courses through his or her “home” institution, but the actual courses are delivered online from any of the participating universities and their respective faculty members.

Great Plains IDEA Consortium Members

- University of Kansas Medical Center
- Colorado State University
- North Dakota State University
- Oklahoma State University
- South Dakota State University
- University of Nebraska- Lincoln

The program is administered by the KU Department of Dietetics and Nutrition (http://www.kumc.edu/school-of-health-professions/dietetics-and-nutrition/online-masters-program.html) for students selecting the KU Medical Center as his or her “home” institution. Completion of degree requirements depends upon several factors including the semester start date, the specific courses offered each semester, and the student’s desired course load each semester. Many students in this program are working professionals with job and family responsibilities, and this program allows the flexibility to take the number of courses that work in the student’s schedule.

Taking one to two courses a semester (including summers) should allow students to complete the program in approximately two to four years. More courses may be taken each semester provided they are available. To see the current schedule of course offerings, visit the Great Plains IDEA (https://www.gpidea.org/program/dietetics/) website and select the course matrix and course information links.

For questions about this program, please contact Kendra Spaeth by email at kspaeth@kumc.edu. Tel: 913-588-5355 (711 TTY)

Students selecting KU Medical Center as the “home” institution apply directly to the Department of Dietetics and Nutrition for admission. These students will receive the master’s degree from KU upon completion of the degree requirements. The application process for the program is online only. Detailed instructions on how to apply are posted on the Department of Dietetics and Nutrition (https://www.kumc.edu/school-of-health-professions/academics/departments/dietetics-and-nutrition/academics/online-masters-program/how-to-apply.html) website. Application deadlines are March 15 for fall semester and October 15 for spring semester.

Admission requirements:

- A bachelor’s degree from a didactic program in dietetics (DPD) (https://www.eatrightpro.org/acend/accredited-programs/about-accredited-programs/) or coordinated program in dietetics (https://www.eatrightpro.org/acend/accredited-programs/about-accredited-programs/) accredited by the Accreditation Council for Education in Nutrition and Dietetics is required and must be documented by submission of official transcript indicating the degree has been conferred before entering the program. Please note: the University of Kansas does not offer an accredited DPD program that meets this requirement.

Official transcripts for all courses taken from all institutions attended are also required.

- Applicants must possess a cumulative grade-point average of at least a 3.0 on a 4.0 scale in his or her bachelor’s degree program.
- Applicants who are not native speakers of English, whether domestic or international, must demonstrate they meet the minimum English proficiency requirement.
- Applicants must meet one of the following criteria:
  - be credentialed as a registered dietitian by the Commission on Dietetic Registration of the Academy of Nutrition and Dietetics and submit a copy of their current CDR registration card as documentation
  - have completed a Didactic Program in Dietetics accredited by the Accreditation Council for Education in Nutrition and Dietetics (ACEND) and submit a verification statement for documentation

The Great Plains IDEA program acknowledges reciprocity as outlined by the Academy of Nutrition and Dietetics (https://www.eatrightpro.org/acend/students-and-advancing-education/international-students/faqs-for-foreign-degrees/). Reciprocity is defined as individuals having completed the education and credentialing requirements in one country may be eligible for another country’s credentialing examination if the two countries have entered into an agreement to allow this process. The Commission on Dietetics Registration (https://www.cdrnet.org/certifications/registration-eligibility-requirements-for-dietitians/) currently has registration eligibility reciprocity agreements with the following foreign dietetic associations and regulatory boards:

- Canada - Dietitians of Canada
- Netherlands - Dutch Association of Dietitians and Ministry of Welfare, Public Health and Culture
• Philippines - Philippine Professional Regulation Commission
• Ireland - Irish Nutrition and Dietetic Institute

• Applicants must provide a resume or curriculum vitae that includes prior employment and participation in professional and/or voluntary organizations (e.g., hospital, alumni or nonprofit.)
• A personal goals statement will be required in the online application
• Three references are required. A reference should be from a faculty member, advisor, employer or other person familiar with the applicant’s work and character. The recommendations may not be obtained from family members, friends, etc.
• The Joint Commission requires all incoming students to obtain a background check (http://www.kumc.edu/school-of-health-professions/background-checks-and-drug-screening-for-students.html). This one-time fee must be paid directly to the company performing the background investigation. For more information, please see the School of Health Professions background check instructions. (http://www.kumc.edu/school-of-health-professions/background-checks-and-drug-screening-for-students.html)

Applicants will be assessed based on these requirements. After an applicant has been admitted, a program may defer an applicant’s admission for one year after which time the applicant must submit a new application.

Admission requirements are subject to change. In most cases, use the catalog of the year student entered the program. Other years’ catalogs→.

The Great Plains IDEA (Interactive Distance Education Alliance) Master of Science in Dietetics and Nutrition consists of 36 credit hours. Students selecting KU Medical Center as their “home” institution will receive their degree from this institution if all degree requirements listed below are successfully completed. Students enroll for all courses through their home institution and the courses are listed as KU courses, but the actual course content is delivered online from any of the participating universities and their respective faculty members.

• Degree requirements are normally completed within 2-4 years of admission to the program although a maximum of 7 years is allowed.

• Completion of a minimum of 36 credit hours.
• Cumulative grade-point average (GPA) of at least a 3.0 for all KU graduate coursework.
• Enrollment in a minimum of one credit hour the semester the student will graduate.
• Successful completion of the following courses:

The Great Plains IDEA (Interactive Distance Education Alliance) Master of Science in Dietetics and Nutrition consists of 36 credit hours. Students selecting KU Medical Center as their “home” institution will receive their degree from this institution if all degree requirements listed below are successfully completed. Students enroll for all courses through their home institution and the courses are listed as KU courses, but the actual course content is delivered online from any of the participating universities and their respective faculty members.

• For the non-thesis option:
  • Successful completion of a general examination (http://catalog.ku.edu/graduate-studies/kumc/#programtext) the semester the student will graduate. The general exam is an oral exam administered by three faculty members that covers the competencies students are expected to gain through the M.S. degree program.
  • Completion of DIET 854 Non-Thesis Research occurs the semester the student successfully defends the project. Students submit a written proposal and conduct an oral presentation of the proposal. If satisfactory, students then prepare a final written report and conduct an oral presentation (defense) of the report which is followed by questions from the research committee. The project is generally completed in 1 to 3 semesters and may include one or more of the following:
    • written intensive review of the literature on a given topic, based on “Evidence-Based Analysis” procedures of the Academy of Nutrition and Dietetics;
    • participation with a faculty member in the development of a research proposal or grant;
    • participation with a faculty member in conducting a pilot project;
    • participation with a faculty member in the design, implementation, or evaluation of a program in a specialized area of dietetics practice; and/or
    • collection and/or analysis of data in conjunction with a faculty member engaged in research.

• For the thesis option:
  • Successful completion of a general examination (http://catalog.ku.edu/graduate-studies/kumc/#programtext) the semester the student will graduate. The general exam is an oral exam administered by three faculty members that covers the competencies students are expected to gain through the M.S. degree program.
  • Successful completion of a thesis defense (http://catalog.ku.edu/graduate-studies/kumc/#programtext) and of DIET 899 Thesis. The defense occurs during the semester the student will defend...
the thesis and graduate. Thesis research is usually conducted over 3 semesters and involves all aspects of research including preparing a proposal, collection and analysis of data, and a thesis. The thesis is presented in written form and orally in a presentation to the thesis committee followed by questions (or defense) and an oral examination before the thesis committee. The thesis defense must be completed in person.
• Successful thesis submission and publication (http://catalog.ku.edu/graduate-studies/kumc/#programtext) (according to Office of Graduate Studies policy).
• Choose elective courses (minimum 18 credit hours required) from the following list. With approval from the Graduate Director, a course not on the list may be counted toward this requirement.

Graduates need knowledge and skills to function in diverse practice and research settings. Organizations. Graduates need knowledge and skills to function in diverse practice and research settings. The Department of Dietetics and Nutrition and the University of Kansas Medical Center have a commitment to nondiscrimination, access and reasonable accommodation of students with disabilities. Therefore, all students admitted to the Master of Science Degree in Dietetics and Nutrition must be able to meet the following standards, in conjunction with the academic standards, are requirements for admission, retention and program completion.

Reasonable accommodation will be considered and may be made to qualified students who disclose a disability, so long as such accommodation does not significantly alter the essential requirements of the curriculum and the training program, or significantly affect the safety of patient care.

Qualified students with a disability who wish to request accommodations should provide appropriate documentation of disability and submit a request for accommodation to:

The Office for Academic Accommodations
Cyn Ukoko, Senior Coordinator of Academic Accommodations
913-945-7035
cukoko@kumc.edu
1040 Dykes Library

Academic Accommodations Intake Form (https://redcap.kumc.edu/surveys/?s=LKXK9HWJY9HH37KN)

The Department of Dietetics and Nutrition and the University of Kansas Medical Center have a commitment to nondiscrimination, access and reasonable accommodation of students with disabilities. Therefore, all students admitted to the Master of Science Degree in Dietetics and Nutrition must be able to meet the following requirements and expectations with or without an accommodation. The master’s degree prepares students to practice dietetics and nutrition and to interpret and participate in research in nutrition within academic and health care organizations. Graduates need knowledge and skills to function in diverse practice and research settings.

All students who are admitted into the master’s degree program in Dietetics and Nutrition must be able to perform the following:

**Observe:** Specific observation skills include, but are not limited to, being able to observe lectures, demonstrations, research, and practice situations in the practice and research of health sciences.

**Communicate:** Students must have the ability to use multiple communication techniques (oral, written, nonverbal) that enable them to communicate with clients, teachers, health providers and faculty. Students must be able to report to members of the team, express accurate information to clients, and teach, explain, direct and counsel people.

**Ethical Standards:** Students must demonstrate professional attitudes and behaviors and must perform in an ethical manner in dealing with others as outlined in the Academy of Nutrition and Dietetics Code of Ethics for the Nutrition and Dietetics Profession. Personal integrity is required and the adherence to standards that reflect the values and the functions of the profession of dietetics and nutrition. Students are required to abide by student honor codes and research ethics.

**Psychomotor:** Students must be able to demonstrate the following skills: ability to generate, calculate, record, evaluate and transit information; prepare assignments; deliver public presentations to large and small audiences; collect specimens and perform basic tests and physical assessments on individuals, e.g., anthropometric assessments, finger sticks for blood glucose testing, using glucometers, assessing skin fold thickness, taking blood pressure; and/or working in institutional and food demonstration kitchens.

**Intellectual and Cognitive Abilities:** Students must be able to measure, calculate reason, analyze, synthesize, integrate, and remember to apply information. Creative problem solving and clinical reasoning requires all of these intellectual abilities.

**Professional and Social Attributes:** Students must promptly complete all responsibilities required of the program. They must develop mature, sensitive, and effective professional relationships with others. They must be able to tolerate taxing workloads and function effectively under stress. They must be able to adapt to changing environments, display flexibility and function in the face of uncertainties and ambiguities.

Concern for others, interpersonal competence and motivation are requisites for the program.

**Doctor of Clinical Nutrition**

The Doctorate in Clinical Nutrition (DCN) program is designed for students with a registered dietitian credential (RDN), with current professional licensure when required by their state, a Master’s degree, and currently working in the field of nutrition and dietetics. This advanced degree will broaden the knowledge base and enhance critical thinking skills to keep pace with the medical complexity of today’s clinical nutrition practice. Students will expand their interprofessional experiences, communication skills, medical nutrition therapy skills, management and leadership skills, and research. The program is offered by the KU Department of Dietetics.

Graduates will be prepared for leadership roles in clinical nutrition or higher education settings through cutting-edge coursework and completion of outcomes-based research projects. Educators, employers and practitioners recognize the competitive advantage that an advanced degree offers to elevate graduates as experts in the field.
Evidence-based practice requires outcomes research to determine best practices. Advanced-level practitioners need strong research skills to develop and direct appropriate and valuable research projects. Program faculty conduct human nutrition research and are well-equipped to mentor students through the research process.

The program is offered fully online, with one orientation and experiential learning campus visit required. The program faculty are located at the KU Medical Center campus of the University of Kansas, which along with The University of Kansas Health System forms the region’s top academic health center. The University of Kansas is a major comprehensive research and training institution serving as a center for learning, scholarship, and creative endeavor.

The mission of the Doctorate of Clinical Nutrition is to serve the citizens of Kansas, the region, and the nation by producing advanced-level nutrition and dietetic practitioners, transformational leaders and researchers.

**Academic Goals of Program**

- To graduate students with mastery of applied medical nutrition science for advanced-level practice.
- To produce graduates who apply existing knowledge and research to clinical settings, evaluate and disseminate findings to advance clinical practice.
- To produce graduates with mastery of interprofessional collaboration, critical thinking, communication, management and leadership skills.

Application for admission to the DCN program will be made through the Department of Dietetics and Nutrition. Application deadlines are February 1 for fall semester entry and September 1 for spring semester entry. Applicants meeting criteria will undergo a standardized screening interview by DN faculty before acceptance. The following materials are required for admission:

1. Be an RDN with current professional licensure when required by their state.
2. A Master’s degree
3. Currently working in the field of nutrition and dietetics (may be part time)
4. Completed graduate application form (including letter of intent with professional goals)
5. Official transcripts from all colleges and/or universities attended with final degrees posted.
6. Three letters of recommendation from supervisors, faculty or advisors in the field within the last five years. All recommendation letters must be on a professional letterhead.
7. International students must reside in a country that has reciprocity with Commission on Dietetic Registration. Official TOEFL exam scores for international applicants sent directly to KU Medical Center (Institution code 6875). Minimum English proficiency requirements are set by KU Medical Center Office of Graduate Studies and are posted online at [https://www.kumc.edu/academic-and-student-affairs/departments/office-of-international-programs/inbound-programs/information-for-students/academic-english-requirements.html](https://www.kumc.edu/academic-and-student-affairs/departments/office-of-international-programs/inbound-programs/information-for-students/academic-english-requirements.html)
8. Minimum GPA requirements for admission to KU as a graduate student: An undergraduate cumulative GPA of 3.0 or better is required for regular admission status. Previous graduate coursework must have a cumulative GPA of 3.0 or better for admission.

**Degree requirements:**

The DCN program would require a total of 48 credit hours. The 39 credits of coursework are offered entirely online. The Advanced Clinical Nutrition Residency and Applied Research Project (see details below) would be completed within a professional workplace with the guidance of their DCN advisor. These courses were specifically selected to enhance communication, collaboration and leadership skills, in addition to research skills and clinical nutrition skills.

- Degree requirements must be completed within a maximum of 8 years.
- Cumulative grade-point average (GPA) of at least 3.0 for all KU graduate coursework
- Successful completion of the following courses:

**Communication, Collaboration and Leadership Core**

- DN 920: Nutrition Communication for Advanced Practice, 3 credits.
- DN 910: Leadership Essentials in Clinical Nutrition, 3 credits.
- DN 950: Interprofessional Collaboration, 2 credits.
- DCLS 880: Principles of Interprofessional Education and Practice Theory, 1 credit

**Research Core**

- DN 930: Evidence Analysis in Clinical Nutrition, 3 credits.
- DN 932: Ethics in Clinical Nutrition Research, 1 credit.
- DN 934: Advanced Methods of Research in Clinical Nutrition, 3 credits.
- DN 941: Applied Nutrition Epidemiology, 3 credits.
- IPHI 850: Introduction to Health Informatics, 2 credits

**Clinical Nutrition Core**

- DN 915: Advanced Nutritional Assessment, 3 credits.
- DN 970: Pharmacology in Clinical Nutrition, 3 credits.
- DN 971: Advanced Nutrition Counseling, 3 credits.
- DN 972: Frontiers in Medical Nutrition Therapy, 3 credits
- DN 980: Nutrigenomics & Nutrigenetics in Health and Disease, 3 credits.
- One elective (see list, below), 3 credits.

**DN 991: Applied Research Project, 6 credits**

**DN 992: Advanced Clinical Nutrition Residency, 3 credits** (360 hours at workplace)

**Select 1 elective class from the following as part of Clinical Nutrition Core Requirements**

- DN 829 Nutrition in Aging 3 hrs
- DN 837 Nutrition in Diabetes 3 hrs
**Year 1**

**Total Hours 45-60**

Reasonable accommodation will be considered and may be made to qualified students who disclose a disability, so long as such accommodation does not significantly alter the essential requirements of the curriculum and the training program, or significantly affect the safety of patient care. Students who disclose that they have a disability are considered for the program if they are otherwise qualified. Qualified students with a disability who wish to request accommodations should provide appropriate documentation of disability and submit a request for accommodation to:

The Office for Academic Accommodations

Cyn Ukoko, Senior Coordinator of Academic Accommodations

913-945-7035 or 711 TTY

cukoko@kumc.edu

1040 Dykes Library

The Department of Dietetics & Nutrition and the University of Kansas Medical Center have a commitment to nondiscrimination, access and reasonable accommodation of students with disabilities. Therefore, all students admitted to the MS Degree in Dietetics & Nutrition must be able to meet the following requirements and expectations with or without an accommodation. The MS degree prepares students to practice dietetics and nutrition and to interpret and participate in research in nutrition within academic and healthcare organizations. Graduates need knowledge and skills to function in diverse practice and research settings. All students who are admitted into the MS degree program in Dietetics & Nutrition must be able to do the following:

**Observe:** Students must be able to observe lectures, demonstrations, research, and practice situations in the practice and research of health sciences. Observation is necessary to perform competent health assessments and interventions. Students must be able to observe, learn from, and analyze medical record content, including discernment and use of clinical and administrative data displayed within the medical record. Students must be able to observe, learn from, and analyze statistical, financial, and reimbursement data, including utilizing spreadsheets, software, databases, and performing mathematical calculations.

**Communicate:** Students must have the ability to use multiple communication techniques (oral, written, nonverbal) to enable communication with clients, teachers, health providers, and faculty.
Students must be able to report to members of the team, express accurate information to clients, and teach, explain, direct, and counsel people. Students who are hearing impaired may give and receive information through sign language or CART services.

Ethical Standards: Students must demonstrate professional attitudes and behaviors and must perform in an ethical manner in dealing with others. Personal integrity is required and the adherence to standards that reflect the values and functions of the profession of Dietetics. Students are required to abide by the professional code of ethics for Dietetics and student honor codes.

Psychomotor: Students must have sufficient motor capacities and motilities to execute various tasks and physical maneuvers such as: Use an electronic keyboard to generate, calculate, record, evaluate, and transmit information; prepare assignments, both written and online; deliver public presentations to large and small audiences; collect specimens and perform basic tests and physical assessments on individuals, e.g., finger sticks for blood glucose testing, using glucometers, skin fold thickness, blood pressure, and placing feeding tubes; working in institutional and food demonstration kitchens to prepare foods and direct employees involved in food services; and conducting patient visits individually and with health care team members to provide nutrition care. Graduate students must be able to travel to sites involved in residency.

Intellectual and Cognitive Abilities: Students must be able to measure, calculate reason, analyze, synthesize, integrate, and remember to apply information. Creative problem solving and clinical reasoning requires all of these intellectual abilities. Student must be able to participate in patient-oriented research activities.

Professional and Social Attributes: Students must exercise good judgment and promptly complete all responsibilities required of the program. They must develop mature, sensitive, and effective professional relationships with others. They must be able to critically evaluate one’s own performance, accept constructive criticism, and look for ways to improve. They must be able to tolerate taxing workloads and function effectively under stress. They must be able to recognize potentially hazardous materials, equipment, and situations and proceed safely in order to minimize risk of injury to self and nearby individuals. They must be able to adapt to changing environments, display flexibility, and function in the face of uncertainties and ambiguities. Concern for others, interpersonal competence, and motivation are requisites for the program.

Doctor of Philosophy in Medical Nutrition Science

The doctoral program in medical nutrition science is designed for students with a bachelor's or master's degree in nutrition (or with a degree in biological sciences that included course work in nutrition) to have the opportunity to pursue research at a world-class academic health center renowned for its research facilities. This program emphasizes course work in the core science of nutrition (integration of nutrition with biochemistry and physiology), biostatistics, and research using advanced research methodology. The program is offered by the KU Department of Dietetics and Nutrition (http://www.kumc.edu/school-of-health-professions/dietetics-and-nutrition.html).

Graduates are prepared for research and leadership roles in academia, industry, government, clinical departments of academic medical centers and centers of advanced clinical practice. Program faculty conduct human nutrition research and registered dietitians are encouraged to apply; however, students enrolled in this program are not eligible to become RDs unless they have met all prerequisites of the Academy of Nutrition and Dietetics (https://www.eatrightpro.org/acend/accredited-programs/about-accredited-programs/) and have completed a dietetic internship. More information. (p. 620)

The program is offered on the KU Medical Center (http://www.kumc.edu/) campus of the University of Kansas which along with The University of Kansas Hospital (http://www.kumed.com) forms the region's top academic health center. The mission of this alliance among health care professions is to create a modern environment for instruction, research, and service, and to provide these services across multiple constituencies at local, regional and national levels.

The University of Kansas is a major comprehensive research and teaching institution serving as a center for learning, scholarship and creative endeavor. A major strength of KU’s medical nutrition science program is the opportunity for clinical and translational research.

Academic Objectives of Program

- To graduate students capable of conducting research using appropriate research methods, ethical procedures and statistical analysis.
- To graduate students with advanced knowledge in the nutritional sciences who will contribute to the growing body of knowledge in the medical nutrition science arena.
- To graduate students who demonstrate professional attributes such as advocacy, critical thinking, flexibility, time management, and work ethic within various organization cultures.
- To enrich the scholarly and collegial culture of the Department of Dietetics and Nutrition at KU Medical Center.

This program emphasizes course work in the core science of nutrition (integration of nutrition with biochemistry and physiology), biostatistics and human nutrition research using advanced research methodology. The course work required depends upon whether the student is accepted to the program from a bachelor's or master's degree program, as well as on the area of study of these degrees (nutrition, biological sciences or other areas of study). Detailed instructions on how to apply are posted on the Department of Dietetics and Nutrition (https://www.kumc.edu/school-of-health-professions/academics/departments/dietetics-and-nutrition/academics/phd-in-medical-nutrition-science/how-to-apply.html) website. Application deadlines are February 1 for fall semester entry and September 1 for spring semester entry.

Admission requirements:

- A bachelor’s degree or master’s degree from a regionally accredited institution is required and must be documented by submission of official transcript indicating the degree has been conferred before entering the program. Official transcripts must be submitted for all courses taken at every institution. The bachelor’s and/or master’s degree should be in nutrition or other biological sciences. Students with degrees from outside the U.S. may be subject to transcript evaluation indicating the degree is equivalent to a U.S. degree and meets the minimum cumulative grade-point average requirement.
- A cumulative grade-point average of at least a 3.0 on a 4.0 scale for the bachelor's degree is required.
- Applicants who are not native speakers of English, whether domestic or international, must demonstrate they meet the minimum English proficiency requirement.
Before entering the program, students must have completed prerequisite courses in biochemistry (one semester), physiology (one semester), and nutrition (more than one semester preferred).

A resume or curriculum vitae is required and must include prior employment and participation in professional and/or voluntary organizations (e.g., hospital, alumni or nonprofit).

A goal statement will be submitted detailing the applicant's educational and professional goals.

Three references are required. A reference provides a professional recommendation on the applicant's behalf. It is preferred that college instructors, academic advisors or supervisors provide these recommendations. The recommendations may not be obtained from family members or friends.

The Joint Commission requires all incoming students to pay for a background check (https://catalog.ku.edu/graduate-studies/kumc/#BackgroundCheck). This one-time fee must be paid directly to the company performing the background investigation. For more information, please see the School of Health Professions background check instructions. (http://www.kumc.edu/school-of-health-professions/background-checks-and-drug-screening-for-students.html)

Applicants will be assessed based on these requirements. Applicants who meet admission requirements will be interviewed by department faculty. After an applicant has been admitted, a program may defer an applicant's admission for one year after which time the applicant must submit a new application.

Admission requirements are subject to change. In most cases, use the catalog of the year student entered the program. Other years' catalogs.

The Ph.D. in Medical Nutrition Science degree program consists of coursework, research experience, and the successful completion of a doctoral dissertation. Relevant prior graduate work and the student's research interests are taken into consideration in setting up individual programs of study leading to the Ph.D.

The program offers a great deal of flexibility. RDs embedded in clinical departments may continue to be employed and may choose to do their dissertation research on clinical problems relevant to the clinical population with whom they work. Students may also do their dissertation research on a nutrition problem with a mentor from a clinical department (and funded by that individual), however, the dissertation committee must be chaired by a member of the Department of Dietetics and Nutrition holding one or more degrees in nutrition. The total course work required depends upon whether the student is accepted to the program from a bachelor's or a master's degree, and it depends upon the area of study of that degree (nutrition, biological sciences or other areas of study). The hours for completion and suggested coursework is determined by the student's research advisor and research committee.

Degree requirements:

- Degree requirements are normally completed within 4 years of admission to the program although a maximum of 8 years is allowed.

- Cumulative grade-point average (GPA) of at least a 3.0 for all KU graduate coursework.

- Successful completion of the University’s Research Skills and Responsible Scholarship (http://catalog.ku.edu/graduate-studies/kumc/#programtext) requirement prior to the semester the Oral Comprehensive Examination is scheduled.

- Successful completion of DN 900 Techniques in Nutrition Research and Human Subject certification meets the Research Skills requirement.

- Successful completion of GSNC 856 Introduction to Research Ethics or DN 932 Ethics in Clinical Nutrition Research meets the Responsible Scholarship requirement.

- Successful completion of the Residence Requirement (http://catalog.ku.edu/graduate-studies/kumc/#programtext) prior to the semester the Oral Comprehensive Examination is scheduled. The requirement is met by enrollment in full-time status a minimum of two semesters.

- Successful completion of the Qualifying (written) Examination. This examination takes place after completion of DN 895 and DN 896. The goal of this examination is to assess that a doctoral aspirant has the necessary nutrition knowledge and analytical, communication and writing skills to successfully complete a PhD degree.

- Successful completion of the Oral Comprehensive Examination (http://catalog.ku.edu/graduate-studies/kumc/#programtext). Students are recognized as formal doctoral candidates after they have passed the comprehensive examination. The Ph.D. candidate must submit a written dissertation proposal describing an original research project in some aspect of nutrition research, and defend the proposal in a comprehensive oral exam before beginning the dissertation research.

For this examination, students must: exhibit the potential for original scientific thought; be familiar with the relevant literature and be able to identify significant research questions in their field; have a good understanding of the underlying principles of the experimental methodologies proposed; show an ability to critically analyze data and to anticipate experimental outcomes; and, have a good fundamental knowledge of nutrition science.

- Successful completion of the Post-Comprehensive Enrollment (http://catalog.ku.edu/graduate-studies/kumc/#programtext) requirement.

- Enrollment in a minimum of one (1) credit hour of DN 999 Dissertation the semester the student will defend dissertation and graduate.

- Successful completion of the Final Oral Examination (http://catalog.ku.edu/graduate-studies/kumc/#programtext) (dissertation defense). The dissertation should be comparable in scope to justify first authorship on a rigorously peer-reviewed manuscript. Students qualifying for a PhD degree in Medical Nutrition Science must have at least one first-author peer-reviewed research publication in review and at least one additional first-author publication prepared for submission at the time of the defense. Students are encouraged to submit their work for publication well before the defense if possible, especially if they wish to be competitive for a postdoctoral research position.

- Successful Dissertation Submission and Publication (http://catalog.ku.edu/graduate-studies/kumc/#programtext) (according to Office of Graduate Studies policy)

- Successful completion of the following courses:
